I had just moved up stream a little and was making a few casts at the upper end of the pool when I heard "Ha! Ha!" click, click, click, r-r-sizz-sizz, and looked round in time to see a fish (which I judged would scale close on five pounds) leap about three feet out of the water. Sizz-sizz, went the line again as it cut the water at a tremendous rate, and then the big fellow shot up once more as he headed for the riffles at the foot of the pool, never giving Dick a chance to reel in an inch of line.

"He's going, Frank; I can't hold him. My line is nearly all out and if ever he gets into those riffles it

will be all off!" cried Dick, as he followed the fish down stream, wading along the edge of the hole up to his hips. "I'm going to snub him up, it's the only thing I can do." Just then the reel stopped singing, his rod made a pretty arch, then straightened up as the line came back limp and slack, and the big fellow was gone.

"Wasn't he a beauty and all fight," said Dick. "He never gave me a chance to take in line, but kept going right ahead till he got the lot. I'm sorry I lost him, but he gave me a rare bit of sport. However, better luck next time."

"We seem to be in the right neighborhood," said I, as Richard put on a new leader, at the same time making a suggestion that we cross the river, as we could cast into the lower end of the hole better from the opposite side. Accordingly we waded into the riffles, where we had a nice little tussle with the stream, more than once narrowly escaping being swept off our pins ere we reached the other bank.

After a few unsuccessful casts Dick managed to pick up another one-pounder, and before long a fish weighing twice as much came his way after a good struggle. Then we had an hour which was a positive blank, except that occasionally one of us would get a rise; we decided, therefore, to give them a rest while we lunched.

After enjoying a smoke Richard put on a royal-coachman and professor, while I replaced my klootchman with a silver-doctor.

About the second cast I made I hooked a fine fish, which only came to creel after a good stiff 10-minutes' fight. He scaled 2½ pounds.

By this time the sun was begininng to touch the pool, but shining as it did through the tops of the mighty Douglas firs on the opposite bank, there were still some shady spots left, and I soon discovered that casting where these giants threw their broad shadows and letting the doctor swing across a sunny patch, seemed to take the fancy of the beauties, and in a short time I had two more to my credit, 2 pounds and 2½ pounds, and both scrappers of the highest order. Then I had a piece of bad luck, losing a nice one which I judged would weigh about 2½ pounds, and this after playing him for some minutes. He had been poorly hooked.

I began to wonder how Dick was faring, not having seen nor heard anything from him for about half an hour, he having worked up stream to a small hole just around a bend and about 50 yards from me. I hallоed to him, and in a few minutes he reappeared. "What luck, Richard?" "Oh, not too bad; got a couple, but they're not as large as they might be."

His faced beamed with delight as he gazed into my open basket. "Those certainly are dandies, Frank. You've struck the right fly."

Off came his professor and royal-coachman and on went a doctor. "Try a few casts there, Dick, while I fill my pipe," said I, laying down my rod and digging into my pocket for a bit of the weed. Just as I struck a match to light up, I heard the sharp clicking of his reel as a fine fellow made off down stream, and after a series of runs and leaps, lasting about ten minutes, I succeeded in getting him into the net; but as I was wading out of the river to a patch of sandy beach where our baskets lay, the fish, a 2½-pounder, made a last final effort to escape, managed to leap clean out of the net and fell in the water, where he put up another short battle, which I eventually decided in our favor. I should like to know if any of your contributors have ever had an experience of this kind. I always thought it impossible for a fish when once fairly down in the net, to find there anything solid enough from which to make a leap. The net is about 18 inches deep. They were now beginning to take so freely that we decided to have turns at it. While Dick loaded his pipe I made a few casts, and with success, for at the third attempt the doctor found another patient, my friend doing the net trick after I had had a few minutes' royal sport.

So it went, first one of us then the other, till we had taken nine fish from this pool, and but two of them under 2 pounds. Then came a straight half hour without a rise, so I made a suggestion that we go up stream to the small hole round the bend where Dick had been trying the professor and royal-coachman. He acquiesced, and in about twenty minutes we took five there, ranging from 1 pound to 2¾ pounds in weight.

It was now 11 A. M., and we had promised our wives that we would be back in camp for dinner at 12 o'clock. We opened the baskets and displayed the catch on a nice, grassy spot, discussing their beautiful lines and the noble way in which each one had fought. As we waded down stream after crossing the riffles, Dick made one last cast behind a big boulder, which lay in the very center of the river, and away went his line once more. I could see by the way his rod bent and shook that he had hold of something a little larger than any that had come to creel as yet. I stood in the water, landing net in hand, watching the expert way in which Richard handled his reel. "Stay with him, Dick," I said, as the fish made another rush for liberty. Then back came the line, only to be taken out a second later, as the trout put down stream once more.

This fish differed from any of the others, in that he never once showed himself during the fifteen minutes my friend played him, staying near the bottom all the time and fighting like a Trojan.

He tipped the scales at 3¾ pounds.

"That's a fine finish," I remarked, as I dropped him in the basket. "I think we'll call it off," Dick whispered. "Well, who wouldn't?"

As we wound up our lines and put our rods in their cases, we compared this half day's sport with others we have had on this river, and both of us agreed that though we had made heavier hauls, never had we met with such success in landing fish of this size, for a man (fishing in the neighborhood we were in) is reckoned lucky if he lands two out of every three he hooks, and we had managed to bring to creel eighteen out of twenty, with the loss of only one fly and half a leader. So we wended our way back to camp. Our loads were heavy, therefore our hearts were light. We were late for dinner, but no scolding awaited us once our guardian angels had peeped into our baskets. As we lay in the shade that afternoon after partaking of a hearty dinner, sloking our pipes and thinking over the events of the morning, Richard remarked: "I know men on the other side that would give $50 to have the bit of sport we had this morning."

"Well," said I, "though they were not with us in the body, if they read of it they may still be with us in the spirit, so off it goes to FOREST AND STREAM."

At night, when I turned in and all was still, save the harsh cry of the mosquito hawk, I thought that the 9th of August had been a crowning day for Richard and me, as well as King Edward VII.

FRANK RAMSAY.

Russia's Great Fishery Exhibition.

THE International Fishery Exhibition, held at St. Petersburg during the first quarter of the present year, was an event of great importance to the fishery interests of the world. A building 685 feet long and 130 wide, formerly used as a riding school, situated in the center of the city, contained a splendid array of exhibits from Russia, Finland, Norway, France, Japan, Roumania, Siam, Germany, Austria, Denmark, Sweden, Italy, Spain, Egypt, Persia and India; a varied and complete display that was in the highest degree instructive and entertaining. Immediately upon entering the hall the visitor was confronted with an artificial rock grotto, upon various portions of which were perched, in natural attitudes, stuffed sea birds of different species, and overlooking a large aquarium contained within the grotto. Many of the exhibits were disposed upon the walls, as well as in various niches, pavilions, etc., of the building, and arranged with the utmost taste consistent with the observer's ease of inspection. The building held a large open space in its center, inclosing an excavated basin brilliantly lighted with electric light, thus displaying its finny inmates to the fullest advantage; various minor fish basins were also so illuminated, for the principal attendance was during the evening hours, the financial results being satisfactory.

In contemplating the exhibition one was impressed with its remarkable diversity, as well as its completeness; the fullness of the representation of the fisheries included in the vast territories of Asiatic and European Russia being, in every aspect, astonishing. The Russian Imperial Fishery Company's exhibit was a very elaborate representation of the country's piscine resources, and the sight of the Rusian department alone was well worth a journey to St. Petersburg. In excellence and extent it was far and away the dominant feature of the entire exhibition, for the contributions were from the North, the Baltic, the Black, the White and the Caspian seas, as well as from the empire's immense rivers and inland lakes and streams. Although in European Russia alone there are nearly three hundred species of fish, but a small portion have been turned to advantageous account, it is nevertheless stated upon expert authority that from ten to eleven million double hundredweight is the annual yield of the nation's fisheries. In this connection it should be considered that, unlike England and other countries, Russia has no ocean fisheries, her product being that of coast and inland waters, yet despite such circumstance the finny harvest, in weight at least, would seem to be in excess of that of Great Britain. The appliances and methods are often of the most primitive nature, crude and inefficient. There is much waste and destruction, and an insufficient study of the natural conditions contributory to the well-being of the finny occupants of the Tsar's varied waters. The enormous mineral oil traffic of the Volga, the constant multiplication of factories with their resulting refuse, the immense destruction of standing timber, and the consequent fouling of the streams with sawdust, all operate in Russia, as elsewhere, adversely to the fishery interests.

The exhibits were displayed in every variety of form and manner; in the technical department the fish were all exhibited in alcohol; then there were frozen fish, tinned fish, dried fish, smoked fish, fish that were pickled, salted or soused, and finally fish that were alive and swimming in their element. The variety of the modes of production and the amplitude of the exhibits of each particular form of preparation were notable features of this unique undertaking. The exhibit of the Biological Experiment Station on the Volga comprised a great variety of living fish—pike, burbot, perch, carp, roach, tench, etc. Near these were displayed finny folk of greater importance and value, the migratory fish, notably the great sturgeons and the salmons. Of the sturgeons there were half a dozen species, the specimens ranging up to twelve hundred pounds. Some of the uncouth monsters were from the Volga and some from the Kura and Ural, all tributaries of the Caspian. The sturgeon called by the Russians osètre and by Germans Dick, is the chief source of the famous Astrachan caviar, which was shown in various modes of preparation, including the gray caviar, the finest of all, bringing two dollars a pound in the Astrachan markets. A fish of twelve hundredweight may yield from two to three hundredweight of carviar, the capture of such a prize being a veritable windfall. The flesh of one of the species of sturgeon is carefully dried, cut into strips and sold in bundles. This is called wjasiga. That of another, the famed balyki, is sold in masses, cut from the fattest portion of the sturgeon and prepared with salt, pepper and laurel leaves. It is very popular in Russia, retailing at seventy cents a pound. It is also much in demand in Germany, where it is called Storfilet, or sturgeon filet. There was also an exhibition of Siberian caviar, an industry of recent development, but of great promise, for the rivers of Asiatic Russia are among the largest of the world and teem with finny wealth.

The sturgeon, however, that is most highly prized is the famous sterlet, adult specimens from the Devina sometimes bringing a hundred roubles. This exceptional value should afford an ample incentive to its acclimatization elsewhere, but the efforts in that direction have as yet met with but limited success. The sterlets were well represented, appearing as the quick and the dead, in aquaria and frozen upon marble slabs. There were also exhibited sturgeon (*A. baeri*) from the Siberian river Yenesei, in appearance and habit allied to the Caspian osètre. The sturgeon of the Caspian may be thus enumerated. Belouga (*Acipenser huso*), average weight 108 pounds, maximum 2,260 pounds. Sevriouga (*A. stellatus*), average fifteen pounds, is caught in enormous quantities in the Kura River. Osètre (*A. goldenstadtii*), average 30, maximum 108 pounds. Chyp (*A. schypa*), average 54 pounds. Sterlet (*A. ruthenus*), 15 to 20 pounds. The sturgeon fishery of the Caspian and its tributary rivers seems to be inexhaustible, an average of 15,000 a day having been caught in a period of twelve successive days, and though actively prosecuted for over a century, no material decline has as yet been manifested.

It has been maintained that the North Sea is the world's most productive fishing ground, but the claim may be disputed in behalf of the Caspian. The wealth of piscine life in both bodies of water is mainly dependent upon the influx of large rivers loaded with organic matter, which is deposited at no great distance from the point of discharge. The North Sea is scoured by tides that tend to the wide dispersal of the ingathered material, or to its whelming beneath shifting sands; the Caspian, on the contrary, is a closed sea, having no outlet, and receives the flow of the largest river in Europe, beside that of minor streams. It has been found that young sturgeon feed upon animalculæ that in turn derive their subsistence from the masses of vegetable matter borne down by fluvial currents, and there can be but little doubt that the vast amount of organic material deposited in the quiet basin of the Caspian is the source of its varied abundance of aquatic life. The sturgeon fishery of the Caspian and its tributary rivers yields an annual product of about eleven million dollars, the export of caviar alone reaching nearly a million. All the different species of the sturgeon and the many and varied forms of their prepared flesh, including the famous Russian isinglass, were fully displayed.

Next to the sturgeons the Salmonidæ were the most prominent feature of the exhibition, the family being represented in Russian waters more abundantly than in those of any other old world nation, as is shown by the product of European Russia, which reaches a hundred inillion pounds annually. The leading species exhibited was, of course, the common salmon (*S. salar*) of the Atlantic coast, its representatives being the product of the streams emptying into the Baltic and the White seas. There was also to be seen the Caspian Sea species, which is really a sea trout, both the salmon and trout alluded to ranging up to thirty or forty pounds. Great interest was manifested in the contribution by an enterprising fish dealer of Krasnoyarsk, Siberia, of immense salmon weighing from fifty to seventy pounds, the product of the Yenesei, a river declared by one of its explorers to be the largest in the world. This particular species is designated by the Russians *Salmo fluviatilis*, it being purely a river fish, non-migratory, apparently confining itself to the upper waters of the great Siberian rivers, the Yenesei, the Obi and perhaps also the Lena, so much of Siberia being inadequately explored that the extent of the fish's range cannot, with certainty, be defined. In the Danube there is a salmon of precisely similar habit, abiding in the river and never going down to the sea. It is known as the hucho, and has a counterpart in a salmon of the Kura River, a tributary, through the Volga, of the Caspian, to which sea it does not descend.

An explanation of this singular habit would seem to be afforded by the character of the seas that receive the waters of these salmon rivers. The Caspian, into which the Volga pours its mighty flood, is the dried-up remnant of a far larger body of water that, at some time in the remote past, had a connection with the Black and the Mediterranean seas. Its gradual shrinkage and closure not improbably involved changed conditions that unfitted it as an abode for the migratory salmon, which thus became habituated to an entirely fluvial existence. It may also be assumed that the riverine salmon of the Danube owes its change of habit to altered marine conditions. It probably at one period of its racial existence migrated annually to the Black Sea, then joined to the Caspian as well as to the Mediterranean. The geological changes since occurring have apparently greatly changed the character of the Black Sea waters, which, except upon or near the surface, have become destructively poisonous. Its depths are saturated with sulphuretted hydrogen, probably escaping through its bottom, for the amount there found was twenty times in excess of that at fifty fathoms. In its deeper waters there is no vertical circulation; they are devoid of oxygen and therefore of all forms of life. This fact also accounts for the absence of the eel in the Danube, the Don, Dniester and other streams tributary to this morbific sea and affords a confirmation of Grassi's discovery that it spawns at great depths.

The lapse of the migratory instinct in the Siberian salmon is open to a similar explanation, for the rivers that they occupy flow into a body of water that, in the obscurity of the past, was a perennially open sea. When within the Arctic circle a temperate climate reigned and the mammoth was the monarch of its far-stretching forests, the salmon, with each season's round, performed their accustomed journey to the distant deep. But the aging earth grew hoar and chill, the circulation of its extremities feeble and slow, and at last its polar waters, locked in an icy embrace, became rigid and still. Then it was that the migratory salmon, barred of access to the ocean, became permanent residents of the streams that gave them birth. Our landlocked salmon of the New England and Canadian lakes as well as those of Sweden, have become dwarfed, but their river-bound congeners of Europe and Asia are, at least in this respect, undegenerate. The hucho is credited with a maximum weight of 125 pounds, and probably specimens equally large will in time be found in the as yet little known Siberian rivers. The largest weight attained by a sea-going salmon was that attributed to a specimen caught in Oregon waters, a quinnat of 100 pounds. It is probable that the fluvial salmon alluded to owe their excessive proportions to an easily obtained and abundant sustenance; undisputed masters of the waters they occupy, they levy without let or hindrance their alimentary toll.

The riverine seclusion of the Siberian salmon perhaps points to an approximate limit of the marine journey of the species in general. The salmon of the Yukon probably voyage a thousand miles of the Behring Sea, the passes of the Aleutian Islands and the neighboring ocean waters before finding their abiding place in the great Pacific. In the Mackenzie, a river discharging into the Arctic to the eastward of the Yukon, and perhaps equal to it in volume, no salmon appear to be present, its mouth not improbably being too far removed from habitable ocean waters to admit of the salmon accomplishing the

journey. The fish that tenanted this Arctic stream when, beneath a genial sun, it coursed through verdurous banks to an hospitable sea, have become extinct, circumstances evidently not favoring their change of habit as they did with their brethren that ages ago found themselves held captive in the tributaries of the Asiatic Polar Sea.

A special biological expedition, despatched by the Russian Government, to explore the northeastern portion of Siberia, exhibited its ichthyological collection preserved in alcohol. Among the many specimens were the familiar salmon of our Pacific coast, that, in their annual migration, pack the streams of Corea, Kamschatka, Saghalien, etc., as densely as they throng our own. Wonderful tales are told of incoming masses of salmon, causing rivers to overflow their banks, to render them impassable to boats and to make their waters undrinkable, all of which, in the light of our Alaskan knowledge, is credible. The salmon fisheries of northeast Siberia will at some future time equal, if not surpass, our own in volume and value, but, were the Russian Government disposed to throw them open to American enterprise and capital, their full development would be of speedy accomplishment. The policy adopted in the Caspian of farming out large areas, under proper restrictions, to the most acceptable bidder, will doubtless be applied to the Pacific fisheries and their due conservation be promoted in conjunction with an access of revenue.

Fish and Fishing.

Striped Bass in the St. Lawrence.

SOME exceedingly good sport has been enjoyed within the last few days among the striped bass of the St. Lawrence. These fish ascend the river to the neighborhood of Quebec, but are not usually taken by angling nearer to that city than Madame Island, which is some little distance below the Isle of Orleans. On account of the distance from Quebec, and because of the necessity of securing boats for the sport, few, if any, visiting anglers attempt to indulge in it, and though large catches have been made since the opening of the month, the fishing is done in the crudest possible manner. There are no suitable piers, as in the neighborhood of New York, whence fly-fishing or trolling for striped bass is possible, and most of those who take the fish in the St. Lawrence, do not even use a rod, but content themselves with a coarse hand-line, which they cast from a schooner or other boat, in coils, and when a fish is hooked, they haul it in hand over hand. The local name of the striped bass is "bar," and large quantities of it are captured by commercial fishermen for the local markets. The water about Madame Island is quite brackish, and as so many American anglers are passing through Quebec in the month of September, I do not see why excellent sport should not be had by them with the striped bass of the St. Lawrence, if they care to experiment with rod and line, from boats which may be chartered, with their crews, either at Quebec, or at some of the small river ports on the south side of the river, opposite to Madame Island, all of which are reached by the Intercolonial Railway. The majority of the fish taken there are small, but some of them weigh as much as twenty pounds each. The baits employed are minnows and young herrings, and there is no trouble in obtaining them.

Canadian Tuna.

The recent references in FOREST AND STREAM to the possibility of catching the tuna of North Atlantic waters with rod and line have stirred up a number of the American anglers who come to Canada for their salmon fishing, and it is more than probable that next season will witness the effort on the part of some of them to kill the big fish in Canadian waters. One gentleman who fishes the Cascapedia took a run down to Gaspé this summer before returning home and made complete inquiries as to the tuna of Gaspé basin, with the result that he is perfectly certain that there is nothing to prevent successful sport there, and that next year he will come prepared to try it. There are professional fishermen at Gaspé who are quite ready to go out with anglers anxious to fish for tuna, and there is also a report that a gentleman still living in this province succeeded some years ago in killing one of these fish in the Gulf of St. Lawrence or the Baie des Chaleurs with rod and line. The matter is being investigated, and I expect to be shortly placed in possession of all the facts.

A Fishing Admiral.

Sir Archibald Douglas, K. C. B., commanding His Britannic Majesty's North American squadron in Atlantic waters, is a fishing admiral. This term may perhaps require a little explanation, in view of the fact that there were fishing admirals who have figured in history. Two hundred years ago there were fishing admirals in Newfoundland—plenty of them. The itle was then bestowed upon a number of illiterate skippers, to whom judicial authority was entrusted upon the west shore of the island. One of Newfoundland's historians describes these fishing admirals as "clothed, not in the simple and sober black of the police magistrate, but in his ordinary blue fishing jacket and trousers, besmeared with pitch, tar and fish slime, his head adorned with an old sealskin cap, robbed from an Indian, or bartered for a drink of rum and a stick of tobacco. The sacred temple of law and equity was a fish store, the judicial seat an inverted butter firkin. Justice was freely dispensed to the suitor who paid the most for it. In the absence of a higher bribe, his worship's decision was often favorably affected by the judicious presentation of a few New England apples. The litigant who commenced his case with the production of a flowing bowl of calabogus (composed of rum, molasses and spruce beer) captivated the judicial mind most effectually. Sometimes, alas, the dignity of the Bench was diminished by the sudden fall of the court prostrate on the floor, overcome by the too potent effects of new rum and spruce beer. One of the most remarkable go the fishing admirals who rejoiced in the title of "the Lord High Hadmiral," and who was the agent of the great Englsh fishing house of the place, was once called down by a superior officer for having given a number of judgments in favor of his own firm. Quite unabashed, he replied, "Well, I must be a pretty sort of a fool of a judge if I could not do justice to myself."

The fishing admirals of the present day are very different from those of two hundred years ago, but the name, which it naturally occurs to an angler to apply to them, suggests at once a reference to the rascally adventurers, who being the first skippers to bring vessels into a Newfoundland port, became, in virtue of a statute of William III., "of pious and immortal memory," the absolute rulers for the season. The first arrival was admiral for the year, and was allowed to take as much of the beach as he chose for his own use, the masters of the second and third vessels arriving at the same harbor, being vice-admiral and rear-admiral, with similar privileges. When these worthies had helped themselves, if anything was left, the unfortunate fishermen might obtain a scrap.

Admiral Douglas, during a recent visit to Quebec, enjoyed magnificent sport among the trout of the Montmorenci, at Laval, a few miles north of the city. He is also a devoted salmon fisherman. In this sense it is not surprising that Sir John Hopkins and many other of Admiral Douglas's predecessors, were also fishing admirals. Stationed, as they are, near the best salmon waters in the world, it would be strange if it were otherwise. Turning over the leaves of a number of old angling books with Sir Archibald the other day, I was surprised to learn from him that though a native of Quebec, it was only comparatively late in life that he became a fisherman. He has made up for lost time since, however, and I shall not be surprised to learn that in the near future we may be indebted to Admiral Douglas and some of the officers of his fleet for reliable information respecting the nature of the fishing to be had in some of the far distant salmon rivers of the Labrador coast. Few ordinary mortals possess the means that these officials do for visiting at will any or all of these little known streams.

After Ouananiche and Trout.

By the time that these lines appear in print the ouananiche season will be practically closed, the open season lasting only to the 15th inst. It is unfortunate for anglers that this is so, for September is the finest month of the year in Canadian woods, and while the trout season lasts until the end of the month, there is no doubt whatever that the ouananiche are later spawners than *fontinalis*. Some very large catches of ouananiche are being made at present writing in the upper waters of the Grand Discharge and also in Lake St. John itself, in the vicinity of the islands about the head of the outlet. Both fly-fishing and trolling are excellent, especially the latter. The best of this sport, however, has fallen to the lot of a party of visiting anglers from the United States, who spent last week on the lower pools of the Metabetchouan, and enjoyed some of the grandest fly-fishing ever reported from these famous waters. Included in the party were Dr. F. M. Johnson and Mrs. Johnson, of Boston, and Mr. and Mrs. Eugene McCarthy, of Syracuse, N. Y. They have now gone to Lake Edward after both big trout and big game. Mr. and Mrs. A. H. Porter, Jr., of New York, are also at Lake Edward for the fly-fishing in the adjacent lakes, and Dr. Geo. L. Porter, of Bridgeport, who is now on the preserves of the Bostonnais Club, expects to join them in a few days. All the club houses along the line of the Quebec and Lake St. John Railway are rapidly filling up with anglers who are after the September trout fishing. Their expectations are great, because the fishing hitherto this season has not been extra good, the perversity of the weather having been something quite unusual.

Among the other well-known anglers now encamped on the Triton Tract are Messrs. Geo. H. Hart, E. L. Frisbie, Harry Chase and E. Wade, of Waterbury, and Gordon W. Burnham, of New York.

E. T. D. CHAMBERS.

Michigan Grayling Streams.

SAGINAW, Mich., Aug. 30.—*Editor Forest and Stream:* I inclose an unmounted photograph of four grayling, the real, genuine Michigan grayling. This was taken on the recent trip which Mr. Hough so pleasantly described. His account of this trip was a practical one. To me, the taking of these last of the Michigan grayling is filled with sentiment and remembrances of old times. I remember my first grayling when I camped on the Au Sable with my father and mother and a dear old aunt of mine, and I had the good fortune to take my first grayling, a fish about 12 inches in length. Thad Norris and Uncle Dan Fitzhugh were on the stream at that time, and I know they had a hearty laugh at my enthusiasm over the taking of this, my first grayling.

I imagine I love the grayling more than almost anyone else does, for it brings back memories of my father, one of the most gentle of anglers and a thorough sportsman. When I was a mere boy—and that is more than thirty-five years ago—I recollect one of the land-lookers, Jerry Day, coming back and reporting to father of this unknown fish in the Au Sable River, and my father got down his old copy, I think, of Frank Forester's Fishes, or some other old book, and picking out Back's Arctic Grayling and pointing out to me the fin of that fish, and saying he was certain it was the same fish in the Au Sable River.

The grayling brings back memories of Fred Mather, a friend of many years standing, and Charles Hallock, who has fished with me and my father in years gone by; Dan Fitzhugh, Len Jewell and Charlie Fitzhugh, who were all good enough to take me with them when I was but a mere youngster. So our recent grayling trip meant a good deal to me.

The fish from which this picture was taken ran from 12 to 14 inches in length, and the picture was taken four days after the fish were taken out of the water. They had been cleaned and much mussed up, as is readily seen. But they were the same grand old fighters as of old, taking the fly delicately and gingerly, and the instant they were struck they would make that grand diagonal rush of theirs that no other fish can equal. For their size they fight with terrific force, and when they give up, they give up completely. I love the smell of the thyme, from which they get their name, the beauty of their fins; their symmetry and color both delight the sportsman and naturalist and the lover of nature.

It is a shame they cannot be kept forever in the streams of Michigan, where they were native and to the manor born.

The largest grayling I ever took was on the little Manistee River years ago, when I went in from Wingleton. One and three-quarter pounds is the weight of the fish I have taken on that stream repeatedly. I have heard of larger fish, but with an accurate scale, I do not believe that any have gone beyond that weight.

There are a few grayling left in two streams in Michigan. In one of these streams, the Manistee, they could be saved if properly protected; in the other stream, where Mr. Hough fished with us, they are surely doomed, for it is bound to be a trout stream, and that means, eventually, no grayling.

W. B. MERSHON.

The Ruling Passion Strong in Death.

ELIZABETHPORT, N. J., Sept. 3.—While fishing a few days ago for Oswego bass at Budd Lake, N. J., I saw something which I had never seen before. A friend of mine who was also fishing near me and had caught two fair-sized fish, lifted the lid of the live box in his boat and called me to look at his fish.

The larger one had apparently tried to eat the small one, and had its whole head in his mouth, but that taxed him to his full capacity, and he could get him no further down, while the small fish could not get away. I did not learn the weight of the fish, but should judge that the large one would weigh over four pounds, while the small one was more than half as big.

I know that when free, fish will eat each other, but I have never before known a fish confined in so small a space as the live box of a rowboat to undertake to eat a fellow captive.

The small fish was rescued from the big one and both were placed in a large fish box at the boat house and were taken out very much alive some days afterward. Perhaps this may interest some of your readers who have heard of or seen similar cases.

L. L. BURRITT.

A party—Mr. and Mrs. Herman B. Duryea, Messrs. William C. Whitney, Harry Payne Whitney, and Yale Dolan—sailed for Liverpool on Friday of last week. They contemplate a pleasant participation in the autumn shooting in Scotland.

CHICAGO AND THE WEST.

Very Large Small-Mouth Bass.

CHICAGO, Ill., Sept. 6.—Mr. H. C. Sefton, of Mt. Vernon, O., incloses a clipping from a local newspaper with this comment: "This is taken from yesterday's Mt. Vernon Republican. I know the man and saw the fish, and the account is true, and therefore worthy of publication in the FOREST AND STREAM. The bass was a small-mouth. There are no large-mouth bass in the creek here." The clipping referred to reads as follows, and the record seems to be authentic:

"The largest black bass ever caught from a stream in this part of the State was landed by Mr. John Bunnell, Thursday morning, from the Kokosing. The fish, which tipped the scales at seven pounds and fourteen ounces, was pulled out of the water near the Slidey Bridge. Mr. Bunnell is very proud of his fine catch and has been exhibiting the fish at the Bunnell shop on W. Front street. Many persons who heard of the fish being landed doubted its weight until they saw its size.

"A number of persons who are interested in fish and who read much in regard to the finny tribe, state that they never saw any account of a larger black bass than this one being caught in Ohio waters. Mr. Bunnell had the big fellow photographed Thursday afternoon.

"The fish was caught on a hook and line, the bait being a minnow. Bunnell set several poles and lines Wednesday night. The big bass had floundered about in the water and tangled all the lines in a mass. It was still alive when Bunnell pulled the lines in Thursday morning. The lucky fisherman was so much excited, however, that he let the fish fall from the bridge, the fall killing it."

Trout on the Two-Heart.

Messrs. J. M. Oliver and son, F. N. Wood, John B. Knight, Edgar M. Snow and B. N. Schumacher, all of Chicago, have recently returned from a two weeks' trouting trip on the Two Heart River of Michigan, Upper Peninsula. Mr. Wood is a newspaper man who does not go fishing as often as he would like to. He tells me that he had a most delightful time, and that the party were successful quite up to their expectations. They did fly-fishing altogether, and had grand sport, this being one of the streams fed largely by the brook trout which run up from Lake Michigan late in the summer. Mr. Wood took one trout which weighed 3½ pounds, the fly being silver-doctor. He says the party did not kill their fish, but kept them in live boxes, and on coming out turned loose something like sixty or seventy-five pounds of trout, which were living and unhurt.

Chicago Fly-Casting Club.

Opportunity will be given this afternoon and to-morrow morning to all members of the Chicago Fly-Casting Club to bring up all their unfinished records. This is the last opportunity for re-entries this summer, and should appeal to those members who have not completed their scores.

Hair Leaders.

Mr. John Norman, of Montreal, writes to me about my experience with the Mississippi River bass, saying: "If you had used some of my hair leaders you would have secured nearly every bass you hooked. The advantage of the hair leader is that it will stretch when wet and this relieves the strain on the hook. I caught six small-mouth bass this month at Round Lake, on trailing flies, the first on record caught on the fly in that lake. These were the only bites I had, and I missed none."

I am obliged to Mr. Norman for the sample of the hair leader, but I very much fear that it would not wholly solve the problem of the Mississippi River small-mouths, although it might materially aid therein.

Fishing in Iowa.

Mr. R. L. Blair, of Des Moines, Ia., writes pleasantly and with the spirit of an angler in his letter, which follows:

"I don't think you ought to publish such articles as the one in this week's FOREST AND STREAM about that trip after grayling. It will make many men wild because they cannot go and do likewise. It's a sin to excite envious feelings in others.

"What pleasure that trip must have been—good company, good weather, plenty of the rarest fish, good camp and everything fine! I'll wager you didn't feel tired, didn't know you were wet. What are city pleasures or enjoyments compared with such an excursion as that?

"I also enjoyed the story about Mississippi River bass, and know something about that myself, for fifty years ago as a thirteen-year-old lad I began yanking bass and wall-eyed pike out of that stream with a cane pole. I didn't know anything about a jointed rod then. Our best time was in early spring, when the fish were running up stream. Taking our stand on a point of rocks jutting into the river, where the water ran swiftly, the fish ran by in schools, and bit eagerly, so it was no trick at all to get a good string. In September and October the fish went down stream, fat and luscious.

"People of the inland districts of Iowa have not enjoyed any fishing at all so far this season. When the close of the season expired May 15, the rains began, and have kept it up all summer, our rivers have been high and muddy ever since; no game fishing at all. Catching mud cats isn't much sport. The rivers being high all summer, fish have had a good chance to get over numerous obstructing dams, so that when the summer rains are all over and our streams have become clear, we anticipate having good times after bass, wall-eyes and pickerel, not excluding channel cats nor game fish.

"We do not in Central Iowa expect much quail hunting, as the excessive rains all summer have doubtless drowned the young broods. Very few are seen except old birds left over from last winter. I suppose we will have our greatest fun the coming winter after cottontails."

I have often had occasion to deplore the deterioration in the angling streams of Iowa, where many years ago I used to fish with great success. Since then the close farming of the State and the absolute disregard of the average Iowa citizen for the fish and game laws has made Iowa pretty near a wilderness so far as her game resources are concerned; that is to say, a wilderness where there is nothing but the abomination of desolation, caused, as Mr. Blair says, by dynamite, spears and all uncleanliness.

A Colorado Bass Lake.

Mr. Vernon McKelvey, of New Windsor, Colo., writes to call attention to the fishing place which he has upon Windsor Lake, Colo., adjacent to Windsor. This lake was stocked with black bass some years ago, and fish are now taken there weighing as much as five pounds. Mr. McKelvey adds that the finest bass fishing in Colorado can be had here, and it is the intention to keep up the stock of fish. It is stated that the yellow perch planted in this lake some years ago have attained a size really enormous for that species, some of them having been taken sixteen inches in length. Windsor Lake is within a couple of hours of Denver, and is still closer to other centers of population. One would hardly expect to hear of bass fishing in Colorado, but this is a progressive age.

Luck on the Flambeau.

Mr. Byron S. Veatch, of this city, is just back from a trip on the Flambeau River of Wisconsin, which he made with his friends, Mr. Jones, of Louisville, Ky., and Dr. Benze, of St. Paul, Minn. They ran the Flambeau for about fifty miles, including three or four pretty stiff rapids, and had splendid success in fishing for small-mouth black bass. Mr. Veatch took some muscallunge also while casting for bass, nothing over 11½ pounds, however. He says the Flambeau is an ideal stream for a trip, the woods being almost unbroken by lumbering operations, the pine hardly being missed in the various growth of oak, maple, spruce, birch, etc., which now lines the high bluff banks. One can start in near Fifield, on the Wisconsin Central line, and run down to Ladysmith on the Soo, making a trip of about seventy miles; or he can keep right on down the Flambeau into the Chippewa, running that stream down to Chippewa Falls, or to its mouth near Wabasha, Minn. The Chippewa and Flambeau drain a great part of the Wisconsin muscallunge country; indeed, all of that undrained by the Wisconsin, these two systems being the only ones by which the muscallunge ascend into these lakes from the Mississippi River. Mr. Veatch says he is going up in November for a deer hunt, as deer are very abundant in that region. He has a cottage on the Mason chain of lakes near Fifield, and thinks this the best place in the State for a cottage, since shooting, fishing and pleasant scenery are all directly at hand. He says the Flambeau small-mouths are fighters from the word, and make him disgusted with lake fishing for big-mouths. He caught seventy-two big-mouths in a Minnesota lake one day, but says a half-dozen river small-mouths are worth the lot.

E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

New England Waters.

BOSTON, Sept. 6.—The big-game season is open at the Megantic Preserve. D. D. Davis, of New York, brought in the first deer, reaching the club house at 1:40 o'clock on the opening day, Sept. 1. A. B. Kellog, who got the first deer last year at the preserve, played Mr. Davis a good second. The camps are full of members and guests, all anxious to get a good share of the first shooting, and the late fishing as well; the particularly fortunate position of the preserve permitting both, being partly in Maine and partly in Canada. At the preserve are the following nimrods: William B. Lawrence and family, of Medford; A. W. Gleason, Mr. and Mrs. T. C. Camp and D. D. Davis, of New York; John E. Crowley and W. R. Buckminster, Boston; Mr. and Mrs. Gaston Sherer, Newton; Dr. and Mrs. T. J. Smith, Valley Falls, R. I.; Mr. and Mrs. H. A. Briggs, Pawtucket, R. I.; D. S. Draper, Wilton, N. H. Mr. L. O. Crane is back to Boston, but will soon go to the Upper Dam with Mrs. Crane for the late fall fishing. Mr. C. H. Tarbox, of Byfield, who is always interested in shooting affairs, says that quail are remarkably plently in his section of the State. He remarks that there are numerous flocks, which promise good shooting on the opening of the season, Oct. 1. Word has been sent to the game warden of that section to "look out" for such hunters as would be willing to shot every one of the birds before the opening day, if they dared. Some shore-bird shooting is being done along the Essex marshes and at Plum Island, but so far the bags have been small. Now the gunners are expecting the autumnal storms to set the birds flying.

Mr. Howard W. Brandenburg is getting to be the champion bass fisherman of those who go out from Boston for a day, for lack of time to go further. Labor Day he went up to Wayland again and caught 23 bass and 6 pickerel. There were a number of others fishing along the river, but they caught few or none. Mr. Frank H. Stuart has been up to New Hampshire fishing for landlocked salmon again, in some stream. He does not say what stream, nor where, but says that the small salmon are more lively than trout even, rising freely to the fly and taking almost any sort of bait. He remarks that somebody suggested that it is against the law to catch the small salmon where he fished. But he fished with one of the judges of the Supreme Court, and is willing to leave the question of legality to him. Mr. W. J. Follett is back from the Inglewood, with Mrs. Follett and his boys. He found rather poor trout and salmon fishing; even on the very locations where his son had had good sport only a few days before. Late in the day the trout would rise occasionally, but generally at ponds so far away from the club camps that the return had to be made with lanterns, over uncomfortable trails. One evening he got eight good trout, and at another time a dozen. None were very large.

At the Maine State Fair this week they showed several curiosities. Mr. J. T. Stanley, who has charge of the hatcheries at Lake Auburn, and Commissioner Henry O. Stanley were in attendance. The latter called attention to several albinos, or fish all white; "a freak of nature." Then came the hybrids, a cross between the salmon and the trout. These hybrids were represented in the tank by a large fish of five or six pounds' weight. Mr. Stanley says that they are found native only in Flood's Pond, in that State. The largest fish in the exhibit were a brown trout and a landlocked salmon, both of about 10 pounds' weight, and both raised at the Lake Auburn hatchery.

BOSTON, Sept. 8.—Some of the returning anglers have had good sport, although the late season, as a whole, has not been entirely satisfactory. Mr. Walter L. Hill, who has recently returned from the Pond-in-the-River, below the Middle Dam, Richardson Lake, speaks of good sport, although he was late and the weather rather warm. He was accompanied by his two boys and little girl. One day they started for B Pond, crossing from the Pond-in-the-River camp in a boat. They had been casting without much success, and Mr. Hill suggested to the boys that they let their flies drag on the surface. Quickly there was a splash, and the son exclaimed: "I've got a big one!" In an instant there was another strike and a second salmon went into the air, hooked to the same rigging. Then the two salmon commenced leaping and darting; over and over each other, and out of water. Mr. Hill well knew that one or both must be lost, though cautioning the excited boy to do his best. Soon one salmon cleared himself, when the other was more easily handled and brought to the net. It was a handsome fish of over three pounds. Mr. Hill says that the other was the bigger fish, and that if one wants genuine angling sport, he has only to get two good-sized salmon on his rigging at once. Earlier in the season he had a peculiar experience with trout, when camped at Big Richardson Pond. Faithfully he cast over the best spot at the Inlet, but not a rise. He kept at it nearly all the forenoon, trying all sorts of flies. His guide ws discouraged, and Mr. Hill suggested that he go ashore and prepare dinner. This was done, but Mr. Hill was not to be beaten too easily, and went back to the same spot to try while the dinner was under preparation. Almost the first cast he made a handsome trout took the fly with a vigorous leap out of water. He was soon brought to the net, and weighed about 2½ pounds. Casting was resumed, and quickly there was another rise, and soon another fine trout was landed and killed. "All we could eat," Mr. Hill remarks. He is an angler with the fly only, and never kills any fish not wanted for food immediately. But the fishing was too good to be abandoned just then, although the guide was calling him to dinner. He made a few more casts, when there was another splash, with a big trout hooked. This one it took more time to conquer, and when brought to the net it weighed plump four pounds. But this noble fish was not to be killed; only shown to the guide. The net was tied around it, put over the side of the boat, and the angler started to show his guide what he had done, while that functionary was getting dinner. The guide came down to the boat: "Wall, you've done well!"—seeing the two dead trout in the boat. "But," said Mr. Hill, as he held up the big trout struggling in the net, "you hoodooed me completely. I cannot catch trout with you in the boat." The guide took this good-naturedly, and the big trout was allowed to depart, for some other fellow to catch. They had fried trout for dinner.

There are stories of great bass fishing at Belgrade Lake. New York sportsmen seem to be most in evidence there. Frederic D. Moore, Dr. Fellows Davis, Jr., and Girard Thompson make up one of the most successful parties; the smallest number of bass they have taken in one day being 58. On Thursday the party caught 88, the largest weighing 3½ pounds. Of course, most of these fish are returned to the water.

Fly-fishing has changed for the better at the Rangeleys and Moosehead. R. N. Parish, the champion angler of the Pool at the Upper Dam, is back there again, for the late September fishing. Since his arrival this time he has landed salmon up to 5 pounds. At Haines Landing, A. J. Wormelsdorf, of Philadelphia, made a good catch the other day, including 15 trout and salmon, running from 1½ to 3 pounds weight. All were taken on the fly. G. P. Luper, of New York, has also taken a salmon of 3 pounds on the fly.

SPECIAL.

Three Twists of the Wrist.

COOL water can be carried all day and plenty of it in a can two feet long and five inches wide clipped to the middle reach of a wagon, where it is out of the way. Inclosed in a leg of old trousers, with a case made of wooden slats put in a spigot, wet the woolen and drive on. Always cool and out of the way.

The gun falls down in the wagon and rolls all over the boat. Make a socket like a heel pad used to lengthen stocks out. Make it of stiff leather; rivet thongs on it on the bottom or tie side fast. Presto! you never mar the stock and the gun stays right where you put it, and you can slip it out in a flash if the socket is made right.

Put a Dietz carriage lamp on spur dashboard, boat or camp. Result, a big light that will not blow out that burns common oil. No globes to break or chimney to clean; a light you can see as far as an engine headlight. These things are all most mighty good and handy, and cost little.

PINK EDGE.

Otters and Carp.

KISSIMMEE, Fla., Sept. 5.—*Editor Forest and Stream:* Your issue of this week has an article on "Carp in the Susquehanna," Mr. England asking for a remedy. It might be of interest to him to know that others would readily find a good use for those same carp.

In fact, in looking for a food supply for otter farming, I selected the scale and leather carp, and had the United States Fish Commission to send a supply of both kind, which were placed in two lakes.

The otters, of course, do their own fishing, and are content with eating the choice parts where the supply of food is abundant.

J. M. WILLSON, JR.

Her Biggest Catch.

The Mutual Friend (to athletic woman)—Now, Mrs. Stebbins, what was the largest fish you ever caught?

Mrs. Stebbins—It weighed 140 pounds, but I don't remember its name.

Mr. Stebbins (feelingly)—I do; it was John Stebbins. —Colorado Springs Gazette.

Points and Flushes.

Mr. Geo. Raper, of All-England, arrived in New York on Thursday of last week, his object being to judge at the Toronto bench show. He contemplates a return to the United States later to judge at the Ladies' Kennel Association show, Madison Square Garden, in October.

Yachting.

Yachting Fixtures, 1902.

Secretaries and members of race committees will confer a favor by sending notice of errors or omissions in the following list and also changes which may be made in the future.

SEPTEMBER.

11. New York, autumn regatta, New York, Lower Bay.
13. Knickerbocker, ladies' day race, College Point, L. I. Sound.
13. Kennebec, club, Bath, Maine.
13. Beverly, seventh Corinthian, Monument Beach, Buzzard's Bay.
13 Atlantic, fall regatta, Sea Gate, New York Bay.
13. Larchmont, club, Larchmont, Long Island Sound.
20. Manhasset, Y. R. A. of L. I. S., open, Port Washington, Long Island Sound.
20. Y. R. A. of Gravesend Bay, Sea Gate, New York Bay.
—. Seawanhaka Corinthian, club, Oyster Bay, Long Island Sound.
27. Riverside, Y. R. A. of L. I. S., open, Riverside, L. I. Sound.
—. Manhasset Bay, club raceabouts, Port Washington, L. I. Sound.

For Cruising Yachtsmen.

WITH the purpose of stimulating the interest in cruising, and the keeping of a detailed log by cruising yachtsmen during the season of 1902, the publishers of FOREST AND STREAM offer prizes for the best stories of cruises submitted to be published in FOREST AND STREAM. It is believed that these will form not only entertaining records of pleasant summer days spent afloat along our coasts and waterways, but will furnish information of practical value to other yachtsmen making subsequent cruises on the same waters.

Prizes will be awarded to the three best stories as follows:

First prize, $50.00.
Second prize, $30.00.
Third prize, $20.00.

Contributions are invited under the following conditions:

1. The cruise must be made in waters of the United States or Canada in the season of 1902.

2. The cruise must be made in a sailing yacht, power to be used only as an auxiliary, if at all.

3. The story must be prefaced by a description of the boat. Cruises should be treated in as interesting and readable a way as possible, but should be practical and contain all possible information and data that would be of value to men going over the same route. A description of the handling of the ship in all weathers will be regarded very favorably in making awards, and it is suggested to writers that an accurate account be kept of all incidents happening while under way.

4. An outline chart suitable for reproduction, showing the course taken, must accompany each article. When possible, articles should be accompanied by amateur photographs taken on the cruise, including one of the boat. Good photographs will be considered in making the awards.

5. The story should contain about seven thousand words, written on one side of the paper only, and must be received at the office of the Forest and Stream Publishing Company, 346 Broadway, New York city, on or before Nov. 15, 1902.

Mr. T. C. Zerega has very kindly consented to act as judge and to make the awards.

The Lawson History of the America's Cup.

Editor Forest and Stream:

It may be remarked at once that this book is one of the most important contributions to yachting literature ever published; a book, in fact, that no one interested in yachting matters can afford to leave unread. Whether one agrees with Mr. Lawson's many statements and opinions or not, the fact remains: that Mr. Winfield M. Thomson has presented the best history of the America's cup that has appeared.

The book is 12 x 8 x 2½ inches. The text, paper, illustrations and binding are an excellent example of the book-maker's art; indeed, no work on yachting has ever been seen in a form so beautiful and luxurious. The index, also, which obviously, has been prepared with care, is unusually complete.

For review purposes the book may be divided into three parts: the first part, relating to the yacht America; the second, to the various matches sailed for the Cup between the years 1870-1901; and the third, which Mr. Lawson terms "Independence episode," embracing his differences with the New York Y. C. in the defense of the America's Cup.

Admirable is the first part, giving as it does a clear connected narrative of the building, the equipment and the voyage of the America across the Atlantic; her exploits in England while under American and British ownership; also her subsequent career. All this part is of great value to everyone that is interested in the subject, as a large number of letters, extracts from a journal kept by James R. Steers, quotations from newspapers—published contemporaneously with the events they record—also some excellent illustrations—reproduced from pictures executed at that period—are therein given. Evidently the finished product is the result of much literary skill and laborious research, and the wise method of the author in quoting ad libitum precludes errors, so that very few occur throughout the book.

The author, however, states that the America was the first yacht to cross the Atlantic Ocean in either direction; this is, of course, a mistake, as a number of yachts crossed and recrossed the Atlantic long before the America was built. It is also stated that the Pearl, owned by the Marquis of Anglesey, was the first vessel to have the distinctive cutter rig. At the date of the building of the Pearl—1820—there were—and had been for many years—a large number of cutters rigged exactly like the Pearl; yachts, revenue cutters, pilot cutters, cutters attached to the Royal Navy, privateers and smugglers. The first cutter that was owned in England, of which any record can be traced, was captured from the French during the eighteenth century, so that the cutter rig did not, as has been generally supposed, originate in England.

Among the slight omissions that occur, the author—while drawing attention to the really remarkable coincidence between Friday and the 13th day of the month, in connection with the America's Cup—does not mention that the first news received in the United States—though erroneous—as to the result of the race at Cowes, was brought by the Cunard S. S. America, which arrived from Liverpool at Halifax; the said news, as perhaps a few yachtsmen may remember, was telegraphed to Boston that the America, though coming in first, had been disqualified for not sailing the proper course.

Nor is mention made of a service of plate, commemorating the America's victory at Cowes, which was presented to George Steers by the leading shipowners, shipbuilders and merchants of New York at a banquet given to him at the Metropolitan Hall, and attended by four hundred citizens. The author, however, properly awards Mr. Steers full credit for the design and actual building of the America. Throughout he is just and impartial, and the errors and omissions that occur are so slight it would seem almost ungracious to mention them.

The reproductions, in the main, are excellent, though, in the first part some of the originals have not the same excellence as the text, and have not been selected with equal care and skill.

In the illustration representing Queen Victoria's visit to the America, giving a view of the America's quarterdeck, stern on, with figures grouped near the after companionway, a massive steering wheel appears prominently in the foreground; this, of course, the America did not have nor require, as she was a vessel of normal type, and was so beautifully designed and balanced that a boy might have handled her slender tiller; and it was only when she was overdosed with lead, spars and canvas—ruined, indeed—that a steering wheel became necessary. Hence, it may be inferred that this drawing from which the illustration was made was of recent date.

The portrait of the America also appears modern, and is by no means the best; whereas the portraits by Dutton, Brierly, Robins and Gregory, which are far superior, should have been chosen from. Then the one selected would have had the additional merit of having been executed when the America was in the zenith of her renown.

The same may be said of the portrait of the Maria; the picture of her painted by Butterworth under the personal supervision of Commodore Stevens, being far better; also the one painted by Robins being much better than the one reproduced.

The lines of the America, taken from Marret's Yachts and Yacht Building, leave much to be desired, as they are lacking in the grace, unity and beauty that were especially peculiar to her, and were inherent also in a very high degree in every vessel designd by George Steers; they are not so accurate as those that appeared in the Nautical Magazine, or Griffith's Naval Architecture, and do not compare with her lines, which were taken off by a French naval architect when the America was dry-docked at Havre previously to her arrival at Cowes; on the other hand, it is only fair to remark that the portraits of George Steers, Commodore Stevens, the Royal Yacht Victoria and Albert, Brilliant, Pearl and the America in a gale are from well-known and excellent originals.

In the second part of the book the author takes his readers skillfully over some thirty years of America's cup-racing and other matters of kindred interest. Many pleasant and exciting scenes are herein so vividly portrayed that yachtsmen still living may, in these pages, revisit them with something of the old keen feeling of delight; while to the younger generation of yachting men they cannot prove other than an inspiration.

Naturally, this part of the book has not required the extended research that is devoted to the first part; nor from the nature of the subject will most readers consider it so interesting, notwithstanding all the facts relating to the contests for the America's cup are clearly and accurately recorded, and in an interesting and impartial manner, making it by far the best record of this era of yachting history that has been published. It also must prove, as time goes on, a valuable source of reference.

Had the book closed here, Mr. Lawson would certainly have deserved, and no doubt would have received, the gratitude of yachtsmen generally for this splendid history of the America's cup—of greater and more enduring value to yachting than the building of an expensive and comparatively worthless cup defender.

Unfortunately, Mr. Lawson has permitted himself to be lured into that most delusive of snares: airing personal grievances in print. At the same time, Mr. Lawson's grievance against the New York Yacht Club cannot and should not be ignored. For he is justly entitled to be met fairly and squarely upon his own ground, without malice and without evasion.

In the opening lines of the Introduction, Mr. Lawson makes this statement:

"The America's Cup—won at Cowes from an English fleet, Aug. 22, 1851, by the schooner America, presented as an international challenge trophy to the American people in 1857," etc.

Here, then, in a few words, is the whole issue: if this cup was presented as an international challenge trophy to the American people in 1857, as Mr. Lawson asserts, then he is clearly right in his contention that his yacht or any other yacht or vessel, owned and built in the United States, has a right to defend it.

The only source from which reliable information upon this question can be obtained, is the original Deed of Gift, executed in 1857. A document drawn by gentlemen, for gentlemen, and while, like most deeds, perhaps somewhat ambiguous when subjected to legal scrutiny, is sufficiently clear to all yachtsmen who wish to understand its true meaning.

This cup, as is generally known, was conveyed to the keeping of the New York Yacht Club as its first trustee, and, according to the Deed of Gift, under the following conditions, so far as presentation is concerned:

"It is to be distinctly understood that the cup is to be the property of the club, and not of the owner thereof, or owners of the vessel winning it in a match; and that the condition of keeping it open to be sailed for by yacht clubs of all foreign countries upon the terms above laid down, shall forever attach to it, thus making it a perpetual challenge cup for friendly competition between foreign countries."

There is no allusion to the American people in this document, and it is perfectly clear that this cup was presented as a challenge cup to the yacht clubs of the world, temporarily the property of the club winning it and holding it in trust.

It is proper, therefore, that this question of ownership should be clearly understood, because, of late, the American people have been led to believe—mainly through a sentimental fraction of the press—that they are really the owners of this cup, and are in some manner being defrauded of their rights by the New York Yacht Club.

It appears that Mr. Lawson, when in doubt about his right as a non-member of the New York Yacht Club to sail in its trial race the yacht that he proposed to build, applied for information to General Paine, of Boston—not to the New York Yacht Club. Mr. Lawson states:

"I sent for Mr. A. G. McVey, the veteran yachting editor of the Boston Herald and a recognized authority in Europe and America on all things pertaining to yachting, laid before him the exact status of the affair as described, and asked him to procure from General Paine the desired opinion.

"On the following day, Dec. 6, Mr. McVey made this report to me:

"I called on General Paine, and after talking over the situation fully, and after I had explained the existing conditions, I asked this question: 'Has the owner of a yacht which is not enrolled in the New York Yacht Club a right to start in the trial races?' General Paine answered: 'The owner of any yacht built with the idea of possibly defending the cup has a right to start in the trial races, and, for that matter, she need not be a yacht either, if she is constructed in this country. Any Gloucester or Rockport stone sloop can start in the trial races provided she is within the water-line length agreed upon between the clubs. No, the New York Yacht Club will not debar Mr. Lawson's yacht.'"

How could General Paine possibly know this? He held no official position in the New York Yacht Club; had no authority to speak for the club; and had no better means of knowing what the constituted authority of the club would or would not do with regard to a question that had never come up before, than had any other member. Clearly Mr. Lawson was ill-advised in asking for this opinion, and General Paine was unwise in giving it.

With the proper exercise of but a small portion of the natural intelligence that Mr. Lawson undoubtedly possesses, all this unpleasantness might have been avoided. Obviously, his proper course, when in doubt as to his position, was to have communicated directly with the secretary of the New York Yacht Club, from whom he would doubtless have received a prompt, official and courteous reply.

With regard to the right of the New York Yacht Club to select a yacht or vessel owned outside of the club to defend the America's cup, it is obvious that the club possesses no such right. This cup, as has been shown, is necessarily—and has always been—held subject to contest between yacht clubs; and not, as so many appear to imagine, between nations or individuals. This being so, it follows that a challenging club might justly decline to sail against a yacht or vessel not owned in the club holding and defending the cup.

What would be thought of Harvard or Yale if either did such an unheard of thing as to bring oarsmen from another university to help them win a boat race on the Thames? The same applies to any base ball, cricket, polo, or chess club. Yet, singular as it may appear, Mr. Lawson's whole alleged grievance is based upon the fact that the New York Yacht Club declined to permit this violation of the ethics of sport.

After a careful perusal of all that Mr. Lawson has to say, it is impossible to discover that he has any valid grievance against the action of the New York Yacht Club or any of its officers.

ARTHUR H. CLARK.

CUTTER MINERVA, N. Y. Y. C., Sandy Hook, Sept. 4.

Corinthian Y. C.

MARBLEHEAD, MASS.

Saturday, Sept. 6.

A CLUB race of the Corinthian Y. C. was sailed off Marblehead Saturday, Sept. 6, in a strong southeast breeze. Calypso got the start in the 25-footers, but Seboomook passed her on the windward leg. On the reach Calypso took back her lead and held it to the finish. In the 21-footers Little Haste pulled away from the bunch soon after the start and won by a large margin. Darthea won in the raceabouts, Runaway Girl being disabled. Scapegoat won in the handicap knockabouts and Rattler in the 18ft. knockabouts. The summary:

25-Footers.

	Elapsed.
Calypso, A. W. Chesterton	1 36 54
Seboomook, B. A. Smith	1 39 07

21-Footers.

Little Haste, T. K. Lothrop, Jr.	1 38 44
Pilot, R. Boardman	1 46 51
Porcupine, C. H. W. Foster	1 47 28
Tabasco III., H. H. Wiggin	1 49 14
Thelema, L. Davis	Disabled

Raceabouts.

Darthea, E. B. Lambert	1 48 05
Runaway Girl, H. Tweed	Disabled

Class B.

Scapegoat, C. Foster	1 36 41
Retriever, H. Benson	1 43 55

18ft. Knockabouts.

Rattler, A. D. Irving	1 35 02
Savage, J. Lawrence	1 35 28

Wollaston Y. C.

QUINCY, MASS.

Saturday, Sept. 6.

THE second race of the Wollaston Y. C. for the Chase cup was sailed in Quincy Bay on Saturday, Sept. 6, in a strong northeast breeze and was won by Neptune. The summary:

	Elapsed.	Corrected.
Neptune, A. E. Linnell	1 22 00	1 00 32
Shella, Capt. Hewitson	1 38 00	1 18 07
West Wind, Wm. Chase	2 05 00	1 34 08

Yacht Racing Association of Gravesend Bay.

Saturday, Sept. 6.

The eighth regatta of the Yacht Racing Association of Gravesend Bay was held on the afternoon of Saturday, Sept. 6, under the auspices of the New York C. C. Twenty-three craft started and finished the contest. The winners in the different classes were Sunol, Cockatoo, Trouble and Flying Fox. Caribou scored a sail over. The Regatta Committee of the New York C. C. placed Opossum in special class Q for open boats and she was also credited with a sail over. The owner of this boat protested the action of the committee, and the matter is now in the hands of the Association for final decision.

Rascal led Martha M. by 22s. at the finish in the class for catboats. The owner of the latter claims time allowance and until this is figured out the winner can not be definitely announced. Until the matter is settled, however, the order of finishing is considered in figuring the standing.

The race was the last for points on the series prizes of the year, and the winners of first honors in the different classes are as follows:

Special, Class M—Sunol, John Abbey, Brooklyn Y. C.
Sloops, Class N—Vivian, S. E. Vernon, Atlantic Y. C.
Special, Class N—Caribou, J. E. Nicholson, Brooklyn Y. C.
Sloops, Class P—Cockatoo, Hendon Chubb, Atlantic Y. C.
Sloops, Class Q—Trouble, W. H. Childs, Marine and Field Club.
Marine and Field Class—Kelpie, W. K. Brown.
Catboats, Class V—Martha M., Richard Moore, Brooklyn Y. C.

Song and Dance, E. F. Luckenbach; Stinger, A. P. Clapp, and Rascal, D. G. Whitlock, carried off second glory in their respective classes. In sloop class Q second prize lies between Bronco and Opossum. It can not be awarded until the Association disposes of the two cases in which Opossum was put into a class for open boats.

The wind was blowing south southeast when the boats were sent awy. It was just strong enough for full sail and to force them over the courses in the fastest time of the year. Cockatoo, which led the fleet at the finish, did the distance of from seven to eight miles in 1h. 10m. 10s. elapsed time. The little Hereshoff creation, Opossum, was second on elapsed time, covering the course in 1h. 13m. 40s.

The first dead heat recorded in the Association since its formation in 1901, happened in the Marine and Field class when Stinger and Kelpie crossed the finish line exactly abreast.

The preparatory signal was hoisted at 3 o'clock and the different classes were sent away on three-minute intervals. The usual Association courses were sailed, classes M and N going out to West Bank Light, and others covering a quadrangle, with marks at Marine and Field Club, Fort Hamilton, Atlantic Y. C. and the start off New York C. C. The large craft going outside had a reach both ways. The smaller boats, sailing the reverse course, taking the marks in the order above stated, had a spinnaker run, a reach, windward work and a reach home.

The starts were all fairly good, and in no class was there much advantage gained. Bonito, Sunol and Caribou were the only craft journeying out to West Bank Light. The start for the inside course was made with spinnakers set to port and the first two legs served a surprise in the way the class P boat Elsie headed the fleet. She was originally a catboat in class Q, and changes made this year have been of great benefit.

Elsie led around the Fort Hamilton mark, with Cockatoo second. Soon after the two got on the wind for the beat to the Atlantic Y. C. stakeboat. Cockatoo showed her Herreshoff extraction by passing Elsie and from then on making a runaway race of it. She gradually increased her lead and at the end of the second round, the finish of the contest, led her old rival, Song and Dance, by 5m. 35s. This left he standing of points for the year, Cockatoo, 66; Song and Dance, 60. Elsie finished third.

Trouble headed class Q during the first round of the contest, and was third boat of the fleet on elapsed time at the finish of the struggle. During the second round of the race Opossum slipped over the water with amazing speed, and was the fourth boat of the fleet to end the journey. At the finish Trouble and Bronco had a hair-raising tussle for first honors in regular class Q, the former crossing the line only 7s. to the good.

The Marine and Field boat, Flying Fox, recently sold to F. B. Anderson, was well handled, and won out in the class. She was leading boat during the greater part of the contest. Just before the finish Kelpie and Stinger entered a luffing match which took them way off the course. This allowed Jig-a-Jig to slip in third boat.

Kelpie was to windward when the aforesaid craft commenced to luff. They squared away for the finish and crossed the line in a perfect dead heat. Quinque was second boat in the class. The six points for fourth and fifth positions were equally divided between Kelpie and Stinger.

Flying Fox won a leg on the Dauchy cup, for which the Marine and Field boats were contesting. Kelpie captured similar honors in the Association race of Aug. 23. As the two are now tied a match to decide the ownership of the trophy will be held soon.

Rascal led Martha M. by 22s. in the class for catboats. The larger craft going out to West Bank Light were stopped after the end of the first round. This was deemed advisable by the Regatta Committee because of a failing wind. Sunol led Bonito by 3m. 40s. Caribou had no opponent. The yawl Kate, belonging to J. S. Negus, of the Atlantic Y. C., made her first start in an Association regatta.

The next and closing race of the year will be held on the afternoon of Sept. 20, off the Atlantic Y. C. This contest is under the auspices of the Association itself for special prizes as follows: Classes K, L, M, $30; class N, $20; class P, $20; class Q, $15; class R and smaller, $15. Second prizes, two-thirds value of first prizes.

It will bring to a close a season of racing which will compare favorably with any ever held in Eastern waters under similar conditions. Points appended to the following summaries are liable to slight changes when the case of Opossum is decided, and a few other claims acted upon. The list of winners, however, will not be affected. Summaries:

Special—Class M—Start, 3:03.

	Finish.	Elapsed.
Sunol, John Abbey	4 18 36	1 15 36
Bonito, Haviland Bros.	4 22 16	1 19 16

Special—Class N—Start, 3:06.

Caribou, J. E. Nicholson	4 33 25	1 27 25

Sloops—Class P—Start, 3:09.

Cockatoo, Hendon Chubb	4 19 10	1 10 10
Song and Dance, E. F. Luckenbach	4 21 45	1 15 45
Elsie, C. P. Rosemon	4 25 12	1 16 12
Streak, Speidel Bros.	4 26 10	1 17 10
Karma, J. C. Erskine	4 27 18	1 18 18
Corona, J. E. Beggs	4 29 35	1 20 35
Kate, J. C. Negus (Yawl)	4 30 22	1 21 22

Sloops—Class Q—Start, 3:12.

Trouble, W. H. Childs	4 26 25	1 14 25
Bronco, F. C. Moore	4 26 32	1 14 32
Flying Fish, I. M. Dean	4 30 14	1 18 14
Wraith, Calvin Tomkins	4 31 00	1 19 00

Special—Class Q—Start, 3:12.

Opossum, R. P. Doremus	4 25 40	1 13 40

Marine and Field Class—Start, 3:18.

Flying Fox, F. B. Anderson	4 37 50	1 19 50
Quinque, L. H. Smith	4 40 55	1 22 55
Jig-a-Jig, W. A. Hutcheson	4 41 50	1 23 50
Kelpie, W. K. Brown	4 42 10	1 24 10
Stinger, A. P. Clapp	4 42 10	1 24 10

Catboats—Class V—Start, 3:24.

Rascal, D. G. Whitlock	4 44 00	1 20 00
Martha M., Richard Moore	4 44 22	1 20 22
Boozie, C. D. Durkee	4 45 45	1 21 45

Points for 1902 Y. R. A. G. B. Series—Mariquita, 5; Sunol, 64; Bonito, 54; Kangaroo, 12; Vivian, 35; Gwendolen, 16; Caribou, 60; Squaw, 24; Indian, 6; Cockatoo, 66; Song and Dance, 60; Streak, 28; Karma, 22; Corona, 21; Kate, 1; Trouble, 56 Bronco, 48; Opossum, 37; Wraith, 36; Flying Fish, 16; Wink, 13; Spots, 2; Elsie (class P), 14, (class Q), 1; Pickaninny, 5; Kelpie, 61; Stinger, 49; Quinque, 40; Flying Fox, 34; Jig-a-Jig, 18; Vixen, 10; Martha M., 58; Rascal, 54; Boozie, 38.

Atlantic Y. C.

Monday, Sept. 1.

The special races arranged by the Atlantic Y. C. for Labor Day proved to be the best that have been sailed under the auspices of this organization for a long time. The stellar attraction was the ocean contest to Fire Island Lightship and return, for a beautiful trophy offered by Com. Robert E. Tod. This struggle was eventually won by Endymion, Geo. Lauder's record-holding schooner.

Events which excited the greatest amount of local interest, however, were those arranged for classes P and Q and the Marine and Field one-design boats. Hendon Chubb, owner of the class P craft Cockatoo, offered two prizes for the respective winners of an outside race for P and Q divisions. These trophies were supplemented by the Atlantic Y. C., a second and third being given by the organization in class P, and a second in class Q. A substantial prize was also offered the boat taking first honors in the Marine and Field class.

The Seawanhaka knockabout, Karma, belonging to J. C. Erskine, of the New York C. C., ably handled, won in class P, and Spots, owned by D. D. Allerton, also of the New York C. C., carried off the honors in class Q. Kelpie, W. K. Brown, owner, finished first in the one-design class.

It was definitely decided late the night before Labor Day not to start the ocean race until afternoon, so the feature of the holiday morning was the beginning of the struggle among the smaller boats. The three classes represented in the contest were the divisions which have filled best and furnished the most spirited contests of the year in the races held under the auspices of the Yacht Racing Association of Gravesend Bay. All were eager for a taste of racing outside, and all of the star craft, excepting Trouble, which was competing down the Sound, started the contest.

The course selected was one to try out the seaworthy qualities of the contestants. It was about twenty-five miles in extent. The yachts first went to West Bank Light, thence to Southwest Spit and from there to the bell buoy off the point of Sandy Hook. Rounding this mark the journey led homeward to Roamer Shoal Beacon, and from there down shore to a buoy off Rockaway Inlet. Another leg back to the finish off Sea Gate completed the course.

The weather for the race was perfect. Conditions of sea and wind, which might have been decidedly disagreeable for boats of so small type, were propitious, and performances of the contestants were unusually good. The Marine and Field boats were sent away at 10:20. Five minutes later class Q followed and the same interval elapsed before the 25-footers got away.

The wind was blowing from the southwest when the race began. This made windward work out to Southwest Spit, and a reach, with ballooners set, to the buoy off the point of the Hook. Another reach brought the boats to Roamer Shoal Beacon. From there a good spinnaker run was in order to Rockaway Inlet mark, with windward work and a short reach to the finish.

The win of Karma in class P was a popular one and the healthy, sportsmanlike action of the losers in cheering her as they learned of the victory, is one that will linger long in the minds of Corinthians who witnessed it.

The victory, too, was well earned. With a good crew aboard, from start to finish everything worked well with Karma. Sails were set quickly, local tides and changes of winds were ably considered. With the newcomer, Vagabond, which was sailing her second race in local waters, Karma led the fleet at the finish only 32s. in the lead. Song and Dance was third.

In class Q Spots, owned by D. D. Allerton, sailed a wonderfully good race. During the first part of the struggle she was well up with class P, and was fifth of the fleet to end the struggle. She led her nearest class competitor, Wink, by 5m. 58s.

Instead of going the full course, the Marine and Field boats were sent in after rounding Roamer Beacon, making their journey approximately seventeen and a quarter miles. The struggle among these craft was keen, with Flying Fox and Kelpie, the final winner, see-sawing for the lead. By more successfully solving the ebb tide off Sea Gate, just before the finish, Kelpie was able to win out by 10s. from Flying Fox.

Fifteen boats started and finished the special races for the small boats, and all are enthusiastically awaiting the next contest over an outside course. Karma did the distance of upwards of twenty-five miles in 4h. 29m. 40s. The summaries follow:

Sloops—Class P.—Start, 10:30.

	Finish.	Elapsed.
Karma, J. C. Erskine	2 59 40	4 29 40
Vagabond, T. A. Vernon	3 00 12	4 30 12
Song and Dance, E. F. Luckenbach	3 01 14	4 31 14
Corona, J. E. Beggs	3 02 18	4 32 18
Cockatoo, Hendon Chubb	3 14 52	4 44 52
Streak, Speidel Brothers	3 22 28	4 52 28
Kate, J. S. Negus (Yawl)	Wrong course.	

Sloops—Class Q.—Start, 10:25.

Spots, D. D. Allerton	3 10 22	4 45 22
Wraith, Calvin Tomkins	3 16 20	4 51 20
Wink, W. A. Barstow	3 20 16	4 55 16
Bronco, F. C. Moore	3 24 11	4 59 11

Marine and Field Class—Start, 10:20.

Kelpie, W. K. Brown	2 12 12	3 52 12
Flying Fox, F. D. Anderson	2 12 20	3 52 20
Singer, A. P. Clapp	2 13 10	3 53 10
Quinque, L. H. Smith	2 17 40	3 57 40

Sloops, Class P—Karma beat Vagabond 32s.; Song and Dance 1m. 34s; Corona, 5m. 12s.; Streak, 22m. 48s.

Sloops, Class Q—Spots beat Wraith 5m. 58s.; Wink, 9m. 54s.; Bronco, 13m. 49s.

Marine and Field Class—Kelpie beat Flying Fox 10s.; Stinger, 58s.; Quinque, 5m. 28s.

The Ocean Race.

The ninety-mile struggle to Fire Island and return was started at 3:05 P. M. Five schooners came to the line, including Endymion, Ariadne (auxiliary), Varuna, Thistle and the Philadelphia boat, Crusader. The wind was blowing southwest at the start, and the big double-stickers went over the line in the following order on the starboard tack: Endymion, 3:07:00; Varuna, 3:07:25; Thistle, 3:08:45; Ariadne, 3:09:20; Crusader, 3:09:22.

Endymion was never headed. The wind shifted shortly after the start and this gave the boats a reach both ways, making fast time possible. By previous agreement Thistle and Ariadne allowed Endymion 15m.; Varuna and Crusader were to get 1h. 7m. each.

Ariadne was 12m. behind Endymion at the finish, and on corrected time was beaten 27m. by the holder of the ocean record from Sandy Hook to the Needles. The third yacht to end the long journey was the flagship Thistle. She was 1h. 38m. behind Ariadne, and 1h. 6m. ahead of Varuna. On time allowance the latter won by 1m. Crusader did not finish.

After leaving the start at Sea Gate the yachts had to go to the starboard of Roamer Shoal and the same mark was left to port on returning. Endymion finished the race at 11:38 P. M. of the day she started, having covered the ninety miles in 3h. 33m., an average of 12.24 miles an hour. When half way to Fire Island Lightship the schooners were in the same order as at the finish. The summaries follow:

Race to Fire Island—Start, 3:05.

	Finish.	Elapsed.	Corrected.
Endymion, G. W. Lauder	11 38 00	8 33 00	8 18 00
Ariadne, H. W. Putnam, Jr.	11 50 00	8 45 00	8 45 00
Varuna, F. T. Ames	2 22 00	11 17 00	10 10 00
Thistle, Robert E. Tod	1 16 00	10 11 00	10 11 00
Crusader, R. J. and W. Koons	Did not finish.		

Eastern Y. C.

MARBLEHEAD, MASS.

Friday, Sept. 5.

The first of a series of three special open races of the Eastern Y. C. was sailed off Marblehead Friday, Sept. 5, in a rattling northwest breeze, in which all hands, except the 21-footer Porcupine, reefed. Sally VI. got the start in the 25-footers, but Calypso soon went ahead and was never caught afterward. In the 21-footers Little Haste went into the lead soon after the start and kept it all over the course, Porcupine putting up a good battle and finishing an easy second. The other boats in the class sailed the wrong course. In the 18ft. knockabouts Rattler and Janet sailed a hot race for first place, Rattler winning by less than a minute. The summary:

Class D.

	Elapsed.
Calypso, A. W. Chesterton	1 34 17
Seboomook, B. A. Smith	1 36 56
Sally VI., L. F. Percival	1 37 29
Chewink II., F. G. Macomber	1 43 45

Class S.

Little Haste, T. K. Lothrop, Jr.	0 59 49
Porcupine, C. H. W. Foster	1 00 59
Rooster II., C. F. Adams	1 45 07
Chloris, Cheney & Laning	1 46 02
Tabasco III., H. H. Wiggin	1 47 41
Pilot, R. Boardman	1 51 00

Class I.

Rattler, A. D. Irving	1 10 51
Janet, B. B. Crowninshield	1 11 49
Scrapper, Caleb Loring	1 11 39
Savage, J. A. Lawrence	1 15 31

Saturday, Sept. 6.

The second of the Eastern Y. C. series was sailed off Marblehead on Saturday, Sept. 6, in a moderate southeast breeze. The 25-footers were bunched at the start, but Sally VI. soon pulled out a lead. On the windward leg, while leading, her throat halyards parted and she was obliged to withdraw, and Seboomook led to the finish. There was another bunch at the start of the 21-footers, and they had it hot all the way to the weather mark. Little Haste managed to get out ahead there, and then she had no trouble in leading to the finish. In the 18ft. knockabouts Savage and Rattler sailed a close race, Savage pulled out a lead of about 20s. at the weather mark, which she held to the finish. The summary:

25-Footers.

	Elapsed.
Seboomook, B. A. Smith	2 43 23
Calypso, A. W. Chesterton	2 48 45
Sally VI., L. F. Percival	Disabled

21-Footers.

Little Haste, T. K. Lothrop, Jr.	2 04 51
Porcupine, C. H. W. Foster	2 10 03
Rooster II., C. F. Adams, 2d	2 10 27
Pilot, R. Boardman	2 12 27
Tabasco III., H. H. Wiggin	2 15 37
Thelema, L. Davis	2 17 16
Opitsah IV., S. H. Foster	Withdrew

18-Footers.

Savage, J. S. Lawrence	2 29 30
Rattler, A. D. Loring	2 29 56
Janet, B. B. Crowninshield	2 33 44

Seawanhaka-Corinthian Y. C.

OYSTER BAY, LONG ISLAND SOUND.

Thursday, Sept. 4.

Twenty-four boats started in the race held at Oyster Bay by the Seawanhaka-Corinthian Y. C. on Thursday. The largest boat to turn up was Empress of the 36ft. class. She had no competitor, and took a sailover. The wind was fresh from the west southwest, which made the first leg of the course a reach with booms to port, the second leg was also a reach and the third a beat.

Three of the American Y. C. one-design 21-footers sailed in the raceabout class, and one of these boats, Jolly Tar, won out. In the American Y. C. one-design 21ft. class there were four starters. Ping Pong withdrew, but the other three boats covered the course, and Howdy won out.

Two of the Larchmont 21-footers started, Dorothy and Houri. The former parted her throat halliards and withdrew. Houri sailed over the course alone.

In the Seawanhaka knockabout class four boats started and Gowan won by 1m. 48s. Lucille was only four seconds behind Bobs, the second boat.

Knave won again in the New Rochelle one-design class by 9m. 7s. Deuce finished second. Lambkin had no competitor in the Manhasset Bay one-design class and took a sailover. A thunder squall made matters rather wet and uncomfortable just as the boats were finishing. The summary follows:

Sloops—Class N—30 to 36ft. Racing Length—Start, 12:25.

	Finish.	Elapsed.
Empress, J. M. Heckscher	3 04 29	2 39 29
Raceabouts—Start, 12:35.		
Rascal, S. C. Hopkins	3 02 05	2 27 05
Snapper, A. B. Alley	3 08 38	2 33 38
Mavis, G. L. Pirie	3 00 21	2 25 21
Scamp, A. H. Pirie	3 07 37	2 32 37
Sis, F. T. Bedford, Jr	3 02 23	2 27 23
Jolly Tar, S. Howland	2 59 30	2 24 30
Hobo, T. L. Park	3 02 38	2 27 38
American Yacht Club—21ft. Class—Start, 12:35.		
Ping Pong, W. H. Browning	Withdrew.	
Howdy, S. Wainwright	3 00 53	2 25 53
The Kid, O. Harriman, Jr.	3 04 06	2 29 06
Cricket, H. Willetts	3 02 45	2 27 45
Larchmont—21ft. Class—Start, 12:40.		
Dorothy, L. G. Spence	Withdrew.	
Houri, J. H. Esser	3 10 45	2 30 45
Seawanhaka Knockabouts—Start, 12:40.		
Lucille, H. H. Landon	3 10 54	2 30 54
Bobs, W. A. W. Stewart	3 10 50	2 30 50
Wyntje, Colgate Hoyt, Jr.	3 11 07	2 31 07
Gowan, F. G. Stewart	3 09 02	2 29 02
Manhasset Yacht Club—One-Design Class—Start, 12:45.		
Lambkin, S. W. Roach	2 40 45	1 55 45
New Rochelle One-Design Class—Start, 12:45.		
Knave, R. N. Bavier	2 32 00	1 47 00
Deuce, L. D. Huntington, Jr.	2 41 07	1 56 07
Ace, W. N. Bavier, Jr.	2 41 43	1 56 43
Alga, Alfred Mestre	2 49 03	2 04 03
Caper, P. L. Howard	2 50 00	2 05 00

The winners were Empress (sailover), Jolly Tar, Howdy, Gowan, Lambkin (sailover), and Knave.

Friday, Sept. 5.

A good list of entries marked the second day's racing at Oyster Bay. During the race the wind veered from northwest to northeast, and it was most unsatisfactory racing.

At the start there was a bad mixup up but no serious damage resulted. All the boats with the exception of Mimosa were going to start on the port tack. Mimosa, however, came driving down the length of the line on the starboard tack with a lot of headway on. Alerion luffed up and just got clear, and Mimosa went afoul of Houri, the latter boat being disqualified for not getting out of the way. Mimosa lost considerably on the start, but she soon worked into first place and won handily.

Jolly Tar, the American Y. C. one-design 21-footer, won out again in the raceabout class.

Howdy won out in the regular 21ft. one-design class of the American Y. C. Gowan got a first place in the Seawanhaka knockabout class. In class R Chipmunk won out. Knave gets another first place in the New Rochelle one-design class. Three of the American Y. C. one-design 18-footers started, and Mongoose III. won. The summary:

Sloops—Class N—25 to 30ft. Racing Length—Start, 12:35.

	Finish.	Elapsed.
Mimosa, T. L. Park	3 48 08	3 13 08
Marguerite, J. F. Dingee	3 53 05	3 18 05
Alerion, J. W. Alker	4 06 15	3 31 15
Raceabouts—Start, 12:40.		
Rascal, S. C. Hopkins	3 41 06	3 01 06
Snapper, A. B. Alley	3 15 52	3 05 52
Mavis, G. L. Pirie	3 31 10	2 54 10
Scamp, A. H. Pirie	3 50 11	3 10 11
Jolly Roger, T. B. Bleecker	3 45 05	3 05 05
Sis, F. T. Bedford, Jr.	3 48 07	3 08 07
Jolly Tar, S. Howland	3 31 25	2 51 25
Hobo, T. L. Park	3 42 18	3 02 18
American Yacht Club 21-Footers—Start, 12:40.		
Howdy, S. Wainwright	3 42 57	3 02 57
The Kid, O. Harriman, Jr.	Withdrew.	
Cricket, H. Willetts	3 44 22	3 04 22
Seawanhaka Knockabouts—Start, 12:45.		
Lucille, H. H. Landon	3 42 49	2 57 49
Heron, F. R. Coudert, Jr.	3 57 05	3 12 05
Bobs, W. A. W. Stewart	3 49 30	3 04 30
Marcia, Johnson de Forest	3 49 15	3 04 15
Gowan, F. G. Stewart	3 42 48	2 57 48
Larchmont 21ft. Class—Start, 12:35.		
Houri, J. H. Esser	3 50 06	Disqual.
Dorothy, L. G. Spence	3 50 15	3 15 15

Sloops—Class R.—Under 18ft. Racing Length—Start, 12:50.

Chipmunk, T. S. Young, Jr.	3 04 23	2 14 23
Cricket, H. C. Pryer	Did not finish.	
Nora, Lewis Iselin	3 17 07	2 27 07
Lambkin, S. W. Roach	3 21 20	2 36 20

Sloops—Class Q.—18 to 21ft. Racing Length—Start, 12:50.

Neola, J. R. Johnson, Jr.	2 25 55	1 35 55
Eos, E. D. Mead	Did not finish.	
New Rochelle Yacht Club 18-Footers—Start, 12:50.		
Caper, P. L. Howard	3 20 35	2 25 35
Knave, R. N. Bavier	3 02 40	2 07 40
Ace, W. N. Bavier, Jr.	3 19 30	2 24 30
Deuce, L. Huntington, Jr.	3 27 26	2 32 26
Alga, Alfred Mestre	3 09 04	2 14 04
American Yacht Club 18-Footers—Start, 12:50.		
Mongoose III., S. Ford	3 09 45	2 14 45
Zelica III., H. A. Sherman	3 15 20	2 20 20
Hustler, J. I. Downy	Did not finish.	

The winners were: Mimosa, Jolly Tar, Howdy, Gowan, Neola, Chipmunk, Dorothy, Knave and Mongoose III.

Saturday, Sept. 6.

The fall regatta of the Seawanhaka Corinthian Y. C. was one of the most successful ever held by the club. The day was somewhat marred by one bad accident, the sinking of Heron, one of the Seawanhaka one-design knockabouts. She was in collision with Lucille, another of the boats in her class, just before the start. Fortunately, no one was injured.

The first leg of the seventies' course was north northwest, three miles; the second, east by north half north, four miles, and thence southwest by south four and three-quarter miles. The wind was east by north, and strong.

On board Rainbow was Mr. E. A. Willard and Mr. F. M. Hoyt. Her sails had been recut and she was in better shape to race than she had been since the New York Y. C. cruise. Rainbow got the start, and Yankee crossed the line some seconds behind her. It was a reach to the first mark, and both boats were going at a great rate of speed. The water was boiling along their deck half way up to the skylights. Rainbow got around the first mark considerably in the lead of Yankee. It was now a beat to the second mark. In the nasty sea that was running the second mark had either sunk or gone adrift, and after the two boats had looked carefully for it, they squared away for the finish line.

The Regatta Committee wanted to have them resail the race, but it was decided to postpone it until the following Friday. It was very disappointing that the mark was not in place for the race promised to be one of the most exciting ever sailed by these boats.

The wind hauled to E.S.E. when the smaller boats were started. Leda and Empress fought the race out in the 36ft. class, and the former won easily. The winning of this race gives Leda the championship in her class on Long Island Sound.

Alerion, Mimosa and Marguerite started in the 30ft. class. The two latter boats had a good race all over the course, and Marguerite distinguished herself by winning out by 1m. 22s. Dorothy beat Houri by over a minute in the Larchmont 21ft. class.

Eight boats started in the raceabout class. Jolly Tar got the best start, but she did not show up to advantage in the heavy breeze, and was the last boat in her class to finish. Whistlewing won by five seconds from Mavis. Mavis and Jolly Tar were sailing for a series prize which Mavis won.

Six of the Seawanhaka knockabouts were to start. After Lucille had sunk Heron she withdrew, and the other boats finished without her. Gowan won, with Marcia second. Gowan wins the series prize, while Marcia gets the Center Island cup.

In class Q Cicada beat Montauk with ease, and in class R Nora won from Cricket. Bab gave Lambkin another beating in the Manhasset Bay one-design class. Knave gets another first place in the New Rochelle one-design class. The summary follows:

Sloops—Class H—70 to 80ft. Racing Length—Start, 12:10.

	Finish.	Elapsed.
Rainbow, Cornelius Vanderbilt	1 58 53	Race
Yankee, J. Rogers Maxwell	2 00 48	off.
Sloops—Class M—30 to 36ft. Racing Length—Start, 12:30.		
Leda, H. L. Maxwell	2 47 03	2 17 03
Empress, G. M. Heckscher	3 07 11	2 37 11
Sloops—Class N—25 to 30ft. Racing Length—Start, 12:35.		
Mimosa, Trenor L. Park	3 00 58	2 25 58
Alerion, J. W. Alker	3 06 53	2 31 53
Marguerite, J. F. Dingee	2 59 36	2 24 36
Sloops—Class P—21 to 25 ft. Racing Length—Start, 12:45.

Bab, J. R. Hoyt	2 35 36	1 35 36
New Rochelle—18ft. Class—Start, 1:00.		
Caper, P. L. Howard	2 44 26	1 44 26
Knave, R. N. Bavier	2 40 56	1 40 56
Ace, W. N. Bavier	2 41 31	1 41 31
Deuce, L. D. Huntington, Jr.	2 44 03	1 44 03
Alga, Alfred Mestre	2 42 49	1 42 49

The winners were: Leda, Marguerite, Dorothy, Whistlewing, Gowan, Cicada, Nora, Bab and Knave.

Quincy Y. C.

QUINCY, MASS.

Saturday, Sept. 6.

THE Y. R. A. open race of the Quincy Y. C., the closing one to be held under the rules of the Yacht Racing Association of Massachusetts, was sailed off the Quincy Y. C., in a reefing east-northeast breeze on Saturday, Sept. 6. There were only two of the 25-footers, Sally VI. and Chewink II. Sally VI. got the start. Chewink II. was over the line when the gun fired and had to return. Sally pulled out a good lead from the start and looked like an easy winner, when she turned the wrong mark on the first leg and was more than half way to the second mark when the error was discovered. Notwithstanding the loss, she went back and kept gaining on Chewink, which obtained a long lead by Sally's mistake. Sally passed Chewink on the second windward leg and then had things all her own way.

In the 21-footers there were two starters, Chloris and Mildred II. Chloris got the start, but they had been sailing only a short time when Mildred went out to weather of her and led to the first mark. On the second leg Chloris gained and on the third she passed Mildred. On the second windward leg Chloris sailed better and held her lead to the mark, after which she had things all her own way. The 18ft. knockabouts went over the starting line in a bunch and Kittawake at once opened up a lead. She held this all around the course and benefited by the mistake of all of the other boats turning the wrong buoy on both rounds of the course. Kittawake was a stranger to Quincy waters, while all of the other boats had raced there. A good race was sailed in the handicap class, Marvel winning on both actual and corrected times. The summary:

Class D.—25-Footers.

	Elapsed.
Sally VI., L. F. Percival	1 56 11
Chewink II., F. G. Macomber, Jr.	1 59 24
Class S.—21-Footers.	
Chloris, Cheney & Lanning	1 58 04
Mildred II., S. P. Moses	1 58 57
Class J.—18ft. Knockabouts.	
Kittawake, H. M. Jones	1 08 50
Malillian, B. S. Permar	1 17 48
Biza, Alfred Douglas	1 17 57
Tokalon, R. J. Randolph, Jr.	1 18 18
Gertrude, H. E. Lynch	1 18 32
Patrice, F. H. Finley	1 21 38

Handicap Class.

	Elapsed.	Corrected.
Marvel, Reed & Lincoln	2 07 34	1 28 04
Hustler, Whittemore & Robbins	2 12 17	1 32 14
Omeme, W. P. Barker	2 13 31	1 36 19
Argestes, G. H. Wilkins	2 12 30	1 38 25
Thea II., Wheeler & Flint	2 23 50	1 46 56
Eclipse, H. A. Jones	2 19 38	1 46 57
Stay King, J. Laird	Disabled.	

Newport Y. R. A.

NEWPORT, R. I.

Monday, Sept. 1.

THE races sailed Labor Day under the auspices of the Newport Y. R. A. were most unsatisfactory, as the list of entries was small and there was a number of accidents. The wind blew half a gale from the southwest and there was a nasty sea running outside.

The bronze sixties, Weetamoe and Neola, were started first. Ten minutes after the start Neola's jib split across the middle and she withdrew, Weetamoe soon followed suit.

Humma got the best of the start in class K, and she had quite a lead on Altair when she broke the jaws of her gaff and withdrew. Altair covered the course alone.

Barbara and Veda were the only 30-footers to cover the course. Carolina and Asahi withdrew and Esperanza was dismasted. Barbara sailed over the course with her mast sprung. The summary follows:

Class I—Sloops—Start, 11:10.

	Finish.	Elapsed.
Neola, George M. Pynchon	Withdrew.	
Weetamoe, Henry F. Lippitt	Withdrew.	
Class K—Sloops—Start, 11:15.		
Altaire, Cord Meyer	2 36 14	3 21 14
Humma, Ralph N. Ellis	Withdrew.	
Newport Thirties—Start, 11:25.		
Barbara, Winthrop Rutherfurd	2 02 56	2 37 56
Veda, William L. Stow	2 08 38	2 43 38

Tuesday, Sept. 2.

The race sailed on Tuesday was over the inside courses. The wind was moderate from the southeast. Weetamoe and Neola sailed over an eight and one-half mile to leeward and return course, Neola got the best of the start and was ahead at the leeward mark, but Weetamoe worked into the lead on the last leg and won by 2m. 26s.

Humma was being repaired and in consequence Altair had no competitor and did not start.

In the 30ft. class Carolina got the best of the start and led all over the course. The thirties covered the Dyer's Island course. The summary follows:

Sloops—Class I—Start, 2:43.

	Finish.	Elapsed.
Weetamoe, H. F. Lippit	5 16 16	2 33 16
Neola, G. M. Pynchon	5 18 42	2 35 42
Thirty-footers—Start, 2:48.		
Carolina, F. Jones	4 47 24	1 59 24
Asahi, L. Warren & W. S. Miller	4 49 20	2 01 20
Barbara, W. Rutherfurd	4 52 37	2 04 37
Wawa, R. Brooks	4 52 42	2 04 42
Esperanza, H. O. Havemeyer, Jr.	4 52 43	2 04 44
Veda, W. L. Stow	4 55 51	2 07 51

Wednesday, Sept. 3.

Humma and Altair sailed in an unsatisfactory race on Wednesday. The course was from Brenton's Reef Lightship nine miles to windward and return. The wind was fluky from the south. Humma got the start, crossing nine seconds ahead of Altair, and was never afterward headed. The 30-footers sailed over an eight-mile triangular course in the bay. Wawa took the lead after the start and led all over the course. The summary follows:

	Finish.	Elapsed.
Humma, Ralph N. Ellis	6 29 53	5 27 53
Altair, Cord Meyer	6 38 51	5 36 51
30-Footers.		
Wawa, Reginald Brooks	4 45 02	1 16 02
Asahi, Lloyd Warren and W. Starr Miller	4 45 38	1 16 38
Esperanza, H. O. Havemeyer, Jr.	4 45 58	1 16 58
Carolina, Pembroke Jones	4 47 01	1 18 01
Barbara, Winthrop Rutherfurd	4 47 05	1 18 05
Breeze, William G. Roelker, Jr.	4 47 34	1 18 34
Veda, William L. Stow	4 51 56	1 22 56

Thursday, Sept. 4.

Humma and Altair, the two 51-footers, sailed a match race off Newport on Thursday in half a gale of wind. The start was made from Brenton's Reef Light vessel to and around the whistling buoy off Point Judith. This made the first leg a beat of seven miles and then a run of seven miles. Humma was first over the starting line with Altair behind and to windward. A long hitch was made off shore first and then the boats worked along Naragansett Beach to the mark, which Humma rounded first. On the run home she increased her lead and won by 2m. 45s. The summary follows:

Start, 11:29.

	Finish.	Elapsed.
Humma, Ralph N. Ellis	1 40 47	2 11 47
Altair, Cord Meyer	1 43 32	2 14 32

Saturday, Sept. 6.

In the race between Humma and Altair, sailed on Saturday, the former won. The boats covered a windward and leeward course twice, five miles to each leg. The wind was fresh from the southwest and the sea lumpy.

Humma got off well in the lead, which she continued to increase all through the race, and won by 3m. 26s. The summary follows, start 11:27:

	Finish.	Elapsed.
Humma, Ralph N. Ellis	3 01 50	3 34 50
Altair, Cord Meyer	3 06 25	3 39 25

Inland Lake Y. A. Regatta.

CHICAGO, Ill., Aug. 26.—In the first race of the Inland Lake Y. A. meeting at Pewaukee, Wis., on yesterday, Anita, of Neenah, the champion of 1900, finished first in A class, having the race entirely at her mercy throughout. Crusader, of White Bear, Minn., could not get within hailing distance at any time of the Winnebago boat, and finished third, Aderyn, of Pine Lake, taking second place, although a liberal distance back of Skipper Davis.

In class B, Jimcrack, of White Bear, retrieved the honor of Minnesota sailors, taking matters into her own hands throughout and even beating four of the class A boats. The judges established the precedent that if any boat in either class finished within the time limit, the race should stand; and under this ruling the class B yachts, although they did not finish within the time limit, were placed as shown below.

The wind was from the south, hauling to the west, at no time of great strength. Davis, who sailed Anita, had only five minutes to spare. The order of the start was Anita, Emanon, Ruth II., Crusader, Aderyn, Challenge, the rest scattered. Nothing decisive occurred under the conditions until about twenty minutes after the start, when Anita forced Emanon, last year's champion, about, and assumed the lead, which she maintained thereafter. The boats finished in the following order:

	Finish.
Anita, Neenah, S. L. Davis	4 00 08
Aderyn, Pine Lake, George Brumder	4 14 30
Crusader, White Bear Lake, Ordway & Clark	4 19 09
Minnewoc, Oconomowoc Lake, Petit & Bullen	4 23 20
Emanon, Oconomowoc Lake, Chas. A. Lester	4 23 40
Caroline, Oshkosh, F. H. Libby	4 31 32
Aspirant, Nagowicka, Ed. Wollegar	4 32 30
Breta, Cedar Lake, Sprinkerman	4 33 32
Comet, Pewaukee, F. Pabst	4 33 40
Adelaide, Milwaukee, R. Nunnemacher	4 37 57
Jimcrack, White Bear, Jack Ordway	4 35 40
Nakomis, Lake Geneva, George Braun	4 40 55
Geronimo, Fox Lake, B. Sullivan	4 41 59
Spray, Pewaukee, W. H. Meyer	4 50 22

Serapis and Challenge did not finish.

Judges: John Berryman, Chicago; George M. Conway, Pewaukee, and Dr. Archie MacLaren, St. Paul.

Second Day, Aug. 27.

There was no race yesterday, the light baffling wind not allowing any boat of either class to finish within the three-hour time limit. At the expiration of the time the three leading boats in A class were placed as they were yesterday—Anita, Aderyn, Crusader. The latter boat was well handled at the start and led Challenge, Anita, Aspirant, Aderyn and Comet across the line. As the course was laid out, it was a beat to windward on the first leg, and different skippers had different theories about handling the proposition. None of them, however, could make up for the lack of breeze.

In the business meeting Com. Hertz stated that the Association had challenged the holders of the Seawanhaka cup, and in case of the acceptance of the challenge would set a series of trial races to be sailed at Winnebago Lake in July.

Third Day, Aug. 28.

Aspirant, the Wollaeger boat from Nagawicka Lake, Wis., won in class A in the third race, Wednesday morning. Jimcrack made it two in class B. In the afternoon, in the special cup race, Aspirant won again for class A and Jimcrack for class B, after an exciting race in which nearly any boat had her chance. The race was protested by Aspirant, but the judge disallowed the protest. Spray was ruled out on the ground that she had a professional in her crew.

At the start Aspirant went over just at gun fire. Her close neighbors were Mavis and Crusader, which were in the stated order sailing to free the first mark and in beating to the second mark. On the reach home Anita showed for a time. On the second round of the triangle, Aspirant made good her lead, being well handled in the beat to windward. The finish was as below:

Aspirant, Nagawicka	1 45 45
Anita, Neenah	1 46 19
Breta, Cedar Lake	1 46 30
Aderin, Pine Lake	1 47 07
Mavis, Pistakee	1 50 07
Cornet, Pewaukee	1 50 02
Crusader, White Bear	1 50 03
Challenge	1 51 20
Minnewoc, Oconomowoc	1 53 27
Caroline, Oshkosh	1 54 22
Ruth II., Delavan	1 55 03

Class B.

Jim Crack, White Bear	1 56 27
Nokomis, Geneva	2 00 58
Geronimo	2 06 30
Spray, Oconomowoc Yacht	2 10 14
Serapis, Pine Lake	2 14 02

Special Cup Race.

Aspirant, Louis Wollaeger	5 06 07
Crusader, Ordway & Clark	5 06 35

Class B.

Jim Crack, Jack Ordway	5 23 04
Spray, Capt. Jack Kohl	5 24 54

Fourth Day, Aug. 29.

The Inland Lake regatta at Pewaukee, Wis., assumed a sportier look yesterday afternoon, when a good breeze sprang up and permitted the running off of two races. The winnings were distributed once more, Breta, of Cedar Lake, taking first in class A in the first race; Mavis, of Pistakee, winning first in class A in the second race. In class B Nokomis, of Geneva, was first in one event, the White Bear boat Jim Crack proving the consistence of its performance by adding one more first to its record in the class B races, which it seems to have at its mercy.

Yesterday's races were the best which have yet been sailed in the regatta, and the course, twice about the triangle, offering a reach, a free run and a hard beat to windward, brought out all there was in the boats. In the first race the start was admirable, the whole fleet going away bunched. Breta at the end of the first leg had established a good lead, with Comet her nearest competitor. In the windward beat Breta bettered her lead and had it pretty much her own way. The start in the second race was also well timed by the whole fleet, Aspirant, the earlier winner, finished badly handicapped by an accident. Crusader, of White Bear, made a hard fight for the first, but had to take second place. Aderyn, of Pine Lake, lapped in a neck and neck finish with Crusader.

The finishes in the two races were as follows:

No. 1—Class A—Start, 1:30.

	Finish.
Breta, Cedar Lake	2 48 51
Minnewoca, Oconomowoc Lake	2 51 08
Aderyn, Pine Lake	2 52 38
Aspirant, Nagowicka	2 56 14
Crusader, White Bear	2 57 06
Emanon, Oconomowoc Yacht	2 57 34
Anita, Neenah	2 58 35
Mavis, Pistakee	2 58 49
Caroline, Oshkosh	3 00 01
Comet, Pewaukee	3 00 15
Challenge, Spring Lake	3 00 35

Class B—Start, 1:40.

Nokomis, Geneva	2 59 45
Jimcrack, White Bear	3 01 19
Serapas, Pine Lake	3 01 42
Geronimo, Fox Lake	3 01 53
Spray, Oconomowoc	3 03 35
Dora, Pewaukee	3 01 05

No. 2—Class A—Start, 3:15.

	Finish.
Mavis, Pistakee	1 57 31
Crusader, White Bear	1 58 31
Aderyn, Pine Lake	1 58 32
Minnewoca, Oconomowoc Lake	4 58 50
Breta, Cedar Lake	5 00 25
Adelaide, Milwaukee	5 00 57
Comet, Pewaukee	5 01 16
Emanon Oconomowoc Yacht	5 01 27
Caroline, Oshkosh	5 02 37
Anita, Neenah	5 02 44
Aspirant, Nagowicka	5 05 26

Class B—Start, 3:55.

Jimcrack, White Bear	5 12 54
Nokomis, Geneva	5 13 56
Geronimo, Fox Lake	5 15 49
Serapas, Pine Lake	5 16 39
Dora, Pewaukee	5 19 27
Spray, Oconomowoc	5 22 14

H.

Newport Special Thirties.

NEWPORT, R. I.

Thursday, Sept. 4.

The "thirties" sailed a race on Thursday for a cup offered by Mr. W. Starr Miller. The boats sailed over the Dyer's Island course. The wind was southwest at the start, making it a run out and a beat back. While the boats were on the second leg the wind hauled to northwest, making a reach to the finish line. Carolina got the best start and led throughout the race, although Esperanza pushed her hard for first place. The summary, start 3:42:

	Finish.	Elapsed.
Carolina, Pembroke Jones	6 22 31	2 40 31
Esperanza, Harry O. Havemeyer, Jr.	6 25 58	2 43 58
Breeze, William G. Roelker, Jr.	6 27 06	2 45 06
Barbara, Winthrop Rutherfurd	6 28 44	2 46 44
Veda, William L. Stow	6 30 34	2 48 34
Wawa, Reginald Brooks	6 30 42	2 48 42
Asahi, Lloyd Warren and W. Starr Miller	6 30 59	2 48 59

Friday, Sept. 5.

In a fresh northwest wind the thirty-footers sailed a sweepstake race over a six-mile to windward and return course. Carolina was first over the starting line, but at the weather mark Wawa had a good lead, which she held up to the finish. The summary, start 3:18:

	Finish.	Elapsed.
Wawa, Reginald Brooks	5 13 14	1 55 14
Breeze, William G. Roelker, Jr.	5 17 49	1 59 49
Barbara, Winthrop Rutherfurd	5 22 18	2 04 18
Asahi, Lloyd Warren and W. Starr Miller	5 23 26	2 05 26
Carolina, Pembroke Jones	5 23 37	2 05 37
Esperanza, Harry O. Havemeyer, Jr.	5 23 49	2 05 49

Saturday, Sept. 6.

The sweepstake race sailed on Saturday by the 30-footers was won by Wawa. Carolina got the start but she got in a luffing match with Esperanza, which probably lost her the race. The summary, start 3:15:

	Finish.	Elapsed.
Wawa, Reginald Brooks	4 58 16	1 28 16
Barbara, Winthrop Rutherfurd	4 58 22	1 28 22
Carolina, Pembroke Jones	4 58 39	1 28 39
Esperanza, H. O. Havemeyer, Jr.	4 59 36	1 29 36
Veda, William L. Stow	5 01 09	1 31 09
Breeze, William G. Roelker, Jr.	5 03 03	1 33 03
Asahi, Lloyd Warren and W. Starr Miller	Withdrew	

South Haven Regatta and Water Carnival.

CHICAGO, Ill., Aug. 26.—In the race from this port to South Haven, Mich., Glad Tidings won the $50 prize in the schooner class, reaching South Haven at 5 A. M. yesterday morning, and joining the others of the Chicago fleet now at South Haven.

First Day, Aug. 27.

Vixen, of Columbia Y. C., won good honors in the Grand Haven regatta yesterday, Aug. 26, in spite of an accident which bid fair to disable her for a time, the throat halliards parting and making considerable trouble. The crew of Vixen was: Skipper, D. Porter, D. M. Lindsay, Robert Graves, B. Brighton, Irving Orr and R. C. Lindsay. Sally, of Spring Lake, was Vixen's special rival, beaten out after a hard fight by only 1m. 19s. The course was twice about a triangle, two miles to the leg, the wind being light and growing even lighter for the finish. Vixen was sailed against Sally in a match for time, and this furnished the most exciting event of the day's racng, which otherwise might have been a bit featureless.

Vencedor was the only class A boat to finish inside the time limit. Vencedor beat Illinois in a drifting match during the afternoon, being the only boat to finish inside the time limit out of the six starters, the others being Illinois, Michigan, Widsith, La Rita and Columbia. The scoring of the regatta is done on the point system, and at this writing stands as follows: Vencedor, 100; Vixen, 100; Peri, 100; Tartar, 100; Sally, 50; Mawaja, 50; America, 66; Imp, 33. The skipper of Imp, M. P. Rumney, of Kalamazoo, Mich., had the misfortune to fall overboard, which put Imp out of the running. The times recorded were as follows:

Schooners—Start, 9:45.

	Finish.
Sallie	11 21 32
Tartar	12 13 38

Class B—Over 32ft.

Peri	12 08 59
Mawaja	12 18 32

Class B—Under 32ft.

Vixen	11 20 1
America	12 15 4
Imp	12 31 0

Second Day, Aug. 28.

In the South Haven water carnival yesterday Vencedor was able to outfoot her persistent rival Illinois after a closely sailed race twice around the six-mile triangle in a stiff and steady breeze. The conditions were much better than on the day previous, and the regatta showed some sporting features. At one time Illinois was thought to have won, but revised figuring of the time allowance showed that Vencedor was first. The times were as below:

Schooners—Start, 9:45.

	Finish.	Elapsed.	Corrected.
Sallie	11 28 18	1 43 18	1 43 18
Tartar	11 54 05	2 09 05	2 02 48

Class B—Over 32ft.—Start, 9:45.

Mawaja	11 37 00	1 52 00	1 48 35
Peri	11 43 35	1 58 35	1 52 23

Class B—Under 32ft.—Start, 9:45.

Vixen	11 44 12	1 59 12	1 49 43
America	11 59 51	2 14 51	2 06 39
Imp	11 57 01	2 12 01	1 58 30

Class A—Over 40ft.—Start, 9:55.

Vencedor	11 15 31	1 20 31	1 20 30

Class A—27 to 40ft.—Start, 9:55.

Illinois	11 25 06	1 30 06	1 22 53
Michigan	11 42 51	1 47 51	1 42 43
Widsith	11 59 46	2 04 46	1 54 42

Class A—Under 27ft.—Start, 9:55.

La Rita	11 35 07	1 40 07	1 28 19
Columbia	11 41 32	1 46 32	1 35 33

H.

English Letter.

THE racing season with us is now practically over, and the best of it ended with Cowes week. The Ryde regatta (Royal Victoria Y. C.) was cut down to three days, and during those the wind was almost non-existent. The postponed review of the fleet at Spithead rendered racing over the usual courses impossible and caused some racing to be abandoned altogether. The review itself would have been an imposing scene had the weather been favorable, but on Monday, when the ships had to get underway and pass by the King, it rained incessantly and blew half a gale from the sou'west, so that the chief feature of the review was abandoned—a royal salute while performing an evolution. After the fleet had been dismissed, the race arranged for auxiliary steam yachts, was started in the presence of the King. It was awful weather to start out on a 340-mile channel race, but there were no absentees. The course was from the Nab lightship to Cherbourg—a dead noser as the wind was blowing. After that they had to go round the Eddystone Lighthouse, opposite Plymouth, and home round the east side of the Isle of Wight, finishing opposite the Squadron Castle, at Cowes. Lord Crawford, who gave the prize, started in his own great ship, Valhalla, but she was out of it in the long peg to windward. The race was easily won by Mr. Armour's handsome vessel, Utowana, which, being the only fore-and-after in the race, worked out a huge lead in the long beat across the channel. The race is of interest because such matches are very uncommon over here. Indeed, our season is marked by a very wearisome monotony that must seriously mar the interest taken in racing, and anything of this nature that is out of the common is for the best. But I cannot help thinking that a couple of seasons will see the steam auxiliary as dead as the Dodo, in face of the competition of the oil engine. What chance, for instance, would Utowana have in such a race with a schooner like Meteor fitted with oil engines? The motor boom is growing here, and the number of yachts carrying these launches is conspicuously large this year, which may be regarded as only the first in which the motor has made a regular appearance. I hear of one large yawl that frequently figures in the handicap racing being fitted with an oil engine. She is almost a new vessel, and others will certainly be so equipped. The difficulty is that our regular marine motor makers do not make engines of sufficient power for very large yachts. However, that is a mere matter of time.

The collapse of the open classes with us this year seems to have led to an opinion that more attention should be devoted by the Yacht Racing Association to this class of racing. That the collapse is complete is shown by the fact that there are only three 36-footers on the Solent, where lavish expenditure has until now been showered on the open classes of small size, thereby completely keeping out the man of moderate means. However, on the top of a wretched season comes the establishment of a new 20-ton one-design class. The Earl of Albemarle is the originator of the class which will certainly supersede the 36-footer Y. R. A. class. The proposed boats will be about 35ft. waterline with 9ft. 6in. beam and long overhangs. The sail area will be about 1,800 sq. ft. Already eight or nine owners have come forward—not a bad start for a new class. This must be regarded as the most serious blow yet aimed at open racing, for the class may well affect the 52ft. class in time. The reasons given for its establishment by Lord Albemarle are significant. The principal one is that men will not readily be found willing to build a new 36-footer every year. If that is the case in the wealthiest center of British yachting, it is no wonder that open racing has indeed collapsed. The new class is to carry four paid hands per boat. So far as I know the designer has not been chosen, but it will no doubt be Mr. Payne, the class being a southern one. Although, to my mind one-design racing is by far the finest form of yachting for real enjoyment, I cannot help thinking it a pity that it should so supersede open racing. The cause, of course, is the extravagent cost and uselessness of racing machines, and yet when the scantling rule was before the Y. R. A., it was successfully opposed by many designers.

The regattas on the Solent being over, those along the western part of the south coast are in full swing. They are always enjoyable, but the big guns of the racing fleet leave them alone, which is a pity, for the courses are all in open water, which may at times give a sea that will quite upset preconceived ideas as to speed. The Torquay and Dartmouth regattas are curious affairs,

The places are about the loveliest in England, and the matches are well managed, but conjointly with the regattas the shore folk run a kind of fair, with merry-go-rounds, hurdy-gurdies—everything that goes to make up a regular English fair. The result is a surprise to yachtsmen accustomed to more sedate ports. But does not Cowes boast of its niggers, now?

E. N. Hamilton.

Western Yachts.

Chicago, Sept. 6.—*Editor Forest and Stream:* There will be a match series of races of unusual interest held here this week between Vanenna, the 52ft. champion of the Chicago Y. C., owned by Mr. W. H. Cameron, and Vencedor, the 52ft. champion of the Columbia Y. C., owned by its Commodore, Mr. Fred A. Price.

This match is for the 52ft. championship of Lake Michigan, and although both yachts have been on Lake Michigan since 1896, this is the first time a match series has ever been arranged for them.

As the clubs represented by these yachts are great rivals, the outlook is good for some spirted rooting on guest boats. The betting is already lively.

The series is to be sailed as follows: First race, Sept. 11, Triangular.

Second race, Sept. 13, leeward and return.

Third race (if necessary), Sept. 20, course to be chosen by winner of coin toss.

Preparatory gun, 1:50 P. M. Starting gun, 2 P. M.

Saturday, Sept. 20, will probably close the general yacht racing season in these waters, although some special events will probably be held after this date.

The Chicago Y. C. has already closed its season's programme, except in its 15ft. class.

The Columbia Y. C., however, has arranged to close its general yachting season Saturday, Sept. 20 with its tenth annual fall regatta, which will be open to all cabin yachts on Lake Michigan. There will be three classes, and time allowance table of L. M. Y. A. will be used.

First class, cruising yachts, sloops or cutters. Preparatory gun, 2:20 P. M.; starting gun, 2:30 P. M. Five prizes in this class.

Second class, schooners and yawls. Preparatory gun, 2:30 P. M.; starting gun, 2:35 P. M. Ten prizes in this class.

Third class, racing yachts, sloops and cutters. Preparatory gun, 2:35 P. M.; starting gun, 2:40 P. M. Ten prizes in this class.

Prizes will be awarded at club house at 9 P. M. same day, at stag smoker and vaudeville given by Columbia Y. C. to all yachtsmen able to attend. You are welcome.

A series of races are about to start for Webb 21ft. cabin class championship cup for 1902. The second race will be held Saturday, Sept. 13. Preparatory gun, 2 P. M.; starting gun, 2:05 P. M. There are four prizes offered in this series. The entries are La Rita, the Lipton cup winner; Sprite, Colleen, Margaret, Arab IV., Privateer.

Present standing on points: La Rita, 100; Arab IV., 80; Spray, 60; Privateer, 40; Sprite, disabled during race; Colleen, disabled before start; Margaret, did not start in first race.

As Colleen and Sprite are Chicago Y. C. entries, and balance are Columbia Y. C. yachts, the interest in these races is quite keen. Beside this, the probability of winner of this series being the Columbia Y. C.'s representative in match between Eastern 21ft. cabin class champion and Western champion of same class for world's championship of the class is an added incentive for owners to keep working to win.

At present it looks as though Little Haste, of Y. R. A. of Masaschusetts, will be Eastern champion, and La Rita the Western champion, and if match does not fall through the series should arouse more yachting enthusiasm than any other event held during the season of 1902.

Beverly Y. C.

BUZZARD'S BAY.

Saturday, Aug. 30.

The 330th Corinthian race was sailed on Saturday, Aug. 30, in Buzzard's Bay. There was a good breeze from the S.W., which held true during the race for the first time this summer. The 30ft. one-design class sailed over an eighteen-mile course; the 21ft. class and the 4th class cats over an eleven and three-quarter mile course, while the 15-footers had a course of eight and three-eighths miles. The summary:

30ft. Class—Start, 1:10.

	Finish.	Elapsed.
Quakeress II. W. F. Harrison	3 57 22	2 47 22
Pontiac, J. A. Beebe	3 59 02	2 49 02
Arabian, Robert Winsor	3 59 43	2 49 43
Praxella, J. Parkinson, Jr.	4 00 24	2 50 24
Young Miss, D. L. Whittemore	4 00 45	2 50 45
Gamecock, L. Bacon	4 02 10	2 52 10
Mashnee, R. W. Emmons, 2d	4 02 11	2 52 11
Zingara, E. M. Farnsworth	4 02 20	2 52 20
Notos, C. H. & M. O. Taylor	4 04 37	2 54 07
Evelyn, John Hitchcock	4 07 40	2 57 40

21ft. Class—Start, 1:19.

Barnacle, W. E. C. Eustis	3 24 55	2 05 55
Terrapin, L. S. Dabney	3 28 41	2 09 41
Radiant, E. C. Baker	3 30 26	2 11 26
Amanita, Joshua Crane, Jr.	3 33 27	2 14 27

Fourth Class Cats—Start, 1:22.

Alison II., S. McLeod	3 44 42	2 22 42
Krieker, W. S. Jameson	3 50 03	2 28 03
Howard, H. O. Miller	3 52 16	2 30 16
Hod, H. B. Holmes	3 57 01	2 35 01

15ft Class—Start, 1:25.

Eaglet, R. L. Bacon	3 05 13	1 40 13
Teaser, R. W. Emmons, 2d	3 06 23	1 41 23
Spider, H. M. Stone	3 06 26	1 41 26
Go-Bye, H. Stockton	3 09 40	1 44 40
Vim, F. W. Sargent, Jr.	3 10 20	1 45 20
Ranzo, M. H. Richardson, Jr.	3 11 10	1 46 10

The winners were Quakeress II., Barnacle, Alison II. and Eaglet.

Monday, Sept. 1.

The 331st open race was sailed on Monday, Sept. 1, in a strong S.W. wind. Single reefs was the order of the day. The courses were: For 30-footers, 13⅝ miles; 1st class cats (25ft.), 10¼ miles; 21ft. restricted class, 10¼ miles; 4th class cats (18ft.), 8⅜ miles; 15ft. one-design class, 8⅜ miles. The summary:

30ft. Class.

	Start.	Finish.	Elapsed.
Young Miss, D. L. Whittemore	1 12 05	3 09 30	1 57 25
Mashnee, R. W. Emmons, 2d	1 13 00	3 10 40	1 57 40
Praxella, J. Parkinson, Jr.	1 12 57	3 10 45	1 47 48
Quakeress II., W. F. Harrison	1 12 32	3 10 30	1 57 58

Howard, H. O. Miller	1 25 00	3 05 20	1 40 20
Maray, —. Wright	1 25 00	Withdrew.	

15ft. One-Design Class.

Spider, Wm. Swan	1 25 20	2 18 55	0 53 35
Vim, F. W. Sargent, Jr.	1 26 09	2 20 58	0 54 49
Go-Bye, H. Stockton	1 25 40	2 21 57	0 56 17
Ranzo, M. H. Richardson, Jr.	1 26 05	2 22 40	0 56 35
Teaser, R. W. Emmons, 2d	1 25 13	2 22 18	0 57 05

The winners were Young Miss, Kingfisher, Radiant and Krieker.

The judges were Geo. H. Richards, E. M. Farnsworth and F. E. Cabot.

Atlantic Y. C.

The Atlantic Y. C. will give an ocean race on Sept. 19, starting at 1 P. M. from Sea Gate to and around the Northeast End Lightship off Cape May. The distance is about 210 miles. The yachts will start on the ebb tide, and if they maintain the rate of sailing shown in the Fire Island race will finish before noon on Saturday. The schooners which entered in the Fire Island race are all anxious to have another trial and have all entered, and the entry of several other schooners has been promised, providing their owners can make the necessary arrangements so that there will be not less than five entries and probably eight. There will be a very handsome cup given by Com. Tod as the first prize, and second and third prizes will be given by the club under the rules governing the award of prizes.

Geo. Hill, Chairman.

The America's Cup.

A dispatch from Rothesay, Scotland, Sept. 8, reports: "In an interview here to-day Sir Thomas Lipton said that he would mail a formal challenge for the America's Cup to the New York Y. C. within two or possibly three weeks. If, however, in the meantime any British yachtsman or combination of yachtsmen challenged they would have his cordial assistance and the use of Shamrock I. as a trial horse, absolutely free of cost.

"Sir Thomas Lipton added that the stories about his new boat being already half built were false."

Rifle Range and Gallery.

Rifle at Chicago.

Chicago, Ill., Sept. 2.—The third annual team and prize shoot of the Combined Short Range Rifle Club of Chicago was held on Aug. 31, and terminated as usual, very successfully. The attendance was better than might have been expected, considering the threatening weather and the occasional showers which hung over the entire city, but which fortunately cleared up later in the day.

The programme for the day opened at 10:30 A. M., with the team shoot for the Peters challenge cup and added cash money prizes. This terminated at 1:30 P. M.

At 2 P. M. the open to all prize shoot was commenced and continued until 11 P. M. In this over fifty shooters participated.

Following are the rules which governed the team shooting:

Each club put up a team of five men, who fired 20 shots per man on the Standard ¼in. ring German target, with a 2in. black at 75ft. Shooting strictly off-hand, no palm rests or lens sights allowed. Five teams participated. Scores:

The Brazilian Rifle Club.

2224

Certified correct,

Y. M. Garden,
O. Panneman,
Shooting Masters,

The Brazilian rifle team scoring high, won the Peters challenge cup and $18 added money. The Willow Rifle and Gun Club were second, and won $5. The William Tell Club, third, received $3.

This was the first time that the Peters challenge cup has been contested for. It will be held by the Brazilian rifle team for one year, when it will again be contested for, and so on until won three times by any one club, who will then become the sole owners of the same. The names of the winning teams to be engraved upon the cup each time when won. This is a great stimulator to good shooting, as all the clubs are anxious to possess the cup, hence it is expected that in the future the weekly shoots of all the clubs will be more regularly attended.

Prize Shoot.

The rules which governed the team shoot were also used for the open to all prize shoot, excepting that the target of honor was used instead of the German ring target. The target of honor has ⅛in. rings, with 2in. black, the center counting 25, which is only ¼in. Three shots fired on each target, possible 75. The five best targets of each man were counted for prizes. Possible on five targets, 15 shots, 375 points. Nineteen prizes were thus awarded in the following order:

F M Garden	72	71	70	69	67	349
A Rieckhoff	73	72	68	67	67	347
A Sorenson	72	71	69	68	67	347

Golden Gate Rifle and Pistol Club.

San Francisco, Sept. 1.—Yesterday wound up the two days' shoot of the Golden Gate Rifle and Pistol Club. The club was authorized to record scores for the championship of the U. S. Revolver Association. A. Haynke, of Sacramento, made the highest score—433, on Standard target, 50 yards. An army surgeon, Dr. J. R. Hicks, of Savannah, Ga., was second with 424. For one reason or another few local champion revolver shots entered this event.

The Golden Gate Club, on its own account, put up $300 for both pistol and revolver.

At the close of the day all hands partook of a fine dinner at the park dining-room. Scores:

Revolver—Dr. J. R. Hicks, 49, 47; J. E. Gorman, 48, 47; L. C. Hinkel, 48, 46; H. Haynke, 46, 45; S. Washburn, 46, 45; M. J. White, 46, 45; J. Tompkins, 46, 45; Smith Carr, 40, 43; C. A. Becker, 45, 43; G. Tammeyer, 45, 43; J. R. Trego, 44; J. Kullmann, 42; T. Buchanan, 40; F. Kruckel, 35; F. H. Miller, 34; Dr. D. Smith, 33.

Pistol—H. Haynke, 49, 46; J. E. Gorman, 48, 47; Smith Carr, 48, 47; Edward Hovey, 47, 47; J. Kullmann, 47, 45; F. Kruckel, 47, 44; J. Mitchell, 46, 45; M. J. White, 46, 45; R. Wash, 46, 44; M. F. Blasse, 46, 44; J. R. Trego, 46, 43; H. Hoadey, 46, 40; Dr. O. Twist, 44, 40; F. K. Moore, 43, 32.

Reentry, 50 yards, standard target, 5 shots.

Roeel.

The fortunate ones in the competition for places on the International Rifle team, which was finished at Sea Girt, N. J., on Monday of this week, were eight men and two alternates, as follows: Capt. William B. Martin, Second New Jersey; Private George E. Cook, District of Columbia; Corpl. K. K. V. Casey, Seventy-first Regiment, New York; Lieut. Thomas Holcomb, Jr., United States Marine Corps; Private M. W. Parker, First Corps Cadets, Massachusetts Volunteer Militia; Private Walter G. Hudson, Signal Corps, New Jersey; Lieut. W. W. Cookson, Sixth Battalion, District of Columbia National Guard; Major Glendie B. Young, First Regiment, District of Columbia National Guard; Lieut. H. H. Leizear, Sixth Regiment Infantry, National Guard Pennsylvania; Lieut. Horace M. Bell, First Regiment, New Jersey; Gen. Bird W. Spencer, captain; Capt. F. L. Graham U. S. A., adjutant; Col. William H. Early, quartermaster; Lieut. Albert A. Jones, secretary. This All-American rifle team will go to Ottawa, Canada, on next Saturday, and there is no doubt but what, in view of more carefully prepared ammunition and greater skill, the contest will be much closer than it was last year, which ever team wins.

The Peters Cortridge Co., of Cincinnati, O., have issued a work of sterling worth, the "American Rifleman's Encyclopedia," compiled by the accomplished authority on all that pertains to rifles and their use, Mr. A. C. Gould, editor of Shooting and Fishing. There is a complete list of words and terms used by riflemen of the United States, with definitions and explanations, and a general fund of information pertaining to rifles and rifle shooting. The scores of the teams and the team membership of the International Rifle matches are given; the different positions of short and long range shooting are illustrated; forms of constitution and by-laws of shooting clubs are presented, and there are diagrams of targets, illustrations of the famous trophies, rifle galleries, etc., to an extent which will not fail to delight the heart and improve the mind of all riflemen.

Rifle and Revolver at Sea Girt.

The annual matches of the National Rifle Association of America, the New Jersey State Rifle Association, and the United States Revolver Association have brought out a strong support this year. The army, navy and civilian interests were well represented. On the first day, Aug. 29, the Columbia trophy, presented by the District of Columbia National Guard to the National Guard of New Jersey, was the object of contest. The conditions were teams of six men from organizations of the National Guard and Naval Reserve of New Jersey. Five shots at 200 and 500yds. Trophy and medal to each member of the winning team. There were four contestants, teams from the 1st, 2d, 3d, and 4th regiments.

The 2d Regiment team won, as follows:

	200 Yards.	500 Yards.	Totals.
Capt W B Martin	22	24	46
Lieut-Col J F Clime	19	17	36
Lieut E Y Breese	20	23	43
Capt R W Watson	19	24	43
Pvt A G Spencer	21	21	42
Corp R W Evans	19—120	25—137	44—254

The second event of the day was the New Jersey National Guard match between teams of six from organization of the National Guard or the Naval Reserve of New Jersey. Ten shots at 200 and 500yds. Prizes: First, the N. J. N. G. trophy and $50; second, $25 and a medal to each member of the winning team. This event was won by the 1st Regiment team as follows:

	200 Yards.	500 Yards.	Totals.
Capt A. H. Graff	41	45	86
Maj A. Rowland	38	45	83
Pvt W H H Bull	42	42	84
Pvt H Gensch	42	43	85
Pvt A Hubschmitt	44	45	89
Pvt Horace M Bell	41—248	44—264	85—512

Aug. 30.

On Aug. 30, in the Inspectors' match, the conditions were open to all Inspectors and ex-Inspectors of Rifle Practice, distance 500 and 600yds.; 10 shots at each distance; rifle any military. Prizes: First, the Department of Rifle Practice badge, to be held by the winner during the year and $25; second, $10; third, $5; fourth, $5. There were eighteen contestants, and the winners were as follows:

	500 Yards.	600 Yards.	Totals.
Maj J E Bell, I G R P D C	50	44	94
Maj L H Reichelderfer, 1st Regt D C	46	47	93
Maj G B Young, D C	47	46	93
W E Holliday, 4th Battalion, D C	49	43	92

The Wimbledon cup match, a National Rifle Association event also, was shot on Aug. 30. It was open to all citizens and residents of the United States; distance, 1000yds.; 30 shots; weapon, any rifle within the rules; cleaning allowed between shots; position any, without artificial rest; handicap for military rifles using Government ammunition, 18 points; special military, any ammunition, 6 points. First prize, the Wimbledon cup, to be held by the winner till the next annual meeting, when it will be shot for on the same conditions; value $500; a medal to the winner. The winner of the trophy is required to give a bond in the sum of $500 to the National Rifle Association of America, or, if he does not desire to give such bond, the cup will be deposited with the Adjutant-General of his State until the next meeting.

Sept. 1.

On Sept. 1 the Carbine team match, the Revolver team match and the Interclub match were shot.

The conditions of the Carbine team match, N. J. S. R. A., were as follows: Open to teams of five men from any regiment, squadron or troop of cavalry, or any military organization armed with the corbine of the Army, National Guard or any foreign Government. Five shots at 200 and 500yds. Carbines and ammunition, National Rifle Association rules. Prizes: First, $50; second, $25 and a medal to each member of the winning team. There were eight contestants, of which Squadron A, New York won, as follows:

	200 Yards.	500 Yards.	Totals.
Sergt Williamson	19	22	41
Herrick	20	19	39
Sergt Shepard	22	24	46
Capt Barry	20	22	42
Lieut Sayre	16— 97	24—111	40—208

The Revolver team match, N. J. S. R. A., was as follows: Military match, open to teams of five men. Distance 25, 50 and 75yds. Two strings of 5 shots at each distance on U. S. Standard A target, 200yds., reduced to 100yds.; bullseye counting 5, 4x5in.; center, counting 4, 11x14½in.; inner counting 3, 19½x24in.; outer counting 2, balance of target. Each string must be fired within the time limit of 30 seconds, taking time from the first shot. Military revolvers, with not less than 4lbs. trigger pull, and service ammunition. Prizes: First, a trophy to be held during the year by the organization winning same, a medal to each member of the team, and $25; second, $25; third $10. There were six contestants. The winner was Battery A, Light Artillery, M. V. M. The scores made by the winners were as follows:

	25 Yards.	50 Yards	75 Yards.	Totals.
Lieut Wm Amory	42	32	27	101
Corp R S Hale	43	35	24	102
J T Chamberlain	45	35	31	111
J C Cobb	44	40	33	117
Chas Walcott	42	43	25	109—540

The Interclub match, N. R. A., was for the rifle club championship of the United States. Open to teams of five men from any rifle club or association in the United States; 10 shots per man at 200yds. on the Standard American target, with 11in. bullseye (the bullseye including the 7 ring); any military rifle; ammunition any; entries of one or more teams allowed from any one organization, but no man allowed to shoot in more than one team; match to be shot simultaneously on home ranges of clubs situated not less than 100 miles from Sea Girt on Sept. 1, at 2 o'clock P. M., on targets supplied for the purpose by the N. R. A., provided, however, that, if desired, any member of a competing club team, who may be at Sea Girt when the match is shot, shall be furnished with facilities to shoot his score, which will be counted as one of the home team.

Prizes: First, the championship banner and a gold medal to each member of the winning team; second, a silver medal to each member of the second team; third, a bronze medal to each member of the third team. Military organizations affiliated with the National Rifle Association, who have not a rifle club organization, will be considered as clubs, and be eligible to enter a team in the above match.

Sept. 2.

The Hilton trophy match, N. R. A., was shot on Sept. 2, and the conditions were as follows: Open to teams of twelve from the Army of the United States, one team from the troops stationed within each of the military departments; the United States Navy; the United States Marine Corps; the National Guard or uniformed militia of the several States and Territories, including the District of Columbia (one from each State or Territory). Other countries—England, Ireland, Scotland and each of the provinces of Great Britain, and all other countries, one team each from the following: The regular army; the militia; the volunteers; the navy of any country. Separate teams may be sent out when the organizations are separate. The members of each team to be officers or enlisted men and active members of the corps or organization which they represent, and to appear in the authorized uniform, full dress or fatigue, thereof. They shall be selected in such manner as shall be prescribed by the military authorities of the country or State they represent, and shall, if required, be certified to by them as being their authorized representatives. Distances 200, 500, and 600yds.; rounds 7 at each distance; position standing at 200yds., at 500 and 600yds. prone, with head toward target; rifles and ammunition as prescribed in the National Rifle Association of America regulations. Prizes: a trophy presented by the late Hon. Henry Hilton, of New York, to be shot for annually at Sea Girt. To be held during the year by the head of the corps or organization whose team may win it, to be returned to the National Rifle Association of America at the expiration thereof; value $3,000; also a medal to each member of the winning team. The contestants and scores were as follows:

Sept. 3, Wednesday.

The Interstate regimental team match was won by the team of the Fourth New Jersey, which scored 257 at the 200yd. range, and 288 at the 500yd. range, a total of 545 points. The 71st New York scored 538, the 7th New York scored 537, and the 2d District of Columbia, winner of last year, scored 533.

Sept. 4, Thursday.

It was New Jersey day in the way of victories. The Interstate military match went to New Jersey, which retains the Soldier of Marathon trophy, with a score of 1084 out of a possible 1200. The distances were 200 and 500yds., 10 shots per man, at each distance. A late start was made in consequence of a rainy morning. Firing commenced at 11 o'clock. The wind was puffy and puzzling. The District of Columbia and New York tied for second place with 1074 each; Massachusetts fourth with 1059; Pennsylvania fifth with 1051; the Marine Corps sixth with 1044; Ohio seventh with 1018; the United States Army eighth with 1006, and Maryland ninth with 939.

The New Jersey team broke the high score record of 1074, which they established last year.

Sept 5, Friday.

In the Leach cup match, at 800, 900 and 10000yds., Sergt. W. F. Leushner, of the 74th New York, won with a score of 22, 21 and 16; total 59.

Sept. 6, Saturday.

The President's match was the last of the programme, and was a matter of keen interest both to the contestants and the onlookers. The conditions were seven shots at each of the following distances: 200, 300, 500, 600, 800 and 1000 yards, each contestant using the military rifle adopted by the State of which he was a representative. Pvt George Earle Cook, 1st Regiment, District of Columbia, won with a total of 189. The winners of the nine cash prizes in the match were as follows: Pvt. George Earle Cook, 1st Regt., District of Columbia; Pvt. H. H. Leizear, 6th Pennsylvania; Pvt. W. M. Parker, 1st Massachusetts Heavy Artillery; Pvt. S. I. Scott, 2d District of Columbia, 186; Capt. W. B. Short, 7th New York, 184; Pvt. W. G. Hudson, Signal Corps, New Jersey, 182; Pvt. F. M. Dardingkiller, 12th New York, 182; Lieut. Thos. Holcomb, United States Marine Corps, 181; Sergt. C. N. Smith, 12th New York, 180. The tie scores between Parker and Scott for third place, and between Hudson and Dardingkiller for fourth money, were decided on the scores of the men in the long range, under the rules of the Association. Leizear and Cook were tied for first place on the actual number of points scored, each having 189 to his credit, but as the Washington man had scored 28 points on the 1,000yd. range, to 26 made by his Pennsylvania rival, the prize was awarded to the sharpshooter from the National Capital.

A telegram from the Association's committee, of which Gen. Bird W. Spencer was chairman, was forwarded in the evening to President Roosevelt as follows:

"President Roosevelt, Chattanooga, Tenn.: We, the riflemen assembled at Sea Girt, N. J., recognizing in yourself a kindred spirit, sincerely congratulate you in your recent escape from a serious accident, and trust you will suffer no permanent ill effects from it; that your eye and arm in the future, as in the past, may assure you a bullseye every time. The President's match, shot this day, was won by George Earle Cook; score 189 out of a possible 210.

"General Bird W. Spencer, Capt. Robert Taylor, Sergt. Fred T. Alder, Corp. W. B. Short, Committee."

The riflemen who intend to compete for places on the international team which is to go to Canada this week, met afterward on the range, and the men who made the best scores will be sent to meet the Canadian sharpshooters on the range at Ottawa in an international contest.

The scores in the President's match were as follows:

Capt W B Martin, 2d New Jersey	162

First Saturday of each month for a year, Burnside.—Contest for the Troisdorf live-bird and target medals; 10 live birds; 25 targets; open to all. First contest, March 1.

CONTESTS AT INTERSTATE PARK.

Interstate Park, Queens, L. I.—Two miles beyond Jamaica, on L. I. R. R. Trains direct to grounds. Completely appointed shooting grounds always ready for matches, club shoots or private practice. Café and hotel accommodations.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have published. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York. FOREST AND STREAM *goes to press on* TUESDAY OF EACH WEEK.

The secretary, Mr. K. P. Johnson, writes us as follows: "The Kenton Gun Club, Kenton, O., will hold its second annual fall tournament on Oct. 21 and 22. This will be strictly an amateur tournament, and all known 90 per cent. shooters will be barred. We know who they are, and they will not be allowed to participate in the division of purses, but a special match will be arranged for such 90 per cent. shooters and manufacturers' agents. Purses divided on percentage system; in 15-target events, 50, 30 and 20 per cent., and on the 20 and 25 target events, 40, 20, 20 and 10 per cent.; $75 or more added money. We wish you would announce our dates in your columns, and when our programme is prepared, we will forward copy of same and ask for a small special notice."

The Breeder and Sportsman, of Aug. 30, has the following concerning a gentleman who distinguished himself in the East and in Europe as one of the most skillful contestants at the traps, he having been in the first flight at Grand American Handicaps and the still harder competition abroad: "Clarence C. Nauman has joined the ranks of the Benedicts. He was quietly married last Sunday afternoon to Miss Martha Bates, a belle of Sonoma, and a young lady noted for the double qualities of amiability of character and beauty. Mr. Nauman was at the Ingleside trapshooting grounds and won a cup in the forenoon, fitting augury for a happy future."

The Colt Gun Club, of Hartford, Conn., held its annual meeting on Saturday of last week and elected officers as follows: President, F. Hermann; Vice-President, R. Hollister; Secretary; R. McFetridge; Treasurer, J. Alger; Assistant Secretary, L. D. Hubbell; Instructor, S. Colt; Trustee, H. Nichols. Interstate rules were adopted. The club will install new traps, and contemplates first-class service and activity.

The Interstate tournament, given for the Nappanee, Ind., Gun Club, suffered in attendance from conflicting dates, two other Indiana clubs having chosen the same dates, and this after the Interstate dates were claimed and announced.

BERNARD WATERS.

Concord Gun Club.

CONCORD, N. H., Aug.—29.—The weather was good at the Concord Gun Club's shoot to-day. The targets seemed to be very hard to break. The scores:

All communications intended for FOREST AND STREAM should always be addressed to the Forest and Stream Publishing Co., New York, and not to any individual connected with the paper.

National Gun Club.

THE following concerning the National Gun Club has been issued by the authority of the proper officers:

CONSTITUTION.

Name.—The corporate name of the Association shall be National Gun Club.

Objects.—The objects of the Association are to increase the National and State protection of fish and game, and to urge the establishment of National and State game preserves; to foster and promote the sports of trap and wing shooting, and to extend the acquaintance and friendship among shooters throughout the United States; to establish local associations in every State and Territory in the Union; and to familiarize the youth of the country with the use of firearms, to the end that they may be prepared for their country's needs.

Directors.—The prudential affairs of the Association shall be governed by a president, secretary-treasurer, and a general council. The president and secretary-treasurer, with two members of the general council are subscribers to this instrument. For the term ending Dec. 31, 1903, the officers are John M. Lilly, President; F. Holloway, Secretary-Treasurer.

Location.—The permanent headquarters of the Association shall be Indianapolis, Marion county, Indiana.

Capital Stock.—This Association has no capital stock.

Jno. M. Lilly,
Tom A. Marshall,
Ernest H. Tripp,
F. Holloway.

SUGGESTIONS.

Members.—Applications for membership will be solicited from residents of every State and Territory in the Union. All applications postmarked prior to Jan. 1, 1904, and passed by the general council, will entitle the applicants to charter membership: Provided, That each application must be recommended in writing by the captain of the State.

Fees and Dues.—Each application must be accompanied by a New York or Chicago draft for $2, to the order of the National Gun Club, which amount will clear all payments to Jan. 1, 1904, after which date there will be a charge of $1 for annual dues.

State Associations.—When the individual members of the National Gun Club in any State or Territory number twenty-five, they will be allowed to form a State association under the name of their State. This Association will be governed by the State officers mentioned below, according to the rules and regulations furnished by the general council.

State Officers.—There shall be in each State and Territory a captain and three lieutenants appointed by the president, who will serve until Jan. 1, 1904, or until their successors are elected and qualified. Their term of office shall be two years. At the expiration of this first term, if there is a State association, the captain and lieutenants shall be elected by a majority vote of said association, the voting to be done by mail. The candidate receiving the greatest number of votes will be captain, and the next three in order will be lieutenants, subject to confirmation by the general council. It is advised that the Lieutenants be chosen from different sections of the State or Territory.

Advisory Board.—There will be a committee composed of the officers and three members of the general council appointed by the president, which will be known as the advisory board, who will pass upon all matters not of sufficient importance to be submitted to the full membership of the general council. For the first term they are Mr. E. H. Tripp, Indianapolis; Hon. T. A. Marshall, Keithsburg, Ill.; Mr. John Parker, Detroit, Mich.

Finances.—The secretary-treasurer will be allowed to draw vouchers on the treasury, upon his own responsibility, for sums not exceeding $50. The president may make purchases in sums not exceeding $200 in any one month, provided he has authority of the advisory board before making the purchase. All purchases must be evidenced by a voucher, and the voucher submitted to the advisory board for confirmation and passage. When such vouchers are passed by the board, the president and secretary-treasurer are released from all further responsibility regarding them. For expenditures exceeding $200, the president and secretary-treasurer must have the confirmation of the advisory board and the authority of the majority of the members of the general council before incurring the indebtedness. Provided, That at no time shall there be an indebtedness incurred unless the funds are already in the treasury to meet the expenditure.

General Council.—The general council is composed of the President, John M. Lilly, and Messrs. Marshall, Tripp, Parker, Elliott, Lyons, Heikes, Hallowell, Budd, Merrill and Banks, who have entire control of the prudential matters and financial affairs of the club. All voting of the general council shall be by mail. The majority of the votes cast shall be binding, and seven votes shall constitute a quorum, the president not voting unless in case of a tie. The officers shall hold their positions up to Jan. 1, 1904, or until their successors are elected and qualified. In the month of December, 1903, the president shall be elected by a majority vote of the entire general council, thirteen of which shall constitute a quorum. He will then appoint both the active members and the members at large of the general council. Beginning with Jan. 1, 1904, the president and general council shall serve for two years, or until their successors are elected and qualified. The secretary-treasurer shall be appointed by the president. Vacancies in the general council will be filled by a majority vote of the council.

Tournaments.—Beginning with the year 1904, there will be held in the different parts of the country, under the immediate control of the National Gun Club, two tournaments annually, in the spring and autumn, details of which will be furnished later.

Consolidated Sportsmen's Association Tournament.

GRAND RAPIDS, Mich., Sept. 6.—The Consolidated Gun Clubs of Grand Rapids gave a most successful two-day tournament this week on their grounds at North Park. Sixty shooters participated each day. The club added liberal purses to all events, and everything was done to make the occasion pleasant to visiting shooters. Targets were thrown from strong expert traps, and moneys were divided on the Rose system.

The distance handicap was most severely applied, and as the grounds and conditions were extremely difficult, some of the best shots of the country who participated made very indifferent scores. The two days' programme included 455 targets, J. M. Hughes winning first place with the only 90 per cent. average. Other honors went to McMurchy, Cox, Hensler and Wilson. The sum of $50 was given for five high guns each day, and $60 for six low gun on completed programme. Summaries of scores and totals are appended:

Sept. 4, First Day.

Events:	5	6	7	8	9	10	11	12	13	14	15	16

Baltimore Shooting Association.

BALTIMORE, Md., Aug. 30.—The Baltimore Shooting Association on Aug. 30 closed its target season. The final shoot was well attended. Fifteen shooters took part.

The main interest centered in the club race, which was finished, for the monthly prizes. They were won by G. E. Edwards and J. R. Malone with a score of 245 out of 250. Dr. H. E. Lupus was third with 242 out of 250. The average handicap system, which was tried for the first time this month, worked out beautifully and gave general satisfaction, as it was impossible to name the winners until the last score of the month was shot up, which kept up interest until the very last.

The club has had a very successful target season. Among the visitors to-day were Ansley H. Fox and Mr. Scott. Mr. J. M. Hawkins was also present.

The Association will probably hold a fall tournament during October. The scores. The figures after the names indicate the handicap in the club event:

Events:	1	2	3	4	5	Events:	1	2	3	4	5

Colt Gun Club.

HARTFORD, Conn., Sept. 8.—The annual meeting of this club was held Saturday, and the old officers, with a few exceptions, were re-elected to their former places, namely: President, F. Hermann; Vice-President, R. Hollister; Secretary, R. McFetridge; Treasurer, J. Alger; Assistant Secretary, L. D. Hubbell; Instructor, S. Colt; Trustee, H. Nichols. The reports of the secretary and treasurer showed the club to be in a flourishing condition socially and financially. The club voted to be governed entirely by Interstate rules for all future contests. New and modern traps are to replace the old ones; then we hope to have conditions second to none. The following scores were made Saturday:

Events:	1	2	3	Events:	1	2	3
Targets:	25	25	25	Targets:	25	25	25
Hermann	21	23	22	Colt	16	15	16

McFetridge	11	20	17	Calkins	12	..	..
W Field	16	..	..				

IN NEW JERSEY.

Oradell—Spring Valley.

Oradell, N. J.—Appended please find the scores made on Labor Day. The conditions were 25 targets per man, unknown angles, for the New City challenge cup, presented by the New City Fair Association, to be competed for on the New City Fair grounds, Labor Day, Sept. 1, between the Spring Valley Rod and Gun Club and the Oradell Gun Club, seven-man teams. The cup to be won twice before it becomes the winner's property. The following are the scores as per the Oradell scorer, E. H. Vreeland, and under which we claim to have won the cup, although same was not awarded us. There being two score keepers, Mr. Washburn, of the Ossining Gun Club, for Spring Valley Rod and Gun Club, and Mr. E. H. Vreeland for the Oradell Club, when the totals were footed up the score for Spring Valley showed one bird in their favor, the score for Oradell Club showed 2 birds in their favor.

Although we protested against the cup being given to the Spring Valley Club, the situation was unchanged. Now as neither score keeper was agreed upon as an official one, we appeal to FOREST AND STREAM as to who should be the winner of the New City cup. The scores stand as follows:

Oradell score:

Oradell Gun Club.		Spring Valley Gun Club.	
F Ackerman	19	Smith	17
Vreeland	19	Singer	16
Winters	18	Barr	14
A Ackerman	18	Blanchard	15
Lundy	18	Geiger	23
Gruman	18	Addis	18
Post	18—128	Fisher	23—126

Spring Valley score:

Oradell Gun Club.		Spring Valley Gun Club.	
F Ackerman	19	Smith	17
Vreeland	19	Singer	16
Winters	18	Barr	16
A Ackerman	17	Blanchard	15
Lundy	18	Geiger	23
Gruman	18	Addis	18
Post	18—127	Fisher	23—128

CHAS. P. POST, Sec'y.

[As each team had its own scorer, and as, according to its score, each club was a winner, there was no contest. Under the circumstances, the teams having perfectly equal standing, one score was as good as the other. Each club could not be a winner. The number of targets which one score showed above the other was immaterial, as an excess of one target constituted just as good a win as an excess of more. The match should be shot over.]

Carlstadt Gun Club.

Carlstadt, N. J., Sept. 1.—The scores made at to-day's shoot are appended. Visiting shooters are always welcome to particpate:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15
Targets:	10	10	10	10	15	10	15	15	15	15	15	15	15	25	25
E B Smith	3	3	6	3	8	5	9	10	7	9	11	10	8	18	12

J. R. MERRILL, Sec'y.

WESTERN TRAPS.

National Gun Club.

CHICAGO, Ill., Sept. 6.—President John M. Lilly has, with characteristic energy, pushed to successful shape his enterprise of a National Gun Club. This may be now considered an established fact, and there are good men associated with Mr. Lilly in the enterprise. The president states that the original idea of this club originated with Jack Parker, of Detroit, who, not having time to carry it forward, turned the idea over to Mr. Lilly, with results now known. The officers of the club are John M. Lilly, President; F. Holloway, Secretary-Treasurer. The general council is made up of the president, with Messrs. T. A. Marshall, Ernest H. Tripp, Jack Parker, J. A. R. Elliott, H. J. Lyons, Rollo O. Heikes, J. J. Hallowell, C. W. Budd, Richard Merrill and Edward Banks. The latest reports from Mr. Lilly show him full of enthusiasm and bound to push this club into a place where it properly belongs, that of the first rank in shooting affairs of the country. Its function is intended to be that of the parent or governing body for the trapshooting interests of the land.

Waterloo Handicap.

The second 100-bird shoot held at Waterloo, Ia., Aug. 28, was shot under liberal handicap. This extreme handicap was given to Frees, and his resultant score of 87 enabled him to take first money, $16.80. R. Storm and H. Steege divided second on 85. Carl White, with an allowance of 12 birds, divided third money with J. C. Hartman. Fourth money went to R. Jackson, who had a handicap of 7 birds. The following are the scores, as reported by "Farmer," of Waterloo:

R. Storm 85, H. Steege 85, J. C. Hartman 82, Frees 80, Burkhart 75, R. Jackson 74, C. H. Wise 73, E. E. Hageman 72, E. Storm 70, C. White 70, E. W. Coburn 53, C. Storm 30.

Mr. Charles G. Grubb, of Pittsburg, calls attention to the fact that James Atkinson, of New Castle, Pa., took high average at Ruffsdale shoot, Aug. 27-28, scoring 96 and 95 per cent for the two days.

E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

Garfield Gun Club.

Chicago, Aug. 30.—The appended scores were made on our grounds to-day on the occasion of the fourth trophy shoot of the third series. Dr. Meek carried off the honors of the day and incidentally Class A medal by making a straight score of 25. Leete and McDonald tied for Class B trophy on scores of 18, while Wilson won Class C on 16.

The cup shoot immediately followed the trophy shoot, and was won by W. A. Jones on a score of 22 from the 18yd. mark. Pollard made 23, but forfeited on account of shooting from 16yds., while his handicap was 18yds.

The day was a good one for target shooting in all respects, only a little too warm for comfort. Attendance was not quite up to our standard, owing to the proximity of opening season on chickens and ducks, and many are on their way to the shooting fields:

Eighteenth trophy shoot:

Leete	011101101111111100000111 —18
Pollard	101011101110111100111101—18
Dr Meek	111111111111111111111111—25
Wilson	010110110101110011110101—16
Thomas	011101110010111111011111—19

Richards	111111111111111011111111—24
McDonald	110010111111001101111101—18
Dorman	110100101110110011111010—16
Miss Linard	010100000011000010000000— 6
T W Eaton	011100111111111111111111—22
Tichenor	010101101000000010101110l—11
W A Jones	101101111001101111111111—20

Fourth cup shoot:

Leete	100111111000110	10 10 01 10 01—14
Pollard	011111110111111	11 11 11 11 11—23
Dr Meek	101010111111111	11 01 10 11 10—19
Wilson	100100000011000	10 00 00 01 10— 7
Thomas	101111111010011	10 01 11 00 11—17
Keahl	011100110000111	11 00 00 10 00—11
Richards	111110011111111	10 11 11 01 11—21
McDonald	011100111110111	00 11 00 10 11—16
Eaton	111111101111110	11 10 10 10 10—19
Tichenor	100001010001111	11 10 11 11 11—16
W A Jones	111111111111111	01 11 10 01 11—22

Sept. 6.—The appended scores were made on our grounds to-day on the occasion of the fifth trophy shoot of the third series. Dr. Meek won Class A trophy after shooting off a tie on 21 with A. Hellman. Drinkwater won Class B trophy on 18, and Eldred won Class C trophy on 19.

The trophy shoot was immediately followed by the cup shoot, in which event Meek and Wilson tied on 19, Wilson shooting from 14yd. mark and Dr. Meek from 18yd. mark. Dr. Meek won cup on shoot-off.

The day was an exceedingly trying one for target shooting, as a strong southwest wind quartered across the traps, making the flight of the targets very erratic, soaring and dipping so badly as to make good scores next to impossible. The weather conditions and opening of hunting season combined to cause small attendance:

Fifth trophy shoot, 25 targets:

M F Wilson	101101100001110001111160—14
J W Meek	111101111110111111110111—21
T Eldred	011111001111111001101111—19
J A Pollard	111011001100111011010101l—16
L Thomas	011111111111110110110101—20
J McDonald	111001101111010100110100l—15
T Eaton	111111011111001010111001—18
T Jones	111101011100101010011000l—14
J C Kissack	001001111110000010011000l—11
G W Drinkwater	110110010101101011111111—18
A Hillman	111101110111110011111111—21

Fifth cup shoot, 15 singles and 5 pairs:

RAVELRIGG.

Westchester County Trapshooters' League.

PLEASANTVILLE, N. Y., Sept. 1.—The fourth tournament of the Westchester County Trapshooters' League took place to-day on the grounds of the Pleasantville Rod and Gun Club, this being their initial shoot over the new magautrap. Everything that could possibly be done for the comfort of shooters had been carefully looked after. A large tent and awning afforded plenty of shelter. Camp chairs were distributed in large numbers. Refreshments were to be had. In fact, it was a very comfortable and agreeable place to spend a day. A little apart from tent was a space under spacious shady trees, reserved for ladies, of whom there were a large number present. The grounds were in good condition. The shooters faced east.

The programme called for twelve events at 15 targets each, 75 cents entrance, Rose system; $8 average money added, $5 to first, $3 to second, to those shooting through the programme.

C. G. Blandford took first, $5, on 90 per cent.; A. Bedell took second, $3, on 86 per cent.

This league comprises five clubs as follows, of which I will name a few representatives:

White Plains Gun Club—Ed. Shurmer, Wm. Thompson, Geo. Molenaor, Ed. Kleine.

Mt. Kisco—A Betti, F. Bailey, Al. Ray, Chas. Green, President George Sutton.

Ossining Gun Club—C. G. Blandford, A. Bedell, C. W. Bissing.

Armonk Gun Club—C. Barnard, John Reed, G. Flewellen, Joe Carpenter.

Beside a large number of Pleasantville shooters, forty-two faced the traps during the day, making this a very pleasant and profitable amateur day's shoot.

Events:	1	2	3	4	5	6	7	8	9	10	11	12
C T Barlow	9	9	8	12	7	11	10	13	7	10	11	..

F Bailey	10	2	3	7	4	3	4	9	4	5	3	..

Several other contestants shot in one or two events only, and several extra events were also shot.

E. G. HORTON.

Winchester Gun Club.

DETROIT, Mich.—A better day than Saturday, Sept. 6, for shooting could not have been asked for. There must have been other considerations, however, than the weather, for only eight members were present.

Class A was not represented. Hitchcock won in Class B, with 24 in the club event of 25 targets. Ford was high in Class C at 20. Following are the scores:

Events:	1	2	3	4	5	6	7	8
Targets:	10	15	15	10	15	10	15	25
Guthard	6	12	11	10	13	10	..	18

McAdam	..	..	..	..	..	8	12	19
Bachmann	..	..	..	..	..	..	6	10

Answers to Correspondents.

KNOWING that there is no more delightful occupation than that in which one man hunts up information for another man who does not care to take the trouble to obtain it by his own efforts, I send you the following universal key to all information for trapshooters, as follows:

I am a young and rising shooter. How can I, as a shooter, quickest distinguish myself? Ans. By mistaking a man for a deer. Some men do it by not knowing that the gun was loaded.

Can some men shoot better than others? Ans. No. It is all in the ammunition. The shooter is simply an animated gun carriage.

I have a shoulder which is light and weak. Can you tell me of a load for my gun which will insure that there will be not the slightest kick? Ans. Load with buttermilk, well wadded with pork rind, and there will be a minimum of recoil.

Of what material are the best gun barrels made? Ans. Iron.

In case of a right-quartering blue pigeon from No. 5 trap, have you any idea of the best place to hold? Ans. Yes.

Is the English bluerock faster than the American pigeon, or vice versa? Ans. Certainly.

What is the speed of a white, corn-fed pigeon at ten yards from the trap? Ans. It depends on whether the pigeon is flying or sitting.

How is chilled shot manufactured? Ans. It is hand made. After being whittled out into small globules and filed into perfect spheres, which are polished with buckskin, it is heated to a bright red, then set on ice, which chills it.

The shooter goes to the score and calls "Pull," then shoots one barrel after the other, but claims that he meant to shoot both barrels simultaneously. What should be the decision? Ans. You fail to mention your handicap.

My gun weighs over eight pounds. What will lighten it? Ans. Cut it in two.

How many different kinds of loads are "best," and can there be more than one best? Ans. No notice taken of anonymous communications.

If a man leans his head over so as to be inside the mark assigned to him, is it not just as much a violation of his handicap as if he put his foot inside the mark? Ans. It would be a violation if he stood on his head and shot with his feet.

Who is the best trap shot in America? Ans. There are about 100 men who are too modest to proclaim what they know about the best trapshot.

How is it that some shooters have so much more hard luck than others? Ans. Skill accounts for what they do do, and hard luck for what they didn't do.

Do professionals and amateurs shoot for fun or profit? Ans. It is strenuously maintained by some that the amateur, on the one hand, who shoots under certain conventional conditions, has certain actuations and purposes which, when compared with those of the expert, are noted for certain differences, while on the other hand, there are those who are equally strenuous in maintaining that the inherent interests of the competition, and the usages established by the first discoverers of professionalism, place the unearned increment in jeopardy from all points of the compass.

If a target starts at a speed of 200 feet the first second of time, and a load of shot, at the moment of the target's starting, starts after it with a velocity of 900 feet, gun and trap being 16 yards apart, at what distance from the trap will the shot overtake the target? Ans. You failed to mention the make of powder. Z.

Watertown Gun Club.

BOSTON, Sept. 1.—Herewith find scores of Watertown Gun Club's all-day tournament. Coming, as it did, after the Interstate shoot at Haverhill, it was almost impossible to draw a good crowd, but the presence of Leroy, Apgar, McLean, Limus and Doremus was enough to make it a success.

Leroy broke 177 out of 190, with Apgar only two birds in the rear, and Doremus being their nearest competitor.

During the intermission the entire group were photographed, and the Peters mascot (Patsy) loomed up to good advantage.

Programme events:

J. T. AVERY.

Ossining Gun Club.

OSSINING, N. Y.—A few of the standbys came out to the regular weekly shoot of the club on Oct. 30. Event No. 4 was for the Bissing prize, a Winchester rifle, to be won twice to own. Coleman was high to-day with 23. Quite a delegation from this club is to attend the fourth holiday shoot of the Westchester County Trapshooters' League at Pleasantville on Labor Day. We wish to thank the ammunition companies that were thoughtful enough to send their experts here on the 20th and 21st. Several others promised to do likewise, but their representatives must have been sidetracked. We remember courtesies of this sort—also failures. Events to-day were as follows, No. 5 was shot from the 21yd. mark:

Events:	1	2	3	4	5	6	7	8
Targets:	10	15	25	25	10	10	15	5p
E D Garnsey	6	10	16	14	..	..	..	..

C. G. B.

Parker Gun Club.

MERIDEN, Conn.—The two days' tournament of the Parker Gun Club, Sept. 1 and 2, had many contestants of fame in the competition of the different events. There were thirty-two participants on the first day and nineteen on the second day. The events were alternately 15 and 20 targets, $1.30 and $2.40 entrance, respectively, a total of 175 targets, $18.50 entrance for each day. Purses were divided by the Rose system, four moneys, ratios 5, 4, 3 and 2. Targets were 2 cents, included in entrance. The competition was open to all. A Bristol sheep bake was a feature of the first day, and was an event of material interest to all. The scores follow:

Sept. 1, First Day.

Events:	1	2	3	4	5	6	7	8	9	10

Dover Sportsmen's Association.

DOVER, N. H.—It is a pretty custom of the Federate Gun Clubs of southern New Hampshire to shoot and eat on each other's grounds. On such days the ladies take care of the tables. Labor Day belongs to the Dover Sportsmen's Association.

The Dover grounds are unsurpassed. There is an adequate platform of nature's building. The height is open and the vision range free for miles in front, while eastward the green land circles with the rim of the sky.

In every sense the sixth annual Dover meet was a great success. Squads of five men each continually paraded the firing line. Invited guests and curious spectators filled every sitting. All came in holiday attire. Overhead, the sky, during the early hours, was one cerulean arch, without cloud or speck. Save for the intense heat, never had a more delightful day dawned since Paradise was forfeited. Later a delicious breeze swept over the hill.

Representatives were present from New York, Boston, Philadelphia, Amesbury, Haverhill, Berwick, Portsmouth, Exeter, Rochester, Somersworth, and Durham, and the local talent, out in force, sweated with enthusiasm. No intermission was allowed for the appetizing lunch. Encircled by daintily spread tables, the ladies stood all day under the great club tent handing out food and drink. The different squads paid flying visits, and seemed to appreciate this important feature of a day's pleasure at the trap.

To and fro, cheery of voice and argus-eyed, President Wentworth kept things going, while Secretay Hallam and Cashier Mitchell never tired and never stopped talking. One of the best shots on the continent—why not say world—took part in every event, showing what exceeding quickness and extraordinary skill can do with the shotgun. This is not too much to say of Neaf Apgar. Mr. and Mrs. W. K. Park, of the Philadelphia Florists' Gun Club, added no little to the well-deserved success. Mr. Park is attached to Sporting Life, and is a forceful and pleasing writer. Mrs. Park (nee Margaret Kirkwood), better known in Dover as "Miskay" is quick and accurate as ever. Let us hope that always, when shooting to kill is necessary, rude man may alone be behind the gun. But it must be admitted that in shooting as a pastime lovely woman brings to the mark an added grace, a touch of refinement the male biped never secures, and a witchery that mocks at studied art. Of Horace and Will Kirkwood, old Dover thinks much and favorably.

Among the expert amateurs, Philbrick led the Portsmouth levy. Lovering and Lockwood showed up capitally for Amesbury, but Langley, of Exeter, was the hero, and held the center of the stage. The young ladies tried to flirt with the last named, but he had no knowledge of the art. They did flirt with Lewis, who has had many year's experience of the pastime.

The main interest centered in the first hundred shots. Fifteen dollars were hung up. There was a handicap supposed to put the poorest shot on a level with the best. How successfully the scheme worked may be learned by glancing at the column of added targets. It was more difficult for some than for others—and there the fallacy lies.

The following ladies accompanied the out-of-town sportsmen: Mrs. Horace Kirkwood, of Boston; Mrs. S. G. Miller, of Haverhill; Mrs. Bickford and Mrs. Langley, of Exeter; Mrs. C. C. Charlson; Mrs. E. P. Merwin, Mrs. M. Goodwin and Mrs. W. I. Philbrick, of Portsmouth.

Among the ladies of the club who acted as hostesses were Mrs. J. B. Stevens, Mrs. C. H. Mitchell, Mrs. F. Y. Fisher, Mrs. N. C. Wentworth, Mrs. John S. Dame, Mrs. Eugene Smart, Mrs. F. F. Wentworth, Mrs. John Drew, Mrs. Chas. E. Hodsdon, Mrs. George M. Beard, Miss Sowerby, Mrs. J. L. Abrams and Mrs. Wilbur Corson.

Five thousand four hundred and thirty-four targets were used.

Langley and Hammond divided first money; R. Winn and W. Fernald the second; Grieves, Bickford and Beard the third, and Philbrick and Sowerby the fourth. Apgar took the five dollar gold piece as high gun.

During the early hours the targets were erratic; later, when the muscular trapper got tired, there was uniformity. The scores:

* Targets added to first hundred.

Birch Brook Gun Club.

LYNN, Mass.—The final shoot of the summer series was shot Saturday, Aug. 30. During the season only nine shooters qualified by shooting the requisite eight shoots. On the above date Hebbard raised his score one point, winning first place and breaking tie with Hilliard. Rowe raised his score five points, breaking a tie with Rand, and winning fourth place. Hilliard and Straw are left with a tie for second and third places, which, acording to the schedule, is to be shot off Labor Day. The scores follow:

Events:	1	2	3	4	5	6	7	8
Targets:	30	50	10	10	10	10	10	10
Rand	18	31	8	7	..	..	..	..
Rowe	23	37	6	8	..	6	7	7
Hebbard	25	37	10	7	10	8	8	9
Straw	24	38	6	..	..	7	8	..
Riley	16	..	5	4	4	2	5	5
Dudley	23	..	..	..	..	..	..	..
Yelmah	19	..	..	6	4	..	..	..
Mose	..	..	..	..	6	..	..	..
Emery	..	..	..	..	..	3	..	..

Nos. 1 and 2 were medal shoots.

Hilliard wins the medal by a score of 332 out of a possible 400. Straw comes second with 320. Only members could compete for the medal.

The following are the prizes, winners and scores in the series, the possible being 240: Winchester repeating shotgun, Hebbard, 200; sole leather gun case, Hilliard, 199; dress suit case, Straw, 199; rubber hip boots, Rowe, 187; shell carrying case, Rand, 182; shooting blouse, Dudley, 177; sack chilled shot, Hastings, 176; Powers cleaning rod, Riley, 175; Tomlinson cleaner, Yelmah, 137.

LYNN, Mass.—The attendance at the shoot on Labor Day was not so large as it would have been had there not been so many tournaments and shoots carried on last week and Labor Day in the surrounding towns, but those who were there had a good time, and some good scores were made. Owing to the warm day, many targets having from one to three shots perforate them were merely "dusted."

The sixth event was a match between Rowe and Emery at 25 targets, Rowe to use black blasting powder and Emery to use smokeless. Rowe won by a score of 20 to 17, though that does not probably prove that blasting powder is better, for Rowe himself made better scores with smokeless. The following are the scores:

Events	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16
Targets:	10	10	10	10	10	25	10	10	10	10	10	15	10	10	10	10
Straw	..	3	5	..	8	..	7	8	7	6	7	..	8	8	..	..

HENRY ROOD, Sec'y.

Pleasant Hill Tournament.

PLEASANT HILL, Mo., Sept. 2.—Over the Missouri Valley incessant rains have been the order of the day for the past few weeks; and the weather man was somewhat against the greater success of the sixth annual (colored) merchandise and sweepstake shoot, scheduled to take place at this place Aug. 29.

The morning of the 29th indications were for rain. This no doubt kept many away, but about noon the sun came out and brightened up the elements, and those who had assembled spent a most enjoyable day at the traps.

Among the out-of-town colored shooters were Lemuel Clay, Frankfort, Kans., undoubtedly the best target shot of his race, who won high average for the programme of merchandise event; Ed. Armstead, Kansas City, Mo.; C. C. Cooley, Kansas City, and John Lewis, St. Louis, while among the white shooters from out of town were W. A. Smith, Greenwood, Mo.; Chas. Berkstresser, H. McPherrin and Geo. Scott, Ore, Mo., and Samuel D. Woodhouse, the U. M. C. representative, who rendered great assistance to the management in seeing that every one was ready when his turn came. Scores of merchandise events:

The live-bird event for the sportsmen's championship trophy, which was held by the late E. R. Nuttall, of Ohiowa, Neb., at the time of his death, was the most important event of the programme, and was to begin at 2:30, and as Pleasant Hill had three of the five aspirants for said honor, this brought out quite a crowd of spectators, who gave three cheers for Pleasant Hill when it was declared that T. H. Cohron by a score of 23 out of 25 had now become the undisputed champion wing shot of his race.

This match was at 25 birds, 30yds. rise, and the winner, in addition to receiving the trophy and being subject to challenge from any colored shooter in the country, also received of the Syracuse Arms Company, one of their hammerless guns. Scores:

Scores in merchandise events:

Event No. 1, 15 targets: Clay 10, J. Mundy 8, T. H. Cohron 10, Charles 6, R. Mundy 8, Dixon 8, Anderson 6, Gibson 6, Lewis 11, Cooley 5, Armstead 7, S. L. Cohron 4. In shoot-offs Lewis won first prize, J. C. hand trap; T. H. Cohron, second, 100 shells; J. Mundy, third, sportsman's knife; Anderson fourth, Ideal gun cleaner.

Event No. 2, 20 targets: Armstead 10, Charles 9, Clay 15, T. H. Cohron 17, R. Mundy 10, J. Mundy 14, Dixon 13, Anderson 11, Lewis 12, Cooley 9, Gibson 6, Clark 8, Sneed 7, S. L. Cohron 6. In shoot-offs, T. H. Cohron won first prize, Davenport single gun; Clay, second, 150 shells; J. Mundy, third, safety axe; Dixon, fourth, one pound Blue Ribbon and Ideal cleaner; Lewis, fifth, Ideal cleaner.

Event No. 3, 15 targets: Clay 14, J. Mundy 12, T. H. Cohron 10, R. Mundy 12, Dixon 9, Anderson 11, Gibson 6, Lewis 11, Cooley 7, Armstead 7, Charles 10, Wilkerson 8, Sneed 9, Clark 8; S. L. Cohron 7, Dullenger 6. In shoot-off Clay won first prize, 150 shells; J. Mundy, second, 100 shells; Anderson, third, pocket knife and Ideal cleaner; T. H. Cohron, fourth, Ideal cleaner.

Event No. 4, 20 targets: Clay 19, J. Mundy 13, T. H. Cohron 12, R. Mundy 12, Dixon 14, Anderson 14, Charles 9, Gibson 7, Lewis 13, Armstead 12, Cooley 9, Clark 9. In shoot-off Clay won first prize, Stevens single gun; Dixon, second, 150 shells; J. Mundy, third, pair leggings and Ideal cleaner; R. Mundy, fourth, box of cigars and gun cleaner; Charles, fifth, Ideal cleaner.

Event No. 5, 20 singles and 5 pairs targets: Clay 25, J. Mundy 20, T. H. Cohron 17, Dixon 19, R. Mundy 18, Gibson 18, Lewis 15, Anderson 15, Cooley 12, Armstead 13. In shoot-off Clay won first prize, Winchester repeating shotgun; J. Mundy, second, 200 shells; Dixon, third, 100 shells; Gibson, fourth, 50 shells; T. H. Cohron, fifth, quart old rye; Lewis, sixth, Ideal cleaner.

Event No. 6, 15 targets: Clay 13, J. Mundy 13, T. H. Cohron 12, Dixon 9, R. Mundy 9, Anderson 9, Gibson 12, S. L. Cohron 8, Armstead 8, Cooley 7. In shoot-off Clay won first prize, Winters' pneumatic recoil pad; T. H. Cohron, second, hunting coat; Anderson, third, box of shells; Armstead, fourth, Ideal gun cleaner.

Springfield Shooting Club Tournament.

SPRINGFIELD, Mass.—The Labor Day tournament of the Springfield Shooting Club was held on the club grounds, with a large attendance. Interstate rules governed the meet, and the sweepstakes were optional. Professionals were permitted to shoot for targets only. Leroy, who was handicapped by a light load, was high gun, breaking 172 out of 195 shot at. The best shooting was done by Leroy, Doremus, Stacy, Chapin, Merritt, Coats, Jordan, Kites, Dr. Keith and Le Noir. The programme contained twelve events, after which extra events were put in. About twenty shooters shot through the whole programme. The day was perfect for shooting, and some fine scores were made. The club received many congratulations for the business-like manner in which the meet was conducted:

Aug. 30.—C. G. C. cash prize contest, handicaps in yards: Nye, 16yds., 46; Randall, 18yds., 44; Du Bray, 17yds., 44; Gambell, 17yds., 42; R. Trimble, 19yds., 41; Heyl, 18yds., 41; Roll, 19yds., 41; Van Ness, 17yds, 39; Roanoke, 16yds., 39; Ahlers, 17yds., 38; Boyd; 17yds., 38; Harris, 18yds., 38; Capt, 16yds., 38; Trimble, 18yds., 37; Ackley, 16yds., 37; Gross, 19yds., 37; Willie, 16yds., 37; Corry, 16yds., 37; J. B., 17yds., 35; Maynard, 18yds., 35; Jack, 16yds., 34; Herman, 17yds., 33; Frohliger, 16yds., 29; Falk, 17yds., 29; Littleford, 18yds., 25; Verges, 19yds., 25; Colonel, 16yds., 14.

Match, team race, 100 targets, 18yds.:

Heyl 85, Ahlers 83; total 168.

Gambell 83, Van Ness 75; total 158.

Sweepstakes, 25 targets, 23yds., one money: Gambell 20, Ahlers 19, Gross 18, Van Ness 15.

Paducah Gun Club.

PADUCAH, Ky., Aug. 30.—We append tabulated scores of the records made at our second annual tournament held here the 26th, 27th and 28th inst. There were about seventy-five participants, including the very best shots in the country, as will be seen by reading the list of entries. Despite the inclement weather that prevailed during the first two days of the shoot, there was the greatest enthusiasm, and from the bearing of the shooters one would not have suspected that the weather was other than the most desirable. The last day of the shoot was clear and bright, and immense crowds were out to view the live-bird match. That afternoon there was a reception held for the ladies, and delicious refreshments were served.

The first high average at targets was made by R. O. Heikes, who broke 340 out of a possible 350, 97.1 per cent., and he was presented with a handsome cup. First high amateur average was made by C. C. Le Compte, of Eminence, Ky., who broke 321 out of 350. 91 per cent. H. C. Bronaugh made second amateur average with 314 out of 350, 90 per cent.; he also won the club's handsome cup, given each year at the tournament. C. C. Le Compte won high average as amateur; he used Infallible powder in Leader cases. H. C. Bronaugh used Dupont powder and Peters cases.

On Thursday, the third day, there were thirty-nine entries in the live-bird race, in which the club guaranteed a purse of $700, but it reached $780.

Rolla Heikes and Mose Starr, of Paducah, were first, killing straight, and the following made 24 out of 25: Dr. Carver, T. C. Sanders and H. Money. Those who killed 23 were: H. C. Bronaugh, James Lewis, Hal. Walters, W. L. Hansbro, W. Brady, F. C. Ward and Chas. Spencer.

First Day, Aug. 26.

W. A. DAVIS.

Trap Around Reading.

READING, Pa., Aug. 27.—The Reading Shooting Association's annual two-days' target tournament opened here to-day and was a great success, the attendance being very large. The shoot was held on the association's new grounds at Carsonia Park, near the city line. The new grounds are ideal for target shooting, having a fine background. Among the sportsmen in attendance from out-of-town were William Hartz, of Sparrow Point, Md.; M. H. Ruppelt, of North Branch, N. J.; H. C. Stephens, of Steelton, Pa.; M. S. Brey, of Zionsville; Ira Brubaker, of Richland; Fen W. Cooper, of Mahanoy City; Arthur Walker, of Catasauqua; Luther Showalter, of Pottstown; D. D. Daudt, Isaac Hahn and John Bell, of Bethlehem; Harry Schlechter, Charles Kramlich, Frank Englert and Charles N. Miller, of Allentown.

The trade representatives present were T. W. Morfey, of the U. M. C., and J. R. Hull, of Parker Bros.

The programme each day called for 135 targets. The best average the first day was made by Schlechter, who broke 125 out of 135. Lee Wertz won the second day's average prize by breaking the same number of targets as Schlechter did the first day.

The shoot was conducted by the association's tournament committee, composed of John Shaaber, Charles Dietrick and George W. Ritter, who worked hard to make the tournament a success, and deserve credit for conducting a tournament without a hitch of any kind during the two days. The scores follow:

First Day, Aug. 27.

Clampionship of Gregory County.

BONESTEEL, S. D., Aug. 27.—On the afternoon of Aug. 26, on the grounds of the Fairfax Gun Club, Carl Porter, holder, defeated J. F. Spatz, challenger, for the Peters Cartridge Co.'s trophy emblematic of the championship of Gregory County, by a score of 46 to 42. Singularly enough, this was an exact duplicate of the scores of the last race between Porter and Thompson for the same trophy.

Porter seemed a bit nervous at first and slobbered his birds badly, but soon settled down to his steady grind and at the end of the first string of 25 the score was 21 to 19 in favor of the champion. The last string of 25 was as pretty a race as any one could wish to see, as the contestants never made a skip until Spatz lost his 21st bird, 42 birds being broken straight, but Porter was not to be denied and ran out his string without a semblance of a skip, while Spatz lost his 22d and 24th bird, going out with a total of 23 on the last string, which made his total 42. Porter lost his 6th, 10th, 11th and 21st, making the very good score of 46. He was warmly congratulated on his victory over his more unexperienced antagonist. This race demonstrated that Mr. Porter is possessed of all the essentials of a good trap shot, save only physical strength, he being a small, slender fellow and very light in build. While Mr. Porter is in his present form there is little hope of defeating him, but it would be more than wonderful if he should retain his present wonderful condition.

His next antagonist will probablyy be either Spatz or Leach, of the Bonesteel Gun Club, and an effort will be made to induce Mr. Porter to waive his right to the grounds and consent to pull off the next shoot at Bonesteel.

A number of sweeps were run off in connection with the championship event, and whether or not the race had exhausted the champion or whether he was a bit careless after his hard-won victory, he displayed little of the form shown in the race. Thompson, of Fairfax, won high average for the day, as also the good share of the purses. Great interest is being shown in these inter-city shoots, and the best of feeling prevails. The day was an ideal one for the sport, and the traps under the management of Mr. Newsbaum, who is an excellent trap puller, worked perfectly.

Following are the scores in the championship event:

Porter	1111101110011111111101111—21
	1111111111111111111111111—25—46
Spatz	0111111111110111101101001—19
	1111111111111111111101101—23—42

W. A. LEACH,
Secretary Bonesteel Gun Club.

Interstate at Nappanee.

NAPPANEE, Ind., Sept. 6.—The Interstate Association tournament held at Nappanee, Ind., Sept. 3 and 4, under the auspices of the Nappanee Gun Club, from an attendance standpoint was a failure, but twenty different contestants putting in an appearance. The small attendance was due entirely to conflicting dates. The dates for the Nappanee tournament were claimed through the columns of the different sportsmen's journals on Feb. 15, and appeared in the list of fixtures from that time on, yet two other gun clubs in the State of Indiana saw fit to hold tournaments on the same date. This may be sportsmanlike and the proper way to create friendly intercourse between gun clubs, but the members of the Nappanee Club and many others as well do not think that it is. Mr. J. L. Head, who is in touch with the trapshooters of Indiana, stated that by reason of the dates conflicting Nappanee was hurt to the extent of twenty entries at least. This is to be regretted, as the Nappanee Gun Club is a young organization and deserved every encouragement. Although the members of the club were very much downcast over the small attendance, the programme as advertised was carried out to the letter. It was a commendable action on the part of the club, and one which will reap its own reward. The scores follow:

Sept. 3, First Day.

The Hamilton Gun Club.

HAMILTON, Canada, Sept. 3.—At the annual meeting of the Hamilton Gun Club the following officers were elected: Thos. Upton, President; M. E. Fletcher, Vice-President; Geo. Crawford, Treasurer; John Hunter, Secretary; Dr. J. E. Overholt, Chas. Brigger and Jos. Crooks, Executive Committee; Dr. Hunt, Field Captain; F. B. Vallance, Compiler of Scores.

It was decided to hold the thirteenth annual grand Canadian live bird handicap on Jan. 13, 14, 15 and 16, 1903, and we beg that you will claim and post these dates for our thirteenth annual tonruey. We are going to make this the live bird event of the season; particulars later.

Appended please find scores of last regular club shoot. At our next meeting, on Sept. 13 the annual team shoot, president against vice-president, will be held, and the competition for the Peters trophy completed. All visiting sportsmen cordially received as members of the day and night.

Events:	1	2	3	4	Events:	1	2	3	4
Targets:	10	25	25	5	Targets:	10	25	25	5
Upton	9	23	19	5	Hunter	8	20	16	4
Brigger	8	22	21	..	Crawford	10	15	14	..
Work	6	20	20	..	Fletcher	..	21	17	..
Dr Wilson	7	18	22	2	Frank	..	19	..	..
E A Clifford	5	20	18	..	Ben It	..	14	14	..
Bowron	9	19	18	..	McMahon	..	17	11	..
Hunt	8	21	20	5	Andy	..	..	..	3
Barr	5	..	11	..					

In event No. 4 Hunter only shot at 4 birds. Events 2 and 3 for Peters trophy; event 4, live birds.

Mr. McMackon, of Ridgetown, visited us to-day, and shot with borrowed gun, which accounts for his dropping so far below his usual average. BEN IT.

Raleigh Gun Club.

RALEIGH, N. C., Sept. 4.—The attendance was smaller at the regular shoot of the Raleigh Gun Club to-day, but the enthusiasm was just as great if not more, as each one thought almost to the last that he would be the winner for the evening's shoot. But the honors were not to go to any one in particular. As the scores show, they were captured by four different contestants, and it seems that some one of this number could have run one more. We see no reason why our president, Mr. Johnson, could not do better since his return from the Lynchburg shoot, where he was handicapped to 20yds., and our club won't forget this injustice. While Mr. Johnson said he was treated royally in every other respect, and he has nothing to say himself against being handicapped, not one of our club members that I have heard express themselves thought it right. The following scores were made to-day at 50 targets: Johnson 41, Pearce 41, Gowan 41, Whitaker 41, Parker 39, Ferrall 39, Gray 37, Stark 33. R. T. GOWAN, Sec'y.

Answers to Correspondents.

No notice taken of anonymous communications.

E. R. C., Tapachula Chiapas, Mexico.—We have an insect here in this country called by the natives chicharra. As I remember, it is exactly the same insect which they have up in the mountains of western North Carolina, called there the seventeen-year locust. In shape it is very much like a common house fly and about half the size of the thumb. It lives up in the trees and darts rapidly away on being alarmed. The note it gives is a shrill whistle when at rest. Would you kindly tell me if this insect is a locust? If not, to what family does it belong? Ans. The insect may be the "seventeen-year locust," which is really not a locust at all, but a cicada (*Cicada septemdecim*). It belongs to the order Hemiptera, which includes bugs, ticks, "walking sticks," manteo, and a great number of quite dissimilar forms; or it may be some closely related form. This could be determined only by the examination of a specimen by an entomologist.

PUBLISHERS' DEPARTMENT.

Before long now the great broad waters of the Southern States, Currituck, Albemarle, Core and Pamlico sounds, and others to the southward, will be covered with water fowl which resort there to spend the winter. Before long, too, people will be thinking of starting for the southern quail grounds. Norfolk and Richmond are two points from which all these shooting localities may be reached, and to these two cities one may travel easily and comfortably by the Old Dominion Line.

The man who is going to Maine, or indeed anywhere to the northeast will do well to include in the routes which he considers that offered by the Maine Steamship Co. The heat and dust of railway travel is avoided, and one's self and baggage need not be thought of after New York is left.

At the Durant, I. T., tournament, Aug. 28 and 29, Mr. Wade won high average for the target programme, with a score of 218 out of 240. He shot Peters Ideal shells.

A Charming Nature Book.

Neighbors of Field, Wood and Stream.

By MORTON GRINNELL.

This is a book of country life, but it deals not with people, but with the wild creatures which, though for the most part unseen, live their lives all about us in Field, Swamp and Forest. Its natural history is accurate and its facts are given most entertainingly. It is copiously illustrated from the author's own specimens and from life. 12mo, cloth. Illustrated. Price $1.30 net, $1.45 postpaid.

FOREST AND STREAM PUBLISHING CO., 346 Broadway N. Y

For Anglers and Big Game Hunters.

A Big Game and Fish Map of New Brunswick.

We have just had prepared by the official draftsman of New Brunswick a map of that province, giving the localities where big game—moose and caribou—are most abundant, and also the streams in which salmon are found and the rivers and lakes which abound in trout.

The resources of New Brunswick in the way of game and fish are only just beginning to be appreciated, and we are glad to offer to FOREST AND STREAM readers the first authentic information as to localities where sports may be had. The map is printed in colors, on a tough paper, and is enclosed in a stout manila envelope for protection in carrying. Price $1.

Self-Loading Pistols or Carbines

Mauser Automatic Carbine or Pistol

are the most efficient Riot Preventres and are rapidly taking the place of the larger revolvers and more complicated automatic or self-loading pistols all over the world. As an offensive or defensive weapon for the Military, Sheriffs, Prospectors, Surveyors, Cowboys and Frontiersmen, it has no equal.

It is sighted up to 1000 yards. It will shoot a mile. It will penetrate 17 inches of pine. It can be fired six shots within one second and holds six or ten cartridges, smokeless powder, soft nose or full mantled bullets. 10 shots can be reloaded in a couple of seconds and it is fully guaranteed. No other weapon will command the same **wholesome respect** among the lawless. It has killed bear, deer, and nearly all big game and little game to be found on this continent, and its small size and light weight make it a most desirable auxiliary.

A New English Gun.

"Great Value for Little Money."

THE REGENT. PRICE $65 NET

We have just received the first few cases of a new English gun which we have named "The Regent". They are made for us by the best gunmaker in England and bored on the same principle that has won world wide honors for English guns. The barrels are best Siemens Martin steel, and the shooting is unexcelled. The stocks are selected English walnut, half pistol grip, latest model Anson & Deeley action, nicely engraved, and the finish and workmanship throughout are up to the English standard. English guns have long been the standard of the world, and this new product will mark a new era in price as well as quality. We have never before been able to offer so fine and good a gun for so little money. They can be supplied in weights from 6¼ lbs. to 8 lbs., in 12 bores, and from full choke to true cylinder.

We carry a large line of guns and rifles from $6.00 to $600.00, and are sole U. S. Agents for the celebrated guns of W. W GREENER.

U. M. C. AT SEA GIRT.

The following matches were won at the great annual military tournament just concluded, by shooters who used U. M. C. ammunition:

The Leach Cup Match.

The Spencer Cup Match.

The All Comers Match.

Revolver Team Match.

Military Revolver Championship.

Inspector's Match was won by the new U. M. C. bullets, and in President's Match the high score was tied by U. M. C. cartridges. In fact, at the rifle ranges nearly every shooter used the new U. M. C. .30 Government cartridge, except where the Government make was specified, and the scores made were the best in many years.

The **UNION METALLIC CARTRIDGE CO.**

313 Broadway, New York. BRIDGEPORT, CONN. 86 First St., San Francisco, Cal.

WINCHESTER

High Velocity Low Pressure Cartridges.

.45=70, .45=90 and .50=110 Calibers, Loaded with Smokeless Powder and Soft Point Metal Patched Bullets.

FOR BIG GAME SHOOTING AT DISTANCES UP TO 200 YARDS.

We are now able to furnish, through the regular trade channels, the above new Winchester High Velocity, large bore, cartridges for Winchester Model 1886, .45-70, .45-90 and .50-110 caliber rifles. These cartridges, although they give high velocity and great muzzle energy, develop only slightly increased initial pressure. By their use, owners of Winchester Model 1886 rifles of the calibers mentioned can greatly increase the power of their guns. For fine shooting, a slight alteration of sights may be necessary when these cartridges are used. When ordering new rifles in which it is intended to use these cartridges, it should be so stated in the order, so that the proper sights may be fitted.

The following table shows the muzzle velocity, penetration and trajectory of these High Velocity Low Pressure Cartridges:

Name of Cartridge.	Weight of Bullet, grains.	Velocity at Muzzle, Feet per second.	Penetration in 7/8 inch dry pine boards at 15ft. from muzzle. Soft point bullet.	Trajectory. 100 Yds. Height at 50 yds. Inches.	Trajectory. 200 yds. Height at 100 yds. Inches.
.45-70	300	1875	13	1.47	7.40
.45-90 Winchester	300	1980	14	1.41	6 63
.50-110 Express	300	2225	12	1.07	5.82

With the great increase in velocity which these cartridges have, their trajectory is proportionately flatter, and, at 200 yards, their remaining energies are practically the same as those of the small caliber high-power cartridges. It is a desirable feature of these cartridges that they can be used by persons who fear to use the high-power small caliber cartridges on account of their great range. These points considered, and the fact that the results are obtained with bullets of large cross section, make these cartridges unsurpassed for striking and killing power at the distances at which most big game is killed.

CANOE CRUISING AND CAMPING.
By Perry D. Frazer. Illustrated. 95 pages, cloth. Price $1.
This interesting little volume is a practical guide for the cruising canoeist, the man who wishes to start away from the city and for a short time to make his canoe his home. With this in view, Mr. Frazer, who regards canoeing as a healthful and economical method of passing away leisure hours, has written briefly but attractively of canoes, camping outfits, clothing, firearms and ammunition; fishing tackle, photography, and in general of cruising, camping and all that pertains to this phase of outdoor life. While the volume has been written chiefly for the younger men, it is yet full of practical information and suggestion that appeals to those who have had a wider experience.
Such a book as this should be in the library of every man who is interested in outdoor life or the things which pertain to it. It is one of the manuals which should stand on the shelf alongside of "Woodcraft," of which, in fact, it is a part.
FOREST AND STREAM PUB. CO.

"THE CHALLENGE."
This spirited picture of the American Elk has been engraved as an artotype in size and style companion to "Alert," The plate is 13 x 19 inches on 22 x 28 Price (mailed in a tube, postpaid), $3.00
FOREST AND STREAM PUBLISHING COMPANY, NEW YORK.

YACHT ARCHITECTURE.
By DIXON KEMP, Associate of the Institute of Naval Architects, and Member of Council. Second edition. Super-royal 8vo. Price, $16.80.
This work enters into the whole subject of the laws which govern the resistance of bodies moving in water, and the influence a wave form of body and wave lines have upon such resistance. It also deals comprehensively with the subject of steam propulsion as applied to yachts. An easy system for designing is provided, and every necessary calculation is explained in detail. The latter part of the work is devoted to yacht building, and engravings are given of every detail of construction and fitting, including laying-off, taking bevels, etc. The list of plates (exclusive of over thirty devoted to the elucidation of the text, and nearly 200 wood cuts) exceeds fifty, and comprises the lines of some of the most celebrated yachts afloat by the most successful builders and designers.
FOREST AND STREAM PUBLISHING COMPANY, NEW YORK.

Hints and Points for Sportsmen
Compiled by "Seneca." Cloth, illustrated, 224 pp. Price $1.50.
This compilation comprises six hundred and odd hints, helps kinks, wrinkles points and suggestions for the shooter, the fisherman, the dog owner, the yachtsman, the canoeist, the camper, the outer; in short, for the field sportsman in all the varied phases of his activity. The scope of the information it contains embraces a wild field, and "Hints and Points" has proved one of the most practically useful works of reference in the sportsman's library.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

COPYRIGHT, 1902, BY FOREST AND STREAM PUBLISHING CO.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SATURDAY, SEPTEMBER 20, 1902.

VOL. LIX.—No. 12. No. 346 BROADWAY, NEW YORK.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted. Anonymous communications will not be regarded. While it is intended to give wide latitude in discussion of current topics, the editors are not responsible for the views of correspondents.

Subscriptions may begin at any time. Terms: For single copies, $4 per year, $2 for six months. For club rates and full particulars respecting subscriptions, see prospectus on page iii.

THE APPALACHIAN PARK.

At the annual meeting of the Appalachian National Park Association, held in Asheville, N. C., on Wednesday of last week, the secretary, Dr. C. P. Ambler, presented a report of substantial progress for the year. Just what an active system has been followed for pushing the Appalachian Park project into publicity and keeping it there, may be inferred from the statistics of the year, which show that the secretary sent out more than 42,000 pieces of printed matter, making a total since the work was undertaken of nearly a million pieces; and more than 1,300 personal letters. The result of the year's propaganda gives substantial cause of satisfaction. Opposition which existed on the part of large lumber corporations has been overcome, and many of the largest and most influential lumber organizations have declared for the Park. As has been recorded in these columns, the bill to provide the reserve was not pressed at the late session of Congress, because it was feared that the immense appropriations made for other purposes would endanger the measure. But there is reason to believe that the matter may receive favorable consideration in the short session in December.

It is a pleasure in recurring to the Appalachian Park to note, as we have noted before, the public-spirited and efficient services performed in its behalf by Dr. Ambler. The setting apart a region of forest for the benefit of the country at large, now and in the future, is one of those undertakings which, while of the highest public importance, must in the nature of things depend for success upon individual initiative and execution. Without some one man so intensely interested and so patriotic in the highest and best sense of that much-abused term that he will give unstintingly of his thought and time and labor to doing the actual work, we should never see the realization of such an undertaking.

AUTUMN'S ANTICIPATION.

THE days of the year have come, charming days to sportsmen, when there is a crisp coolness in the breezy air; when there are, from the master hand, free touches of glorious reds, yellows and browns spread here and there on the landscape; when there is a rustle of falling leaves which whisper that the reign of summer is ending; and when the fancies of the sportsman lightly and blithely turn to thoughts of dog and gun, game birds, open fields and woodlands of pleasant memories. As his eye rests upon the landscape with its touches of fall coloring, he notes that the general green color is faded and washed out, with an approach to the sere where the frosts nipped hardest, all in sharp contrast to the deep fresh green and summer flowers of a few weeks ago.

The game birds, in sympathy with the year's fruition, have quite or nearly attained their full growth, and are garbed in coats of many colors, each bird a gem to delight the eye and to evoke a craving for possession.

The season and the opportunity combine to reawaken memories of the past and to excite purpose for the future. The sportsman resolves to go a-hunting. Even if he knows that he cannot go, he tries to delude himself with the belief that he may go after all, and thereupon he enters into all the discussions and preparations with the same earnestness of those whose going is a fixed certainty. There are many grave deliberations as to guns and dogs. The experienced sportsman takes time by the forelock. If he have not a gun, he consults his friends as to which can be obtained at the most reasonable price consistent with useful service, and the pleasure of him who gives the advice is no less by a single jot than the pleasure of him who receives it. Localities are canvassed as to their present possibilities; country friends, resident on the scene of future pursuit, are written to for advice concerning the bird supply; the best routes are decided upon by which to journey to and fro, and last, but not least, the friends most available from whom to beg or buy a dog of usefulness afield, are carefully considered and decided upon.

At no stage in a sportsman's life can he better put a friend to the test of true friendship than in the beginning of the hunting season, by asking for the loan of his friend's best trained setter or pointer. A friendship which will withstand such a shock is better than fine gold. Nevertheless, solid and majestic as is such friendship, it is far the wiser part to refrain from subjecting it to the test too many years in succession.

But all the details of preparation on the one hand, and all the ardent anticipations of sport afield on the other hand, all stimulated to the highest pitch by the most favorable reports from the game section, confer a material benefit in themselves, for, if the outing should prove a failure as to the bird supply, there has been for the time being a wholesome diversion from the cares of business, a renewal of neglected friendships, a fighting of battles over again, and all the successes possible as a matter of anticipation. If the outing, on the other hand, is a success, it is not only a pleasure and material benefit in itself, but also an event which makes good biography and material for retrospection in later years.

EYES AND SEEING.

IT is chiefly by the use of our eyes that we learn things. This is trite enough, of course; yet do we all of us appreciate what it means?

The newborn infant, staring at vacancy with goggle eyes, sees no more than the blind puppy; but with time—like the pup—it learns to use its eyes and with proper training to get the most out of them. The babe learns to recognize things, to estimate distances, to avoid dangers, to journey comfortably. After a season, as its intelligence increases, it learns to read and begins to acquire knowledge from books, but for the average man, during at least the earlier part of his life, this book knowledge has little meaning unless it conveys some mental picture—unless the reader can mentally compare the things he reads of with the things that he has seen.

As we grow older, we learn to use our eyes in different ways according to the conditions of life which surround us. The city dweller, familiar with the surroundings of a closely built-up neighborhood, is at home in the city, but knows little of the scenes and surroundings of the country. If he visits the country, he finds that he lacks the sense of direction and easily becomes lost in swamp or thick woods. He does not know the trees, the flowers, the birds or the mammals which he sees, and if he asks questions about them, and is given their names or other information by some one better informed, it makes little impression on him and he forgets at once. Transplant him to the country and let him live there for a year, and his knowledge of these things will enormously increase.

The average man learns to use his eyes for one set of observations, and this is true of all men, whether their pursuits are in or out of doors. The hunter, scanning the horizon for game or scrutinizing the ground for "sign," does not regard, and probably does not see, the vast number of other interesting things that are visible. The botanist goes along with his eyes fixed on the ground looking for low-growing plants in the meadow or among the underbrush, while the ornithologist has his eyes in the air among the tree tops, and the geologist looks at the rocks at his feet, or the distant buttes, and is blind to all beside.

There are two sorts of men who habitually travel with their eyes wide open, and see most of the things that are to be seen. These are the trained field naturalist and the Indian. The first sees alike bird, beast, flower, shell and rock, and beside this views with delight the charm of the landscape. Perhaps there is no one who takes so much pleasure in his walks abroad as he. No step that he makes is without its interest, and there are few persons before whom so wide a field of pleasure is open as the naturalist.

The other man whose powers of observation are highly trained is the Indian. His whole life is given to observation, to the noting the signs of the forest, and the prairie, since it is by noticing these signs that he exists.

A writer has said, "Like the wild bird and the beast, like the cloud and the forest tree, the primitive savage is a part of nature. He is in it and of it. He studies it all through his life. He can read its language, it is the one thing he knows. He is an observer. Nothing escapes his eye. The signs of the clouds, the blowing of the wind, the movements of birds and animals—all tell to him some story. It is by observing these signs, reading them and acting on them that he procures his food, that he saves himself from his enemies, that he lives his life."

It is a happy circumstance that the rising generation are being taught more and more to use their eyes, to observe the facts of nature which are constantly taking place about them, and, in some measure, at least, to apply these facts to the great lesson of the development of life which within the last fifty years has been explained to us.

One of the chief charms of the FOREST AND STREAM is that the contributions which it contains are written by men and women who have been trained to observe nature and wild life, and are able to tell vividly and attractively about the things they see. It may be hoped that the readers of FOREST AND STREAM are training up in their turn a generation which shall see things even more clearly and with a greater breadth of view than did their fathers.

HONEST ALL THROUGH.

"THE honest man is honest all through," wrote President Faunce, of Brown University, the other day in a discussion of college students cribbing. That means, among other things, that an honest man is honest in the woods, as well as out of them.

The woods test of honesty is searching and severe a man be not "honest all through," he is very be dishonest when the great forest shuts h from the conventional surroundings and fluence of his accustomed every-day life.

This immersion in the woods is a ma some of the wondrous transformations It relaxes the set face, smoothes out from the brow, gives brilliance and pu erect carriage, expanded chest, light does all this gracious renewal, regen not grudgingly and hesitatingly and generously and in full measure. This woods life, the element of it which ca wilderness of green fields and odor waters as among the most blessed her

But there is another side. Upon c a host of those who go into the wood ings have a certain malign spell wh the all-through-ness of their honest from home, in the woods, answerable bound by none of the customary rest association with their fellows. And stances, if a man be not honest all th going to jack deer, or put out a hound provide a mess of trout. And he is self to himself—for he surely will ac self, be it ever so lightly—by a ve reasoning. "The game law is all way," he will say to himself, if he after he has got what he wanted, "b for a fellow here in the woods. N ever suffer because I have that ven deer more or less, what does it amo I hadn't got it, some one else would. nobody's business, and beside, no o anything about it."

It is precisely because there are cas this fashion, and act accordingly, c even the arguing, that the Adiron spoiled of their deer, as the corres from Old Forge tells us they are. T killed in violation of the law, out of s and by hounds, are killed by deer h are not "honest all the way through."

Apropos of the transfer of live qua another, the fact has been called to c California the law forbids the export and other game, except for the purpos and the right to transport for the purpos or for scientific purposes, must first be o in writing from the Game Commissio Board of Fish Commissioners. This is a able system, and one which might ac adopted in some other States.

The Sportsman Tourist.

The Song of the Sea Gull.

FLY high, fly low, as swift we go
Above the billows crest with snow;
With tireless wing we onward swing,
To seek the food the waters bring;
For One above our needs will know.

Through summer's airs so soft, so slow;
Through autumn's blasts and tornado,
We, circling still, on sweeping wing
Fly high, fly low.

Through the fierce storms that winters bring,
When from the north the wild gales sing,
Above the ice and through the snow
With dauntless breasts we face the blow,
Or, sweeping on the tempest's wing,
Fly high, fly low.

J. H. FISHER.

Taking Your Boy Hunting.

THE boy had been promised a day with the prairie chickens, and the various stages of preparation and anticipation had been passed through, and we were at last in a hunting wagon, slowly trotting over the wind-swept stubble and prairie as the dogs ranged ahead hunting for birds.

Surely anticipations are rarely realized; as far as that boy was concerned it would have been an impossibility. The first thing in the morning and the last thing at night did his 16-gauge gun come in for an inspection only such as a captain at West Point would give the arms of his company. And before the gun went back in its case the oiled rag was each time carefully applied to barrels and stock.

At odd times during the day the gun would be taken

o, like the dogs, is restrained, his protests keeping pace with the impatient whining of the dogs. "Just see them. Golly, there must be fifty of them! What big fellows they are! See them run! There they go; now see the chance we lost!" as the birds take wing and go sailing on curved pinions toward the prairie grass cover. The boy is worried, perceptibly so, equally so with the dogs that also saw the birds flush and away, but our good farmer mentor tells the boy that he knows just where those birds went, and right after breakfast we will walk right to the exact spot, unless we meet another covey or two on our way, and the dog will locate them at once. And the boy wonders at this and quiets down. And here is the farmhouse at last, and the first to greet us is the farmer's wife, who lifts the boy out and in doing so gives him a motherly hug and kiss and carries him right into the kitchen and sets him by the warm stove that supports its burden of sizzling ham and eggs and boiling coffee awaiting our coming.

The farmer's boy, about the age of the other boy, comes in with his burden of milk, warm and foaming, from the pasture. An acquaintance is struck up at once and they are deep in the chicken question immediately, the farm boy telling where the coveys are and where they roost and how tame they are, and such other information as would prove of interest.

The boy at the breakfast table has certainly heart for other things than food, and only under the stern command of his parent and the mothering of the other boy's mother, and the good example of the other boy, who has been choring from daylight and eats as only a farmer's boy can, does he worry down his food. And the breakfast over we don our shooting coats, distribute a supply of shells, fill a goodly sized stone jug with water, and during all this time our good hostess is loading a basket with a lunch that a well-to-do farmer's wife knows only too well how to put up, while the farmer's boy, who is to go with us, finishes up some work about the place. "All ready?" cries the farmer, and we jump in and off we trot straight across the stubble toward the promised swale of prairie land, where our birds of the morning pitched. The dogs are out now ranging to right and left, nosing the ground and running in geometric circles over the stubble. They are fresh and wild, but will soon steady down. Away we go, the sun now tempering the breeze, making it a pleasure to face the wind blowing in our faces. "Look out! No, nothing there now; that's where some birds were no doubt feeding this morning," as the dogs halt and for a moment make game. We are out of the stubble now and are now riding over the thick prairie grass and approaching the swale. The dogs some distance ahead of us have stopped still and are hugging the grass. They have scented the birds. We drive up and dismount. I put shells into my gun and taking the boy's gun go through the motions of loading it, but put empty shells into the barrels. The farmer has put shells into his gun and already stands behind his dogs. I keep close to my boy—in fact, a little behind him, so I can look over his gun barrels when he shoots. I know that the roar of the flushing birds will disconcert him, and he will pull one trigger after another at the brown and white mass that leaps into the air. The birds are some distance yet ahead, the scent coming fresh and strong to the dogs down wind.

Under persuasion they crawl stealthily along, their eyes aglow and their jaws dripping with saliva, every muscle tense and nerve quivering. The boy divides his attention between the dogs and the grass a little ahead of them. He is already at the highest pitch of excitement and trembles like an aspen. On and yet on the dogs crawl, and yet no birds, when with a roar the covey breaks cover and is in midair. The farmer, who knows a gun, quickly stops the two leaders, and the boy does as I anticipated, aims at "something brown" and pulls both triggers—and gets nothing—and I am fortunate in knocking over a single quartering bird that comes my way. The covey being leaderless, flies aimlessly along, and scattering drops not a hundred yards away. The dogs retrieve the three birds and the boy is yet suffering from his first attack of chicken ague. In his excitement he did not know that he actually fired no shot.

We jump into the rig and drive toward where we marked down the birds, the dogs ranging a short distance ahead. And now comes the boy's lecture, to which he patiently listens, chagrined at his miss, and after being told about the fallacy of trying to kill a whole flock instead of a single bird at a time, I explain to him how his gun was really not loaded, but promise next time to let him load it himself. The boy naturally reasons that he might have gotten a bird if his gun had been loaded and becomes a little confident.

The dogs are down again. Out we jump. The birds are scattered and scared, and will lie close. At most two at a time may flush, more likely one at a time, and they will have to be kicked out of the thick cover. The second dog is backing the leader—so we are shooting over the single dog. We agree to give the boy first shot. The dogs are urged on until they will go no further. The boy is told to step just ahead of the dog and kick the thick grass. He does so, and up flushes bird, all but brushing the boy's face with his wings, and the boy shoots, bang, bang, a yard behind each time, but before the bird is out of range he is neatly dropped by our host and marked down.

The dogs are yet close upon the ground, for within a radius of fifty feet are perhaps the rest of the covey, unless they have bunched and run.

We go along cautiously and words of admonition are poured into the boy's ears, when up flushes another single bird and again the boy misses. He was prepared for the flush, so much so as to shoot before the bird was three feet from the ground and expending both barrels upon his upward flight, shooting under each time. I "wiped" the boy's eye as the bird started straight away. The dogs were yet staunch and flat upon the grass. The rest of the birds were close at hand. More admonitions to the boy. We still kept him close up to the dog. It was his day, and the opportunities must first be his. With a whirr a bird quartered off to the left, and the boy scored! With a whoop he dropped his gun and ran to retrieve his bird, flushing a chicken in his course. Well, he brought back his fluttering quarry and got a long lecture on such temerity, and an example was cited of what a wildcat would do if recovering after a shot he should tackle the hunter who had approached him after dropping his gun.

The boy was attentive and drank in the lessons preached to him. For a boy his improvement throughout the day was marked. Suffice it to say that we with no indifferent appetites enjoyed our noonday meal in a gully by a spring under the spreading shade of a cottonwood. During the heat of the day we rested, and the boys talked and exchanged farm and city lore and became fast friends.

The country boy shot with my boy's gun a part of the afternoon, and my boy held the horses. And so the day was spent, and when that boy rolled into the sleeper at night on his return to town, he certainly was a tired, flushed, but happy boy, and there was no prouder boy in town than he as he paraded his own particular bunch of birds shot with his own gun up the street for the admiration of the other boys who did not go.

CHARLES CRISTADORO.

ST. PAUL, Sept. 11.

Philosophy from the Shastas.

SHASTA MOUNTAINS, Cal., September.—*Editor Forest and Stream:* I have not interfered by interpolating foreign substances into FOREST AND STREAM lore for quite a while. I have, like a simple fellow immortalized by William Shakespeare, begun to look upon time with considerable indifference and, perhaps, with some contempt.

> He drew a dial from his poke,
> And looking on it, with lack-lustre eye,
> Said, very wisely: "It is ten o'clock;
> Thus we may see," quoth he, "how the world wags;
> 'Tis but an hour ago since it was nine;
> And after one hour more 'twill be eleven;
> And so, from hour to hour we ripe and ripe,
> And then, from hour to hour we rot and rot;
> And thereby hangs a tale."

Not altogether a motley, miserable fool was he, but somewhat of a forester. Base is the slave who counts out the sands of his life in the click of wheels—the nonsense of a brass clock! In timing his pace, his sentiments and his physical and intellectual being to schedules that mince the atoms of what we call time into motes and dust! The great ones of the days in which we live have reached the summits—of what? If some of our most conspicuous specimens of human greatness have not achieved the *ultima thule* of slavery in the acquisitions most dear to our alleged civilization—why my head will bleed water like a watermelon if plugged. Tennyson sung,

> Better fifty years of Europe than a cycle of Cathay.

But he had seen but little of Europe and not any of Cathay; and his song is a fine specimen of pessimism, in its undertone; and Europe and Cathay are un-American anyhow you fix it.

Civilization is a hard problem with decayed spots in it. If the people who see the most of it would vote, without stopping to argue and be coerced, the majority would signify that they would rather go a-fishing than moralize about the more vital things of every-day occupation.

Andrew Carnegie makes no mistake in putting the products of industry into libraries for the people who make it possible for him to be a benefactor. But I question, at my own expense, the advisability of his donating his tomes to contending cities. The people of cities have too much of everything, particularly in America, and they have more newspapers than they have time to read between meals. Few metropolitans can read, really. If Mr. Carnegie would establish little temples to Minerva where they naturally belong, and where nature puts them, the pilgrims who sought them would be true disciples. One of enduring and spacious construction would fit in the Yellowstone Park. Others would not interfere with the beauties of Western cornfields, Southern plantations, mountain mills and mines.

The accumulated wisdom of the ages, freed from the modifications that civilization buries it under, is unquestionably among the treasures that acquisitive man has gleaned from the earth, its occupants and its discovered materials and forces. The great pity, it sometimes seems, is that the real brain, brawn and sinew of humanity is forever handicapped and balked by the lack of access to the fuel, energy, impetus, material and tools and science in which the world is rich. One disadvantage is that the science of accumulation and centralization hoards the world's treasures in archives when they were created and intended for broadcast distribution. A rich jewel in an Ethiopian's ear is better than to have it in a monarch's crown, if the crown is hidden away from enterprising thieves and the people. Ten million dollars can be stowed in a barrel and buried in a bank or in the earth. It might make ten hundred thousand people happy and serviceable for a week or so, and it would do things of various kinds until some villain buried it again. Money is chiefly employed in diverting mankind from acquiring wisdom. If we shoot snipe we lose ducks.

The world is full of philosophy, of differing quality and value, and I always contribute my product with as much assurance as diffidence. I know there is some in circulation that is no sounder. The more fertile and ponderous brains of great capacity sometimes acquire bulk like the snowballs rolled into huge globes by boys in New England and in other regions where there are winters. The acquisition of the one being about as profitable as that of the other to all concerned. And so, I can affix no moral to this except that, as a friend of mine was fond of saying, "A rolling stone is the noblest work of God, and an honest man gathers no moss."

It is reported that a man recently killed a deer not far from my shack in these mountains, with a madstone in its stomach. The man took the stone to town and sold it for $1,500. I never knew before where madstones came from. Alas, poor deer! If they carry madstones around worth $1,500, it is much more injudicious in them than to have good meat on their bones and a skin worth 78 cents, on the meat. However, I have seen neither the man nor the madstone. The history of the achievement will doubtless show up in some of the metropolitan newspapers after a while, fully illustrated with photographs of the man, the deer and the stone in its stomach.

The smelting of ores in this region has become an important industry. Smelters upon the upper Sacramento River finding it profitable to roast and smelt ores for copper and other metals are paying dividends to many shareholders in various parts of the world. Incidentally the smelters are denuding the mountains in a wide radius of all timber and vegetation. One smelter has fairly shown its effect in killing nearly every tree and all other vegetation in a circuit of ten to twelve miles in diameter. The devasted realm is constantly extending. Other smelters are being constructed and operated. Government agents are said to have reported upon these works from time to time, but there is no evidence that it has had any effect. As the business stands, corporations are doing a good business in producing copper at a considerable disadvantage to the commonwealth. They are denuding many square miles of land to which they have no right nor title of much good timber and vegetation, while they are also destroying many small homes, orchards and garden spots. If complaints are strenuously pushed by individuals the corporations sometimes pay damages, arbitrarily in which they are rather more scientific than just. The laws for the protection of fish and game do not work where there is none for the protection of homes, the health of the people or Government lands. Sometimes a man is arrested in this State for killing a deer out of season, or for illegally shooting duck or quail, or for cutting a tree or two on Government land—all of which is right and proper. Some of us, meanwhile, would like to know if corporations of considerable size are ever susceptible to legal regulations. As one of the people interested in the protection of the commonwealth, I would like to see them arise and explain why they discriminate between a smelter and a gun, or between a corporation and a chopper—always at the expense of the lesser nuisance. The realm being devastated by the smelters in Shasta county would make a magnificent public park or reserve, but it would now take a century or more for it to recover from the destruction wrought by the fumes of the smelters in four or five years' operation. The region is worth more, for all apparent advantages, than a Philippine island. There are trout streams in it, and it has much cover for deer, bear, chipmunks and 'coons.

I contemplate going abroad soon with my meat gun and unreliable dog. If I jump anything, and see it before the dog does and if it is good meat, I shall shoot at it. If I get it I will report. RANSACKER.

Tales of the Frontier.

II—The Midwinter Bath.

IN the open or prairie part of the Minnesota country all midwinter traveling in pioneer days was not only a matter of discomfort but frequently of suffering and peril.

Roads were scarcely worth the name; the climate was both severe and treacherous, and the open plains, swept by autumnal prairie fires and winter blizzards, were frequently barren to sight of any landmark whatever that could be depended upon to guide the traveler on his way; and by common consent the pioneers wisely hugged the straggling shelter line of the scanty timber along the streams; and as long as possible put off the business of traveling to distant points until the rigor of the winter weather had passed away.

My father—Orin Belknap, Sr.—lived, during the later '60s—on the left bank of the Des Moines River, near a station named Jackson, and, in the latter part of the winter of 1868-9 business that could not be omitted or postponed called him and my stepmother to the embryo village of Spirit Lake, Iowa, some eighteen miles distant. Choosing a morning that promised unusually fine weather for the coming day, they set forth in a home-made, one-horse cutter, drawn by the old family mare, a strong animal, both active and willing, and in every way reliable; and proceeded without delay or trouble to the village, and their business disposed of, were ready for the return journey shortly after noon. The road from Jackson to Spirit Lake skirted the south shore of the lake that gave its name to the village for a distance of several miles; and on the way to the village my father had noted that when the shore of the lake was reached the road forked, and the larger part of the small amount of midwinter travel had evidently taken to the icy surface of the lake, where for a long distance toward the village the dim roadway over the ice of the lake could be plainly followed by the eye—sometimes at a long way from the shore. However, he took the land road, and meeting with considerable difficulty from drifted snow at the few points where the low brush timber of the lake shore had prevented the snow from being hammered into hard roadway by the blizzards of early winter, he determined to return by the trail over the ice.

The surface of the lake was covered with ice of several feet in thickness, and no thought of danger from thin ice troubled them; but they had yet to learn of the terrible power of the frost king, and of the fantastic pranks he sometimes played with the icy surfaces of the northern lakes. All unconscious of impending peril, on their return they sped along over the smooth surface of the lake seated low down in the little cutter, and well wrapped up, while the faithful old mare, with outstretched neck and nimble feet, was busily pushing the miles behind them at a rate that promised an early return to the warm stable she was striving for.

Finally my father became aware that they were gradually traveling up grade; but so very gentle was their ascent, and such an utter sameness met the eye as he glanced ahead through the sunlit glare of the ice, that the significance of the matter did not dawn upon him until the old mare—still trotting swiftly along—suddenly commenced to slide down a smooth incline nearly as steep as a house roof! An instant after, as the little sled rose to the summit, to their horror they saw at a glance that, for a long distance toward the shore and far out into the lake, a mighty wrinkle had heaved the thick ice high in air; that the mare had stepped, and the cutter was now sliding across the wide crack in the ice caused by the upheaval; and that squarely in front and fifty yards in width—and into which they were now irresistibly moving—lay a vast canal of unknown depth and of the temperature of ice. Down they went, and in a moment the horse was swimming, and in another the water rose to the old gentleman's neck.

Being severely afflicted with rheumatism, so that every move was made with difficulty, he could only remain seated; and fortunately the box of the little sled was short enough, so that with his back against the back of the seat, he could reach the front of it with his feet and brace himself solidly in position; and realizing that their lives now depended on the strength and fidelity of the horse, just as the stout old lady was gently lifted from her seat and floated back over the top of the cutter, crying: "O, father, help me!" he with one hand threw back to her an end of the bed quilt that had been lying across his lap, and with the other guided the faithful old mare straight toward the opposite shore; and while the frightened old lady floated far astern, clinging for life to the towline of the bed quilt, the mare swam on for twenty yards, where she found good footing on the gently sloping ice, and soon they both were safely drawn ashore.

They now wrung the water from their garments and wrappings as best they could, and again seating themselves in the cutter and wrapping up in the wet coverings, they plied the whip as the honest old mare had never felt before, and as no human habitation stood between them and the Des Moines River, no pause was made until the house of a neighbor was reached in the timber along its banks.

Fortunately, the weather continued fine, and though the old gentleman was upward of 70 years of age, and the old lady a person all unused to hardship or exposure, no permanent ill effects followed the sufferings of the homeward ride. ORIN BELKNAP.

In the Adirondacks.

OLD FORGE, N. Y., Sept. 8.—*Editor Forest and Stream:* Connected with the sad occurrence at Blue Mountain Lake, when Judge Storrs "accidentally" mistook his friend for a deer and shot him, is the fact that this eminent jurist was a transgressor of the game laws of the State of New York, which prohibit "floating" for deer. It is surprising that he should have set such an example, but he probably did not expect that his "sin would find him out." In what a curious attitude would he stand, or sit, if here upon the bench of this State and called upon to try a poor layman for a like offense!

If you should be told that deer are "increasing" in this great forest, don't you believe it. Few people qualified to judge believe that they are "holding their own," and fear eventual extermination. There is very little "protection" for them, except on principle, for not all men willingly transgress the laws, whether a "protector" may be in their vicinity or not. Hundreds of deer are killed in violation of law—I might say in defiance of law—and for each hundred killed I doubt if there is an average of one prosecution. If it were not for that part of the game law which places restrictions on railroads and express companies, there would be no end to the illegal slaughter.

It seems to me that the article by Mr. Avis on "Manliness and Sport" in some respects answers itself, yet something remains to be said, I think. While he declares himself to be in favor of "killing game for sport," he asserts that "while the legitimate act of killing an animal in the field may not be a strictly manly proceeding, yet neither is it unmanly." If "legitimate," how can it be "unmanly"? Again, if it be not "strictly manly," must not the negative intervene and classify it as being "unmanly"? One cannot serve both God and Mammon; that which is not "strictly manly" must of necessity be "unmanly." The boy with the air gun shoots birds for sport. Does Mr. Avis approve of this? True, he is not shooting "game," but as he is killing for sport is he doing an act more deplorable than he who kills game for sport? In brief, when is the justification for killing any of God's creatures simply for "sport"? I can see nothing of "dignity," "bravery" or "boldness" in the man who slaughters simply for "sport."

Is it not time to cease characterizing the killing of men by hunters as "accidents"? According to the lexicographers, an accident is an occurrence which can not be avoided. To mistake a man for a deer can be avoided, therefore an "accident" does not arise from such an error. To characterize such killing as carelessness or heedlessness is too mild; moral guilt really attaches to the act, for the killer does not exercise either the reason or intelligence with which he is supposed to be endowed. A capable hunter will never fire by guess; that is, he will always be sure of the object at which he fires, taking no chances. With this rule closely followed by inexperienced hunters, they will have very infrequent occasion to bemoan the killing of a friend or companion. Remember the saying of Davy Crockett, "Be sure you are right and then go ahead."

The story is current in the Adirondacks and quite generally believed, that the Central Railroad management is to acquire several hotel properties and operate them—notably the Stevens House, at Lake Placid, and Paul Smith's. A large hotel on the Fourth Lake of the Fulton Chain is also said to be projected, on real estate owned by Dr. Webb.

The development of the first four lakes of this chain during the last fourteen years, has been marvelous. When I came through the chain from Paul Smith's in 1888, a small house on Cedar Island (Fourth Lake), a log house on Third Lake, and an indifferent building at the foot of the chain, where the large and commodious Forge House now stands, were the only structures to be seen, with the possible exception of Lou Woods'. Now the Arrow Head, Rock Point Inn, Eagle Bay, Cedar Island, Bald Mountain House, and the Forge are excellent and well-patronized hostelries, and about two hundred and fifty or more camps line the shores, among them the late ex-President Harrison's, now occupied by his widow. The Central Railroad Company owns the steamboats which ply upon these lakes at extortionate rates of fare, also the two miles of railroad from the main line to Old Forge, upon which the fare is twenty-five cents.

The railroad from the main line at Clearwater to Raquette Lake, touches the head of Fourth Lake, and by that route many guests of the upper hotels go, so that road controls all travel by boat or railroad. While the railroad is said to be owned by a private company of nabobs, it is really a part of the Central's system. A considerable part of this road is upon State land, in direct violation of the constitutional declaration that the public lands "shall not be sold, leased, or otherwise disposed of," and yet there was no State authority to interfere while the road was being built. Poor State! The goose is almost wholly bereft of feathers, and very soon private interests will take the goose itself. The forest is doomed; it must be lost to the people through private greed and official dishonesty. The evils cry to heaven, but there is none to abate them. The people are powerless; their representatives are omnipotent.

In front of this, the Forge House, lie several castings which it is said, represent an expenditure of something like $100,000. A century ago John Brown came here from Boston and bought 300,000 acres of forest, since known as the "Brown tract." Subsequently his son-in-law, a Frenchman, was associated with him in an attempt to establish a colony and make a clearing for raising produce for its support, and opening an iron mine for employment. A foundry was built, forging apparatus installed (hence Old Forge) and one ton of iron had been produced when the enterprise collapsed. The son-in-law, who had been left in sole possession of the property, made a last draft on a Boston bank, which was dishonored because of the bank's knowledge of the fallacy of the undertaking, whereupon the manager of the property went to the mine and there shot himself. The colony at once disbanded, and the members of it emerged from the forest as best they could, with considerable amounts of money due, leaving herds of cattle and flocks of sheep to run wild or die, the latter being their fate. It was a curious, visionary project which possessed John Brown, robbing him of his fortune and making a physical wreck of him. His son-in-law was doubtless insane. There are various evidences still remaining of this wild adventure and the dreams of the adventurers, which with other facts would make a lengthy historical chapter. And "Old Forge" is likely to live as a name indefinitely for that for which it stands. There are other historic incidents and events connected with the place fit for a second chapter. D. H. B.

A Summer on the Labrador.

A ROCK-BOUND coast, massive, irregular and bleak, with here and there a bunch of stunted birch or spruce, a patch of drifted snow or a few sod-covered huts, the Atlantic line of the Labrador Peninsula extends from the Strait of Belle Isle to Cape Chidley, a distance of nearly seven hundred miles. With its whole length indented by numerous bays and inlets, some of which stretch many miles into the interior, a line which followed the coast would of course exceed this distance many times. Numberless islands, barren of all growth other than that of moss and lichen, and without any uniform shape or size, skirt the coast almost continuously, in some places extending seaward for twenty-five miles.

The mainland, however, does not carry out the idea of barrenness suggested by these islands, for over most of the length of the peninsula a thick growth of low shrubs and berry vines is found, and in the southern half, in the swampy ground and around the heads of bays, a fair growth of birch, spruce and fir. Labrador was first visited by Lief son of Eric the Red, about the year 1,000, and from its desolate rocky coast, he called it Helluland, "Strong Land." In 1498 Sebastian Cabot skirted the whole coast to beyond Cape Chidley, and in 1504 the town of Brest was founded by the French on Bradore Bay, near the Strait of Belle Isle. Whether the name Labrador is derived from "La Bradore," the name of a Basque whaler who settled early on the coast, or from the Portuguese word for laborer, from the fact that Corteral in the early part of the sixteenth century brought home a cargo of natives as slaves, or as some claim, from "La-bras-d'or," from its supposed mineral richness, seems to be unsettled. Among the inhabitants and fishermen who frequent the coast it is known simply as "The Labrador." Its total area comprises about 500,000 square miles, of which a large part between Hudson and Ungava bays is wholly unknown, except to the wandering bands of Eskimos whose hunts occasionally take them inland. That part of Labrador including the coast line is under the jurisdiction of Newfoundland, having been annexed by the British Government in 1763. In 1774 it was placed under the jurisdiction of Canada, and in 1809 was again annexed to Newfoundland, to whose Government it is still united.

The cruise of a Newfoundland "fisherman" to this coast is not an unusual event. Every year during the early summer months from fifteen hundred to two thousand vessels varying in size from twenty-five to seventy-five tons, leave all parts of the Newfoundland coast and make up the great Labrador codfishing fleet, whose catch is finally distributed principally among the countries bordering on the Mediterranean.

This industry takes men, women and children in large numbers from Newfoundland, and the summer is passed by them either on the schooners or in the temporary summer huts. There is much of a heroic nature in the lives of the people engaged in this industry. Venturing in vessels often unfitted to withstand the severe weather met, to a coast which has neither lighthouse, buoy, nor any guide (other than occasional "American men," signifying bold shore), which is imperfectly charted and an accurate knowledge of which can only be gained by repeated visits, they undergo much privation and hardship, often suffering shipwreck and the loss of the summer's work. The cruise of the Lily of the North, a "fisherman" of eighty tons, during the summer of 1900, however, combined an unusual errand with several unexpected, if not unusual incidents. While it was originally intended that contact with the Labrador shore should be simply incidental to the trip, circumstances left no choice

but that we should pass the summer on this coast, and that the rocks of Paul's Harbor, Black Island, should furnish a final resting place for the schooner. Chartered to land a cargo of stores at Jensen's whaling station on Cape Haven, Baffin Land, and to bring back the accumulated supply of oil, bone, ivory and fur, the Lily left Halifax July 17 with a crew of six and four passengers. The trip to Sydney, Cape Breton, was lengthened by calm weather for two days after leaving Halifax, but enlivened by the schools of porpoises and small whales which played about the schooner off the Nova Scotia coast. Sydney is known chiefly as the home of the great Dominion coal mines, the terminal of the steamer Bruce connecting with the Newfoundland railway, and as the place of departure of several recent Arctic expeditions. We were disappointed to find that the Peary relief ship Windward had left for the north two days before our arrival.

It was with many regrets that we parted company with two of our number, both enthusiastic Arctic explorers, who had come with us to Halifax and continued on to Sydney on learning of our stop there. As they turned southward on the afternoon of the 23d, we sailed away from Sydney, laying a course down the Cape Breton coast, past St. Paul's Island, and Cape St. George, into the Gulf of St. Lawrence. A thick fog enveloped everything in the Gulf on the morning of the 26th, but with a strong southerly wind we were making fast progress toward the Strait of Belle Isle.

With sail "wing and wing" and supposing ourselves to be fifteen miles off the Newfoundland coast, Jack, who was at the wheel at the time, discovered breakers directly ahead, about half-past two in the afternoon. A sudden call to Capt. B. brought everybody on deck, and ahead, not fifty yards off, we saw a white line of foaming water.

With quick judgment the Captain took in the situation, ordered the wheel over, and the main boom, which fortunately we were carrying on the starboard side, hauled in. Everybody pulled with a will. As the Lily swung into the wind the fore boom jibed over with a bang and we skirted the shore for a quarter of a mile before losing sight of the breakers. How many feet further we could have gone without striking we shall never know, but a good view of the low, sandy beach convinced us that it was a poor place to end the cruise, but an excellent one to reach shore, from such a situation as ours might have been. The tremendous tide which is always a source of danger to navigation in the Gulf and Strait of Belle Isle had carried us inside of Point Raiche, and the thick fog had prevented our knowledge of it. We spoke two schooners, laid our course, and by night were well into the Strait of Belle Isle.

The combination of the wind and tide made a choppy sea in the strait, and the night was an uncomfortable one for all hands. Soon after dark the wind died out, leaving us at the mercy of the tremendous seas, and we bobbed about like a pea in a drum. New lights on the Newfoundland shore, of which we had no record, confused our position, and the break of day was welcome, bringing as it did a calmer sea and a light fair breeze.

As we came on deck the Labrador shore was in plain view—a rocky, barren coast, rising from the sea in irregular shape from 500 to 1,000 feet, with plentiful patches of snow to be seen. Directly astern was a small iceberg, while ahead and over toward the Newfoundland shore we counted eight or ten much larger ones. We were continually in sight of great numbers of these islands of ice during the day, some with great patches of dirt sticking to their sides, showing that at some time they had turned completely over, bringing up from the bottom mud and sand; others with blue veins running in horizontal lines over their surface, caused by the fresh water streams while the berg was in glacier form. These bergs are a great danger to navigation owing to the large part and the irregular shape under water, and the schooners give them a wide berth.

The Labrador shore and the Strait of Belle Isle during July and August perhaps furnish the best place on the continent to see these monster cakes of ice. They are brought south from a great territory of Arctic waters by the strong current which makes up the shore, and are seen in almost every conceivable size and shape.

As we neared Cape Charles, in the distance was one which assumed the perfect shape of a twenty-story skyscraper, while all around us were those of smaller dimensions and of irregular shape. On our near approach usually a great flock of gulls would rise from the top or from some crevice, only to settle back again upon our reaching a safe distance.

We passed Henley and the "Devil's Dining Table" during the afternoon, and just at sunset rounded Cape Charles, with its few fishermen's cottages tucked away almost out of sight between the rocks. It was here that the Miranda, on her memorable cruise of 1894, put in after colliding with an iceberg and before returning to St. John's for repairs.

We headed for Assizes Harbor, sailing through narrow channels and skirting high headlands, finally dropping anchor in a beautiful little harbor almost completely landlocked. Five other schooners were also anchored there, and within a short distance were three icebergs, white, silent and ghostly, as they rose out of the water into the darkness. Assizes Harbor is but a short distance from Battle Harbor, and we crossed in a few minutes the next morning.

Battle Harbor is the principal port and capital of Labrador. As far as we could learn it gets its name from a battle once fought between the Eskimos, who formerly inhabited the coast as far south as the Strait of Belle Isle, and the fishermen. It is a prosperous fishing settlement, and supports a church, school, deep-sea mission, hospital and sailors' home.

We had noticed a decided change in the temperature since coming through the strait, due no doubt to the Arctic current and to the abundance of ice floating about. Unable to make headway against the stiff nor'easter, which blew after we left Battle Harbor, we put into Ship Harbor about dark, and found a little settlement of a dozen huts at the head of a narrow channel, which makes in for half a mile between precipitous cliffs.

This was on Saturday night, which meant that we must spend until Monday morning here, it being a custom observed among the fishermen that no vessel shall leave a harbor on Sunday; nor is any work done about the schooners other than that necessary for comfort. Fish caught Saturday with no time to salt them away before Sunday, are put in bags and hung over the side of the vessel until Monday morning. Often anchored in company with fifty or sixty schooners, we did not see a single anchor raised on a Sunday during the summer. One would hardly expect to find this custom among a people whose season at the best is short, whose income is correspondingly small, and who must depend to a large extend upon fair winds to cover the long distances of the coast, but we were impressed by its very general observance.

At Ship Harbor we visited the owner of the fishing privilege and leader of the settlement. A man past middle age of medium height and stocky build, with a bright eye and bushy whiskers, he looked the typical fisherman and gave us a cordial welcome to his summer home. These temporary houses are for the most part built with a light wooden frame and covered with sod, some with an inverted boat for the roof, with walls of sod, and many built of sod alone. The interior is of equal simplicity. In some of the larger stations where the fishing is controlled by one man, and his helpers are all "sharemen," an occasional neat frame house is found with a degree of comfort not to be expected.

The subjects of conversation among the large class of fishermen are few, and confined almost wholly to that of their voyage and the conditions which go to make it a success or a failure. Fish of course is the chief topic, and the state of the fishing up or down the shore is the first question passed between stranger or acquaintance. Our friend at Ship Harbor said that never in his experience of thirty years on the Labrador had he known such a season for late ice, scarcity of fish and a generally backward summer. The pack ice left Ship Harbor July 16, and the 28th, the day we reached there, small bergs and plenty of floe ice was to be seen. On learning our destination and the nature of our errand, he looked doubtful, shook his head and said: "You'll see plenty of ice down north, I guess." His advice was to put outside of the islands and go down outside of the ice pack, even if we were obliged to cover an extra couple of hundred miles, in order to skirt it. This same advice we received from several old-timers along the way, and was the plan we had expected to see carried out on reaching the Labrador. But Capt. B. was unwilling to take the chances of being driven south by a combination of the Arctic current and the northerly winds, which, contrary to all precedent, seemed to be prevailing on the coast.

On Sunday we took a stroll over the hills, climbed a high mountain and had a superb view of the country for miles inland. Stretching away as far as the eye could reach appeared a rolling plateau, with a succession of barren and snow-patched hills, intersected by many bays and inlets, and dotted with numerous lakes. On our return to the harbor I was passing the hut of our friend, and hearing voices within, entered. I was greeted with an inquiry for my friend, and we were soon seated around his stove. He said he wanted to tell us something. "Did you boys know," he said, "that it would not have been safe some years ago to have been seen going over these hills on Sunday with a gun over the shoulder? If you'd come back at all you would have been without your gun." He explained that among the older school of fishermen such things were unknown, and that the observance of their customs was as strictly enforced among strangers. He accepted pleasantly our explanation, and we stored up the suggestion for future use.

From Ship Harbor we made slow progress, owing to contrary winds, and made harbors at Domino and Indian Tickle. Aug. 1, after a good run of seventy miles, past Grady, across the mouth of Hamilton Inlet and by Indian Harbor with its Deep-Sea Mission Hospital, we anchored in Ice Tickle, just as the wind left us and a heavy rain fell. Aug. 2 came in foggy. About 9 o'clock the sun broke through and we left the harbor with a light southerly breeze. Hardly half a mile from our anchorage, while running along with another schooner close by, and in trying to avoid a well-known rock, we ran directly on another. A sudden grating sound and light shock was all the warning we had, and we thought we were sliding over all right; but a second shock brought us to a standstill. An examination showed plenty of water under the bows, about twelve feet over the starboard side amidships and eight to port. Our consort immediately anchored and sent her sturdy crew aboard. The tide was within less than half an hour of high, and appeared to be falling, so that quick work was necessary. An anchor was put out over the starboard stern, but the united efforts of fifteen men could not stir her. Appearances certainly suggested a sudden ending of the cruise, with but a small part of the journey covered, and the object of the expedition not accomplished. It was impossible to pull her off, and the only course seemed to be to shift the cargo from the after hatch and wait for the next tide. The captain, who had come to our assistance, said as he could be of no further use, he had too much at stake to delay longer, having already been delayed in his cruise. But "if there was any danger I'd stay all summer," he said. "Many a good craft and cargo has been left on the rocks before," was his comforting remark as he left us.

That afternoon we brought pork, bread, molasses, coal, coffee and a variety of articles out of the after hatch, stowing it all across the bows. The hours we spent after this work was done lying about the deck waiting for high water will always be remembered. An unusual anxious expression was noticeable on the face of each member of the crew. Every man had at some previous time been wrecked, some more than once; and the stories of past experience, of battles on the sealers, against icy storms in the early spring, against great winds and seas, of being thrown on the rocks, and of the suffering caused by the loss of a summer's work, all this added to the seriousness of the moment.

Toward night, as the tide began to rise, an anchor was carried out from the starboard bow, and about 9 o'clock, after an hour's hard work at the windlass, she slid off into deep water. Getting under way at eight we encountered a gale from the northeast, and put into Sloop Harbor, in company with twenty-five other schooners. After the gale came a calm, and then a Sunday, in all three days of tedious wait in an uninteresting spot; days when, as George remarked, the "dollars came up through the horse pipe." When we finally did get away it was only to meet another blow from the northeast, and we took refuge in Holton. A good day's trout fishing here compensated somewhat for the delay. At Turnavik everybody was busy and happy. Fish were running plentifully and boatload after boatload was brought in to be split, salted and packed away until September, when they are washed, dried and taken aboard the steamers which are chartered by the larger operators to call during September for that purpose. The fish are caught either in traps, with hooks and lines, or with jiggers.

Capelin were as plentiful as the cod. They are a small fish, resembling in appearance a smelt, and are used as bait for the cod, often for dog food, and not infrequently as food for the fishermen.

The fishing at Turnavik is controlled by a member of a family of famous Arctic navigators, who was connected with the Bradford expedition into the Arctic regions on the Panther in 1868. His son was mate on the Peary ship Windward in 1898-99, and during the two days we were held there by calms, we heard many interesting tales of Arctic adventure.

From Turnavik to Hopedale is thirty miles in a straight course, between the islands, and we reached there Aug. 11, just as a stiff northeaster struck us, with rain and fog, and prevented further progress.

Going into Hopedale we passed several Eskimos in their fishing boats coming in from their camps for Sunday at the station. They were the first we had seen on the coast, and were objects of much interest. We passed within hailing distance of one, and after exchanging the usual "Oksunai" (greeting), we inquired if he had any fish. His reply was "little," and in answer to our question, "Any fish at Hopedale?" shouted back, "I suppose." Hopedale was founded by the Moravian missionaries in 1776, and is the second oldest station on the coast. The Eskimos here number about 180, a small proportion of whom, however, are of pure blood, and at the time of our stop they were mostly away, engaged in the cod fishery.

The long establishment of the missionaries here and many years of contact with the fishermen have introduced many European customs of dress, living and food, so that the primitive life can no longer be seen. They live in wooden huts and support themselves by fishing for the cod, seal and salmon in summer, and hunting the caribou and fur animals in winter. They are able to trade with the missionaries the results of their hunting and fishing for bread, molasses, powder, shot, etc. Most of the younger Eskimos at Hopedale can write, the children attending school for certain periods during the winter. They have the Bible and Sankey's hymns in their language, and the only encouragement needed for them to sing the hymn book through from beginning to end is a willing audience. Sunday evening after church in the mission chapel, we visited a hut where a number of the Eskimos had collected, and were given a recital of hymns with accompaniment of the accordeon. The men and women all sing well, joining in the different parts and maintaining for the most part a fair degree of harmony. The station shows the expenditure of much labor on the part of the missionaries.

Paths have been laid out through the woods with seats erected at various points, and the gardens of cabbage, lettuce, turnips and potatoes, as well as the beds of pansies, daisies and poppies, looked surprisingly thrifty when the short season which they are allowed is considered. It made an interesting start the next morning to see all of the fifty schooners heave anchor and leave the harbor together, and out through Hopedale Run, where a head wind was encountered, quick work and good seamanship was much in evidence in the efforts to keep clear of the rocks and of each other.

There seemed to be no end to the contrary winds, and consequently slow progress, and we put in to Cape Harrigan Harbor and Quirk Tickle on our way north until the 15th, when we reached Ford's Harbor, so named from the family who have been the solitary residents and undisputed landlords for seventy-five years. Gales, calms, fogs and rocks had so delayed our progress since reaching the Labrador shore that for some time we had felt many doubts as to the possibility of being able to reach Cape Haven. The same opinion prevailed among all whose advice we sought, and was to the effect that even if the Lily was able to reach Cape Haven and return, it would not now be possible to accomplish it in the time at our disposal. Much as we regretted leaving the expedition, which we were interested in seeing successfully carried out, and giving up the chance of getting among the walrus and polar bears in Hudson Straits, and the primitive Eskimos of Baffin Land, it seemed our only course, and we made preparations to leave the schooner at Ford's Harbor. Our plan was to go from there to Nain, and camp in the interior until the mail steamer should call again. Efforts to get any of the Ford family to guide us to Nain, about twenty miles inland, were fruitless on account of the run of codfish, which had just commenced, and the prevalence of the grip, which incapacitated several of the family. Our crew rowed us across to a summer camp of Nain Eskimos, and there we bargained with a native by the very un-Eskimoish name of Levi Frye, to land us and our outfit at Nain.

It was nearly 6 o'clock when we had finished loading our baggage, provisions and camp outfit into Levi's boat, and soon after, with wishes of good luck from all hands, we sailed away, heading into a narrow channel which leads for some distance between the high rocky sides of two islands, toward Nain. We had made the schooner our home for just four weeks, and had become so used to the attractiveness of our plain and healthy living, our comradeship with the captain and crew, and to the many interesting incidents connected with the life among the fishermen, that it was with no small regret that we left all this to enter upon new experiences.

Wind and tide turned against us about 10 o'clock, and with a suggestion from Levi of "Plenty tide; no row," we camped a few feet back from the shore.

Levi got us started soon after light the next morning, and we went along merrily enough until the tide again turned against us. With Nain in plain sight, with no wind, a head tide, with mosquitoes playing havoc with every exposed part of one's person, the last five miles was tedious and exasperating. At last about 2 o'clock in the afternoon we deposited our outfit on the deck of the missionary schooner Idalia, anchored close in, not daring to risk putting it within reach of the voracious "huskies," which will devour anything, from a tent peg

to an Eskimo baby, as the opportunity offers. Three years ago in Hopedale, we were told, an Eskimo baby became separated from its mother, and happening to fall was pounced upon by a pack of dogs, and before assistance could reach it was torn to pieces.

Observation during our stay among them justified this reputation. Some of them show much intelligence, however, and they form a most important part of the establishment of an inhabitant of "the Labrador." During the summer they find plenty of food among the refuse of the fishing, and save the continual fighting among themselves spend most of the time in sleeping. Winter is their busy season, as they furnish the only means of locomotion for the missionaries, natives and settlers. Exercised continually in drawing the "comitek," with only such food at hand as can be carried or may be killed en route, at the end of a day's run they are indeed ravenous.

Mr. Stecker, a missionary, who has made many long trips during the winter among the Eskimos around Nachrak and Cape Chidley, told us of the absolute need that upon stopping at night for camp, while one man built the snow house and another gathered material for a fire, a third should watch the dogs lest they eat the seal skin harness in which they are driven, or fall upon and devour one another. Under good condition a day's run of from fifty to seventy-five miles is not unusual, and there is a tale about a team of twelve dogs having made the distance between Hopedale and Nain, 114 miles, in one day.

The first attempt to start a missionary station on the Labrador coast was at Cape Aillik, in 1751, and resulted in the death of the missionaries and their companions at the hands of the natives. Nain was founded in 1770, and is the oldest station on the coast. The Eskimos at Nain number at present 280. About Nain, which is in latitude 56, there is a sufficient growth of trees to supply all the wants for building purposes and for fuel, so, as at Hopedale, the Eskimos live in wooden huts adjoining the missionary house and chapel. C. S. HAWKINS.

Potholes and Sport.

CHARLESTOWN, N. H., Sept. 9.—*Editor Forest and Stream:* It was very sad news to hear from Kelpie a week since that Old Hickory had been obliged to leave camp under the care of a physician. We can only hope for the best, and that he may yet be restored to chronicle more "Camps of the Kingfishers." Sorrow as we may, the old ranks are thinning, and though fresh recruits, and good sportsmen, too, fall into line, they can never fill gaps in the hearts of the veterans, though they may close the ranks.

I am sorry Mr. Stewart misunderstood me in regard to the glacial theory concerning potholes. I did not mean to accuse him of holding it, but merely quoted it as he did himself, to show that those which he has found in North Carolina were entirely out of the reach of the supposed glacial action. I should like to see one of the garnets which he says served as "drills"; all the holes that I have been able to examine have been either partly filled with quartz gravel, or empty, as if subsequent freshets had washed them out. I never found any large stones in them, as is sometimes said to be the cause of them. All that I have seen have been in the primitive granite, and all with the exception of the "Devil's Pulpit," quoted in my last, have been in the site of present waterfalls, but that one is so high on a hillside that it was evidently ground out in some early geological period, since which the Merrimac Valley has undergone great changes, for the present falls at Amoskeag are four miles east of the said potholes.

I have been amused as well as interested in the descriptions on "sport" which have been going on in FOREST AND STREAM the last few weeks, and in noting the different views expressed, and I think Webster gives the explanation very simply, when he describes "sport" as a name for all amusement, backed by Dryden, Milton and Shakespeare, and "sportsman" as a term applied especially to the devotees of "field sports"—hunting, shooting and fishing. I agree with Coahoma in the main, though I find the name of the author of the dictionary as far back in Scripture as the Flood, instead of dating from Belshazar's Feast!

I think we may safely leave the designation to Webster and follow the classification according to English custom, whence the turfman, the golfer and the cricketer, although all indulging in recreations classed as "sport" by Strutt, in his "Old English Sports and Pastimes," are distinctly differentiated from the "sportsman" "par excellence" who follows the rod and gun. Bear and bull baiting, dog fighting and various other old pastimes have either become extinct, or relegated to the control of the criminal courts, and may be excluded from any lists of sport.

Now, to turn to another of the various questions discussed under this head, it may be safely said, that the primitive sportsman was purely and simply a "pot-hunter"! The meat of all the game he captured went to the larder, the hides to the tanner, while the horns and heads, or other uneatable portions, were used to decorate his dwelling, be it hunting lodge or baronial hall. In the old feudal times, all the game was considered the property of the king, but as the power of the people increased, it became in Europe transferred to the landholders, where it now remains, while, when this new country was settled, following, but reversing the celebrated dictum of Louis XIV., *"l'Etat, c'est moi,"* or "I am the State," the State became the king, and the property in the game is held as being vested in it.

The European sportsman is also, to some extent, legitimately a "market-hunter." The game belongs to him, it is raised on his own estate at his own expense. He pays for gamekeepers, shelter and winter food, and compensates his tenant farmers for any damage done to their crops in the summer, and it is considered as proper for him to sell any surplus not consumed by himself and his guests, as for any farmer to raise and sell chickens or turkeys! With us the case is very different, the market-hunter pays for nothing but the powder and shot which he uses to destroy the property of the State, or in other words, of his fellow citizens at large, that he may fill his own pockets with the proceeds. Pastime plays no part in the incident.

I must confess myself to having been all my life to some extent a "pot-hunter." That is to say, all the game which I ever captured or destroyed, whether fur, fin or feather, has at once found its way to my table for consumption, or to those of one or two near neighbors; none has ever been wasted. Like Didymus, I know nothing of big-game hunting; I never had a chance, but I think I should have enjoyed it when I was young and able, and I have no slurs to throw on those who do, provided they make a legitimate use of their game. The Creator gave us the good things of this world to use, and not to waste, and I have no patience with those who slaughter a lordly elk or moose for the sake of his teeth or horns, and leave the carcass rotting in the woods; or with the taxidermists who aid and abet them, for by the help of these same taxidermists the herd of buffalo in the Yellowstone Park has been nearly destroyed. The biggest animal I ever shot was a twenty-five-pound porcupine, which I dropped from a tall tree, thinking it was a raccoon, and I have been sorry for it ever since. I have seen deer, at Diamond Ponds and Connecticut lakes, when trout fishing, but was never there in the open season. I think my youthful experience in "stalking" gray squirrels might turn to some use in deer hunting. Game was never plenty enough in New England for me to find any to spare, though I have provided many a good family dinner in the course of sixty-five years, but I have often reeled up my line and unjointed my rod long before dark while the trout were still biting, when the weight of my creel told me that I had enough for breakfast or dinner, as the case might be, and had had a delightful afternoon in the fields and woods. Enough for the present.

VON W.

The Nature of Sport.

Editor Forest and Stream:

When I read Coahoma's latest contribution to the discussion of sport, my first thought was that I could well afford to let it go unanswered, for he appeals for a decision of the issue between us to a court which has already decided that issue in a manner that is entirely satisfactory to me: Witness the increase of laws which restrain the pot-hunter, and the rapid increase in numbers of that class of sportsmen who practice field sports in accordance with Webster's definition of the word sport. However, my second thought is that it would be a courtesy on my part to correct a few false impressions which Coahoma seems to be laboring under, and therefore I will reply briefly.

Our personal feelings are not germane to the question which we are discussing, and quite likely are subjects of no great interest to the readers of FOREST AND STREAM, still, as Coahoma appears to be concerned about mine, I would assure him that our pleasant little debate has afforded me some amusement, but has excited no indignation within me. Therefore, it will be apparent to him that he has wasted considerable effort in his "endeavor to mollify" a phantom of his own imagination.

My thanks are due Coahoma for his allusion to the domestic dog which hunts solely for diversion, though I scarcely expected his aid in substantiating my side of this controversy. It is not my intention to combat Coahoma's theories, for they are of such a nature that they can be neither proved or disproved. But when he makes a deduction from those theories, and tells us "that the procurement of something useful as a result of the chase is an essential element of true sport," neither his theories nor facts sustain him, and even the dogs which he invokes refuse to do so.

I have been taught that dictionaries were created to give us correct definitions of words, but since Coahoma's *ipse dixit,* what must we believe? He not only discredits Webster's unabridged, but he also assigns its authorship to "Uncle Daniel." In the latest revision of this work great effort and large sums of money were expended to secure the services of the greatest living lexicographers, men eminent as specialists in the departments which they were to edit. If Coahoma's claims to superior wisdom and power are well founded, how did it happen that he was not selected to perform this great work?

If Coahoma will take the trouble to read my original article on the subject of sport carefully, he may discover that I made no attempt to establish kinship between athletic games and field sports, and that what he has said in regard to this is simply another case in which he has "mollified" another phantom of his imagination.

There certainly is diversion in these games, and therefore I can see no impropriety in referring to them as sports, at least until Coahoma is recognized as supreme authority and our dictionaries are revised in accordance with his dictum.

I have always believed that sportsmen as a class are possessed of a fair share of philanthropy, but Coahoma "puts me to shame," for we must infer from what he says that he believes that sportsmen are so philanthropic that their sport in killing "predatory animals" is derived from their consciousness of having performed an act of kindness to their fellow men. Just imagine, if possible, a sportsman so imbued with philanthropic impulses that he will travel, say from England to the Rocky Mountains, to kill a lion solely for the purpose of preventing that lion from preying upon domestic creatures which perhaps belong to some person whom this sportsman never even heard of. When the imagination is trained so it can perform this feat, just to try to imagine a fox hunter riding pell mell through a farmer's crops and knocking down fences right and left in his efforts to catch a fox, solely for the purpose of preventing said fox from catching the farmer's chickens.

I dislike very much to disturb such sublime faith in the innate goodness of mankind, but truth compels me to point out to Coahoma that sportsmen sometimes rear predatory animals artificially, and turn them loose to prey upon man's domestic creatures, and even get laws enacted to protect them, so that sport may be enhanced. I have heard of professional exterminators of predatory animals, but such men are usually influenced neither by sport nor philanthropy, but work for pelts and bounty money.

I have read of the doings of sportsmen of the past centuries. I do not know whether Christopher North was one of these sportsmen or not, but if he was, it is not a fact to brag about.

If what I have read is true, it was quite a common practice "in ye olden time" for the lord of the baronial hall to send forth an army of retainers to herd game in a small inclosure, where it could be speared *ad libitum* until the sportsmen's lust for blood was glutted. This sport was usually followed by feast and revelry, and this latter part of the programme was considered a success when the entire company lay gorged and beastly drunk upon the baronial floor. When we turn from such a spectacle and view field sports as they are practiced today, I think it will be conceded that some progress in the right direction has been made, and that the typical sportsman of the present time operates upon a higher plane than did those of "ye olden time."

In the affairs of life it is often the case that persons who have the accident of wealth at command, buy honors and distinction and parade them as something to which they are justly entitled.

Our sense of justice and our obligations to real merit should prompt us to rebuke such practices whenever and wherever they occur.

In field sports this propensity of man to appropriate something which he is not entitled to is illustrated by that class of sportsmen who pose as mighty hunters, and in proof thereof point proudly to the game heads which they have either bought outright, or which have been secured for them, as Coahoma says, by paid experts. It gives me great pleasure to assure Coahoma that I am in full sympathy with him in his denunciation of this class of head hunters.

In my opinion a game head or trophy should always symbolize sportsmanlike pursuit and capture, but should never be displayed as a symbol of skill except by the person who so captured it; otherwise it is only symbolical of fraud and disgrace.

It is always the genuine, the valuable, and the highest type of things which are counterfeited, and therefore our counterfeit sportsmen serve at least one good purpose in pointing out the genuine and highest type of sportsmanship of the present day.

JOS. W. SHURTER.

GANSEVOORT, Sept. 6.

The Law of Forest and Mountain.

IT is often said that there is no law without a penalty. This maxim will not bear close scrutiny; and it may not be unprofitable to examine a case in which a code depends absolutely upon the unforced assent of those to whom it applies. We speak of the code which regulates the use of private property by woodsmen and mountaineers. The mountain hut and the forest camp, although absolutely unpoliced and practically beyond the jurisdiction of statute law, are protected by a sentiment which amounts to law, and yet has no recourse against breaches of the custom of the region. You may leave your valuables on a trail in the Northwest secure of finding them again, and you may, under well-understood restrictions, use any camp in the woods of Maine or Canada. Similarly the mountain shelters of the Appalachian or Alpine Clubs, or those erected at private expense, are free to all who traverse the mountains. And the rules for their use by the casual occupant are so explicit as to have the value of law, and as binding as if a thousand penalties and precedents enforced each article. We are dealing with a very different code from Mr. Kipling's "law of the jungle"—the rule "of hoof and of claw"; we are examining the case of men free to be lawless, who, under a code of some complexity, are scrupulously a law unto themselves.

The limits of mountain law have been recently illustrated among the ice valleys of Mont Blanc. M. Joseph Vallot has for twelve years maintained a mountain observatory near the summit of this great mountain. The building was supplied with the usual instruments, and was fully provisioned. Near at hand he had erected a mountain hut for the use of all climbers, which has frequently harbored bewildered wanderers on the upper reaches, and has undoubtedly been the means of saving many lives. This hut proved too narrow for two German tourists who decided to make a stay of several days under the Dôme du Goûter. So, acting under mountain law as they supposed, they broke into the observatory, helped themselves to the provisions, and made themselves free of all its accommodations, offering on their return to repay the owner for the food actually consumed. M. Vallot, learning meanwhile that his instruments had been disturbed, brought suit against the trespassers.

How jealously mountain law is guarded is shown by the protests which everywhere arose in Switzerland. M. Vallot had no difficulty in proving himself in the right, but the case brought out very clearly certain principles in mountaineering ethics. It was shown that the invaders were not storm-bound, but could at any time have descended to the valley. It was held that they entered the observatory, not in their need, but for their greater convenience. Every one declared that they had no right merely to prolong a holiday in this fashion, and that mountain custom granted them only the occupancy of the hut, not the right to enter the larger building or to use the provisions. It might be added that the offer to reimburse M. Vallot for the provisions was highly improper. They should have promptly replaced them after due notification. Thus, quite apart from the graver charge of vandalism, these two climbers were found in contempt of mountain law. Henceforth their mountaineering reputation, except in Coventry, will be of the worst.

The principle involved is clearly that of reasonable use. Illustrations might be cited indefinitely. One may not plan for a week in the woods, and then keep on from shelter to shelter for a month; yet if one, through an unforeseen mishap, needs food and shelter, they are his to take where he finds them, and upon the sole condition that he respect the propery he uses and make good as soon as possible any impairment of its stores. Any Appalachian Club shelter in the White Mountains, with all its utensils, is free to every pedestrian until the tiny building is full. Beyond that point, members of the club justly require outsiders to give way; but the case almost never arises. In all these matters a fine sense of delicacy is shown by those who do not always receive credit for that quality. No logging camp in the country would refuse its best to a

belated woodsman, and none would receive pay for any trouble and expense which his succor required; but these same lumbermen would decline to be used as a convenience by a party of improvident campers not actually in distress.

Into the minuter articles of mountain and wood law it is superfluous to go. One does something for the neglected or ill-defined trail over which he passes, not out of surplus benevolence, but because the unwritten law prescribes the lopping of the bush, the freshening of the blaze, or the rebuilding of the cairn. One takes a stray hound only to the next clearing, because such is forest law. Under this code most of the meannesses and crimes that are incident to civilization vanish. It is as if the vast solitariness of the forest and the mountain reproduced itself in a kind of largeness of soul in the woodsman and mountaineer. He feels more vividly than the man in the multitude the solemnity of any act that concerns another individual. In town you cannot safely leave an overcoat on the rack with the door ajar; in the North Woods you may leave in an open shack the best gun that the forges of England, Belgium, or America can produce, and passers-by, who perfectly know its value, will hardly give it a second look. Human nature resents anarchy as nature abhors a vacuum. And wood life and mountain life would be very anarchy without stricter laws and finer morals than suffice for the abodes of men. The loss of a camp ax would put the owner to the greatest inconvenience, the depletion of a store of provisions might bring a party to the verge of starvation, the theft of a gun might mean a crueller but no less certain death than a bullet through its owner's heart.

It is salutary that, from time to time, men should thus be brought face to face with the whole consequences of their deeds; and it is creditable to human nature that it responds so trustily to the test. It is refreshing, too, to find a realm of law in which stern penalties are unnecessary, and it is strange that the advocates of philosophical anarchy have neglected the striking analogy which lies to their hand in the law of forest and mountain.—New York Evening Post.

The Story of Pup.

New Orleans, La.—*Editor Forest and Stream:* Every species of the animal kingdom is inflicted with a sprinkling of fools. The cause is heredity, injury from accident or disease, abuse, ill training, etc. Some years ago an old man with a large family of boys accounted for the erratic conduct of one of them, because when little he had been kicked in the head by a calf.

It seems to me these instinct people are very unfortunate in the selection of their pets. For the benefit of the clergyman whose article appeared in Forest and Stream six or nine months ago, I will give the history of one of my dogs. His name was Pup—wife never could find one nice enough for him. He was a black and tan about the size of a half-grown cat or a little larger. He was a marvel of intelligence and affection. A cross word nearly broke his heart.

He soon took a great delight in playing with a small rubber ball—often alone if he could get no companion. He never forgot where he left the ball. Sometimes he would lose it under a piece of furniture, and on my return in the evening to dinner I always said "Pup, where's the ball?" and he would run to the particular piece of furniture; and a cane always brought it out. One Sunday evening the ball rolled under the sideboard just as dinner was announced, and I allowed it to remain there. Thursday evening when I came home I wanted the ball and had forgotten all about the sideboard. Pup was in the back yard with daughter. After looking about I asked wife, who said she had not seen it for several days; that it must be lost. I then called Pup and said, "Pup, where is the ball?" He immediately went to the sideboard, and the cane brought it out. I remembered then the incident of the Sunday evening before, which I had totally forgotten. I could scarcely believe it and questioned wife and daughter.

Neither had seen the ball since Sunday. Circumstances had been such that they had had no time for playing ball and had not even thought of it.

Pup's instinct averaged up well with my own. After he got so he could go up and down the five or six steps of the front gallery he would take the ball there. Sometimes when he was about tired the ball would roll off and Pup would let it remain. All the gallery front was a dense thicket of rose and other flowers three feet deep. Pup always found the ball.

The gong at our gate and two of our neighbors' gates had identical tones; at least none of us could detect the slightest difference, and our folks made many needless trips to the front of the house. Pup soon discovered it and never made an error.

Pup was timid about stairs and always had to be carried. When he was about six months old I was sitting on the gallery steps, Pup playing in the front yard. Finally he came and wanted to go up. I said, "Pup, you are a big baby," and took him and boosted him up, then down again. I then said, "Pup, you can go up; come on," and he made the first one and stalled. With a little boosting he made it and also the down trip. Next day he did it with a rush much to wife's surprise. I then told her of his lesson the evening before.

When the madam went to the gate Pup always went to the top of the steps and was very uneasy. He seemed to think the bell was a special and important charge of his and was always especially interested in the postman. The first time he came, after he could make the stairs, madam took the mail and started for the house. Pup seemed to think an important privilege and duty had been usurped from him and acted wildly. Madam finally gave him the mail with some misgiving. In a flash he made the fifty or seventy-five feet up the steps into the house, out of sight. In some alarm madam hurried in and found him standing at her chair the most delighted dog ever was. Next day when the postman came, Pup was at the gate before madam reached the gallery. Pup was leaping and doing all sorts of coaxing, and the postman was tantalizing him. Madam told him to give Pup the mail, but it took several requests before he did so. Pup rushed in and by madam to her chair, although she tried to stop him. He seemed to think that was the only proper place to deliver it.

About this time a mink got into the chicken house and killed an old hen and all but four of a brood of 15 or 18 newly hatched Plymouth Rock chicks. Although I made diligent search that night, I could find none; next morning I found four. Although but three or four days old, the little rascals had secreted themselves in the grass and would not peep. This I should think was a case of instinct and a fine one. When I took them into the house there was a delighted and fussy hen. She squatted on the dining-room floor and proceeded to feed the poor darlings; the pup walking around and around, very dignified. Finally, one wandered away but a yard and Pup gravely walked up to it and with a punch of his nose bumped it into the bunch. Madam said, "You, Pup, if you hurt it I'll give it to you good." She tucked them away in a basket, but they soon got restless, and I let them out. Pup was there looking as grave as any old hen. He soon lay down. In a few minutes one jumped on him, and finally all. In a few minutes they cuddled between his legs and were asleep. He thought he had a new duty to perform, and thereafter took charge of them during the day time. If seemingly sound asleep and one should wander to another room or on the gallery, he would gravely get up and bump it back to the bunch, when he would lie down again. He always seemed pleased when the lot were perched on his back, and would promenade them about the house.

A day or two after Pup took charge of the mail I gave him a lesson on the morning paper, and all that was necessary was to say, "Pup, go get the paper." The carrier was very expert at throwing and seldom missed the gallery. The paper was rolled into a solid roll and was hard as wood. Occasionally it fell short and fell into a dense mass of all sorts of flowers and shrubs at the foot of the gallery, where I could not see it. Pup had it in a flash.

This took a lesson the first time only. Pup expected to find it on the gallery, and when it was not there returned to tell me. I said, "Come on, Pup." Looking over the railing I could barely see it. Taking Pup up I showed it to him. He was so delighted he wriggled out of my arms and had it in an instant. One time about a month later he came back looking very dejected. He evidently thought the situation might baffle me; it was so impossible for him. In a magnolia frascati, seven or eight feet high, the paper had lodged.

I said, "That's all right." Of course he believed every thing I told him, and he was joyous on the instant, and went with me. I reached it easily, and Pup was wild. I started back and commenced to unfold the paper. If I had not rolled it up again and given it to him I believe it would have broken his heart. He was off like a flash and was waiting beside my chair when I got in. He would always hold things to deliver them personally. Pup never brought the paper in except when told. Why I do not know, except it was his love of approval.

I must now record the only thing Pup did in his life that could deserve a suspicion of reproof, and this was reprehensible. Pup usually took his meals from a plate on the back gallery—that is, what he did not take at the table. The chicks were now about three months old. For some time Pup had concluded that they no longer needed such close or constant attention. One day madam placed Pup's plate on the gallery and seated herself in the dining-room where she could see him through the open hall door and the outside door. In a minute or two a chick comes monkeying around and finally picks in Pup's plate—a deadly offense it seemed in his judgment. I suppose he thought he had trained them better. At any rate, to madam's horror, there was a lightning-like snap, and a chick lay there that never kicked; and Pup was serenely continuing his meal when madam reached him. Madam contends he could understand every word she said, no matter whether she was talking to him or not. All her reproaches and lecturing did no good. The other three chicks followed in the same way in the course of the next month or six weeks. However, it is simply an example of the imperial power of atavism which prevails in every species of animal.

Pup had gotten quite a reputation by this time; many mail carriers and others coming to see him. I presume it was partly due to his diminutive size, beauty and affectionate, sprightly disposition.

Pup slept at the foot of our bed in a large upholstered chair in which madam made him a bed. When the mosquitoes were too bad Pup would put his paws on the bed where I was lying and give the most plaintive little, almost inaudible whistle I ever heard. In fact, I never heard anything approaching it before or since. Madam always protested. She had fixed him up good with his bar and he ought to keep quiet.

Pup always got in all right. When I raised the bar he would leap in and curl up at the foot between wife's feet and mine, where he was no inconvenience. He would never lie on one's feet. In extremely cold weather Pup always slept with me. He would always wait until I was perfectly and comfortably tucked in, when he would spring up, get to the head and commence to root at the covers at my back, until he got between the sheets, when he would crawl in out of sight. If he made a mistake and got between other covering he would get out and work until he found the proper place. Sometimes I would baffle him by holding the clothes tightly. He would know it in an instant, when that little whistle with its pleading, would come, and if I pretended to be asleep he would crawl around and put his face close to mine and keep up his pleading. That would settle it. Pretending to wake up with "Why, helloo, Pup," and a pat, he was happy, and went back to rooting, I generally helping him.

Pup knew my usual time to come to dinner. I can't say if he could really tell the time by a clock or not; at any rate, he judged the time as well and closely as if he could. Wife said he was always on the watch ten minutes before my time. One evening wife was standing at a side window in the front parlor watching to see me alight from the car at the corner less than half a block below.

Pup was standing by her. It was winter and the house was closed. Hearing a car coming, she took Pup in her arms. I happened to be on the car. The instant Pup caught sight of me she said she thought he had gone crazy. She never saw him act so. The next evening when she went in to watch for my coming she found the pup perched on top of the back of a large upholstered chair which stood against the window—and he always did so afterward.

When Pup was eighteen months or possibly two years old, I came down stairs one Sunday morning in summer and Pup greeted me at the foot. The house was all open. Just across the hall, opposite the stairway, was an open side door, and I sent Pup the side way for the paper, although front and back parlor and front room were open. Why I sent him this way I don't know. I waited for nearly five minutes and was full of all kinds of wonder when Pup came slowly into sight, the most heart-broken looking creature I ever saw. He stopped about ten feet from me and looked up into my face with the most pitiful expression.

I said to him, "Why, Pup, what is the matter with you? You act funny this morning; why don't you bring me the paper?" He never budged all this time or lost that pitiful look until I said, "Pup, go get me the paper."

My son was sitting in the back parlor reading a magazine and heard every word, but was so engrossed he did not realize it.

I walked in and was standing near him when Pup came in the front door with a large magnolia leaf some eight inches long and stopped about ten feet from me. He looked delighted, but seemed a little doubtful. Astonished, I said, "Well, Pup, you are not only funny this morning, but I am afraid you are crazy." Son then came back to the world, and seeing the pup standing there, commenced to laugh and said, "The paper has not come." Taking the leaf from Pup we both shouted. In an instant a voice from the kitchen demands, "Who's been scolding Pup?" I replied. "No one." "You can't tell me. He has crawled under the range and I can't coax him out." It was the only time madam ever failed.

I took the leaf to the kitchen and showed it to her and related the circumstance, when she had a good laugh, too. I got down on my knees and coaxed and patted him, and in a minute he came out all right. I took him in my arms to the back parlor and held him on my lap for a few minutes and petted him. The paper carrier, we afterward learned, was sick, and the substitute had left all papers on our block at corresponding numbers on the street back of us.

The second Sunday following the paper missed again, and when Pup brought with the keenest delight a large double leaf from a child's picture book that had blown over from our neighbor's yard, I took it with as much delight as he, and Pup was not laughed at, either.

When Pup was two years old a canine epidemic broke out that was very fatal. I never heard of a dog recovering. Our next-door neighbor lost a black and tan a little smaller than Pup, that they always kept blanketed in winter, and also a large collie, although they had the care of a veterinary and the best attention. Pup was very patient, with never a moan or a whine. Now, I think of it, he never did whine. Our neighbor's big collie kept the neighborhood awake for two weeks.

We did everything in our power—expense not considered—for Pup. He slept with me at night, wife taking another room. During the day he was in a bed at her side. He could not eat nor did he seem to care for water.

The morning of the day we lost our Pup, about ten o'clock, madam had occasion to go upstairs for something about her sewing. In a minute, as she turned to return, there was Pup standing, looking up with his sweet, pitiful, imploring eyes. He had made no sound, not even his little whistle. She was so amazed she almost dropped to the floor. She never fainted in her life, but she felt perfectly uncanny. She immediately took him in her arms and carried him to his bed in the dining-room at the side of her sewing-chair. I and wife feel perfectly sure he was aware his end was near—might come any instant, and he did not want to commence the journey when alone, and followed her upstairs. Where he ever got the strength to get up that long, winding stairway of twenty steps is beyond my comprehension. He lay quietly sleeping most of the time, occasionally working his head from under the light gauze with which wife kept him covered to protect him from the mosquitoes. About two o'clock he seemed a little restless, and wife took him as he lay with his bed and placed it on the lounge within a foot of her. He seemed content, and after wife had petted and talked to him a minute he closed his eyes as if he wished to sleep. Wife replaced the gauze. In about fifteen minutes he had laid so quiet and motionless wife removed the gauze. Poor Pup had entered into his eternal sleep as peacefully and quietly as a flutter of a sleeping infant's breath. The expression on his face was perfectly beautiful.

Wife always lamented, "Oh, if I only had not covered him up." It was better so.

Do you think any one on earth could make wife or me believe our Pup was not a reasoning dog with good sense and plenty of it? He was six weeks old when our friend gave him to us, and two and a half years when we lost him, and he was a blessing and constant source of pleasure to us all. I have never been able to find another, as they seem to have gone out of fashion for many years, the pugs, fox and other terriers being the fad. If some lover of reasoning dogs would only send me one from six to twelve weeks old—a male—he would do a fine piece of missionary work. Wife is now North and, well, I don't know—anyhow, Iowa is a long way off—if this should receive the editor's approval.

J. H. Sampsell, M. D.

127 Carondelet Street, New Orleans.

About Sept. 1 a fire, originating among the local sheep camps, began to burn among the pine forests near the borders of the Yellowstone Park Forest Reserve. People fought it for a week, and it was thought to have been stamped out. A high wind, however prevailing Sept. 7 rekindled it, and it threatened not only all the forests in the neighborhood, but all the winter stock range as well. The whole country turned out to fight it, with what result is not yet known.

Natural History.

Potholes.

Editor Forest and Stream:

Your very simple inquiry in regard to the probable age of those curious holes in the rocks which go by the common name of potholes, brings to my mind that question asked by Dickens' Paul Dombey, of his father, the rich merchant, in that story of that noted author, "Dombey and Son," "What is money?" That noted financier was suddenly, as we say, dumbfounded by the apparently simple question. And, indeed, I am at a loss to give an answer to this you have propounded to me. When I was a boy I was taught that the earth was six thousand years old; when a young man I stood on the top stone of the oldest of the pyramids of Egypt, and looked down, as Napoleon said, from the work of forty centuries. And the chisel marks on the stones of that wonderful edifice were, and, of course, still are, as fresh apparently as if they had been made yesterday. If this should be so, of what age must that granite rock have been of which that stone is a part? Since your proposition came to me, I have been thinking of what answer I can give to it, but the more I think ot if, and I have been thinking of it by the side of some of these holes, little ones which have been worn into the surface of the solid granite merely by the flow of the streams of the water of the rains which have coursed down the gentler slopes of the solid, smoothly time-worn bare rocks; and in the flow down to the level ground have worn the surface into sand, of which the soil at the foot of the slope is formed—I can not form any guess even, of the number of centuries, thousands of them doubtless, required to wear away these little basins even; not to mention these deeper ones which exist. But I might hazard a thought that some millions of years of such action as is now going on in these holes, the deeper ones of them, might possibly be sufficient. Then comes the thought—if this vast time has been spent in the mere smoothing off the surface of these rocks by the action of the flowing water, how many myriads of years must have been required to form those solid crystallized rocks themselves, before they were forced by some amazing convulsion of nature into the ragged peaks and broken cliffs which are only the exposed points of the vast rocky foundation of the earth's surface.

And thousands of feet thick of later rocks have been deposited on this foundation during uncountable ages, and all this vast time these oldest rocks have been worn down so little as to leave the rough points still unsmoothed. During the twenty years of my residence in this mountain region I have seen not the slightest change in the surface of the rocks exposed in the streams, but every visit to these places there has been the same whirling and eddying of the water, and the same grinding of the gravel; but the effect of it all is wholly too small to be measured. There is a change in the appearance of the river bed after any one of these occasional freshets occur, and then, of course, it is reasonable to think that most of this wearing work is done; but it is wholly too insignificant to notice even by the careful eye of the student intent on the possible unfolding of any one of the secrets of nature's work. To my mind this kind of study seems beyond the present ability of the human mind, even to intellect, to grapple with. For the life of a man, even if extended to its fullest limit, is too short to follow out with any understanding of it, as to the time involved of any one of the geological problems, which are presented to us in the rocks which we see under our feet. The best we can do is to study, as we can observe with careful eyes; think of what we see, and of all things most, gain all the knowledge we can possibly of others' work; adding to it the trifle each of us may gather; and,

> "In this our life, exempt from public haunt,
> Find tongues in trees, books in running brooks,
> Sermons in stones, and good in everything."

And thus we may gather in this life possibly something of use to us in another to follow. Who knows!

HENRY STEWART.

Coyote Jack.

THE account of tame birds in a recent FOREST AND STREAM, leads me to send you an account of a tame coyote, which, as far as I can learn, seems to be an exception to the rule governing coyotes, as he is of a most loving disposition, and has no treachery in his make up. He loves to play with all children at sight, and no matter how roughly they play with him, he never uses those big canine teeth hard enough to hurt a child.

I inclose you three snap shots of Jack in his outdoor life; one where he has the boy down, one where he is posing with his mistress, and another where he is lying on his back with the cook examining his teeth.

Jack is mischievous, of course, and will steal your handkerchief out of your pocket, or do anything to make you chase him, yet he will take anything from your mouth as gently as a well-bred house dog.

Jack was raised on a nursing bottle on Major Gordon W. Lillie's ranch in the Indian Territory. Major Lillie is an old friend of mine, and while on a visit to the Wild West Show this spring, I had my first introduction to Jack, who was playing with the crack shot, May Lillie, the Major's charming wife. Jack seemed to take to me at once, and in a few minutes we became friends, and as the continual moving of the show seemed not the best place to educate Jack, the Major insisted on presenting him to me. So Jack and I left on the same train for Atlantic City, where he has made a host of friends.

He goes to the beach with the cook, who is especially fond of him. At first he was afraid of the surf, but now he takes his surf bath daily. It is interesting to watch him with strange dogs. Jack wants to play with them on sight, but many of them as soon as they scent him will run with their tail down, afraid of him; others take to him at once, and play until both dog and coyote are winded. He will, I think, learn to retrieve, and I am going to try to teach him the house tricks of a well-broken dog.

We thought Jack was going to die the other day, as after playing all the afternoon he fell in what appeared to be an apoplectic fit. I opened his mouth and threw in a handful of salt. He recovered only to act crazy, rushed all over the yard, ran into the fence, and in fact acted just as I have seen dogs with meningitis. I caught him and poured down a big dose of syrup of buckthorn. He showed partial paralysis, then final complete collapse; lips white and pulse almost gone. I felt his heart, which was almost still, and said at once "he will be dead in less than an hour." There was not a dry eye among the women and children gathered around poor Jack. As I thought nothing could hurt him, I gave him a spoonful of aromatic spirits of ammonia. It made him struggle to get up but he sank back into a deep sleep, which lasted several hours. We kept him very quiet, and I found his heart was getting stronger. He finally awoke to consciousness again, but was very weak. He finally recovered, and is to-day the same old Jack. I think the cook over fed him. Now, if this attack had happened

COYOTE JACK IN AMIABLE MOOD.

to a fine bred dog I don't believe he would have recovered. It is new to me to see an animal recover from this and become all well again.

By the way, Major Lillie has a herd of forty buffalo on his ranch in Pawnee, Indian Territory. He had two killed by railroad accident this spring shortly after the show opened in Chester, Pa.

JAMES A. CATHCART.

English Rabbit Skin Trade.

CONSUL MARSHAL HALSTEAD writes from Birmingham, Eng.: "Instead of being sent to certain parts of the European continent—where for a great many years rabbit skins intended ultimately for American use have undergone a process known as pulling—a few bales of these skins were shipped last winter, experimentally, direct from Birmingham to the United States. It was thought, a shipper told me that we had produced a new machine in the United States which could pull out the long hair of rabbit skins at less cost than by the extremely cheap hand labor of the Continent. I learn that the machine experiment was not a success, and I know the English dealers who were interested in the American venture are again sending their skins to the Continent, where the long, useless hairs are laboriously pulled out by hand and the skins reshipped to hat manufacturers in the United States, who shave off the close hair and use this fur to make felt hats.

"Millions of rabbits, British and Australian, are consumed annually in Great Britain. Dealers purchase skins from game and poultry shops, and where rabbits are dressed in households there is, as a perquisite, a penny apiece to the cook. One Birmingham dealer tells me he handled 3,000,000 rabbit skins last year."

Bite of the Coral Snake.

Editor Forest and Stream:

Is it not probable that many accounts of bites of the coral snake, *Elaps*, resulting in no harm to their recipient are based upon a mistake in the identity of the snake? There are one or two species of harmless snakes of the genus *Lampropeltis* that resemble *Elaps* in having bands of red, yellow and black, and as these snakes are found in the same regions as *Elaps*, they are no doubt mistaken for it. In *Elaps* a broad band of red lies between two narrow bands of yellow, while in *Lampropeltis* the broad red band lies between two narrow bands of black. The black band in *Elaps* is about as wide as the red, while in the harmless snake the black band is narrow.

Game Bag and Gun.

Proprietors of shooting resorts will find it profitable to advertise them in FOREST AND STREAM.

Across New Brunswick on Snowshoes.—I.

THERE is perhaps no part of the sporting country of America which to-day is attracting greater interest among big-game shooters and anglers than the Province of New Brunswick. This is true not only in regard to the sportsmen of the East, but those of the West, and it is curious to note that among the visitors to that region during the season just closed there were numbers of Western men, including gentlemen from Cleveland, O.; Dayton, O.; St. Louis, Mo., and one or two points in Indiana. Hence we have the curious spectacle of large numbers of sportsmen of the Middle West turning not to the wilderness of Wisconsin or Minnesota, nor to the more distant Rocky Mountains, but to the forest-covered hills of the northeastern sections of America, those very portions which were first visited and settled by the white inhabitants of this country.

There is a reason for all things, and there is a reason for this sudden and growing popularity of the moose and caribou country of New Brunswick. In brief, it is there that the extremest doctrines of modern game protection have been worked out to successful issue. In New Brunswick they have game because they have a protection which protects. In no portion of America are the FOREST AND STREAM theories of game protection more fully believed in or more thoroughly carried out than in New Brunswick. No waste, no sale, a very limited bag, and the most stringent inspection—such are some of the proved and practical features of the law of that land.

Believing, as one must, that the days of our American game are numbered, and being curious to see the effect of modern methods of protection in a country once depleted of its game and now more fully stocked with big game than any other area of equal extent in any portion of America, the writer hailed with extremest satisfaction the opportunity to make a winter visit to New Brunswick, and to look into the matter of the New Brunswick game supply at first hand. That this could be done in a thoroughly satisfactory way was made possible in the first place by the kindly offices of Mr. Adam Moore, president of the New Brunswick Guides' Association, than whom a more level-headed sportsman or more splendid man never existed in any country. Mr. Moore, with his friends, Henry Braithwaite, George Armstrong, Arthur Pringle, Harry Allen, Bob Allen and W. T. Chestnut, will all be remembered as members of the New Brunswick party which visited the Sportsmen's Show in the winter of 1901. The fine impression made by these men here is not dispelled but heightened, by the acquaintance the writer has had with them during the trip recently ended. I want to say in advance of my story that I believe New Brunswick has more game than any country in America, and that it raises the best guides and the best men on earth. It is a square country, an honest country. Fakes do not flourish there, do not grow there, and are not wanted there. It is a square, fair, heel and toe, man's game that one will get in New Brunswick.

I wanted to see New Brunswick in the winter time, because it is in the winter that one can best tell how much game there is upon a given bit of country; and because, in the second place, I am personally fond of winter camping and of snowshoeing. A third consideration was the fact that during the month of December most hunters are out of the woods. Therefore it seemed possible to have plenty of time, plenty of room and plenty of chance to see what there was to be seen. In these days of special interest in moose and caribou, the plain story of this trip may prove of service to other sportsmen who purpose going into that region. Perhaps I may further preface the story by a little advice as to the preliminaries, which I found so easy and simple that I dare counsel others to do just as I did.

All talk of trouble with customs officers, etc., in going into New Brunswick is a mere bugbear, a humbug. I explained to the customs officer here in Chicago that I was going on a hunting trip, that my rifles, camera, etc., were of American make and that I had nothing which I considered dutiable in Canada which I did not intend to bring back with me. With great courtesy my baggage was marked in some mysterious way which enabled me to take it from the depot without further trouble at Fredericton, N. B. I had, in advance of this, written to Mr. W. T. Chestnut to attend to the details of my shooting license, etc. Either that gentleman or Mr. Robert A. Allen, of Fredericton will take up such matters for shooters, since both are connected with the Fredericton Tourist Association. I found everything arranged on a thoroughly complete schedule. One leaves Chicago on the Canadian Pacific connection at about 3 o'clock in the afternoon, reaching Montreal the next evening. A wait of an hour at the latter city and one then crosses the grand St. Lawrence River and works on northeast, ever northeast, across the State of Maine, into New Brunswick, and so by noon of the next day arrives in the beautiful and homelike little city of Fredericton, the capital of the Province, a city of many governmental traditions as well as many graceful social heritages of a dignified past.

Madame went with me, it being at first a question of whether it might not be possible for a woman to go into the woods. This was decided in the negative, so the better half of FOREST AND STREAM expedition surrendered at discretion and was made beautifully at home in the families of friends. As to the method of the conversion of the Yankee, I wot not so much, but the work of the Chestnuts, the Everets and many others was of so potent a nature, that when at length Adam Moore and myself returned from the wilderness, we found that Madame had applied for naturalization papers, was wearing Canadian garb and was rebellious at the mere suggestion of ever going home to Yankeedom again. The quality of New Brunswick hospitality is not the least charm of a visit to that land.

Big Adam Moore—they sometimes call him "Little Adam" for fun—was at the depot at Fredericton, with

Henry Braithwaite, that lovable old-timer who personally superintended the turning on of the water into the Miramichi River in the remote past. We three foregathered forthwith and began to buy stockings. We bought some, and then some, and then some more. I certainly would counsel any one intending to hunt in New Brunswick at any season of the year to purchase his clothing at Fredericton. The woolen socks you get there, for instance, are just the sort you need, and cost about one-third of what they do in the States. One ought to have from eight to twelve pairs of stockings at least for a winter trip, a couple of pairs of heavy over-stockings, and a good pair of shoepacks in size about three or four numbers larger than his regular shoe. For dry, cold snow, many prefer the moccasin, among these Henry Braithwaite, who will not wear a shoepack if he can help it. I found the shoepack very useful, as we met much thawing weather, and also found my Yankee wear of Gold Seal rubbers very serviceable. I also committed the heinous crime of using a pair of Alaska model snowshoes, five feet long and one foot wide, the bow turned up in front after the fashion of the "tripping shoe" of the far North. These shoes created in turn horror, consternation, amusement and scorn, wherever they went in the Province. I had them fitted with straps such as we used in hunting in the Rocky Mountains—straps which must have caused Adam Moore and Henry Braithwaite many a pang of misery. I would not counsel any one else, unless wedded to his idols, to take this sort of snowshoe into New Brunswick with him. Let him get all his outfit on the spot. He can get practical footwear and any sort of snowshoes that he needs at Fredericton, and much better snowshoes than he can get in the United States. Luckily, I had with me a pair of genuine Arthur Pringle shoes which dear old Frank Risteen had made for me by Arthur several years ago. These snowshoes saved my life—that is to say, prevented me from being publicly mobbed by the public of that Province, who look upon any long-bowed shoes as seditious and dangerous. In parentheses I may say that I wore the flat-bow shoes and the regulation New Brunswick tie, fashioned after the Millicet Indian tie, every once in a while; that is to say, whenever I felt that I could spare another toe nail. Then I would hie me back to the long bows and straps and give my toenails a chance to grow out again. If you are a snowshoer you will know about these things, and if you are not a snowshoer you will learn about them when you go against a New Brunswick trip in the winter time. You will then learn the source of that greeting which all New Brunswickers exchange: "Good morning, sir. How many toenails have you lost this week?" Inquiry of almost any man in regard to himself and family will usually discover the fact that the New Brunswick human being sheds his toenails as regularly, if not as painlessly, as the moose does his horns. A little ball of ice under a snowshoe strap will do wonders in a day's tramp down hill under a heavy pack. Try it, and you will learn all about it. I had tried it before. Hence the heresy of the long bows. In straight-away walking, and in not too rough a country, the long bow is, in my opinion, more comfortable to wear than the codfish model, which is universal throughout New Brunswick. I would not advise it as a hunting shoe.

One will perhaps prefer to take his own arms and ammunition with him. I took both my .30-30 and .30-40, for no special reason except that I dislike to be confined to a single gun, which may get out of order. The .30-30 I left at Fredericton. Had I taken Uncle Henry's advice, I would have left the .30-40 also, and would have bought me a gun down which one may drop a can of frozen beans in lieu of better ammunition. Uncle Adam, upon the other hand, slyly said that he thought the .30-40 would do the trick. I relied upon it, as will appear. Later also we may discuss somewhat of the ancient war between Uncle Henry and the small-bores.

We had a little meeting of sportsmen the first night in Fredericton, there being present Adam and Henry, Jack, a brother of Adam, Billy Walker, Mr. Edgecombe, president of the Board of Trade; Bob Allen, of the Tourist Association; Arthur Shute, and a lot of other awfully good fellows. All these filled me so full of moose and caribou stories that I began to feel that it was not really worth while to leave Fredericton, which I had already discovered to be a mighty comfortable place. Nor was this resolution without a certain support in recent facts. Mr. W. T. Chestnut, sometimes called Billy Chestnut for short, had, in the week just past, gone out and killed his caribou within twenty-five miles of the town. They told me of moose which had crossed the river practically at the edge of Fredericton—showed me the very place where one moose came down the road just beyond the edge of town, and, refusing to be frightened, at length deliberately turned around, took his time, and walked back into the water again. They showed me good deer country running right up to the edge of the town, and told me innumerable stories of how this, that and the other fellow had gone out and done this, that and the other thing in about fifteen minutes after leaving home. All of which, by the way, was strictly and literally true.

"You must not get too much worked up by these stories," said Billy Chestnut to me. "The finest story of that kind we ever knew to happen here was that of a young dude who came in here from Boston. He came into our store about the first thing he did, and stood looking around. He wore a suit of bicycle clothes, carried an old .44 gun, and said, kind of off-hand like, that he had come to kill a moose and would be glad if I would tell him which way to go. He said he did not have very much money and not very much time, but he thought he would kill a moose or so. The law then allowed one to kill two moose. Well, this fellow, acting upon my advice, went into the country about twenty miles from here, and put up at a farmhouse. He took lunch and then walked out into the edge of the woods a little way, and blamed if he didn't meet two moose, and kill them both! The next day he was back here in town. 'I got 'em,' said he. He thought it was the easiest thing in the world to kill a moose, and, in fact, was the only fellow not surprised at his feat! I may add that he came up again the next year and did not get any moose at all."

Still running ahead of my story, I may supplement the foregoing statement with the story of three Fredericton shooters who had just come back to town about the time Adam and I returned from the wilderness. One of these men went up about twenty-five miles on the railroad, and in less than fifteen minutes killed a caribou, which he put in the express car and sent back home, and it reached Fredericton the evening of that same day. The other two members of this party each killed his caribou before noon of the next day. At about the same time a bunch of caribou broke through the ice on the St. John River not far from Fredericton, and one of the animals was drowned. It is no exaggeration to say that game is abundant even close about this old settled community, although the true hunting country is much further away and more difficult of access.

I must linger also in the preliminaries of my story sufficiently to tell of the day which we passed at the Pine Bluff Camp, six miles up the lovely St. John River. This house party was gotten up in honor of the visitor, and there were present Mr. W. T. Chestnut and his brother, Mr. Harry Chestnut, Adam Moore, Henry Braithwaite, Arthur Shute, Billy Walker, Gus Tweedale, Bob Allen, Harry Atherton and Bud Babbitt, sometime known as "the Deacon." For the refreshment of these the Chestnut boys had provided a noble pasty, composed of partridges, the same blended with fine herbs and other articles wisely added thereunto. This with many other concomitants furnished an ample luncheon, superintended by no less a personage than Joe Paul, a brother of Jim Paul, the guide and sportsmen's show performer. Joe Paul is homelier than Jim, and deaf as a post, yet they say he can draw the long bow upon occasion just as well as Jim.

Pine Bluff Camp is rarely open in the winter time, but it is ideal at any season of the year. Built of small round logs, provided with an ample fireplace, with its walls decorated with trophies and weapons of the chase, it is a beautiful tabernacle of sport and fit to be enjoyed by the sportsmen who built it. Here are antlers of moose and caribou, and pieces of beaver cuttings, and the skulls of all manner of animals native to that country. Among other curios was the iron head of an old Indian tomahawk, which was dug up on an island in the St. John River some years ago. Authorities state that, from the model of this Indian ax, it is undoubtedly 150 years old or more. Yet in the eye of the ax head there may still be seen the wrapping of birch bark, which the former owner used to tighten it upon the shaft. Wonderful fabric is this birch bark, for here is some of it, subjected to earth and air and water for more than a century, and yet shows unmistakably the grain of this useful product of the wild woods.

It was a jolly day at Pine Bluff, and here we heard more moose stories and more caribou stories which I may not pause to narrate, as well as many partridge and woodcock stories. For instance, Harry Chestnut mentioned casually that his bag of woodcock for the season just closed was 110. He shoots over a level-headed old setter which he purchased years ago from W. B. Wells, of Chatham, Ont., and tells me that there is grand grouse and woodcock shooting near Fredericton.

I noticed Adam Moore and Henry Braithwaite poring over some maps of the Province, and I could hear all sorts of talk about the Tobique and Nictau and Miramichi, the Little Southwest and the "Big Divide," and a lot of things which at that time I did not understand so well as I do now. Presently I learned that these hospitable New Brunswickers were indeed planning upon a large scale to give me what Adam Moore promised should be "the biggest trip ever undertaken in the Province by a sportsman at this season of the year." Henry Braithwaite and Billy Chestnut and Mr. L. I. Flower, of Central Cambridge, were all to come up with us to Adam's camps on the Nictau lakes. There we were to kill each his moose and caribou, and then undertake a little enterprise which had long been in the brains of both Adam and Henry; to wit, to cross over from Adam Moore's country, south over the unknown Tobique Divide, and come out in Henry Braithwaite's country, on the headwaters of the Miramichi system. I learned that Mr. Flower could not go, that Billy Chestnut could not go, and that finally Henry could not go with us, for the reason that he had just received word from Mr. Arthur S. Phillips, of Fall River, Mass., that his services were engaged for the month of December. This left Adam and me as the sole members of the original party, and Adam and Henry were now discussing whether or not it would be safe to try to make a winter journey across this unexplored country which lay between their two game ranges. Billy Chestnut got wind of it and told us not to try to make it across. Henry rather thought that it might be done, but was not sure. I did not know anything about it. Adam said nothing, but apparently kept up something of a thinking. The oddest of it all to me was that there should be any part of New Brunswick which was not thoroughly well known. Henry Braithwaite has been trapping pretty much all over that Province for forty years, and when not hunting, trapping and guiding, has been engaged with the lumber companies cruising. Adam Moore has traveled all over the Tobique and Nepisiquit countries, and every spring runs a bear line more than 200 miles in extent, with some fifty or sixty traps on it. Now, how these two men, who both knew there was no one in between them, and who both agreed that it could not be so very far from one fellow's country to the other, could have been in their business so long and not have known every inch of the whole Province, was what seemed to me a singular thing. I had the notion that New Brunswick was an old country, and thoroughly well known, and moreover not so big but what one could travel all over it easily. That was my first impression. I knew more about it when I came out.

E. Hough.

Hartford Building, Chicago, Ill.

A visitor to Shenandoah writes thus of the mules, which the big strike is giving a taste of outdoors: "Some of them had not been out of the underground tunnels where they work for 12 years. None of them had been up for five or six, unless it was to go to the mule hospital. When they were brought up they were stunned by the sunlight; they were turned out to grass, and did not know what to do. They smelt the air, and looked off great distances, and put their noses to the field; and then, after a while, they laid themselves down and in sudden access of joy rolled, and kicked, and nipped one another on the neck."

Woodcock.

Woodcock shooting has a peculiar fascination for nearly all sportsmen, and one or two couple of these beautiful birds is considered a sufficient reward for many hours of hard work by man and dog in the most difficult cover. Unfortunately, it is becoming more and more difficult to find even a few woodcock in many of the best covers in the country at the time of the autumn migration, where formerly they afforded the finest sport.

This is not at all surprising when we consider the number of gunners and the high prices paid for woodcock in the markets of our large cities, but there was a sudden falling off in the fall flights about ten years ago, and there are certain reasons for this which we think are not generally known.

Years ago there were well-defined frost lines in our Southern States, and the winter temperature was never known to drop much below certain well-defined limits south of the latitude of these supposed lines. Suddenly the cold waves became intense, all the winds of the Arctic circle rushed in, and the frost king extended his realms into almost tropical regions. In fact, his influence was felt to the ultima thule of the Florida peninsula, and he carried with him snow and sleet far down into South Carolina and Georgia.

The destruction of the Florida orange groves is well remembered, and for several years we had no crop worth mentioning. No one has called attention to the effect of these cold waves upon the woodcock. In the winter of 1893, surprised in their usual winter haunts by the sudden influx of cold and sleet, they rose en masse and fled before the blast of cold wind to the coast of Georgia, where they pitched at first in any spot where they could find food. If they had taken to the great canebrakes, the majority would have been safe. Doubtless many did so, but others descended upon islands and rice fields, where they found scant cover. There they were found and slaughtered in immense numbers for days. All the swamps were alive with them and everywhere the guns were booming.

We heard that there was a flight of woodcock, and supposed that this meant, as usual, that we could find a few birds and possibly bag half a dozen. After 3 o'clock in the afternoon, we drove to a swamp, about two miles from a large city. We found birds at once among the bushes, upon the high ground, before entering the swamp proper; in fact, they were everywhere, and in a short time we had fired all the shells we had with us—a box containing twenty-five.

Upon a kind of knoll covered with bushes and thorny vines, and where the ground was springy, the woodcock were innumerable, when the dog pointed, and we went in to flush, so many would rise that it was very puzzling. Two or three would get up in front of the dog, and others on both sides of us. At the shot more would rise, and it was most confusing. We never expect to see anything like it again. The woodcock were of all sizes, from the splendid specimens, nearly as large as a female teal, to the little birds from the far North, hardly as large as a robin or small Wilson's snipe.

For many days the weather must have been about the same, as the woodcock continued to be killed, and the markets were full of them. We think that large numbers were shipped to distant cities. Bags of fifty to one gun were common, and the price declined to ten to twenty cents each. At last a change came in the weather, and the remnants of the grand army of woodcock which had entered the country disappeared. It was the winter march into Russia, and Moscow over again, with birds instead of men as the victims.

We are speaking now of but one of the great cold waves, of which we have personal knowledge, but there were probably other years, when sudden changes in the weather produced somewhat similar results. We do not think, however, that the destruction of woodcock was as great.

Such a concentration of birds must be very disastrous in its effects. Any one can kill them with any kind of a gun, and without a dog. All the woodcock usually distributed over a wide area, and in summer breeding all over the Northeastern States and Canada, were forced down into a narrow strip of country bordering on the coast. The arrival of such a host of birds was heralded far and near. Every one became excited and all the dogs and guns in the country were carried into the field.

Such a slaughter could not be repeated, as after one such experience the woodcock would probably not remain so far north, but distribute themselves in the far South, in the early part of the winter.

However, we have had fewer flight birds in New York since that cold wave winter, and its effects on the woodcock have no doubt been felt in many other States.

Theodore Gordon.

West Haverstraw, N. Y., Aug 26.

[To write now about woodcock shooting seems almost like writing about the pursuit of the great auk. Indeed the woodcock is so nearly extinct that it ought to have protection everywhere, in the hope that by such protection it might be enabled to re-establish itself. The examples given by Mr. Gordon are extremely interesting.

A valuable note on the destruction of woodcock—among other birds—in South Carolina, during the great cold wave of Feb. 13 and 14, 1899, was published in the Auk of that year by Mr. Arthur T. Wayne, who says of the species under consideration: "The woodcock (*Philohela minor*) arrived in countless thousands. Prior to their arrival I had seen but two birds the entire winter. They were everywhere, and were completely bewildered. Tens of thousands were killed by would-be sportsmen, and thousands were frozen to death. The great majority were so emaciated that they were practically feathers and of course were unable to withstand the cold. One man killed 200 pairs in a few hours. I shot a dozen birds. Late Tuesday afternoon, I easily caught several birds on the snow and put them into a thawed spot on the edge of a swift-running stream in order that they would not perish, but upon going to the place the next morning I found one frozen. These were fearfully emaciated and could scarcely fly. Two birds were killed in Charleston in Broad street. It will be many years before this fine bird can establish itself under the most favorable conditions."

The question of the woodcock's future is one of great interest to those older sportsmen, who can remember

when it was a common bird, and there are men of experience who would have the killing of the woodcock absolutely prohibited for a term of years. Such absolute protection, if actually given, would no doubt enable the species to recover.]

CHICAGO AND THE WEST.

Lull in Sporting Season.

CHICAGO, Ill., Sept. 13.—There is a bit of a lull in the sporting season here for the time, the first flurry of the chicken season, always short, having subsided, and the duck season not yet having begun. Fishing is over for the trout anglers, and the sport of the angle does not appeal to the bass and 'lunge fishers so much now as it should, though the fish are rising better than for three months, possibly better than at any time this season. Everybody wants to go shooting, and nobody is going because the outlook afield is not yet sufficiently alluring. Meantime, we wait for a little while, a week, perhaps two or three weeks, until we may see what we are to see for this fall.

The Illinois chicken crop was not only a failure, but a very alarming failure. The birds simply are not here. No one knows what has become of them, but the truth none the less stares us in the face that we have no birds worth mentioning to carry over as breeding stock for next year. We have been shooting chickens here for several years now, and for one or two seasons we had more birds in Illinois than we had in Dakota, but this was the result of a closed term of three years, and it seems not to have lasted. We are confronted with the apparent necessity for another closed term of several years. Shall we get it? We ought to, but we will not. The Illinois laws were never in worse shape, nor was ever the outlook for our game in worse shape than it is to-day. With woodcock and quail unprotected, our grouse absent or unaccounted for, and the remaining features of our game laws in a lamentable state of confusion and misapprehension, we have surely little to boast about here in Illinois at present.

The salvation of the situation here has been the Lacey law. Really it does not seem that there is very much illegal game coming into the Chicago market, very little if any of our local game. Deputy U. S. Marshal Bortree, certainly a very ardent protectionist if we have any, says that he thinks the laws against sale and shipping are better respected than he would once have thought possible. Deputy Clark, who has under his more immediate charge the South Water street operations, is of much the same belief. The depredators don't like to run against Uncle Sam. As to early and illegal shooting, one can only guess. There were no chickens left on opening week, but perhaps these died from other causes than sooner shooting. I have not heard of any arrests and convictions, but there may have been some, the records being concealed in the offices of the State Warden.

Teal Coming In.

The first flight of teal, just eight days ahead of time, arrived in this region yesterday and to-day. These birds are reported at Grass Lake, north of us fifty miles or so, also at Senachwine and Swan lakes, a hundred miles or so south of us. These seem to be travelers and not local birds. Some of our old-time shooters say that the local-bred teal get up and go north early in the fall, and then come back again later on. As to the accuracy of this, it is hard to vouch. At any rate, here these teal are, a ray of hope upon a horizon otherwise black enough in a sporting way. No doubt ample arrangements are now under way for their proper entertainment. Tolleston Club has had good shooting at local mallards. These teal should be there to-day or to-morrow.

Wild Rice.

Speaking of teal reminds one of wild rice, regarding which a considerable amount of correspondence has come during the past year. I met out at St. Paul a firm who sell this rice regularly. They told me that they supplied it both for the table and for sowing purposes. The table article is burned or singed, this operation being performed by the Indians, who place it over a hot fire in order to remove the husks or beard. This leaves a long, darkish kernel, something like a grain of oats which has been blackened by mildew. The grain is hard and firm, and the taste is more like oats than like domestic rice, although it is very sweet and palatable. The firm told me that this form of the wild rice berry is never sold for planting purposes, and that they supply the unsinged or bearded seed for sowing, the price for the seed being 5 cents a pound less than the cooking article. They tell me that the Indians do not bring in as much wild rice as formerly, but possibly the informant told me this because he needed the money. There would seem to be plenty of wild rice and plenty of Indians left in Minnesota, not to mention North Carolina.

Grouse Country.

Some of my Michigan friends who like a turn or so at ruffed grouse shooting might bear in mind Detroit, Minnesota. Deputy Warden Stephens, of that point, asked me why I didn't come out there to have a grouse shoot with him this fall. "How many can you get in a day?" I asked him. "Twenty-five, easy," said he, "but no more. That's the daily limit."

If I thought I could get twenty-five ruffed grouse in a day of wing shooting, I think I would bid good bye to sorrow and just go shooting. We never did get that many in our palmiest days over in Michigan. If the whole part of a half-dozen guns brought in that many we felt we had done pretty well.

November Ducks.

Tom Divine, of Memphis, Tenn., now for a year or so the Mississippi missionary of the Winchester R. A. Co., has been over on the St. Clair Flats of Michigan, getting over a little case of Mississippi malaria, but started home yesterday. Tom told me here that really the best place to see duck shooting in November is at the Swan Lake Club of Vicksburg, at Washington Lake. He says that as the weather begins to tighten up North the birds pile into these Southern waters in thousands and offer the finest kind of sport. The club has never established a limit to the daily bag, but will soon do so. There is talk of making the novel limit of one hundred shots a day. This would not mean fifty birds a day for so very many shooters, but it would allow every fellow a lot of fun almost any day he went out in season.

On Grizzly Ridge.

I have a friend out in the West, who lives where there is always snow in sight. We have never seen each other yet, and have only exchanged letters twice, but we are friends, and will probably go after my grizzly together one of these fine days. My friend writes in his last letter:

"Yes, we have grizzly bear and mountain sheep in this country, as well as deer and smaller bear. Although I failed on this trip to get either, it was not because the game was not there, for we saw plenty of deer and bear sign along the river and in the cañons. We were in a mountain sheep country, but the weather was too hot to climb the rocks and cliffs after them, so we contented ourselves with fish, grouse, peaches, apples and blackberries. I was out for health more than game.

"There have been a few very large grizzlies killed in this county in the last year, and in each case the bear had killed from 300 to $500 worth of cattle befor he was captured. I have not heard of any depredations of cattle-killing bear this summer. I think it would not be a difficult matter for you to find your game over on what is called Grizzly Ridge. You would outfit here for your trip to the mountains, this being the most convenient to the best game localities. It would also be the best place to leave your wife, providing she did not accompany you on the hunt. You would have to go with a pack outfit, as the bear country is inaccessible for anything but a pack train or a footman. You will find no trouble in procuring your man and outfit for a trip of that kind."

I like the sound of that name, Grizzly Ridge. Must have been a bear made a track across there some time, anyhow. I'm expecting another friend—whom I have never met or written to yet, by the way—along through here from that same country this winter, and if I see him, I will tell what he says about the prospects in that part of the world.

Off For Moose.

Messrs. T. W. Robinson and John Morron, of this city, start Sunday next for New Brunswick for a moose hunt, with Jack Moore as guide in Adam Moore's newly discovered moose country. They will very likely get their game. These are the only Chicago hunters to qualify so far for New Brunswick.

Wishininne Reunion.

The Wishininnes have been dropping into town for the past week, coming from here, there and everywhere, as becomes gentlemen of the Wishininne sort at this season of events. Mayor Harrison spent his summer at the Huron Mountain Club, of Michigan, and had the worst luck fishing ever known to befall any member of that organization. He only caught three or four good trout all summer, and there was no one else who did not get big ones. Similar luck attended him later in the angling season, when he went to the Manitowish Chain after muscallunge. Seventeen pounds and a half was the best he could do, though others were snaking 'em in all around him, up to 35 pounds or better.

Hon. Hempstead Washburne was more lucky in his sojourn at Huron Mountain. He, or his son, it does not clearly appear which, accomplished the undoing of a 5¼-pound trout, not to mention others of goodly proportions. Mr. Washburn is all smiles where he isn't all sunburn.

Mr. Graham H. Harris was happier than anybody this week when he dawned at the club table. He has been out in the Rockies west of the National Park for six weeks, and has had magnificent fishing in the Snake and other streams. He met there Mr. Ed. Ellicott, also of Chicago, and the two did extensive business with the trout. Mr. Harris wants to start right back again to the Rockies.

Eddie Pope has been chicken shooting, and is expected back soon with stories of sport and glory, and several others have shooting or fishing yarns to spin. Great deprecation was expressed over the summer records of Messrs. Wells, Denis, J. V. Clarke and Lou Clarke. Mr. Wells, the president of the club—we have never been able to oust him from that office—had a vacation, but threw it away playing golf at Exmoor Club, of Chicago. Mr. Lou Clarke did the same. His brother, J. V. Clarke, deserted to Rye Beach, which is somewhere in the darkest East. Mr. Dennis did as badly in taking his golf around Boston. These disaffections among the Wishininnes have caused a sharp schism, and the internal conflict in the club ranks run to threats of firing all members who forsake the rod and for the crooked-clubbed game of Thistledom. This and other matters will come up for discussion at the first formal meeting of the body, which will be a dinner at the Mayor's residence next Tuesday evening. Only Creole dishes will be served, and many important questions of national importance hitherto left unsettled will upon this occasion be finally disposed of.

Western Licenses.

Mr. Jas. K. Boyd, of New York, writes about Minnesota game laws:

"As to the Minnesota non-resident law, you write none will be required from hunters coming from States not having a non-resident tax. Mr. Stephens says law requires paying $25. A recent article in FOREST AND STREAM says there is a tax of $10. Can you enlighten us? If you will, we will be greatly obliged. We would stop in Minnesota on our way to North Dakota if not taxed.

"I was greatly interested in your chicken article of this week. Nothing has made my blood boil the same since my last year's shoot. Meat dogs are the correct thing."

The *Game Laws in Brief* states: "Minnesota requires a non-resident license for hunting game of any species from citizens of all States, which require non-resident hunting licenses. Fee, $25."

This is the latest of which I know. I did hear something of collecting licenses from some parties who were out in Minnesota during our late trip there, but I could not say whether all these were from other license States. Illinois and Wisconsin men get it in the pocketbook. Perhaps the wardens find that the only practical way to get any license money is to assess every shooter found there. If they did not do this, they might find that everybody came from some innocent State. It has always been a great aid in the enforcement of the game laws of Minnesota to put the burden of proof on the other fellow. I would suggest that Mr. Boyd get his advice on this direct from Mr. Fullerton, the State warden. I would also advise him to steal Mr. Fullerton's meat dog if he can. Mr. Fullerton won't mind it. He never gets a good dog but what some fellow comes along and steals him. In fact, he rather expects you are going to steal his dog, I think. He acted surprised because I didn't.

Keep In Line.

I was talking with a friend of mine the other day, and he asked me to go shooting with him. "I had a good shoot out in Nebraska last fall," said he, "but I shot a fellow, out there, and that sort of made me feel out of sorts; spoiled my hunt, in fact. This fellow was the most excitable man you ever did see. When we were walking along in line, and the dogs came to a point, he would always run out ahead of everybody and try to get the first shot. I told him he'd get shot or shoot somebody, and blamed if the very next day it didn't happen! He ran out in front about thirty yards, and a bird crossed over his way. I killed the bird. Didn't see the fellow. Say, you ought to heard him holler! We was some bothered to get the shot out of him. I said to him, 'Now what did I tell you? Now I'll tell you what's what. Either you have got to go back to camp, or I will. I won't shoot in line with you any more.' Well, the fellow, he says, 'I guess I'll go back,' so he went back to camp, and I was glad he did. He made me nervous."

Forest Fires and Timber Reserves.

The Interior Department on Sept. 10 received a petition from Fremont county, Wyo., asking that 550,000 acres of land lying on the continental divide southwest of Lander be made a forest reservation. The largest fire in the history of the general land office occurred on this tract and is still raging.

Got A Muscallunge.

Theodore Roosevelt, Jr., has returned to his home after his first trip into the West. Among the different and perhaps not always accurate stories regarding his success it may be stated with probable truthfulness that the young man caught a 22-pound muscallunge in Wisconsin. This would seem to be luck enough, even without any chicken shooting. E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

Connecticut Rail Shooting.

ESSEX, Conn., Sept. 12.—*Editor Forest and Stream:* So far as getting rail is concerned, the shooting the past week has been all that could be asked for. On Saturday, the 6th, for the first time in the season, several shooters killed the legal number of birds, and since that time the shooting has been exceptionally good.

Some black ducks have been killed and a few blue-winged teal as well. No snipe are reported as yet, still it is quite early to be looking for them. A good frost will probably bring them on in numbers. G. W. C.

MILFORD, Conn., Sept. 12.—*Editor Forest and Stream:* It is years since the rail shooting has been so good as during the past week. There seems to have been a succession of flights of birds, and many of the bags have been good, running from thirty to forty to the boat. One gunner who one day had the whole ground to himself, succeeded in getting the limit, fifty birds.

This year the grass is exceptionally thick, and it is only on the occasion of an unusually high tide that the boats can move freely through it. On a number of occasions shovers have reported that there were lots of birds in the thick grass and the cattails, where owing to the low stage of the water they were entirely safe.

Old shovers believe that the season is nearing its end, and say that a little colder weather than that already had will send all the birds south and close the season, except for the few hardy birds that sometimes linger among the sedge further down the river, for a few weeks longer. R. P.

Deer Jacking in New York.

ORANGE, N. J., Sept. 12.—*Editor Forest and Stream:* In your issue of Sept. 13 you make mention of the recent accident near Blue Mountain Lake, and state that "jacking" is illegal (as it should of course be). I note that in the *Brief*, page 25, Laws of New York, Sec. 6, says: "No jacklight or other artificial light shall be used in taking deer before Aug. 15, 1902." How is this to be construed? Of course I agree heartily with the tone of your editorial, but was rather surprised to find the above quoted statement in the *Brief*. In discussing the late tragedy, I had argued that all jacking was illegal, but to make sure I looked it up. G. W. W.

[Our correspondent must have looked up an edition of the *Brief* printed before the amendment of 1902 was adopted. The July issue of the *Brief* gives the prohibition of jacking without any limitation as to time.]

All communications intended for FOREST AND STREAM should always be addressed to the Forest and Stream Publishing Co., New York, and not to any individual connected with the paper.

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in FOREST AND STREAM.

Fish and Fishing.

A Monster Halibut.

THE other day while endeavoring to trace, for the benefit of FOREST AND STREAM's readers, the source of the rumor that the North Atlantic tuna, or horse mackerel, had already been taken in Canadian waters by rod and line fishing, I came across a well-known local angler, who probably holds the record for the largest halibut taken by an amateur fisherman. In fact, not very many larger ones are known to have been caught by professionals off any of the coasts of the Dominion. The fish in question weighed 325 pounds, and was caught off the north shore of the Gulf of St. Lawrence some time ago by Col. L. P. Vohl, fire commissioner, and formerly chief of police in the city of Quebec. The Colonel is not only himself a most trustworthy authority, but has for voucher of the present story no less unquestionable a witness than Mr. Napoleon Comeau, the well-known explorer, scientist and sportsman of Godbout. Messrs. Comeau and Vohl had gone together to visit a brother of the former, who resides near the Caribou Islands, a few miles east of Trinity Bay, on the north shore of the Gulf. They went out codfishing very early one morning just off the islands in an ordinary fishing boat, using small portions of herring for bait. They had anchored their boat, and the Colonel was lifting out of the water a codfish about two feet long, at the end of his line, when he saw an enormous white mass turn itself over near the surface of the water and then disappear from view. He called Comeau's attention to the incident, and though the latter had not seen the movement, he knew that it must have been caused by a halibut, and decided that they would both stop fishing for cod and endeavor to hook the larger fish. Taking up a large herring and splitting it in two along its entire length, Comeau placed one-half on each hook. It was not very long before the Colonel felt something tugging at the end of his line. While the hook remained near the bottom nothing occurred. He had remembered that his bait and the codfish which took it were near the top of the water before the halibut had appeared in pursuit, so he gradually drew up the line, and had lifted it some distance from the bottom, when the big fish took hold. He instinctively tugged back to fasten the hook, and Comeau caught hold of the line to make sure what was on it. His experience enabled him to decide at once that the Colonel had hooked a halibut, though there was nothing at that time to indicate that it was anything like the monster that it proved to be. Both men had been fishing with lines of only thirty fathoms each, and their boat was anchored. Comeau immediately handed back the Colonel's line to him, unwound it, and fastened his own to the other end of it, to avoid being taken by surprise. They had only come prepared for cod, and had brought no gaff with them. Now they were fast to a halibut, which was not very long in proving himself a strong and heavy fish. Fortunately two fishermen were out in another boat nearly half a mile away. These they hailed, and called them to their assistance. They brought their boat alongside and boarded the other, bringing with them both a gaff and a spear, the latter being such as is used for horse mackerel and porpoises. Without these weapons and the aid of the two fishermen it is certain that the Colonel could never have saved his fish. Its game qualities were, very fortunately, far from equal to its size and weight, and when the latter had been overcome, and the cod line used by the Colonel had proved its strength sufficient to bring the halibut to within a few feet of the top of the water, a well directed stroke of the spear buried the weapon in the body of the fish, which was soon brought near enough for another good hold of it to be taken by the gaff. The main struggle between the fish and its captors was yet to come, however, for it took the combined strength of four men, lifting with both spear and gaff to get the monster into the boat. In American waters, larger specimens of this fish have been taken, though not very frequently. Jordan and Evermann declare that it sometimes reaches a weight of 400 pounds. Yarrell, in his "British Fishes," says that in April, 1828, a halibut 7 feet 6 inches in length and 3 feet 6 inches in breadth and weighing 320 pounds was taken off the Isle of Man and sent to Edinburgh market, and that it was said to have been the largest specimen ever exhibited there. The male halibut, according to Dr. G. Brown Goode, rarely exceeds 50 pounds in weight, while the average weight of a full-grown femals is somewhat between 100 and 150 pounds, though sometimes much heavier. He records the capture of ten or twelve fish off the New England Coast weighing between 300 and 400 pounds, in the course of about ten years. This, however, is only about one of this size each year.

Wholesale Destruction of Labrador Salmon.

Major-General Dashwood, one of the best living authorities upon field sports in Newfoundland and Labrador, and author of "Chipioquorgan; or Life by the Camp Fire in Canada and Newfoundland," which was published in Dublin, in 1871, is calling attention to the wholesale destruction of salmon on the Newfoundland and Labrador coasts by the cod traps which are now so plentiful there. Interviewed in Montreal, he said that there were now thousands of these traps along the coasts, and that they are utterly destroying the salmon fishery. They are far worse, as he points out, than the salmon nets, for these latter are from 5 to 6 inches in mesh, which easily let through the small, immature salmon of 4 pounds and thereabouts, that abound upon the coast, while the cod traps, which are only required by law to have a mesh of 4 inches, and which are often of a still smaller mesh, gather up all the grilse and small salmon, over 300 of them being sometimes caught in a single sweep of a cod trap. One fisherman told the General that a certain river on the Labrador coast had yielded him thirty-five to fifty barrels of salmon per annum when he netted the mouth without barring the stream, but that since the cod traps had become so common the average yield of his nets was only about eight barrels. The Hudson Bay Company had only collected some forty tierces of salmon this season at Rigolette, while in former times the yield there was over 300 tierces.

Cod Fishery Threatened.

Serious as is the threatened destruction of the Labrador and Newfoundland salmon industry, the dreaded result to the great codfishery of Newfoundland from the continued employment of the cod traps is very much more serious still. The destruction of this fishery would mean absolute ruin and national bankruptcy to Britain's oldest colony, and this destruction is seriously threatened at the present time. The trap system is killing all the young cod which encounter it, and the longer it is allowed to continue the scarcer will the fish become. The small cod are of no value whatever. They are simply caught and thrown away. As a result, the fish are not only becoming scarcer, but of a much smaller size. It is pointed out by those who have carefully studied the problem, that if this system is not put an end to, it cannot be very many years before the industry will be killed. Many of the fishermen are already awakening to the true facts of the case, and are in favor of going back to the old practice of hook and line fishing for cod, providing it is made compulsory for all engaged in the industry. They know that if this were done, the supply of fish, which of late has been steadily declining, would soon increase, and that they would save more money by it, for the outlay for traps is very large as compared with that for hooks and lines, and a trap costing from $350 to $500 is often destroyed by gales of wind or movements of the ice. It is now some fifteen years since the cod traps were introduced. Ten years ago, the evils resulting from their use became so evident that an act was passed to abolish them. Thanks to the influence of the fish merchants, however, who only seem to care for present profits, the law was repealed before it came into force.

The importance of the codfishery to the people of Newfoundland, and the absolute ruin of the country which must follow its destruction, is illustrated by the fact that 56,000 heads of families, out of the total population of 210,000, are engaged in catching and curing fish, and only 12,000 in all other occupations. Over 20,000 Newfoundlanders and a thousand vessels are engaged every summer in the codfishery of Labrador, where 600,000 quintals of 112 pounds each are annually taken. The entire export of the island is about 1,350,000 quintals, and the annual value of the take of cod fully $7,000,000.

Until the introduction of trap nets and the consequent wholesale destruction of the immature fish, there was no apparent decrease in the supply of cod, though an average of seventy million fish was captured by Newfoundlanders alone by hook and line. The natural increase of the cod is enormous, and the Arctic current, which washes the shores of Labrador and Newfoundland, is laden with the food on which the commercial fishes live and thrive, and brings with it a never-failing supply for their sustenance. The Arctic seas and the great rivers which they send forth are swarming with minute forms of life, constituting in many places what has been well called "a living mass, a vast ocean of living slime." Upon this "slime food" live the almost microscopic crustaceans. They in turn furnish food for the caplin, the squid and the herring, which, with multitudes of other forms, are devoured by the cod.

E. T. D. CHAMBERS.

Russia's Great Fishery Exhibition.

(Concluded from last week.)

IT is Russia's proud boast that the wealth of her inland waters in *Coregoni,* or the whitefish family, is not elsewhere equalled. In her western domain she enjoys an abundance of the great and little marane (*C. albula* and *C. maraena*), the Dwina and Petschora product, especially in its dried and smoked forms, contributing largely to the sustenance of the mases. Beside the species mentioned Russia claims the possession of nine others, most of them incident to her Siberian waters. In our great lakes and in the many streams and lakes great and small of Alaska and Canada, there exist at least nine species of whitefish, and according to the classification of some authorities, fully a dozen; so that Russia's claim to an exceptional diversity is open to question. To the future leading peoples of the world, the Saxon and the Slav, belongs the development of its subarctic region, nine-tenths of which is included in the domain of Russia, Canada and the United States. Canada possesses an extraordinary wealth of fish in her thousands of lakes and lakelets, scattered over her immense territory; the waters of Hudson's Bay likewise teem with finny life, all of which aquatic treasure will ultimately find a market over the railroads now under way that will extend from the Dominion's great inland sea, westward through the Peace River region to the Pacific. Canada's territory is inferior in extent to that of Asiatic Russia; she has not its mighty rivers, but she will doubtless be a good second in the product of her inland fisheries. Russia's exhibit of whitefish was as ample and as instructive as any other branch of her great fishery exposition, the design and execution of which reflects lasting honor upon her far-seeing Government.

Other fish that figured largely in the brilliantly lighted building have perhaps little interest to the American reader, as compared with those already discussed. It may be mentioned, however, that Russia's annual yield of herrings, carp and perch is in excess of two thousand million pounds. The herring catch is mainly of the famous Astrachan herring, a fish perhaps averaging in length 1½ feet and weight of 2½ pounds, the product of Caspian waters. Some of the great fishery firms transact an enormous business, thus the Sapojnikoff Brothers and the Bessubikoff Brothers direct fishery operations in the Astrachan of immense magnitude and which were well represented at the exhibition. Of the Sapojnikoff Brothers it may be said that their fishery has been carried on in the delta of the Volga since 1796, and their ownership in connection therewith extends over an area of a hundred square miles, beside that covered by other fishery grounds rented from the Crown for an annual payment of 200,000 rubles. Ten thousand men are regularly employed, a number that upon emergencies is largely increased, the annual value of their product being from one and a half to two and a half million rubles, and comprising about a score of different species of fish, aggregating a weight of over 40,000,000 pounds. The firm has large buildings for cleaning and eviscerating the fish, drying houses, salting houses, smoke houses and freezing houses. The greater portion of the catch is salted, about 20,000 tons of salt being annually consumed; a portion is shipped in ice, for which purpose the firm has sixteen ice houses.

Beside the large firms mentioned, there are others; indeed, the Caspian fisheries may be said to be exploited by large aggregations of capital. Apart from the economies effected by such a scale of operation, there are others resulting from a fuller observance of the restrictions of the conserving regulations of the Government; for, being intelligent beneficiaries, the large firms appreciate their value.

Salt fish is in Russia a staple article of diet with the laborer and the peasant, and is afforded at a very low price. Indulgence, however, is not unattended with danger, for deaths are not infrequently occasioned by the so-called Russian salt fish poison; technically speaking, a ptomaine resulting from the decomposition of ill-cured fish. Nowhere in the world does fish assume such a variety of alimentary forms, and a study of their mode of preparation might be profitable to some of our great food purveyors.

In Russia the fishery methods employed are as diverse as its peoples, and were given a full representation at the exhibition. The appliances for the most part were similar to those elsewhere in use; but there was much that was novel, especially those of the various tribes or clans of Cossacks, of which the limits of this article do not admit of a description. In the French department there was a noteworthy exhibit, so designed as to effectually portry the operation of the nets, casting, drawing, etc., a realistic impression being made by the arrangement of sheets of glass in conjunction with other devices, giving effects of a floating or immersion of the nets in water.

For many years prior to the initiation of the Siberia Transcontinental railroad, the Russian Government had from time to time despatched naturalists, geologists and other scientific investigators, with a view of acquiring the fullest knowledge of the country's resources. The result of these purely official undertakings were not made known; indeed, the reports of nearly all that have since been promoted have never seen the light. At this exhibition, however, the outcome of some recent researches in connection with the Siberian fisheries was made public, and the specimens given the fullest display. There was also much of interest in the exhibits of the various imperial biological stations, with their maps and photographs, and their array of instruments and appliances for taking deep-water temperatures, bottom samples, also hatching apparatus, and various paraphernalia.

The piscine resources of the province of Russian Finland, the land of a thousand lakes, were effectively set forth, whitefish and salmon figuring largely in the representation. The Russian sardine (Sardellen) industry was well presented, and there was also an interesting display of rods, nets, reels and other appliances of the sporting angler.

A consideration of the numerous foreign exhibits would perhaps be of little interest to the casual reader. It may, however, be said of Japan that her contribution represented the labor of a force of fishermen and fish artificers that, according to a statement of the Japanese Minister of Agriculture, numbered three and a half millions in 1891, operating a fleet of four hundred thousand boats, to which the annual renewals or additions numbered three thousand, the total product of 1899 being valued at about $52,000,000. Herrings, sardines, tunnies, mackerel, cod and salmon formed the bulk of the catch, which, cured in various ways, is largely marketed in China. Japan has a fine and well equipped biological station at Tokio, publishes a fishery journal, and appears to be abreast of her sister nations in pisciculture and in all things appertaining to the welfare of her immense fishing interests.

During the month of March there was held in connection with the exhibition, a congress of pisciculturists and fishery experts, at which, together with various other matters of interest, there was discussed the question of fresh fish transportation, better and more effective methods being strongly advocated. Possibly as a result of this agitation it has just been announced that the Alexandrowski car works of St. Petersburg, are turning out refrigerator cars of an entirely new type, patterned after the meat-carrying ships that bear through the tropics the perishable products of the antipodes, to become the sustenance of the masses of the opposite zone. No particulars of construction are given, but the statement would imply that refrigerative machinery, instead of ice, is to be employed. It was given out that the new transportation service was to be initiated during the present summer, between Tomsk, Siberia, and St. Petersburg. With the old style vehicle it was found impracticable during the hot months to transport Siberian fresh meat over the vast stretch of railway extending to eastern markets, especially as the condition of much of the road bed precluded the attainment of the speed of our fast freight trains. If the new method refrigerative transport proves successful the Russian producer in remote portions of the Empire will be enabled to compete advantageously, the vast potentialities of Siberia become known, and its fish, flesh and fowl, its vegetable and animal products, crowd the world's channels of trade.

Nevertheless, however much the meat-producing capacity of the Empire be developed, it cannot materially contribute to the world's ever increasing demand for the most stimulating form of bodily sustenance. Everywhere the farmer treads upon the heels of the herder; everywhere the pastoral succumbs to the agricultural industry. Cheap land is the basis of cheap meat, and it is the steady absorption of the former that is the prime cause of the advancing price of the latter. Against the pending dearth of animal products but one alternative is open to the flesh eaters of coming generations, and that

is the acceptance of fish as a substitute. Apart from the capacities of our lakes and streams, we can continue to reap from the inexhaustible sea a harvest of unfailing abundance, for in its depths lie, as yet undisturbed by man, vast reservoirs of excellent but unfamiliar food fish. We have ventured only to the threshold of the treasure house of the deep, but its future revelations of novel alimentary wealth will enrich the fare of posterity and afford an ample store of varied sustenance.

Another international fishery exhibition will open this month at Vienna, and still others, on a minor scale, have been or will be held in Germany, Holland, etc., during the current year. The query naturally suggests itself Why do we not ourselves hold such distinctive exhibitions, inasmuch as the industry is of a magnitude amply sufficient to qualify it for a separate representation? Nowhere has fishculture been prosecuted so successfully or upon so extended a scale as in North America; in no other country than our Union have the appliances of the piscatory art attained so high a degree of excellence. In our great land abutting upon two oceans as well as upon the world's largest lakes, containing in its varied waters fish representative of every zone, we have the basis of a representation fully as rich as that afforded by the St. Petersburg exhibition. In the great industrial exhibitions held of late years in various cities, east, west and south, the fishery exhibits have done scant justice to the country's immense resources; in fact, as European experience shows, public enlightenment upon the subject cannot be adequately effected save by a distinctive exhibition. Such separate display stimulates individual interest; it enables the country to take stock of its resources, and to apprise the world of their availability. Already Germany is actively discussing ways and means of diverting to their own country a portion of Russia's overflowing wealth of fish and fish products, as revealed in the great structure upon the banks of the Neva. The initiation here of a similar undertaking would probably need a measure of that Government aid that enabled the Russians to so impressively demonstrate the magnitude of their resources, and the result doubtless would be equally compensative. At an international exposition there might be much in the fish-curing methods of other nations worthy of study or imitation, particularly those of Russia, with whose population fish is a far greater food staple than with our own. In the vista of the future may be discerned a time when, by reason of its ever increasing scarcity, meat will occupy a place in our dietary subordinate to that of fish. There is a wealth of opportunity in the better and more economical preparation of fish and of fish products, and effective stimulus to such action would be the probable outcome of an elaborate and well devised competitive exhibition. A. H. GOURAUD.

THE RECORD BASS.

In New England.

BOSTON, Sept. 15.—The law is off on partridges in Maine to-day, and the local gunners are much interested. Reports concerning the flocks are very conflicting. Careful observers say that the cold and wet May and June was very hard on the chicks, and that the birds are scarce. On the other hand, the boomers of Maine resorts declare that partridges were never so plenty. This last assertion must be taken with as much of a grain of salt as the patent medicine advertisement. I have seen one or two Maine gunners from the sections nearest the settlements, and they say that they have seen but few broods of partridges. Sportsmen who have been into the more distant forests on fishing trips have seen some broods, but their reports, taken all together, would indicate that partridges are rather scarce in Maine. From some sections in New Hampshire there are accounts of a good many flocks, with fair shooting promised. In Massachusetts there are doubtless more partridges than a year ago, with reports of an unusual number of quail.

Mr. J. H. Edwards is out from a fishing trip to King and Bartlett, Me. He was accompanied by Mrs. Edwards, and they had a most enjoyable vacation. They were camped at Tommy Jeraud's, making several trips to other waters. They had good togue fishing on the lake, catching some big ones. On Spencer Stream they had great trout fishing, taking forty trout in an hour and a half on one trip, with about thirty out of one pool. Brook fishing was good also on other streams, with good fly-fishing on Spencer Lake. At Spencer they had good sight of a big black bear one day. As is almost always the case, they had no gun. Moose and deer were frequently seen.

A party of well-known New England sportsmen, consisting of Messrs. Charles A. Mitchell and Z. W. Sturtevant, of Lowell, Mass.; W. C. Raymond, of Bridgewater, Vt., and I. R. Clark and Alfred T. Waite, of Boston, have just come out of camp at Millsfield Ponds, in northern New Hampshire. These camps, situated northwest of Errol and reached via Colebrook and the Dixville Notch, are the only ones in the Millsfield region, and are presided over by Sam Bailey, the noted Colebrook guide. The party had excellent luck trout fishing and report that the region abounds with game, deer being seen in large numbers. All the members of the party have frequented many hunting and fishing sections of New England, but they are the most enthusiastic over Millsfield, and Sam Bailey in particular.

Mr. Herman L. Buss and W. G. Clark, of Boston, with Mrs. Buss, Mr. and Mrs. C. B. Buss, the two Misses Buss, Walter H. Buss and Miss Alice Brown, of Medford, have returned from a vacation and fishing trip to Tim Pond, Me. They had a very enjoyable season, with good fishing. The cool weather and frosts seem to have started fly-fishing at the Rangeleys. E. C. Swift, of Boston, has been having good fishing in that part of the country. Mrs. C. S. Nutting and Miss Allida Nutting, of Lexington, have returned from a trip to Black Brook camps. They had good fly-fishing, securing forty-five at one outing, with several doubles.

At Moosehead the fly-fishing is said to be better since the cooler weather. Camping parties are very numerous. They go into the woods, and on to the streams and waters, in all directions, making Kineo their headquarters. George V. Leverett and Dr. J. T. Sherman, of Boston, have been on a month's canoeing and fishing trip in that part of the country. C. W. Blodgett, of Boston, is back from a trip to Brassua Lake. A. L. Shaw, A. H. Shaw, Mrs. R. G. Shaw and Miss Shaw, of Wellesley, have been at Spencer Pond. D. C. Stanwood, of Boston, has returned from a camping trip. Hector W. Gordon and F. B. Hare, of Boston, are still in the woods.

The mystery of the disappearance of Benjamin Kincaid, an advertising agent of the Boston Globe, has not yet been solved. Accompanied by a friend, Peter H. Lawson, he went to Molunkus, Me., for an outing and fishing trip, four weeks ago. Aug. 30, the day for their return, had come. At about 7 o'clock in the morning young Kincaid said that he would take a spin on the lake for a while, and then be ready for the team to Mattawaumkeag. This was the last seen of him. About 10 o'clock his canoe was found, bottom up, on Lake Molunkus, by a party of anglers. The paddles and Kincaid's hat and coat were found floating near. But dragging and the most diligent searching has failed to find the body.

BOSTON, Sept. 13.—The returning fishermen tell of glorious trips and a glorious season at the salmon pools. Mr. John Fottler, Jr., spent several weeks at his salmon river, the St. John, at Gaspe. In his party was Senator Proctor, of Vermont, who is an enthusiastic angler, and greatly enjoyed Mr. Fottler's river. They caught about fifty salmon in all, the largest of 32 pounds. On Mr. Fottler's return from salmon fishing he went on a trout fishing and outing into the White Mountain region, New Hampshire. That region is noted for its stream fishing, but many of the streams, especially near the hotels, have been badly over-fished. But Mr. Fottler did not spend much time fishing these streams; accompanied by the village blacksmith, he went over the mountains and through the woods eleven miles, to a stream that had scarcely been fished at all for two years. The first day they filled their baskets with beautiful trout, returning a host of small fish to the water. Camping that night, they fished the next day, and filled their baskets again. It was a great trip. Mr. Fottler is fond of the woods and not afraid of tramping. The village blacksmith, a robust countryman, had to admit that he had his match for a long tramp in the city man he guided.

At the Megantic Preserve all the camps are full, with the enthusiasm the greatest ever known there for both hunting and fishing. Secretary L. Dana Chapman has word that a good many deer are being taken, but the captors are not as proud of them as they would be were they not mostly does. But such is almost always the case; the does and fawns are earliest taken, the bucks not coming down to the water and to feed. Later they are found on the ridges, however.

Several Boston sportsmen are planning for trips late in this month to Nova Scotia and New Brunswick for moose calling. Dr. McAlear, of Worcester, has a trip of that sort in view, and is looking for one or two Boston friends to accompany him. Dr. Heber Bishop and D. J. Flanders are about starting on a moose hunting trip to the Provinces. It will be remembered that Dr. Bishop has a longer record of moose slain by his own skill than any other man in the country.

SPECIAL.

CHICAGO AND THE WEST.

The Record Rainbow.

CHICAGO, Ill., Sept. 13.—Unless I am mistaken, the largest rainbow trout ever taken in this part of the West is that reported in the following correspondence from Mr. J. D. Hawks, President of the Detroit & Mackinac R. R., who writes from Detroit under date of Sept. 6. Mr. Hawks says:

"I inclose you copy of a letter which will explain itself. The rainbow trout mentioned is a very fine specimen, and I am having it mounted. I have just had another fish mounted which is longer and slimmer than the rainbow and probably weighed somewhat heavier. I have not yet learned what species the fish is, but believe it to be a steelhead trout. It was caught three or four miles from East Tawas on our road.

"I finished the trout season proper at Turtle Lake, with a number of the other members of the club. The trout fishing was as good as I ever had anywhere—in fact, it was difficult to fish all day without catching too many trout; so I generally put in half a day driving around the country, and the other half-day fishing for trout, and found no trouble in catching twenty-five nice fish every time I went out.

"We have made several plants of rainbow trout in the upper south branch of the Thunder Bay River but so far I have not seen one in the stream. There is no doubt but that some of the large rainbow trout are dropping down the Au Sable River toward the mouth. This, of course, suits me, as a D. & M. Ry. man, as it puts them within reach of our road.

"I understood you to say a couple of years ago that you wanted to catch a grayling. If you are of the same mind next spring, come out here, and I will show you where to do it, and will guarantee that you will catch several grayling, beside getting some of the best trout fishing you ever saw."

The letter inclosed is from A. Kirsten, of Oscoda, Mich., who wrote as follows:

"OSCODA, Mich., Sept. 4.—Mr. J. D. Hawks, President and General Manager, Detroit & Mackinac Ry., Detroit. As per your request to Mr. Oliver, agent of the D. & M. Ry. here, I sent you the rainbow trout caught by me Aug. 31. He was of no particular use to me only for eating, but I considered him too rare a specimen to use him in this way; and upon the request of many here who knew you and your sporting qualities, I concluded to send him to you if you wished him.

"I captured him in the Au Sable River, five miles north of McKinley, at the farm of W. H. Winton. It took me forty-five minutes to land him, and can assure you it was the most exciting time I ever had in all of

my twenty years' angling. I used a No. 2 silk Kingfisher line, 6½-ounce rod and No. 02 hook. His weight and dimensions are as follows: Weight, 8 pounds; length, 26 inches; depth, 6¼ inches; thickness, 3¼ inches; mouth when open, 4¾ inches. He used continually from 75 to 125 feet of line. A. KIRSTEN."

It is well known that these Au Sable rainbows outfight any fish we have in our trouting waters in this part of the country, and it seems that this game quality continues even into the heavyweights. It must have been indeed an exciting time for Mr. Kirsten when he was fighting this big fish.

As to what Mr. Hawks says about the grayling, perhaps he has not heard of our successful grayling trip this summer. I am not sure that I want to catch very many more grayling now. They'll go fast enough even if we all put up our rods; but I would be willing to wager something pretty that Mr. Hawks has in mind the same stream that we fished this summer.

E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

Dr. Henshall's Grayling Success.

OSWEGO, N. Y., Sept. 12.—*Editor Forest and Stream:* Mr. W. B. Mershon, who writes in FOREST AND STREAM anent the passing of the grayling, will no doubt find consolation in the fact that there are yet some grayling to be taken with the fly in the waters of the Gallatin, Madison and Jefferson rivers in Montana. In the Gallatin River there are only a few left. They, with the trout and the Rocky Mountain whitefish, are being exterminated by the numerous canals and ditches taken out for the purpose of irrigation. In the Jefferson River I think they are more numerous. I have seen boys with quite respectable strings of grayling, caught with grasshoppers in the latter river, and have also seen them jumping in the evening for natural flies, and they seemed quite numerous. At the time I did not have my rod and flies with me, and therefore did not fish. Red Rock Lake, in the very southern part of Madison county, Montana, contains grayling of large size. This lake drains into the Madison River.

But to Dr. Henshall, who is in charge of the U. S. Fish Hatchery at Bozeman, Mont., is due the credit of being the first man to successfully propagate grayling from the spawn and milt. The doctor sent his men to the upper Madison River, where they easily secured several thousand eggs. These were duly hatched and put into the small ponds at the hatchery. After the sack had been absorbed, they all died, refusing to eat the usual food prepared for the trout fry. During the summer of 1899 or 1900 the writer was in Dr. Henshall's office, when he saw a number of dead grayling fry lying on a table. The doctor told of his bereavement, and said that he had put some of these dead fry under the microscope and had made a discovery. He had discovered that they possessed in their mouth a number of small but very sharp fangs. These fangs could only be seen with the microscope, and that this discovery he thought solved the problem of the death of the grayling fry. The spring water used for the hatchery as it came from the rocks was walled up and roofed over, and was therefore absolutely pure water, or at least water entirely free from infusoria, and as the grayling fry had those invisible fangs in their mouth, they must derive their food from infusoria, and that another year he should put them in creek water in which there would be food for them. In a recent copy of a paper published at Bozeman, Mont., it is announced that Dr. Henshall is now prepared to stock streams with grayling. He has therefore solved the problem. F. M. HIGGINS, M. D.

A Pacific Black Sea Bass.

MR. H. T. KENDALL, of Pasadena, Cal., but formerly of Dorchester, Mass., has raised the record of the world on black sea bass. His brother, Dr. W. G. Kendall, of Boston, a prominent member of the Megantic Club, was with him, and forwards to me, for the FOREST AND STREAM, through the kindness of Secretary L. Dana Chapman, a photograph of the big fish and the anglers, with an account of the capture. In the launch Fortune was also Dr. H. J. Macomber, of Pasadena, who got a fish weighing 183 pounds, and which, under any other circumstances, would have been considered a seven-days' wonder. But Mr. Kendall's fish weighed 419 pounds, and raises the world's as well as the Tuna Club's record 35 pounds. The fight lasted an hour and fifty-one minutes, and when one considers the little rod, only 16 ounces in weight, with which the feat was accomplished, the wonder grows, and one is convinced that angling is an art mechanical. The line was a 24-strand Cuttyhunk, and tested up to a lifting strain of 48 pounds. This feat will be a study for anglers the world over; the skill required to land a fish weighing almost a quarter of a ton, with a mere thread and a pliant rod with reel attached. The fish fought vigorously, and of course would have broken away a hundred times but for the remarkably skillful manipulation of the reel. SPECIAL.

Bass and Pickerel at Fowlwood Lake.

ROCK HILL, Sullivan County, Sept. 13.—I herewith report you my luck with rod and reel on Fowlwood Lake. After two hours' fishing, actual time, I landed twenty-eight pounds of fish—viz., three bass weighing respectively 8 pounds 10 ounces, 6 pounds, and 4 pounds, and three pickerel, 4 pounds, 3 pounds 6 ounces and 2 pounds. These were all caught on a single rod with crawfish for bait, and it was only after an involuntary swim that the largest bass was landed. I can assure you it seemed to me as if a team of horses were attached to my line when I got him on.

Of course this is a fish story, and like most of the same, may not be believed, but I would like to know if the like record has ever been beaten.

Mr. William Urban, of the cashier's office in the New York Custom House, caught one of 11½ pounds, a bass 6 pounds, and pickerel 5½ pounds.

Canine Elegies and Epitaphs.

For those which have been printed in earlier numbers see issues of July 19, 26, Aug. 2, 16, 23 of the current year.

XXI.—The Dog which Thomas Thomas Owned.

He's passed away! That good old dog
Which Thomas Thomas owned
For 17 attentive years,
Now lies bewept, bemoaned.

'Twas hard for Tom to pay the tax
On dogs so old and staid;
'Twas harder still to have him die
Just when that tax was paid.

That such a dog should go tax free
Was Thomas's favorite whim,
And yet he took it very hard
When death exempted him.

So now no more on Sabbath days
That dog to church will go,
And, when the benediction's said,
Depart sedate and slow.

No more in Thomas's restaurant
When winter's winds do roar,
As door is left ajar, will he
Arise and shut that door.

Or jump and open it himself
And never howl or whine
When wishing to go in and out,—
The dear, defunct canine.

No more whene'er his name is called
Will he respond alert;
For Thomas Thomas's Thomas-dog
Has mingled with the dirt.

Now friends drop in and mix their tears
With Thomas's copious brine,
And beer up to the memory
Of his A1 K 9.

—Springfield Republican.

XXII.—Sir Walter Scott's Maida.

(*As done in Latin by Lockhart*)

Maidæ marmorea dormis sub imagine, Maida,
Ad januam domini sit tibi terra levis.

(*As Englished by Scott.*)

Beneath the sculptured form which late you wore,
Sleep soundly, Maida, at your master's door.

Points and Flushes.

The Canadian Kennel Club Stud Book, Vol. V., 1902, contains registrations and winnings for the year ending Aug. 31, 1901. The registrations are from 5534 to 6027. It is published by H. B. Donovan, Toronto. Price, $1.00.

All communications intended for FOREST AND STREAM should always be addressed to the Forest and Stream Publishing Co., New York, and not to any individual connected with the paper.

Yachting.

Yachting Fixtures, 1902.

Secretaries and members of race committees will confer a favor by sending notice of errors or omissions in the following list and also changes which may be made in the future.

SEPTEMBER.

20. Manhasset, Y. R. A. of L. I. S., open, Port Washington, Long Island Sound.
20. Y. R. A. of Gravesend Bay, Sea Gate, New York Bay.
—. Seawanhaka Corinthian, club, Oyster Bay, Long Island Sound.
27. Riverside, Y. R. A. of L. I. S., open, Riverside, L. I. Sound.
27. Manhasset Bay, club raceabouts, Port Washington, L. I. Sound.

For Cruising Yachtsmen.

WITH the purpose of stimulating the interest in cruising, and the keeping of a detailed log by cruising yachtsmen during the season of 1902, the publishers of FOREST AND STREAM offer prizes for the best stories of cruises submitted to be published in FOREST AND STREAM. It is believed that these will form not only entertaining records of pleasant summer days spent afloat along our coasts and waterways, but will furnish information of practical value to other yachtsmen making subsequent cruises on the same waters.

Prizes will be awarded to the three best stories as follows:

First prize, $50.00.
Second prize, $30.00.
Third prize, $20 00.

Contributions are invited under the following conditions:

1. The cruise must be made in waters of the United States or Canada in the season of 1902.

2. The cruise must be made in a sailing yacht, power to be used only as an auxiliary, if at all.

3. The story must be prefaced by a description of the boat. Cruises should be treated in as interesting and readable a way as possible, but should be practical and contain all possible information and data that would be of value to men going over the same route. A description of the handling of the ship in all weathers will be regarded very favorably in making awards, and it is suggested to writers that an accurate acc unt be kept of all incidents happening while under way.

4. An outline chart suitable for reproduction, showing the course taken, must accompany each article. When possible, articles should be accompanied by amateur photographs taken on the cruise, including one of the boat. Good photographs will be considered in making the awards.

5. The story should contain about seven thousand words, written on one side of the paper only, and must be received at the office of the Forest and Stream Publishing Company, 346 Broadway, New York city, on or before Nov. 15, 1902.

Mr. T. C. Zerega has very kindly consented to act as judge and to make the awards.

The America's Cup.

Now that Sir Thomas Lipt n has really determined to make another attempt to win the America's Cup, it has been a source of very general satisfaction that he has selected William Fife, Jr., to design the boat. Mr. Fife knows more about the form of yachts than any man in England, and now that he has two good trial boats, one on each side of the Atlantic, with which to try out the new product, his new boat should be in better condition for the races than any of the previous challengers, particularly as the work of construction is to be commenced on the boat at once at the yard of Denny Brothers, at Dumbarton, so that she may be out very early in the season. Capt. Bob Wringe will have charge of the new Shamrock, and he is probably the ablest British skipper, and one of the most dangerous opponents that Capt. Charlie Barr could have, for beside being a wonderfully clever sailorman, he is familiar with American ways and conditions.

Every year of a Cup race Americans always go through the process of losing the Cup even before the challenger arrives on this side. The same state of affairs will exist this year, but this is a good sign, and the Cup is not in danger until we become over-confident.

At least one new boat will be built on this side for the defense of the Cup. This will be the New York Y. C. syndicate boat, and she will be designed and built by the Herreshoffs at Bristol. It is to be hoped that William Gardner, of Gardner & Cox, will receive an order for a boat. His success in turning out racing craft of all sizes and types has proven that he is fully qualified to cope with the task, but there is a popular prejudice among men who build Cup defenders in favor of Herreshoff; and probably this is because there are few who care to risk a quarter of a million dollars in anything but a pretty sure thing.

It is rumored that a syndicate is being formed in Boston to build a boat from designs made by W. Starling Burgess, son of the late Edward Burgess. Mr. Burgess has had but little experience in designing racing yachts of large size, but he has been quite successful with his smaller boats. If the money can be raised in Boston to build a boat from Burgess's design, surely New York yachtsmen should have sufficient pride and interest to see that one of their own designers shall be represented by a boat in the trial races.

Of the Boston designers, none is better fitted to undertake the work of turning out a successful Cup defender as B. B. Crowninshield. Independence, his first boat in that line, was a wonderfully fast craft. The experience he had with her has stood him in good stead, and he is now capable of putting a dangerous boat in the big class. While natural ability and training of course count greatly in producing these big boats, still a man who attempts the work without having had any previous experience with them, and having no data to work on, is certainly greatly handicapped.

New York Y. C.

GLEN COVE, LONG ISLAND SOUND.

Thursday, Sept. 11.

Seventeen boats started in the annual autumn sweepstakes of the New York Y. C., and the sail off for the prizes offered at the spring regatta, which was postponed on account of calm weather.

The regatta committee was on board Mr. Frederick G. Bourne's steam yacht Colonia, while the club members and their guests used the steamer William Fletcher from which to see the races.

The wind was south by west at the time of the start, and the following course was signalled from Colonia, which boat made the starting line off Matinicock Point buoy. It was from a line between the committee boat and a mark a quarter of a mile north from Matinicock Point buoy, six miles east by north to and around a mark one and a quarter miles west by north from Lloyd's Point, four miles northwest to and around a mark one and three-quarter miles east by north from Great Captain's Island Light, five miles southwest three-quarters south to the mark at start.

The preparatory signal was made at 11.30, and ten minutes later boats in classes J, K, L and M were started. Altair was first away with Effort next, while the others crossed as follows, Humma, Eclipse and Ondawa. Gaviota followed some distance behind. On the next signal yachts in classes G, H, I were sent away. Yankee was just on the line at gun fire, followed by Weetamoe, Neola, Rainbow, Eelin and Isolde. The signal given at 11.50 was for the schooners. Elmina was first over with Muriel just astern, the others crossing in the following order, Katrina, Wayward and Indra.

It was a broad reach to the first mark, and balloon jibs were found to be most beneficial, the boats that set spinnakers soon taking them in, as they did more harm than good.

Yankee was sailing well and was fast getting away from Rainbow. Eelin sailed by Captain Charlie Barr, kept dropping Isolde. After crossing Muriel and Elmina got into a luffing match that took them well off their course. Muriel got the best of it and was ahead and to windward of Elmina. At the first mark Muriel was seconds ahead of her competitor. The old sloop Eclipse was at the mark just as Muriel came down on it and she had to bear off to clear her and make a wide turn. Elmina's skipper took advantage of this opening and swung his boat inside of Eclipse, thus making a close turn and securing the lead. This bit of ill luck cost Muriel the race. Weetamoe had opened up quite a gap between herself and Neola on this leg.

From the first mark the boats had a reach to a buoy off Great Captain's Island, and then it was a beat back to the starting line. The boats that held in under the Long Island shore were materially benefited in the windward work.

Those boats competing for the Bergen Handicap Cup and those in cruising trim and class M, covered the course but once.

At the end of the first round Yankee was 1m. 30s. ahead of Rainbow, Weetamoe led Neola by 3m., Eelin was 2m. 26s. in the lead of Isolde, while Elmina had Muriel by 1m. 8s.

Balloon jibs were broken out after rounding the home mark, and the boats reached away again for the first mark. On this leg Yankee increased her lead a little on Rainbow, and Weetamoe increased her advantage over Neola, while Muriel came up on Elmina in good shape.

On the second round the breeze increased a little. The second leg was a reach and ballooners were again carried. After luffing around the mark off Great Captain's Island the boats settled down to the hard beat up to the finish line. Yankee and Rainbow held along under the north shore. Elmina and Muriel made long tacks across the Sound, while the two "sixties," Weetamoe and Neola, stood in under the Long Island shore. At the height of the fight between Elmina and Muriel, the latter's main top staysail got adrift, and from that time on Elmina kept getting away from her, although she won by only 14s.

When near the finish line Humma had a luffing match with Eelin, and the former got a little the best of it and crossed first.

The "sixty" Weetamoe, designed by Messrs. Gardiner & Cox, distinguished herself by beating the 70-footer, Yankee, by 25s. This is rather a remarkable performance, and it is evident that the owners of these bronze boats are now getting them in shape. Neola has had the paint removed from her topsides, and she looks very slick and reminds one of Shamrock II. Neola still carries her solid mast, while Weetamoe has a hollow stick.

The summary:

Schooners—Class D—Racing Trim—Club Cups.

	Start.	Finish.	Elapsed.	Corrected.
Muriel	11 52 00	4 32 59	4 40 59	4 40 59
Elmina	11 51 51	4 32 36	4 40 45	4 40 45

Yankee	11 46 19	4 00 36	4 14 17	4 14 17
Weetamoe	11 46 58	4 17 01	4 30 03	4 13 52

Robinson Cup—All Classes—Racing Trim.

Yankee	11 46 19	4 00 36	4 14 17	4 14 17
Weetamoe	11 46 58	4 17 01	4 30 03	4 13 52
Elmina	11 51 51	4 32 36	4 40 45	4 26 50

Elmina beat Muriel in class D by 14s.; Yankee beat Rainbow 3m. 34s. in class H; In class I Racing Trim, Weetamoe beat Neola 1m. 47s.; in class J, Racing Trim, Humma beat Altair 8m. 57s. Effort took a sail over in class L, Racing Trim; Katrina beat Wayward 8m. 18s. in the class for schooners in cruising trim; in the class for sloops and yawls, J and K, Eclipse beat Ondawa 41s. Eelin beat Isolde 3m. in the Special Class; Eclipse beat Ondawa 41s. in the Special Class.

Bergen Cup, schooners, handicap—Katrina beat Wayward 8m. 18s.

Bergen Cup, sloops, handicap—Eclipse beat Ondawa 41s.

Naval Alumni Cup, schooners—Elmina beat Muriel 14s.

Naval Alumni Cup, sloops—Weetmoe beat Yankee 25s.

Robinson Cup, all classes—Weetamoe beat Yankee 25s., Elmina 12m. 58s.

Atlantic Y. C.

Saturday, Sept. 13.

The fall regatta of the Atlantic Y. C. was held on the afternoon of Sept. 13 over courses in the lower bay. Counter attractions on Long Island Sound kept away all of the larger schooners and sloops, and consequently the racing was confined to classes J and under. Eclipse, Vivian, Bonito, Cockatoo, Trouble and Rascal carried off first honors.

The day was full of exciting incidents and will be long remembered by Sea Gate Corinthians. A strong northwest wind came swooping down out of a threatening sky shortly after the start, and played havoc with the fleet, which had begun the race in a light southeasterly breeze with full sail set. Twenty-two craft started the struggle. Twelve of these managed to finish. Of the other ten which failed to cover the courses, five were disabled and the rest withdrew.

J. E. Biggs' class P sloop Corona, was dismasted just after rounding Southwest Spit buoy, the outer mark of the fourteen-mile journey for classes N and under. She was fairly on her course for home when a particularly hard puff struck her, breaking the spar short off seven feet from the deck. No injuries resulted, and the flagship Thistle, which was in the vicinity, towed the disabled craft to harbor.

Some few minutes after the start the class R boat. Pebble, belonging to R. W. Spier, lost her tiller, and her skipper was obliged to steer the craft to moorings by the aid of an oar.

The class V catboat, Martha M., belonging to Richard Moore, broke eight feet from the outer end of her boom, and as a result had a most tedious time making Gravesend Bay again. The 21-footer, Bronco, owned by F. C. Moore, suffered an accident to her gaff and withdrew, while Song and Dance, E. F. Luckenbach, caused a great deal of anxiety by losing her center board and not making harbor until long after the other starters had finished.

Opossum, R. P. Doremus; Gwendolen, H. G. S. Nobles; Streak, Speidel Brothers; Peanut, Calvert Brewer and Boozie, C. D. Durkee, preferred the security of a mooring to the tempestuous times outside, and withdrew from the race as soon as the full force of the northwesterly squall struck them.

The race was started promptly on scheduled time. The preparatory signal was shown at 1 o'clock and ten minutes later the first of the boats began the contest. L. J. Callanan's Eclipse and the class K boat Ondawa, belonging to Henry J. Robert, sailed boat for boat in class J. Ondawa led by 40s. on the start.

The special class M boats, Bonito, Sunol and Titania, the latter in her first local race of the year, got away on the next signal in the order named. Bonito and Sunol had a little mix-up at the start, which is liable to result in a protest from the latter.

At the next gun Vivian and Gwendolen, the only entries in class N, sailed off, with Vivian in the lead. Class P got away well bunched, Cockatoo first, followed by Vagabond, Corona, Streak, Song and Dance and Elsie. Trouble led class Q boats and then came Bronco, Opossum and Flying Fish. In class R Peanut led Pebble over the line by 20s., and Martha M. headed the catboats with Rascal and Boozie crossing in the order named.

Eclipse, Ondawa, Bonito, Titania and Sunol went out to the bell buoy off the point of Sandy Hook, leaving the Southwest Spit buoy on the port hand, returning over the same course, a distance of 18 miles. The other starters had a journey four miles less, from the starting line off Sea Gate to the Spit and return.

A light southeasterly breeze sent them away. The tide was running flood, and it would have been windward work to the first mark had not the wind changed into the northwest.

For some minutes after the beginning of the struggle the yachts tacked back and forth in an endeavor to stem the fast running tide. Elipse, Ondawa and Titania stood over toward the Jersey shore and were the first to catch the wind and rain squall. When it came they had a reach for the mark and fairly flew through the water. Boats which had aimed to get to windward before the breeze changed were now to leeward.

The larger craft going out to the point of the Hook had a run from Southwest Spit, windward work back from the Hook to the Spit again and a close fetch home.

Hendon Chubb's class P boat, Cockatoo, distinguished herself. She was the first craft of the fleet to finish, crossing the line 11m. and 31s. ahead of T. A. Vernon's Vagabond, second boat to end the journey, and doing the 14 miles in 2 hours and 29 minutes. Louis May had charge of the craft and she was handled to perfection.

W. H. Child's Trouble, with C. D. Mower at the tiller, carried off second glory. She was not only a fine winner in class Q, but was third craft to end the journey, only one minute behind her larger rival Vagabond, on elapsed time. Vagabond was formerly Mongoose I., a well-known Crowninshield raceabout.

Special class M boats put up the only exciting finish of the day. Bonito led, while Titania and Sunol had it nip and tuck for second place, the former finally winning out. Cockatoo beat Vagabond 11m. and 31s., Trouble led Flying Fish 4m. and 38s., and Eclipse defeated her smaller rival, Ondawa, which had gone up a class, by 10m. and 41s. for the 18-mile course.

Bonito led Titania by 5m. and 48s. and Sunol by 6m. and 44s. Vivian and Rascal had no competitors in their respective classes after the first stages of the contest. The summaries follow:

Sloops—Class J—Start, 1:10.

	Finish.	Elapsed.
Eclipse, L. J. Callanan	4 22 43	3 12 43
Ondawa, H. J. Robert	4 33 24	3 23 24

Special Class M—Start, 1:15.

Bonito, Haviland Bros	4 41 16	3 26 16
Titania, W. H. Childs	4 47 04	3 32 04
Sunol, J. Abbey	4 48 00	3 33 00

Sloops—Class N.—Start, 1:18.

Vivian, S. E. Vernon	4 10 59	2 52 59
Gwendolen, H. G. S. Nobles	Withdrew.	

Sloops—Class P—Start, 1:21.

Cockatoo, H. Chubb	3 50 00	2 29 00
Vagabond, T. A. Vernon	4 01 31	2 40 31
Elsie, C. P. Rosemon	4 53 01	3 32 01
Corona, J. E. Beggs	Disabled.	
Streak, Speidel Bros.	Withdrew.	
Song and Dance, E. F. Luckenbach	Disabled.	

Sloops—Class Q—Start, 1:24.

Trouble, W. H. Childs	4 05 31	2 41 31
Flying Fish, I. M. Dean	4 10 09	2 46 09
Bronco, F. C. Moore	Disabled.	
Opossum, R. P. Doremus	Withdrew.	

Sloops—Class R—Start, 1:24.

Pebble, R. W. Speir	Disabled.	
Peanut, Calbert Brewer	Withdrew.	

Catboats—Class V—Start, 1:30.

Rascal, D. G. Whitlock	4 31 26	3 01 26
Martha M., Richard Moore	Disabled.	
Boozie, C. D. Durkee	Withdrew.	

Beverly Y. C.

BUZZARD'S BAY, MASS.

Saturday, Sept. 13.

THE closing race of the Beverly Y. C. was sailed off Wing's Neck on Saturday, Sept. 13, in a screeching southeaster. All of the 30-footers, with the exception of Mashnee, carried three reefs, while Mashnee was double reefed. This extra sail helped Mashnee, and she won by nearly a minute. Zingara was doing good work when her mast carried away. It was Barnacle's day in the 21-footers, and she won handily. Krieker in the fourth class cats got mixed up at the start, but afterward caught Allison II. and won handily. Vim won a close race in the 15-footers. The summary:

30-footers.

	Elapsed.
Mashnee, R. W. Emmons	2 28 05
Arabian, Robert Winsor	2 29 00
Pontiac, J. A. Beebe	2 29 18
Quakeress, W. F. Harrison	2 30 32
Praxilla, John Parkinson, Jr.	2 30 38
Evelyn, John Hitchcock	2 34 09
Young Miss, D. L. Whittemore	2 35 52
Gamecock, Louis Bacon	2 37 00
Notos, W. O. and C. H. Taylor	2 41 53
Zingara, E. N. Farnsworth	Disabled.

21-footers.

Barnacle, W. E. C. Eustis	1 17 40
Terrapin, L. S. Dabney	1 24 12
Amarita, J. Crane, Jr.	1 26 02
Sylvia, S. D. Warren	1 29 00
Wyona, H. O. Miller	1 31 37
Edith, Clark King	Withdrew.

Fourth Class Cats.

Krieker, W. S. Jameson	1 35 02
Allison II., Stewart McLeod	1 37 42
Hod, H. B. Holmes	1 42 10

15-footers.

Vim, F. S. Sargent	1 08 42
Ranzo, M. H. Richardson	1 08 55
Go-Bye, H. Stockton	Withdrew.
Spider, W. Swan	Withdrew.

Corinthian Y. C.

MARBLEHEAD, MASS.

Saturday, Sept. 13.

THE Labor Day race of the Corinthian Y. C. was sailed off Marblehead on Saturday, Sept. 13. It blew hard from the southeast all day and there was a big sea running outside. In the 25ft. class Seboomook got the best of the start and led all over the course. The breeze lightening, the race of the 21-footers was a bit fluky, Little Haste winning by nearly 43m. In the raceabouts Darthea won, Tunipoo withdrawing. Yarico finished first in the handicap class, but lost on corrected time to Ruth. The summary:

25-footers.

	Elapsed.
Seboomook, B. A. Smith	1 52 02
Calypso, A. W. Chesterton	1 53 40

21ft. Cabin.

Little Haste, T. K. Lothrop, Jr.	2 18 15
Porcupine, C. H. W. Foster	3 01 10
Tabasco III., H. H. Wiggin	3 15 40
Pilot, R. Boardman	Withdrew.

Raceabouts.

Darthea, W. H. Lambert	3 09 23
Tunipoo	Withdrew.

Class A.

	Elapsed.	Corrected.
Ruth, H. H. Wheelock	3 54 42	3 34 44
Yerico, W. H. Rockwell	3 52 20	3 52 20
Eleanor, W. M. Currier	Withdrew.	

Kennebec Y. C.

BATH, ME.

Saturday, Sept. 13.

A SPECIAL race for yachts of 15ft. to 25ft. waterline, given by the Kennebec Y. C., was sailed off Bath, Me., on Saturday, Sept. 13. Joker was first over the finish line, but lost to Aspenet on time allowance. The summary:

	Elapsed.	Corrected.
Aspenet, Fred M. Cook	0 53 52	0 53 15
Joker, R. H. Gardiner, Jr.	0 53 25	0 53 25
Swift, J. Owen Ledyard	0 58 25	0 56 27
Hecla, George A. Ward	1 05 27	0 59 27

Y. R. A. of Massachusetts.

BOSTON, MASS.

Percentages.

THE racing season of the Yacht Racing Association of Massachusetts closed with the annual rendezvous and marine parade on Sunday, Sept. 7. Secretary A .T. Bliss has issued a table of percentages, which he has compiled from newspaper reports. There are protests to be decided by the Executive Committee of the Association, which may affect the standing of the yachts, but a general idea of the r work may be obtained from the table. Thordis, which leads the 25ft. open class, did not sail the necessary number of races to qualify for the championship, but would undoubtedly have done so had her class been provided for. Calypso, a Hanley creation, wins the championship in the restricted 25-footers for the second season. The work in this class has been very close throughout the year, and it was not until the very close of the season that the winner was assured. In 21-footers Little Haste, which has won a majority of races in club and open events, gets the championship. Rooster II. is a close second. If Rooster's total percentage were divided by the actual number of starts, she would get the championship, but in figuring the percentages it is assumed that a yacht shall have started in half as many races as any other boat in her class. Tunipoo, the only raceabout to sail the necessary number of races to qualify in her class, gets the champ.onship. Malillian, a Crowninshield boat, gets the championship in the 18ft. knockabout class, with the highest percentage of any Association boat. In the 18ft. class Lobster gets the championship with just the number of races to qualify. Decisions on the following protests by the Executive Committee may change the results: Little Haste vs. Chloris in race of Aug. 4; Chloris vs. Little Haste, in race of Aug. 19; Lobster vs. Wawenock, in race of Aug. 4; Calypso vs. Sally VI., in race of Sept. 3; Question vs. Miladi, in race of Aug. 21; Seboomook vs. Calypso, in race of Aug. 29. The table of percentages is as follows:

	Starts.	Totals.	Averages.
Class C—25ft. Yachts.			
Thordis, Charles A. Heney	3	266	88.9
Chloris, Cheney & Lanning	1	100	66.7
Addie, W. H. Stimpson	1	75	50.0
Hustler, Whittemore & Robbins	1	50	33.0
Theodora, Frank Burgess	1	50	33.0
Ideal, H. B. Whittier	1	33	22.0
Class D—25ft. Cabin Yachts.			
Calypso, A. W. Chesterton	21	1546	73.6
Sally VI., L. F. Percival	21	1468	69.9
Chewink II., F. G. Macomber, Jr.	22	1428	64.9
Seboomook, B. A. Smith	14	909	64.9
Areyto, L. D. Baker	7	363	33.0
L'Aiglon, E. W. Hodgson	5	166	15.1
Early Dawn, J. E. Doherty	6	144	13.1
Cyrilla, W. D. Turner	1	25	2.2
Class S—21ft. Cabin Yachts.			
Little Haste, T. K. Lothrop, Jr.	18	1318	73.2
Rooster II., Adams Bros.	10	795	72.3
Chloris, Cheney & Lanning	22	1481	67.3
Mildred II., S. P. Moses	17	1125	66.2
Tabasco III., H. W. Wiggin	12	729	60.8
Pilot, Reginald Boardman	13	634	48.9
Thecla, C. W. Chapin	14	634	45.3
Opitsah IV., Sumner H. Foster	8	454	41.2
Micmac, Richard Hutchinson	15	546	36.4
Perhaps II., J. E. Robinson	8	330	30.0
Quakeress, William H. Joyce	3	71	6.4
Katherine, Harold C Sears	2	39	3.5
Thelma, Livingston Davis	1	16	1.4
Class K—21ft. Knockabouts.			
Tunipoo, J. T. Humphrey	5	450	90.0
Dorathea, W. B. Lambert	2	150	50.0
Opitsah II., C. F. Tillinghast	1	50	16.6
Class I—18ft. Knockabouts.			
Malillian, B. S. Permar	16	1465	91.6
Biza, Alfred Douglas	14	1076	76.8
Kittiwake, Henry M. Jones	13	975	75.0
Domino, C. C. Clapp	10	814	74.0
Question, J. Henry Hunt	12	726	60.5
Miladi II., F. R. Adams	15	872	58.1
Gertrude, H. E. Lynch	12	562	49.6
Tokalon, R. J. Randolph, Jr.	22	976	44.3
Ospray, A. R. Train	7	346	31.5
Savage, J. S. Lawrence	4	340	30.9
Ayaya, W. P. Keyes	7	317	28.8
Nethla, C. W. Cole, et al	6	261	23.7
Aspinquid, C. M. Foster	6	259	23.6
Patrice, A. W. Finlay	11	233	21.2
Comforter, J. M. Whittemore	5	209	19.0
Scrapper, W. C. Loring, Jr.	4	155	14.1
Bohemian, A. B. Holmes	3	109	9.9
Lollipop, H. B. Bailey	4	66	6.0
Alcedo, J. F. Linder	4	55	5.0
Class T—18ft. Yachts.			
Lobster, C. J. Hendrie	5	416	83.3
Wawenock, Coombs & Seymour	6	458	76.3
Monsoon, A. W. Erickson	1	100	33.3
Owaissa, Walter Kelly	2	83	27.7
Zetes II., John A. McKie	1	66	22.2
Zoe, F. J. Stewart	1	66	22.2
Toss, J. B. Stearns	3	33	11.1

Larchmont Y. C.

LARCHMONT, LONG ISLAND SOUND.

Saturday, Sept. 13.

The Larchmont Y. C. gave its final race of this season on Saturday, Sept. 13. The twenty-one boats that started experienced all kinds of weather, including a vicious squall, yet all but one finished.

The preparatory signal was given at 11.30, and at that time there was but little air from the west by north. The tide was running strong to the east. The course signalled for the 70-footers, the "sixties" and the schooners was south southeast three miles, northeast, five-eighths east, six miles; west, three-quarters south, six miles. This was sailed twice over, making thirty miles in all.

The 51-footers and the special class made up of Effort and Marguerite, covered an eleven-mile triangle twice, while the raceabouts and the Larchmont 21-footers sailed twice over a five and a half-mile triangle.

At 11.30 the preparatory was given and five minutes later the 70-footers were sent away. Rainbow was first over the line with Yankee a few seconds behind on her weather. Both boats carried reaching jib topsails and Yankee set a balloon for staysail. Rainbow drew clear of Yankee soon after the start, and it was not long before she was well ahead. Soon after rounding the first mark the wind hauled to the south, reaching Yankee first, and she caught and passed Rainbow. When on the last leg of the first round the wind freshened considerably, and Yankee continued to outfoot Rainbow, and at the end of the first round Yankee led by 3m. 49s. The change in the wind made every leg of the second round a reach. When near the Hempstead mark the squall that had been making up in the northwest, broke and made matters lively. The 70-footers hung on to all sail. Rainbow was splendidly handled on the last two legs of the course, and cut down Yankee's lead materially, but was not able to overtake her. Yankee won by 2m. 7s.

The schooners started at 11.40 with Elmina in the lead. Both boats carried reaching jib topsails and main-top staysails. The boats had but little wind and they were being moved slowly by the ebb tide. Elmina increased her lead until the boats were off Matinicock Point, when the breeze freshened and Muriel ran up on her rival. Elmina drew into the lead again. The boats had a reach across the Sound to the home mark, but when nearly there the wind headed them and a short tack was necessary to make the mark. On the second round the squall hit the schooners. It blew hard for a time and picked up a lump of a sea. They clewed up their fore topsails, and after considerable difficulty Muriel managed to get her club topsail on deck, and she was better off without it. Elmina won the $500 cup for schooners by 3m. 48s.

At 11.45 the "sixties" started, both crossed together with Neola to windward. A luffing match took place soon after they crossed, and Neola got rather the best of it. Weetamoe caught and passed Neola just before they reached the second mark. At the end of the first round Weetamoe was 1m. 50s. ahead of Neola. On the second round Neola cut down Weetamoe's lead considerably, but the latter boat won by 27s. These boats again saved their time on the 70-footers and would have beaten them on corrected time.

At 11.50 Marguerite, Effort, Altair and Humma started in the order named. Altair again surprised all interested by defeating Humma by 2m. 6s. At the end of the first round Altair was almost 4m. ahead; on the second round Humma did better and cut down Altair's lead considerably.

Effort and Marguerite were without competitors, and a special class was made up for them, Effort giving the smaller boat a large time allowance. She was unable to save her time and Marguerite won by over 15m.

Three of the Larchmont 21-footers started, and Houri gave Dorothy a very bad beating. Adelaide, the third boat in this class, was the only starter that did not finish.

Some good racing was seen in the raceabout class. Hobo, the American Y. C. boat, again showed her heels to her competitors and beat Whistlewing, the second boat, 2m. 55s.

The summary:

	Finish.	Elapsed.
Sloops—Class H—Start, 11:35.		
Yankee, J. R. Maxwell	3 50 20	4 15 20
Rainbow, C. Vanderbilt	3 52 27	4 17 27
Schooners—Larchmont Cup—Start, 11:40.		
Elmina, F. F. Brewster	4 02 14	4 22 14
Muriel, Chas. Smithers	4 05 50	4 25 50
Corrected time, Elmina 4.22.02.		
Sloops—Class I—Start, 11:45.		
Weetamoe, H. F. Lippitt	4 07 38	4 22 38
Neola, G. M. Pynchon	4 08 05	4 23 05
Sloops—Class J—Start, 11:50.		
Humma, H. B. Duryea	3 34 21	3 44 21
Altair, C. Meyer	3 32 15	3 42 15
Sloops—Special Class—Start, 11:50.		
Effort, F. M. Smith	3 38 40	3 48 40
Marguerite, J. F. Dingee	3 56 49	4 06 49
Corrected time, Marguerite, 3.33.33.		
Larchmont 21ft. Class—Start, 11:55.		
Adelaide, J. J. Dwyer	Withdrew.	
Dorothy, L. G. Spence	3 52 31	3 57 31
Houri, J. H. Esser	3 24 31	3 29 31
Raceabouts—Start, 11:55.		
Snapper, A. B. Aller	3 13 04	3 18 04
Jolly Tar, S. Howland	3 04 45	3 09 45
Joker, Walter Jennings	3 06 56	3 11 56
Rascal, S. C. Hopkins	3 06 24	3 11 24
Sis, F. T. Bedford, Jr.	3 07 16	3 12 16
Hobo, T. L. Park	3 01 39	3 06 39
Mavis, G. L. Pirie	3 06 16	3 11 16
Whistlewing, H. M. Crane	3 04 34	3 09 34

The winners: Yankee, Elmina, Weetamoe, Altair, Marguerite, Houri and Hobo.

Hempstead Bay Y. C.

HEMPSTEAD, GREAT SOUTH BAY.

Saturday, Sept. 13.

THE annual open regatta of the Hempstead Bay Y. C. was held on Saturday, Sept. 13. Sixteen boats belonging to members of the Hempstead Bay and Unqua yacht clubs competed. The boats covered a twelve-mile triangular course, and all but four finished. At the time of the start there was but little air stirring, but soon after the boats were sent away more wind came up and the boats finished in a northwest squall that was accompanied by heavy rain. The summary follows:

	Finishd.	Elapsed.	Corrected.
Sloops—Class A—Start, 11:26.			
Edice, Unqua Y. C.	2 54 43	3 28 43	3 29 13
Emmia, Unqua Y. C.	2 26 14	3 00 14	3 29 37
Fleetwing, Hempstead Bay Y. C.	2 09 52	2 43 52	3 34 20
Aglia, Hempstead Bay Y. C.	3 11 35	3 45 35	3 45 35
Terrapin, Unqua Y. C.	Withdrew.		
Catboats—Class B—21ft. and Over—Start, 11:31.			
Dorothy, Hempstead Bay Y. C.	2 47 28	3 16 28	3 16 49
Imp, Hempstead Bay Y. C.	3 04 11	3 33 11	3 30 34
Ellen, Hempstead Bay Y. C.	3 04 04	3 33 04	3 33 04
Cecil F., Unqua Y. C.	Withdrew.		
Catboats—Class C—21ft. and Under—Start, 11:36.			
Little Minister, Hempstead Bay Y. C.	3 01 56	3 25 56	2 25 56
Defiance, Unqua Y. C.	3 10 21	3 34 21	3 26 40
Grace, Hempstead Bay Y. C.	3 11 26	3 35 26	3 32 13
Grace R., Unqua Y. C.	3 11 25	3 35 25	3 33 52
Undine, Unqua Y. C.	3 21 37	3 45 37	3 34 29
Peggy, Unqua Y. C.	Withdrew.		
Fellowcraft, Unqua, Y. C.	Withdrew.		

The winners were Edice, Dorothy and Little Minister.

Marine and Field Club.

Saturday, Sept. 13.

The annual ladies' race of the Marine and Field Club was scheduled for Saturday, Sept. 13, but wind and weather made it inadvisable to brave the elements with the fair sailors. In its place Kelpie, W. K. Brown, and Flying Fox, F. D. Anderson, sailed off a tie which existed for possession of the cup offered by Commodore F. W. Dauchy to the winner of the best two in three races. Flying Fox won the deciding contest and the trophy.

Newport Special Thirties.

NEWPORT, R. I.

Monday, Sept. 8.

IN a light southwest wind Carolina won the race for the Clarence W. Dolan cup, sailed on Monday. The boats sailed over the Dyer's Island course. Esperanza was first to start, but Carolina passed her during the early part of the race and won by nearly two minutes. Carolina now has the best record of the season on points, and is in the lead for the Paget cup. The summary, start 3:00:

	Finish.	Elapsed.
Carolina, Pembroke Jones	5 46 40	2 38 40
Wawa, R. Brooks	5 48 27	2 40 27
Barbara, W. Rutherfurd	5 49 27	2 41 27
Asahi, L. Warren and W. S. Miller	5 50 19	2 42 19
Breeze, W. G. Roelker, Jr.	5 52 21	2 44 21
Esperanza, H. O. Havemeyer, Jr.	5 54 18	2 46 18

Tuesday, Sept. 9.

On Tuesday it blew half a gale from the southwest, and seven of the 30-footers started in what proved to be a very exciting race. A triangular course was laid out and the boats covered it twice. Breeze was put over the starting line in the best berth, but she was unable to hold this advantage, for she was soon passed by Carolina, which won by nearly a minute. Carolina is now well in the lead on points and stands a very good show of winning the Paget cup. The summary, start 3:17:

	Finish.	Elapsed.
Carolina, P. Jones	4 57 46	1 40 46
Wawa, R. Brooks	4 58 43	1 41 43
Breeze, W. G. Roelker, Jr.	5 00 51	1 43 51
Esperanza, H. O. Havemeyer, Jr.	5 00 58	1 43 58
Asahi, L. Warren and W. S. Miller	5 01 32	1 44 32
Barbara, W. Rutherfurd	5 03 19	1 46 19
Veda, W. L. Stow	5 07 58	1 50 58

Wednesday, Sept. 10.

Six of the 30-footers sailed a race in a fresh northwest breeze over a triangular course laid out in the bay on Wednesday. The contest was won by Carolina, which boat now leads by seven points for the Paget cup. The summary, start 3:31:

	Finish.	Elapsed.
Carolina, Pembroke Jones	5 06 41	1 35 41
Asahi, L. Warren and W. S. Miler	5 08 02	1 37 02
Breeze, W. G. Roelker, Jr.	5 09 43	1 38 43
Barbara, W. Rutherfurd	5 10 53	1 39 53
Veda, W. L. Stow	5 10 59	1 39 59
Esperanza, H. O. Havemeyer, Jr.	Withdrew.	

Thursday, Sept. 11.

Carolina won the race sailed on Thursday, beating Asahi, the second boat, by nearly three minutes. A good south breeze held throughout the race. The boats covered the Dyer's Island course. Esperanza held the lead which she got at the start for a good part of the race, but on the beat down the bay she struck a flat spot under the west shore and by this bit of ill luck was badly beaten. The summary, start 2:21:

	Finish.	Elapsed.
Carolina, Pembroke Jones	5 22 21	2 01 21
Asahi, L. Warren and W. S. Miller	5 25 18	2 04 18
Barbara, W. Rutherfurd	5 25 32	2 04 32
Veda, W. L. Stow	5 25 38	2 04 38
Esperanza, H. O. Havemeyer, Jr.	5 26 43	2 05 43
Breeze, W. G. Roelker, Jr.	5 27 52	2 06 52

Friday, Sept. 12.

On Friday the 30-footers sailed the annual race around Conanicut Island, a distance of twenty-three miles. The race was for a cup offered by Mr. Reginald Brooks. Barbara led from start to finish, and when she crossed the line a winner the boat was half full of water, she having leaked badly during the latter part of the race. The race was an exciting one, and Veda finished a good second, being only a few seconds behind, a rather unusual thing in so long a race. The summary, start 1:30:

	Finish.	Elapsed.
Barbara, W. Rutherfurd	4 40 19	3 10 19
Veda, W. L. Stow	4 40 52	3 10 52
Esperanza, H. O. Havemeyer, Jr.	4 41 02	3 11 02
Carolina, Pembroke Jones	4 41 03	3 11 03
Asahi, L. Warren and W. S. Miller	4 42 02	3 12 02

Monday, Sept. 15.

The last of the series races was sailed by the 30-footers on Monday. The race was won by Carolina, who gets the Syndicate Cup and the Paget Cup. The boats were sailed in the morning race by their professional skippers, and cash prizes were offered by the owners, and Carolina, handled by Captain Sam Seaman, a Port Washington, L. I., skipper, won easily.

The wind was light from the northeast for the afternoon race, and the boats sailed twice over a triangular course. Barbara led at the end of the first round, but on the second round Carolina took the lead, which she held up to the finish. The summary, start 3.25.

	Finish.	Elapsed.
Carolina, Pembroke Jones	6 05 38	2 40 38
Barbara, W. Rutherfurd	6 07 48	2 42 48
Wawa, R. Brooks	6 10 37	2 45 37
Asahi, L. Warren and W. S. Miller	6 11 41	2 46 41
Veda, W. L. Stow	Withdrew.	

The standing of the boats for the Paget Cup follows: Carolina 86 and Esperanza 77 points.

Columbia Y. C.

CHICAGO, LAKE MICHIGAN.

Saturday, Sept. 13.

The second race for the Thomas H. Webb 1902 Championship cup was sailed on Saturday, Sept. 13. The boats covered a triangular course. The breeze was variable, hauling from west to northwest during the race and varied in strength from 5 to 12 miles. The summary, start 2:30:

	Finish.	Elapsed.
La Rita	4 27 03	1 57 03
Privateer	4 41 55	1 11 55
Colleen	4 29 55	1 59 55
Margaret	4 35 15	2 05 15
Arab IV.	4 34 32	2 04 32

The race committee was made up of E. T. Balcom, Chairman; A. J. Roran, R. J. Summers, W. S. Bougher and W. S. Burrows.

The standing of the boats on points in the races sailed up to date follows: La Rita, 200 points; Colleen, 80 points; Arab IV., 140 points; Spray, 60 points; Privateer, 60 points; Sprite, disabled during first race; Margaret, 40 points.

Interclub Racing.

Seawanhaka-Cor. Y. C.—Sachem's Head Y. C.

OYSTER BAY, LONG ISLAND SOUND.

Monday, Sept. 8.

AFTER a season of spirited racing, over the courses of the Seawanhaka Corinthian Y. C., in 1898, the one-design knockabout class inaugurated by this club, became to some extent scattered about the Sound, a number of the boats being sold out of the club and racing the following season in their special class, in the open races of the various clubs.

In 1899, Com. Seward, of the Sachem's Head Y. C., purchased Gloria, and finding her well suited for use at the easterly end of the Sound, induced other members of his club to buy boats of the class, with the eventual result that at present practically all of these knockabouts not owned in the Seawanhaka Club, belong to members of the Sachem's Head Club.

On the return of the latter club from their 1901 cruise to Block Island, a heavy southwester was caught just at the start, through which the knockabouts carried two reefs across Gardiner's Bay, through Plum Gut and down the Sound to Sachem's Head, demonstrating to the satisfaction of all concerned, their ability to carry on in heavy weather and hard seas. After a run of sixty-five miles, with a beam wind averaging twenty-five miles an hour, Senta finished first just three and one-half minutes ahead of Midge, the second boat. I am sure that the keen sport had from such a race will be fully appreciated by all those who were fortunate enough to have made the memorable cruise to New London in these boats in 1899, especially that beat to windward from the lightship off New London to New Haven breakwater, on the return.

The acquisition of these one-design boats at Sachem's Head developed a most commendable racing spirit, weekly matches being held every Monday, the club championship in 1901 being won by Midge, owned by Mr. William E. Peck, and in 1902 by Senta, the property of Vice-Com. R. C. Mitchell.

In the fall of 1901 the possibility of a match race between the boats of the two clubs, was discussed and details arranged last spring the date selected being Monday, Sept. 8, and the prize a $100 cup, to which each club subscribed equally. It was arranged that the scoring should be by the point system, every boat entered and finishing, being credited with one point for each boat she defeats, and one additional for starting.

The final selection of boats to represent the two clubs was as follows:

Seawanhaka Corinthian Y. C.

Boat.	Owner.	Helmsman.
Gowan	F. G. Stewart	F. G. Stewart.
Wyntje	Colgate Hoyt	Colgate Hoyt, Jr.
Bobs	W. A. W. Stewart	W. A. W. Stewart.
Marcia	Johnston de Forest	Sherman Hoyt.
Lucille	H. H. Landon	E. I. Lowe.

Sachem's Head Y. C.

Gloria	E. C. & R. B. Seward	E. C. Seward.
Kittywink	John J. Phelps	R. C. Lincoln.
Frances	R. C. Lincoln	John J. Phelps.
Midge	W. E. Peck	J. P. Bartholemew.
Senta	R. C. Mitchell	R. C. Mitchell.

The race was managed by a committee of three, each club selecting its representative, and they in turn choosing a third member, as referee. The Seawanhaka Club was represented by Mr. Allen E. Whitman, Secretary of the Race Committee of that club, and the Sachem's Head by Mr. Edward M. MacLellan, Chairman of the Race Committee of the Manhasset Bay Y. C., Com. A. P. Thayer, of the Huguenot Y. C., acting as referee. Rear-Com. Matheson, of the Seawanhaka Club, courteously placed Lavrock at the disposal of the committee, and invited those members of the Sachem's Head Club present aboard as his guests.

The boats sailed club course No. 3, off Oyster Bay, in the reverse direction, or from the starting line, near Centre Island buoy, two and one-half miles northeast by north, to and around a mark boat, thence two and one-quarter miles west, half south, to a second markboat, thence two miles south-southeast to starting line, all marks being left to port, and the course sailed twice around, a distance of thirteen and a half miles.

The time of starting was changed to 1 o'clock in the hope that the breeze might freshen, which it did, but not until the finish of the first round. The warning signal was given at 1 o'clock P. M., and the preparatory at 1:05, the start being at 1:10, with a light northeast breeze and exceptionally good, the boats being closely bunched at the line of the signal. The order of crossing was as follows: Marcia, Lucille, Midge Bobs, Gloria, Wyntje, Frances, Senta, Gowan, Kittywink.

All crossed on the starboard tack, several going about after crossing, in order to get a clear wind. Senta stood well in on the beach on this tack, and because of a strong flood tide weather-bowing her, fetched into last place. On the beat to the first mark, Lucille drew away rapidly from the others, and had a lead of forty seconds on Bobs, the second boat, at the mark. The Seawanhaka boats were the first five to round this mark, the first Sachem's Head craft around being Kittywink, who was one minute and thirty-five seconds behind Lucille. To the second mark it was a spinnaker run, during which Lucille bettered her lead on Bobs by fifty-five seconds. The relative positons of the other boats was not materially changed on either the second or third leg of the first round, the latter being close hauled.

As the boats approached the finish line, on the first round, a fresh southwesterly breeze could be seen coming out of Oyster Bay, and there was some question on the committee boat as to whether it would head the boats in the rear, before they could turn the mark. This, however, did not occur, although the last two boats had to pinch hard to lay their course.

The position of the boats at the finish of the first round follows:

Lucille	2 49 12	Kittywink	2 53 40
Gowan	2 51 31	Gloria	2 54 30
Wyntje	2 52 33	Midge	2 55 55
Marcia	2 53 30	Senta	2 56 17
Bobs	2 53 35	Frances	3 00 15

During the first round of the course there was a noticeable silence among the Sachem's Head people aboard the committee boat, which, however, was dissipated while the first leg of the second round was being sailed, especially when Senta, who had ninth place at the finish, again started for the beach, this time with lifted sheets, worked into the freshening breeze from the southwest and in spite of the best efforts of Marcia, with spinnaker set, walked through the fleet until almost in the lead, and might have reached that coveted position had not her spinnaker carried away aloft and going overboard got under her keel. A curious feature of this leg was, that while the two leading boats kept offshore and held the northeast wind close hauled to the first mark, the remainder of the fleet, though not a great distance astern, carried ballooners and in one instance a spinnaker, almost to the mark, which was rounded in the following order:

Gowan	3 33 57	Kittywink	3 42 35
Wyntje	3 35 40	Frances	3 42 48
Bobs	3 35 43	Midge	3 42 50
Gloria	3 36 43	Marcia	3 42 55
Lucille	3 42 25	Senta	3 43 10

It was a close reach to the second mark, with a freshening southwest breeze and the boats made a beautiful picture as they drove along, with their lee rails awash, and a beat to the finish, when, for the first time, the boats were well spread out, the majority standing to the westward and lee-bowing the tide, which had now begun to ebb. The first boat to finish was Gowan, well sailed by her owner, Mr. F. G. Stewart, and winning from Wyntje by 2m. 57s. The summary is as follows, course 13½ miles, starting signal at 1:10 P. M.:

Seawanhaka Boats.

	Finish.	Elapsed.	Points.
Gowan, F. G. Stewart	4 31 33	3 21 33	10
Wyntje, Colgate Hoyt	4 34 30	3 24 30	9
Bobs, W. A. W. Stewart	4 35 00	3 25 00	8
Marcia, Johnston de Forest	4 38 50	3 28 50	6
Lucille, H. H. Landon	4 39 52	3 29 52	5
			38

Sachem's Head Boats.

Gloria, E. C. & R. B. Seward	4 35 27	3 25 27	7
Kittywink, J. J. Phelps	4 41 43	3 31 43	4
Frances, R. C. Lincoln	4 40 56	3 30 56	3
Midge, W. E. Peck	4 42 10	3 32 10	2
Senta, R. C. Mitchell	4 43 38	3 33 38	1
			17

The race was a most satisfactory one in all respects, and while the shift of wind on the second round somewhat altered the relative position of the boats, the advantage was with the Seawanhaka men, for the excellent reason that their boats were in better racing trim, and also because they handled their racing sails more smartly than their opponents. The general sentiment of the Sachem's Head skippers was, that while they regretted not having won the cup, they were very glad that they had come, for the reason that the race had shown where and how they could improve their boats, and by doing so, make a closer and even more interesting race for next year's cup.

The conditions under which the race was sailed did not make it possible that team work could be used to good advantage, except in the case of Marcia, sailed by Mr. Sherman Hoyt, who never missed an opportunity to avail himself of a chance to hold down a boat of the opposing club when it presented itself. It is to be regretted that there was not more chance for this work, which is often so telling in a race of the kind.

In view of the number of boats started in the race, it is a pleasure to record that there was not a single case of crowding on the line or at the marks, the best of feeling being shown and no disposition whatever to work the ragged edge of the rules. Both clubs are to be congratulated on the spirit of fair play shown throughout.

After the race, the Seawanhaka Club gave a dinner to those who had participated in the race, and if the informal speeches then made are to be taken as evidence, the race marks but the beginning of the interclub race idea, which cannot fail to be of inestimable value to the sport, for the good fellowship and the personal acquaintances thus formed. The cup, which becomes the property of the Seawanhaka Club, was on exhibition during the day.

An informal reception to the crews was given in the evening aboard the Aloha, by Com. James, and proved a fitting close to a day which will be remembered with pleasure by those taking part.

EDW. MENZIES MACLELLAN.

Seawanhaka-Corinthian Y. C.

OYSTER BAY, LONG ISLAND SOUND.

Friday, Sept. 12.

THE Seawanhaka Corinthian Y. C. gave prizes for special races between the two 70-footers Yankee and Rainbow, and the two sixties, Neola and Weetamoe, on Friday, Sept. 12.

The Regatta Committee was on board the steam yacht Lavrock. The preparatory signal was shown at 12:30. The course signalled was three miles north-northwest, then four miles east by north, one-half north, then southwest by south four and three-quarter miles, to be covered twice. The wind blew fresh from the south all through the race, although when the boats were on the last leg it worked around to the east somewhat.

At 12:35 Rainbow and Yankee started with the former in the lead, but Yankee was close on her weather quarter. Spinnaker booms were dropped to port, but the sails were not broken out, as the two boats had a luffing match. After getting well off their course, they squared away for the first mark and broke out their spinnakers. At this mark Rainbow led by 30s. It was a close reach to the second mark, and No. 1 jib topsails were carried. On the third leg, which was a beat, Rainbow drew ahead and crossed Yankee's bow. On the first leg of the second round Yankee caught Rainbow and passed her as they rounded the first mark. Yankee got the weather berth at the turn. She held her advantage up to the second mark. Owing to the shift of wind the third leg of the course was a long and a short one. Yankee crossed Rainbow's bow and had her under her lee up to the time they finished. Yankee won by 40s. The boats made very fast time over the course, and the race was very interesting throughout.

Neola and Weetamoe started at 11:40, with the former over half a minute ahead. After a short luffing match both broke out spinnakers to port and headed for the first mark. On the first leg Neola drew away from Weetamoe, but on the second leg conditions were reversed. On the windward work on the last leg Neola had Weetamoe under her lee all the way. On the second round Neola was 30s. ahead of Weetamoe at the first turn. On the second leg Weetamoe cut down Neola's lead to 20s., but on the windward work Neola, well sailed, kept her rival under her lee and won out by 1m. 49s.

The sixties sailed remarkably fast and had they been racing on time allowance with the 70-footers, both the bronze boats would have beaten them. The summary:

Sloops—Class II—Start, 12:35.

	Finish.	Elapsed.
Yankee, J. R. Maxwell	3 05 18	2 30 18

Vencedor and Vannena Series Races.

CHICAGO, LAKE MICHIGAN.

Thursday, Sept. 11.

One of the closest and most exciting races ever seen on Lake Michigan was the first of the series races between Vencedor and Vannena that was sailed on Thursday, Sept. 11.

The boats covered the Chicago Y. C.'s long course, and the start was made off the Van Buren street gap at 2 o'clock. The first leg was to the four-mile crib and the second to a mark off Jackson Park and then back to the starting line.

The wind was west by south, and the first leg was a spinnaker run. Vannena was first over the line with Vencedor close behind her, both boats broke out spinnakers immediately after crossing. Vannena rounded the first mark 20s. ahead of Vencedor. The second leg was a reach, and Vannena still held the lead. At the second mark she was 25s. ahead, having made a gain of 5s. on the second leg. From the second mark back to the finish line it was a close fetch, but the boats could lay their course. Vannena was still in the lead as the two boats neared the finish line, and was in the weather berth. When but a short distance from the finish line, not more than a hundred yards, Vencedor worked through Vannena's lee and finished a winner by 15s.

The boats raced without any time allowance, although according to the table used by the Lake Michigan Y. C., Vannena would have to allow Vencedor something over a minute.

The summary follows:

	First Mark.	Second Mark.	Finish.
Vencedor	2 30 10	2 57 10	3 38 13
Vannena	2 30 30	2 57 35	3 38 28

Saturday, Sept. 13.

The second race of the series between Vencedor and Vannena was sailed on Saturday, Sept. 13.

The course laid out was seven and one-half miles to leeward and return. The wind was light, varying from west to northwest.

Vencedor broke one of her peak halliard bands soon after starting and was forced to withdraw from the race. At the time of the accident there was a man on the gaff and he had a narrow escape from being badly hurt.

Vannena sailed over the course alone and accepted the race. This gives each boat a leg in the championship pennant, and the deciding race will be sailed on Saturday, Sept. 20.

Manhasset Bay Y. C's. Challenge Cup for the 30-foot Class.

The racing in the 30ft. class on Long Island Sound during the season of 1902 proved to be unusually keen and exciting. The boats in this class are of a good size for general racing, being large enough to have comfortable cabin accommodations and yet possess the great advantage of not being expensive craft to maintain.

The race committee of the Manhasset Bay Y. C. believing the class to be a good one and wishing to encourage competition between the boats, has decided to offer a $500 Challenge Cup to be competed for during the season of 1903. Mr. Edward M. MacLellan, chairman of the race committee, has issued the following circular:

The race committee begs to announce that the Manhasset Bay Y. C. will offer a Challenge Cup, to be raced for during the season of 1903, by what is known as the 30ft. sloop class.

The cup will cost $500.

The conditions to govern the races for the Challenge Cup and dates on which they will be sailed, will be announced as soon as the Long Island Sound racing schedule for 1903 is arranged, and it is definitely known whether or not any change will be made in the measurement rule of the Yacht Racing Association.

Match Race Between La Rita and Little Haste.

The match race that has just been arranged by the Columbia Y. C. of Chicago, between La Rita, the crack western boat, and Little Haste, the eastern champion, bids fair to be one of the most important events of the season. The races are to be sailed off Chicago on Sept. 26, 27 and 29.

The western representative, La Rita, won the Lipton Cup this year. She also took the Lake Michigan Y. A. pennant. At the present time she is ahead in the Columbia Y. C. Championship series. La Rita defeated the old Canada Cup trial boat Illinois in the race for the Thomas H. Webb cup on July 4. This cup is offered for all Lake Michigan cabin yachts from 18 to 30ft. waterline, sailed under time allowance.

The races between La Rita and Little Haste should arouse the yachting enthusiasm of western yachtsmen. The showing made by these boats in their respective waters this season indicates they are the champions of the East and West, and they are undoubtedly closely matched. Seamanship and handling will have much to do with the result of the races. E. T. B.

Hull-Massachusetts Y. C.

HULL, MASS.

Saturday, Sept. 13.

The last of the regular championship club races of the Hull-Massachusetts Y. C. was sailed off Hull on Saturday, Sept. 13, in fluky breezes varying from east to southwest. It was southeast and very strong before the start, but constantly grew lighter until, when the yachts were on the second round of the course, it had died to almsot a flat calm. It then backed to the eastward, giving the leading 25-footers an opportunity to finish just within the time limit. There was but one 21-footer, Chloris, and she failed to finish within the time limit. When it seemed that the 18-footers could not possibly finish within the time limit, the breeze hauled to southwest and sent them around flying, the first boat finishing fifty seconds inside the limit. As the knockabouts only sailed around the course once, they finished well within the limit.

Chewink II. was the windward boat in the start of the 25-footers. Sally VI. was just under her lee, and L'Aiglon was to leeward of all, but ahead. L'Aiglon led to the first mark, but on the beat to windward both Sally and Chewink passed her. At the end of this leg Sally had established a good lead, which she held to the finish. In the 18ft. knockabouts, Biza was first over the line to leeward. Ayaya was next, with Malillian on her weather quarter. Then came Gertrude, Nethla and Alcedo. Biza led all around the course, until the wind hauled to southwest, just before the finish, when Gertrude came up and passed her, winning by twenty seconds.

Sally VI. wins the championship of the club and the cup presented by Com. Boggs. Malillian wins the championship in the 18ft. knockabout class and the cup. Rooster II. and Chloris are very close for the championship in the 21-footers and the cup presented by Vice-Com. Boynton. Accordingly this class will race Saturday. The summary:

Class D—Y. R. A. 25-footers.

	Elapsed.
Sally VI., L. F. Percival	1 56 00
Chewink II., F. G. Macomber, Jr	1 59 25
L'Aiglon, E. W. Hodgson	2 04 15

Class S—Y. R. A. 21-footers.

Gertrude, H. E. Lynch	2 35 10
Biza, Alfred Douglas	2 35 30
Ayaya, W. P. Keyes	2 37 45
Malillian, B. S. Permar	2 39 32
Nethla, Cole & Bacon	2 45 10
Alcedo, J. F. Linder	Withdrew.

YACHTING NEWS NOTES.

Mr. Stanley M. Seaman has made the following transfers through his agency: The Burgess 40ft. sloop Nymph, owned by Mr. John Reilly, New Rochelle Y. C., has been chartered by Col. David E. Austin, of New York city. The Crowninshield designed raceabout Vagabond, owned by Mr. P. L. Howard, New Rochelle Y. C., has been sold to Mr. T. Alfred Vernon, of the Atlantic Y. C.

Mr. Hollis Burgess, the Boston yacht broker, has made the following transfers through his office: The 21ft. Buzzards Bay knockabout Amanita, owned by Louis Bacon, of Boston, sold to Joshua Crane, Jr., of Westwood, Mass.; the 15ft. Manchester half-rater Devil, owned by Dexter Rumsey, of Manchester, Mass., sold to Mark Hopkins, Jr., of Boston; the 45ft. center board sloop Frolic, owned by Theodore Cox, of New York, bought by Henry Crowell, of Newton Highlands, Mass.; the 62ft. steam yacht Eleanor, owned by George A. Binden, of Wakefield, Mass., chartered to the Manchester Y. C.; the 105ft. steam yacht Josephine, owned by Wm. H. Gwynne, of Cambridge, Mass., to the Boston Leather Associates; the speedy 114ft. Herreshoff steam yacht Clara, owned by Robert Bacon, of New York, chartered to Robert Winsor. The last mentioned charter was made in conjunction with Mr. Frank N. Tandy.

Captain William A. Andrews, who after making two successful passages across the Atlantic in small boats, and who attempted a third trip with his wife, has been declared legally dead by the courts. He sailed from Atlantic City with his wife in a 12ft. boat known as the Dark Secret for Palos, Spain, on Oct. 6, 1901, and has never been heard from.

The twin screw English-built steam yacht Candida, ex Cala Mara, has arrived at New York from Southampton by way of the Azores. The yacht has been purchased by Mr. H. Douglas, of New York, through the agency of Mr. A. J. McIntosh, from Captain S. H. Johnston-Stewart, of Glasgow. The yacht was designed and built by J. Reid & Co. at Glasgow in 1895. She is 141ft. between perpendiculars, 18.75ft. breadth and 9.5ft. deep.

Mr. Cornelius Vanderbilt has purchased through the agency of Messrs. Tams, Lemoine & Crane, the English built steam yacht Cherokee, from the estate of the late William Clark. Cherokee was built in 1893 by the Naval Construction and Armaments Co., now Vickers, Sons & Maxim, at Barrow-in-Furness, England, for Lord Ashburton, from designs by Mr. W. G. Storey. She was named the Venetia. Mr. Whittaker Wright, of Cowes, purchased the vessel in 1897 and changed her name to Sybarite. In the spring of 1901 she was sold to the late William Clark, who named her Cherokee. She is 233ft. over all, 219ft. 5in. on the water line, 29ft. 3in. inches beam and 18ft. 9in. deep. She is of steel, has two decks, is lighted with electricity and has six water tight bulkheads. Her engines are of the triple expansion type, with cylinders 21½in., 34in. and 36in. in diameter by 34in. stroke of piston.

At the annual meeting of the Northport Y. C. held on Saturday evening, Sept. 13, the following officers were elected: Commodore, John B. Morrell, of New York; Vice-Commodore, Charles A. Van Iderstine, of New York; Secretary, H. Davis Ackerly; Treasurer, Charles J. Pidgeon. Members of the Board of Trustees, Edward Thompson, Nathaniel S. Ackerly, Daniel P. Morse, John W. Hiltman and John J. Burton.

The New Seamanship.

As Exemplified in the Huge Seven-Master.

Down at Quincy Point, within the placid confines of the Fore River, lies the hull of the largest sailing vessel the world has yet seen. This vessel marks the culmination of a new era in wind-propelled vessels—or else the beginning of one whose extraordinary developments the imagination hesitates to reach out after. There be wise heads whose belief is that in a seven-master, 10,000-ton (displacement) schooner, with a carrying capacity of 8,000 tons, the type has reached its limit, and no further progress in size and number of masts is probable, and others prophesy that the development of the idea is only in its infancy and the sea-freighting of the world is yet to be done in vessels to which even this is but a pigmy. Only a little while ago people who failed to take the advice of the late lamented Hosea Biglow, "Don't prophesy onless ye know," were saying that the building of great steel steam freighters in the many magnificent shipyards the world over was sounding the doom of the large sailing ship, that great ocean cargoes were soon to be carried entirely in steamers, and that the old ships with their towering clouds of canvas were to live only in memory and the pages of romance. Now what do we see? The Fore River Engine Works, mammoth, modern, turns out side by side with a Government cruiser an equally enormous ship of steel for the carrying of coal, to be driven from port to port, not by mighty engines and triple screws, but by the same wind and clever trimming of sails and setting of keel to current that sent the Argonauts of old on their historic course.

Truly this ship, whether the alpha of an era or the omega of a type, is extraordinary among sailing vessels and on her to-day extraordinary weapons are at work. From the great powerhouse alongside come all sorts of occult forces, their work on board, controlled and directed by a hundred men, making a seeming pandemonium. The blows of the riveting machines within the hull blend in such rapidity that you cannot hear yourself shout. On the decks men hold a hose ending in a steel tube to the head of a cold chisel, and with it cut steel as if it were cheese, the chisel driving by the buzzing blows of a hammer concealed within the tube and vibrated by compressed air. On the wooden deck being laid above the steel one the calking irons are driven by the same wizard hammer, and one man calks as ten might without it. And out of it all grows the city, beautiful and stately, which is, after all, to be but a sailing ship, wind-driven and wave-tossed, as was the first little schooner launched at Gloucester early in the eighteenth century.

As this vessel marks the present summit of achievement in building sailing vessels, so she presents forcibly the new seamanship which her type has brought about. The old-time idea of a sailing ship culminated in the three-masted full-rigger. As the vessel of the Argonauts had but one mast with a single square sail hung from a cross yard, so the subsequent greater vessels grew on this model, adding more masts and more square sails until we have the great cargo ships of the last century. Many of them are extant to-day, with towering masts hung with five or six square sails to a mast, to say nothing of studding sails for light weather, staysails hung between the masts, and jibs, jib topsails, and flying jibs till one is bewildered with the number of sails and appalled at the number of men required to handle them. Then, I take it, some genius discovered that instead of having the yard hung to the mast by the middle, it worked better in a small boat with a single sail to hang it at the end, and have the sail swing by its edge from the mast. It made things one sided, but it was a splendid thing in tacking and beating. Thus we had the catboat rig, properly so called, because it is as quick as a cat in tacking. Somebody put a bowsprit and a jib on a catboat and behold, the sloop. Again an extra long sloop giving chance for second mast similarly rigged and we have the first schooner. Yet from the first two-masted schooner of two centuries ago to the many masted leviathan of to-day is a long look ahead and the change has come in the main within just a very few years.

Not until the time of the Civil War was so huge a schooner as a 300-tonner thought of, and it was not on the seven seas at all, but on the Great Lakes in the year 1850 that the first three master was built. Twenty years later the three-master had become the favorite rig of all schooners of above 150 tons or so. The growth from that time forward was steady, but slow, and it was not till 1880 that we had a four-master, and vessels of the schooner type began to run up into the 1,200 and 1,500 ton class. It was in 1889 that the experiment was carried still further. The demand was for greater tonnage, greater coal-carrying capacity, for coal seems to be the chief burden of the great schooner. Yet as the size of the vessel increases it is unwise to increase the size of single sails beyond a given point lest they be unwieldy. To get greater spread of canvas, therefore, another mast must be added and the Governor Ames, the first five-masted sailing vessel afloat, was built at Waldoboro, Me. There was much controversy as to the worth of the Ames, and it was not until about four years ago that the experimen was declared a success by other builders and followed by the John B. Prescott, a five-master with a capacity of 4,500 tons, and the Nathaniel Palmer. Two years later came two greater than these, the George W. Wells, and the Eleanor A. Percy, six-master, each with a capacity of about five thousand tons, and the only two in the world, and now two years later still we have the seven-master sliding off the ways.

Certain peculiarities in the handling of the two six-masters, however, showed that in them the limit of size in wood construction was reached. In sailing it was discovered that the six-masters were "tender," that is to say, the rise and fall of the seas under their great length made them wiggle and spring, their keelson not being rigid enough when built of wood, although of huge thickness, was re-enforced in every possible way. Hence the Lawson is built of steel, giving a rigid keelson, although a much slenderer one, all of which helps the carrying capacity. From the tip of her 85ft. bowsprit to her great stern, which lifts almost a half hundred feet out of water, 478ft. aft, and from her keel to her seven mastheads, 135ft. above it, she is practically all steel, the deck and cabin fittings and the 55ft. topmasts only being of wood. The names of the masts, by the way, are in order, fore, main, mizzen, spanker, jigger, driver and pusher.

With her nineteen sails set she will spread more than an acre of canvas to the wind and yet she carries or is to carry a crew of only sixteen men. The largest full riggers of the present day carry crews of thirty to forty men and it is obvious that the sixteen men of the Lawson could not handle her without special appliances, in the knowledge of the working of which comes the new seamanship.

The jovial "yeo-heave-ho," the rollicking sea chanty, and the tramp, tramp, of feet as the sailors hove her short at the capstan by main strength, is no longer heard in taking up the anchor. It could not well be, for each anchor of the seven-master will weigh 10,000lbs. and must be handled by grips of steel and the giant strength of steam. So the huge cable will grind in and out of the hawser hole to the puff of an engine with the power of forty horses throbbing in its heart, the touch of a man's hand on the throttle and lever being all the human agency required in its handling. Again in the hoisting and lowering of such great sails there is no more call for the watch to tally on the falls and "walk away up the deck with her" while the great gaff swings aloft or is dropped. Instead a valve is turned in the steam winch which sits at the foot of the mast, the drum revolves and with a man to "hold a turn" of the halliards on this the sail goes aloft with no strain except it be on the piston rod of the engines. So, too, in the steering. The steersman may watch the leach of the foresail indeed to see that he is giving her the proper "full and by" when beating to windward, but he will no longer be able to gauge the progress and point of his ship in a dark night by the feel of the straining seas on the rudder, as he might do in the old-time smaller ships that steered by hand. Instead he will stand with his hand on a little wheel that turns at a touch to starboard or to port and merely transmits his will to the engine whose pistons sway the great rudder to the right or to the left as the command comes through the mechanism. In the darkness of the night the steersman will have but to keep his eye on the needle and lubber mark on the compass and swing the 10,000 tons of his monster ship, by a touch of the finger.

The new seamanship is founded upon the old, indeed, but differs from it in the size of the forces which it handles and he methods used as much as the Yankee designed and built schooner differs in size and appearance from the old-time brig that was built in Liverpool and sailed from Southampton docks, differs almost as the modern great freight engine differs from a donkey cart. The romance of many men and little sails is swallowed up in the romance of enormous cargoes and mighty forces controlling them under the guidance of a few. And it is a romance incomparably greater. To feel thus, you have but to stand on the stern of the Lawson and look forward along her mighty deck, see the sheer of her hull sweep upward and forward till the forecastle deck marks its culmination. Already she is no more a structure of steel, but a living creature of the sea, harnessed by man, to be sure, to do his bidding, but to do it with a stateliness, a grace and a dignity that is matched by no other creation of his hand.

"The days of the large sailing ship are numbered; steam is to take its place," said the unwise prophets of a few years ago. Now we see steam added to the sailing ships merely to assist in the handling of them, that they may be larger, and drive a still greater hull than would be otherwise possible. Yet in view of the great increase in number and size of schooners, one is tempted to prophesy with like rashness that the days of the square-rigger are numbered. Capital works always in the direction of economy. If it finds, as it must, that the schooner type will carry as great a cargo, with a crew one-third as large, and other expenses no greater, it is obvious that it will in the future employ the schooner. To-day in the waters of Massachusetts Bay, a full-rigged ship is rare enough to cause comment from those who look from the land. The schooner is more easily handled by fewer men, may be handled more quickly in a given maneuver, and though in sailing directly before the wind, where many of her sails would blanket one another, she may not be so speedy as the ship with square yards, yet on any given voyage of much duration she would come in ahead because of her superior speed in reaching and tacking.

There may be a limit to the size of schooners, but it is doubtful if we have approached it yet. The first four-master came about almost by accident. The hull was intended for a very large three-master, but it was found that to supply the proper sail area three masts would be very large and the sails unwieldy, so a fourth mast was added as an afterthought. The first five-master was deemed an unwise experiment by many builders, and was not duplicated for a decade. Now we have a seven-master and there is little doubt that though most of our harbors will not admit vessels drawing greater depth than this, there is room in them for vessels still longer, and no reason why an eighth or a tenth mast might not give the ship still greater length and coal carrying capacity. Indeed, the problem of handling these great vessels is not so much the matter of entering harbors, for in many coastwise ports the big six-masters already in commission sail directly to the dock, and in others where it is not wise to attempt this, tugs meet them outside and tow or push them in; the trouble will come in the open sea. The addition of each new mast seems to bring an added problem in the matter of handling the ship. Thus the five-master has ways that are new and tricks that are vain which never confronted the captain of the three-master, and these are to be learned only by actual handling. Captain Crowley, who is to be the master of the Lawson, well knows this. He has grown up with the schooner type, and has handled each additional mast as it came into use. Yet he sees no reason why the seven-master, when her little ways are once learned, should not be handled as well as the smaller ships.

Within a few weeks the Thomas W. Lawson will be spreading her acre of canvas to the breezes of Massachusetts Bay, and her skipper will be face to face with the latest conundrum of the sailor man's world, and the half of the world that goes down to the sea in ships and

does business in great waters looks on with intense interest in this latest and greatest venture in the new seamanship.—Winthrop Packard in Boston Evening Transcript.

Canoeing.

A Delaware River Cruise.

THIS cruise really began at Deposit, N. Y., but for the benefit of other canoeists who may wish to make a similar voyage, it should be said that the first start was made from the Knickerbocker Canoe Club house, at the foot of West One Hundred and Fifty-second street, this city, on a windy July morning at the commencement of the ebb tide. The distance to the Pavonia ferry in Jersey City is upward of ten miles, no doubt, but while there is no little dodging of tugs and ferry boats in the lower river, it is a safe and pleasant trip withal. The first slip above the Pavonia ferry is the one to enter. It is long, but at its head the bulkhead is low, and I found no difficulty in getting canoe and duffle ashore and into the baggage room of the Erie Railway, just down the slip, where everything was held safely for me until the following morning, when I helped stow the canoe and duffle in the baggage car of the 9:30 train, while our party took the earlier train, arriving in Deposit an hour ahead of the canoe, so that we had ample time to purchase supplies and make all arrangements for getting away at once. There were three of us. The most important member was the little daughter, who, while but fourteen months of age, has had a varied experience in canoeing; her mother, the Mate; and the Skipper.

The railway station in Deposit is a half-mile from the West Branch of the Delaware, but a truckman was found who, when the train arrived, took our outfit to the riverside below a little dam, where we pushed off after 4 o'clock.

Out of the first four rifts I had to wade two shallow ones, and then a shady place on the Pennsylvania shore reminded us we were weary and in no hurry, so we made camp beside a spring where the lilies and daisies were blooming luxuriantly. The sky was blue and great white clouds drifted lazily about. Westward the mountains rose high above the valley, their slopes clothed with chestnuts or dotted with fields of hay. That evening Mount Deposit was made luminous by an electrical storm, though no rain fell.

The vapor stove refused to perform its duties the next morning. It was coaxed, petted, abused, all to no purpose, and in the end a wood fire was resorted to. And while we ate breakfast the sun came over the Delaware county hills, the catbirds and robins caroled among the pines and lindens and a gray squirrel watched us from a nearby stump. All was fair and lovely on this morning of our first vacation in many moons, and the fact that there was nothing to hurry for seemed too good to be true. While the little girl took a nap we angled and paddled along shore under the willows, where we found the spawning bed of some large fish, with its eggs just visible in the murky water kicked up by the parent fish in its haste to avoid us. That accounted for the commotion in the water we had seen and heard now and then. We were discovered by two parties. One was managed by "Ma," as a pretty girl in a blue frock called her, and who informed us they had lunched on black bass and wanted me to "take a snap shot" at them as they rowed by; the other consisted of three small boys who took great interest in the canoe and the bass rods, but who could hardly believe that the air beds did not contain hay, as they supposed.

Early morning of the third day found us threading the passages among the many islands, and as these became more numerous, the water grew shallower, so that I waded seven of the first eleven rifts, and in a few the Mate also joined me among the boulders. But these little passages are lovely, and one should go slowly, to thoroughly enjoy the beauty of the ever-changing view of hill and stream. The vegetation is rank and green. Willows and coarse water grasses border the waterways, and flowers are everywhere, including water lilies. Now and then a muskrat stopped a moment to watch us, and once a mink, swimming across stream, was so startled on finding the strange craft near it that it seemed undecided what to do for a moment, then lost no time in gaining shelter. Woodchucks and squirrels were seen frequently. The rift at Hale's Eddy bridge is very shallow, but the channel is near the western shore. We ran two others that were strewn with huge rocks, between which there was little room to pass; and one that was shaped like the letter S, where hard bumps were unavoidable. After passing the islands we found shelter from the showers under a great elm tree, where lunch was prepared. We counted twenty-seven rifts that morning. One of the next four rifts had a nasty drop among boulders, but we passed it safely. About a mile above Hancock we got on the wrong side of the first rapid worthy the name we had encountered, and there was nothing for it but to let the canoe down to the pool below, as there was not sufficient water on the brink of the falls to float all hands. A rift was ahead which was wide, shallow and nasty, and many hard bumps resulted. There the river turns sharply to the left beneath high cliffs, and in a few moments we were running the swiftest rift so far—deep but dotted with jagged stones and boulders, some of which left their marks on Nomad's garboards, and on one of them we struck so hard that getting off was very difficult, and for a time it seemed a question whether my good maple blade would hold us straight or would break and let Nomad swing round broadside; but the Mate saved the day and we swung off at last.

Hancock lies on low ground between the East and West branches of the Delaware, but below the village a mountain stands out alone, like a sign post marking the parting of the ways. We came to a sudden stop at the foot of a shoal, where there was only water enough to float the canoe and its little passenger, who was then asleep. Three more shallows marked the next hundred yards, and we gladly emerged from the West Branch and entered the Delaware River with a rush that carried the canoe ashore in an eddy that described a compound curve. The clouds were pouring along the mountains, black and threatening. Tall pine trees on one of a group of islands promised shelter, and avoiding a rift in the main channel, we found the lower end of the largest island covered with tall pines, and a high, dry spot under these was selected for the tent. We were tired and ached all over from the cold wind and the icy water, and turned in early. That day we ran or waded forty-six rifts, and fifty all told.

Saturday dawned black and cold, with a penetrating east wind. So low were the clouds that the mountains were only partly visible at times. Rain fell in heavy showers all day. One storm came from the east, another from the south, and a third poured down the western hills. In foraging about I found a great heap of driftwood near camp, so it was easy to keep a comfortable fire going under the pines, as there were dry yellow pine puncheons and planks with which to feed it. There was a terrific thunderstorm during the night, and in the morning we were enveloped in clouds. The river had risen four or five feet. The cockpit of Nomad is about 5½ft. by 18in., but enough rain fell in it to fill it to a depth of 3in. And it was a juicy day, as the Chinaman said. We were fortunate in having a very snug and dry conical tent with a heavy floor cloth; blowbeds, waterproof garments, and changes of woolen clothing. A heavy double and two army blankets were none too warm. And while sitting in the tent was monotonous for the baby, she was kept dry and warm and took no cold. Dinner that evening was eaten between showers under the pines. It was not comfortable, this looking forward to more rain and flood water during the night, but it was better to keep dry where we were than to make camp anew in the rain, on the mainland.

Under the pall of clouds on Monday morning we beheld a raging torrent of yellow water, bearing on its surface railway ties, trees and lumber. It was well the island was high, for when I placed the 7ft. steel bass rod on a level with the tent and let the line run out until it touched the water, the distance was less than the length of he rod. Other islands were partly or wholly submerged. There was no desirable camp site on the western shore, and while there was high, level ground near the railway tracks on the eastern side, a frame camp was there, and in it seven or eight young fellows who were waiting for better fishing conditions, and making day and night hideous with their horse play meanwhile. That morning the wind hauled into sou'sou'west, and the sun came out. Every available line was hurriedly bent on the trees, and everything hung out to dry—even the tent and the pine needles under it were sunned. It was then that we realized the full value of the blowbeds, for while the covers got damp underneath, otherwise our beds remained dry. They were put out, too, and on them the little girl fell asleep while the blessed sunbeams played about her head. After noon the wind went into the west and rain fell heavily for two hours, but we laughed this time, for everything in the tent was dry again. Dusk found the wind in the east, but the sky cleared somewhat, the bullfrogs, whippoorwills and even the moon took courage, and a certain frog, clad in brown and green, which came round when the lantern was alight, hopped squarely into the fire as we sat beside it, but jumped out so hastily that it cleared the bank and disappeared in the flood.

Two great bald eagles rose from the trees along the Pennsylvania shore as we rushed down the first long rift one morning, and they circled quite near for a time. We lost all count of rifts, so deep were the minor ones buried under the flood, but we knew the others, where the incline was great and the waves rough. In these the sensation was akin to that of coasting on a toboggan, so swift was the speed when the single blades were in motion, to maintain steerage way. There was a peculiar lifting and falling of the boat, while she also rocked from side to side, imparting to one a sensation totally unlike that of riding long swells at sea. At the Stockport postoffice we asked for mail and eggs. Further on we ran a rapid worthy in every way of that name. In and out, round one mountain, then another, always passing masses of beautiful ferns and blooming laurel, and we glided down a long incline where the Delaware turns an angle so sharp as to form a dead water, into which Equinunk Creek debouches. Equinunk is a typical mountain village, and as I plodded up the muddy road, past the tavern and its horse sheds, it was easy to fancy the scenes taking place there on election day, when the place swarms with mountaineers and tanglefoot whisky is king. Of the three stores on the hill I chose the larger one, at the sign of the farming implements. A young woman well posted on local subjects gave me some trustworthy information while she tied up sundry parcels. Fresh bread, she told me, could be obtained across the way, at Joshua Pine's, whose wrapping paper was covered with a statement that he kept a full line of boots, rubbers, horse feed, phosphate, wool and cotton goods, butter, hosiery, eggs, mittens, flour, cracked corn and many other things. He did. Entering, I walked down a long aisle lined with dress goods and gewgaws. No one appeared. I turned up another aisle and had reached the door on that side before I discovered Joshua Pine himself, seated behind a high counter, gazing at me stolidly, his gray eyes glinting dully in a mass of black hair and beard. He supplied my wants, remarking meanwhile, "It is sour weather we are having." He spoke truly. And it was some satisfaction to hear from him that there had been a cloudburst "up the Equinunk" that morning, while we had missed it. Joshua was fortunate in that he had never until that morning heard of a certain biscuit which has been advertised the length and breadth of this land, at an expense of many thousands of dollars.

We dropped down to Lordville. Midway of the two villages there is a semi-island on the New York side which is high, dry, shady, and an ideal camping place for canoeists. The most picturesque spot we had seen was at Bush, where a cliff overhangs the railway, and from its summit, perhaps 500ft. above the river, a goodly creek pours down from ledge to ledge. Its course is clean cut through the pines, as if an engineer had planned it all. Long Eddy is well named. We loafed along its laurel-clad banks in company with a little brown crane. The baby was sleeping on her air cushion when a stop was made under a cluster of beech trees opposite Long Eddy village to avoid a shower. There was perfect shelter, and advantage was taken of it to eat lunch.

The incline of the rift at this village seemed fully ten per cent. for upward of a mile. We chose the eastern side, but at one point passed over a submerged island in less than a foot of water, but did not ground. At Basket Creek, a pretty trout stream in Sullivan county, the first rowboat worthy the name was seen. Crooked Rift is a long shoal, filled with boulders and willows, and commands respect. There were fields on the Pennsylvania side, and as a storm was brewing, we hugged that shore until a grassy bank near the water's edge struck the Mate's fancy, and in reconnoitering we dubbed it Butternut Camp, after the trees which shaded it.

[TO BE CONCLUDED NEXT WEEK.]

Take inventory of the good things in this issue of FOREST AND STREAM. *Recall what a fund was given last week. Count on what is to come next week. Was there ever in all the world a more abundant weekly store of sportsmen's reading?*

Amendments to Constitution of A. C A.

IN accordance with Article 12 of the Constitution of the American Canoe Association, notice is hereby given that at the next meeting of the Executive Committee thereof, the following amendments to the Constitution will be proposed for action:

Amend Article V., Sec. 1, by striking out "Librarian-Custodian" from third line.

Amend Sec. 2, by striking out all after the word "The" in the ninth line.

Amend Article VI., Sec. 5, by adding after "appropriated" in the sixth line the words, "They shall receive and hold in trust all moneys received from Life Memberships which shall be known as 'Life Membership Permanent Fund,' deposit, invest, or make such other disposition of the same as they shall deem best and pay the interest or earnings thereof over to the Secretary-Treasurer of the Association on or before Aug. 1 in each year. The principal of the 'Life Membership Permanent Fund' shall not be expended except by a four-fifths vote of the Executive Committee concurred in by a like vote of the Board of Governors." (The rest of the section to remain as it is.)

Amend Article IX., Sec. 2, by adding after the eighth line, "They shall also forward the Board of Governors immediately on its receipt, the amount of any money received in payment for a Life Membership." (The rest of the section to remain as it is.)

To Article VI., of the Constitution, add additional sections as follows:

Section 9.—Racing Board—Each Division in its proper turn at its annual meeting shall elect in the same manner as its regular officers, one member of that Division to serve on the Racing Board of the Association for a term of three years, or until his successor is elected. The Commodore shall be a member ex-officio, but in case of a tie, he shall not vote.

Section 10.—Duties—It shall be the duty of the Racing Board to hold a stated meeting during the annual meeting of the Association in August, and at the annual meeting of the Executive Committee in October, but special meetings may be held at any other times and places at the call of the chairman, to select at the annual stated meeting in October a chairman and clerk, whose duties shall be as in other organizations. They shall revise and amend the present racing regulations of the Association and shall from time to time make such changes therein as they shall deem best for the interests of the Association, but no amendments to the racing regulations shall be valid unless such amendments in general terms have been published in one of the official organs of the Association for at least two weeks prior to any stated meeting of the Racing Board.

At all meetings of the Racing Board three shall be necessary to make a quorum, but in the event of the absence of any member, the Executive Committee of the same Division from which he comes, may select any other member of the Association to represent him during his disability only, and in the event of a vacancy occurring, the same shall be filled for the unexpired term in the same manner as for the full term.

Notice is also given in the same manner that the following amendments will be proposed to the By-Laws:

Chapter I.—Section 2—After the second line on page 22, add "An active member in good standing may commute his annual dues for life by paying to the purser of his Division, the sum of fifteen dollars." (The rest of the section to remain as it is.)

Amend Chapter IX. by substituting "three" for two in sub-division eight.

Notice is also given in accordance with Rule 23 of the Racing Regulations that the following amendments will be made:

Amend Rule 23 so as to read: "These rules may be amended by a vote of a majority of the Racing Board of the Association, notice of such change having been given in the official organs at least two weeks before the vote of the Racing Board is taken thereon."

R. J. WILKIN, A. C. A., No. 47.

Rifle Range and Gallery.

The Strength of Rifle Barrels.

IN your remarks on this subject on Aug. 30 there is much that every gun maker who aspires to do more than copy designs of others ought to know, and as the barrel of the gun is the most important part, so is it essential that all relating to it should be thoroughly understood. It is a subject by no means exhausted. On the contrary, there is room for improvement in various directions, and the most important of these is the safety of breechloading arms taken in connection with the ammunition intended to be used with them. The correspondence now proceeding in your paper on cordite high power rifles supplies a striking illustration. A rifle maker of repute seriously states that the cordite rifle, made by him is designed as to dimension and material to withstand a chamber pressure of 75 tons per square inch, and that the steel

will stand a pull of 50 tons per square inch before breaking. This statement is directly opposed to the well established fact that in the case of a free tube, namely, one not under pressure externally, the bursting force must always be less than the tensile strength of the metal. It is impossible with a 50-ton steel to make a tube, however thick, that will not yield under a bursting pressure of even 50 tons. Furthermore, if the elastic limit, more correctly styled the yield point, be 30 tons, which is practicable, the process of yielding will commence before the gas pressure reaches that amount. This yielding will not be much when the same pressure is again applied, but the tube or chamber will be by so much permanently enlarged. The manner in which steel acts under tensile stress is often misunderstood, and is not correctly stated in the fourth paragraph of your article, as also at the end of the fourth paragraph of article on same page headed "Cordite High Power Rifles," where the writer says:

"The elastic limit is the point at which steel ceases to be rigid under tension and begins to elongate, and the maximum stress is the stage of tension at which steel ceases to be able to recover its original form after the tension is removed."

This is not so. Steel is an elastic body, and is never rigid under tension. It begins to elongate as soon as tension is applied, and as the force of the pull increases it lengthens in some proportion up to a certain limit. If the pull ceases it returns almost to its original length, so long as the force applied has not exceeded this limit, which varies with the kind of steel and with the heat treatment it has undergone. When the limit of nearly uniform temporary elongation has been reached a sudden increase of the rate of elongation occurs. The molecular arrangement is strained, and the steel, on the pull being relaxed, does not spring back, but is permanently elongated. With certain steels and certain states of others the elastic limit is not arrived at until the pull has reached 30, or even more, tons per square inch, but the same piece will stretch at an increased rate after the yield point has been passed, and continue to do so for 20 or more additional tons of pull, until the breaking point is near. The resistance then rapidly ceases and the bar breaks. The stress indicated by the testing machine just before fracture is the ultimate breaking stress, in this case 50 tons or more, whereas the elastic limit is only 30 tons.

It is not advisable to be satisfied in designing any steel work to provide strength equalling the working stress or the proof stress. A factor of safety is necessary, and in rifle barrels the unknown stress that they may be subjected to at a proof house renders it necessary to leave a large margin of strength. This cannot be attained by merely adding to thickness and using ordinary steel. A special steel is required having three qualities combined, namely, high elastic limit (stiffness), good elongation (toughness), and a high ultimate stress (strength). The method of attaining this cannot be discussed in a communication of length suited to your columns.

The following method of testing whether a gun barrel in the first machined state possesses the necessary qualities was originated by me in 1896, and has proved most useful. The ordinary method in the case of small arms is to test the bars from which barrels are to be forged by pulling in a powerful testing machine specimens having an acting length of 6in. and diameter that corresponds with a sectional area of one-sixth of a square inch. These are cut necessarily the long ways of the bar. The heat treatment in forging and annealing barrels may seriously affect these qualities, and it is evident no tensile testing can be applied to the finished barrel. My procedure is to leave so much extra length on the breech end of the tubes when forged that a disk a quarter of an inch thick can be cut off; from this a piece can be cut tangential to the hole, and long enough to give a test piece with screwed ends ¼in. in diameter and an acting length between them of .6in, in length and .1'56 in diameter, giving a cross section of one-sixtieth of a square inch; in fact, the dimensions of the large test piece divided by ten. A trial was made to determine whether the results of testing pieces so small would agree with the large tests. In 1897 Messrs. Kirkaldy & Sons made numerous tests for me of such pieces with the scrupulous accuracy characteristic of all they undertake. A comparison of the results with those given by the larger test pieces proved that they were substantially the same. The Webley & Scott Arms Co. adopted this method with success, using a two-ton machine to do the work, and have found the system very useful.—John Rigby, in Field (London).

The Palma Trophy.

THIS emblem of international skill drifted further away from American possession than it did last year, for at Ottawa, Canada, where the long range international contest took place last week, the British team came out of the contest victorious. Hereafter American teams will need to journey across the Atlantic Ocean at such times as they seek to regain possession of it.

There were three teams in the contest this year, the Canadians, who were possessors and defenders; the Americans, and the British.

In the first stages of the contest, at 800yds., the Americans held the lead, and victory seemed to lean reasonably in their favor, for they led the British team by 22 points and the Canadian team by 42 points. At the next longest range, 900yds., the British team took the lead by 12 points, having made up all the lost ground of the shorter range. The Canadian team was hopelessly behind.

At the last and longest range, 1,000yds., the British and American teams tied, so that the British were victorious over the Americans by the 12 points to the good made at the 900yd. range, the scores being: British, 1459; American, 1447; Canadian, 1373.

The next, and succeeding, contests for the Palma trophy, if it is not captured by teams representing other nations, will be held at Bisley, England, next year. This will impose a much greater expenditure of money to meet expenses, and the patriotic generosity of Americans may be called upon to supply the needed amount.

The personnel of the British team was as follows: Lieut.-Col. T. Lamb, South Lancashire Regiment.; Arm.-Sergt. J. H. Scott, Border Rifles; Staff-Sergt. J. Fraser, 1st Banff. R. G. A.; Arm.-Sergt. J. E. Martin, 5th V. B. Highland Light Infantry; Corp. H. Ommundsen, Queen's Edinburgh; Color-Sergt. Lawrence, 1st Dumbarton; Corp. A. Paterson, 3d V. B., Seaforth Highlanders; Color-Sergt. W. T. Davies, 3d Glamorgan.

The Canadian team:

Capt. R. J. Davidson, 8th R. R. Quebec; Capt. T. Mitchell, Toronto; Lieut. Gilchrist, 1st B. F. A., Guelph; Staff-Sergt. McVittie, 48th Highlanders, Toronto; Staff-Sergt. Simpson and Pvt. Armstrong, 10th Royal Grenadiers, Toronto; Staff-Sergt. Skedden, 13th Hamilton; Pvt. C. S. Scott, 43d Ottawa.

Columbia Pistol and Rifle Club.

SAN FRANCISCO, Sept. 7.—The Columbia Pistol and Rifle Club's regular shoot was as follows, Columbia target, off-hand:

Two hundred yard range, rifle, 10 shots: Ed. Hovey 60, 72, 73; G. Mannel 67, 73, 79; A. H. Cady 69, 77, 82; Dr. Twist 100, 113, 129.

Three-shot match: G. Mannel 7; W. G. Hoffmann 14, 15, 20; F. O. Young 15.

Military and repeating rifle, Creedmoor count: Ed. Hovey 48, 47, 47; Knostman 38, 37, 36, 36.

Firty-yard range, pistol: Dr. H. W. Hunsaker, 40; F. O. Young 45, 45; Mrs. G. Mannel 57, 60, 61, 68, 77; R. Schneider 63, 73; L. C. Gimmel 67, 70, 75; E. A. Allen 77, 93; Mrs. Waltham 79, 79, 89, 100; G. Mannel 70.

Revolver: F. O. Young 54, 57, 60, 61.

.22 and .25cal. rifle match: W. G. Hoffman 18, 19, 24, 24, 26, 27; H. Kroeckel 19, 21, 22, 22, 23, 23; C. M. Daiss 21, 21, 21, 22, 24, 27, 28, 29; Dr. Twist 25, 28; E. A. Allen 40, 36, 39; L. C. Gimmel 36, 43; Magnin 73, 75.

A. H. Pape, our champion rifle shot, won all first prizes at the last Schuetzen prize shoot as follows: $25 for most points (308); $25 for best center (.062in.); $20 premium in five; $5 tickets best center to win; $10 premium for most 3in. bullseyes in 30 shots making 12; $2.50 for last bullseye.

FRED. O. YOUNG, Sec'y.

International Rifle Match.

NEW YORK, Sept. 11.—*Editor Forest and Stream:* Re the Palma. The scores made by competitors for place on Canadian team were simply wonderful. The best eight exceeded by many points the score of the Irish team last year, with their match rifles.

Our team cannot be beaten unless it is by the coach.

At Sea Girt, last year, in the International matches, the coach sat behind the shooter and "ordered" him what to do. This reduced the skill of the team to the ability of two men. The official coaches this year are Hayes and Scott.

I do not think Hayes ever shot a long range match; albeit he is very skillful at the short ranges. Scott did some good work in the old days of twenty years ago, but was low man on the team last year, and made, I believe, less than an average of outers on the Wimbleton cup this year.

The change of temperature from the very warm weather we had here last week may prove a serious stumbling block, as the variations of elevation will be greater. FRANK HYDE.

Cincinnati Rifle Association.

CINCINNATI, O.—At the regular meeting of this association on Aug. 31 the following scores were made on 25-ring target, 200 yards: weather clear, steady 3 o'clock wind:

		Honor.
Gindele	232 218 212 211 211	20 22 23—65

The Laflin & Rand Powder Company, New York city, has issued a work which embodies the useful properties of record and reference. It contains forty targets and scoring sheets, which can be used for first, second or third class targets, with places for recording elevation, wind gauge, clock, light, flags, notes, and for date, range, elevation, time, thermometer, barometer, rifle, powder, bullet, position. There also is an article by Dr. W. G. Hudson on "Notes on the Sight of the U. S. .30-Caliber Magazine Rifle," points for beginners and an article on loading and reloading.

Trapshooting.

Fixtures.

If you want your shoot to be announced here send a notice like the following:

Sept. 18-19.—Iowa Falls, Ia.—Annual amateur target tournament of the Iowa Falls Gun Club.

Sept. 20.—McKeesport, Pa.—Enterprise Gun Club's tournament.

Sept. 20.—Silver Lake, S. I.—Shoot of the Richmond Gun Club. Main event, 50 targets, handicap, $1 entrance, for $10 gold piece. Albert A. Schoverling, Sec'y, New Brighton, S. I.

Sept. 21.—Brooklyn, L. I.—Shoot of the Fulton Gun Club; merchandise events. Albert A. Schoverling, Sec'y.

Sept. 23-24.—Concordia, Kan.—Second annual tournament of the Concordia Blue Ribbon Gun Club.

Sept. 23-25.—Cincinnati, O.—Second annual handicap target tournament of the Cincinnati Gun Club. Charles F. Dreihs, Sec'y.

Sept. 24.—Brooklyn, L. I.—Tournament of the Brooklyn Gun Club, commencing at 1 o'clock; $17.50 in gold for high averages; Enfield street, near Liberty avenue. John S. Wright, Mgr.

Sept. 24-25.—Taylorville, Ill.—Taylorville Gun Club's tournament.

Sept. 25-26.—Streator, Ill.—Streator Gun Club's target tournament.

Sept. 26-27.—Matthews, Ind.—Second annual target and live-bird tournament.

Sept. 27.—Middletown, N. Y.—Open shoot of the Middletown Gun Club. Russell M. Vernon, Sec'y-Treas.

Sept. 29-30.—Lewistown, Ill.—The Interstate Association's tournament, under the auspices of the Lewistown Gun Club. H. H. McComber, Sec'y.

Oct. 1-2.—Fostoria, O.—Fostoria Gun Club's target tournament; $100 added; first day open to all; second day, merchandise handicap. W. R. Alspach, Ass't Sec'y.

Oct. 1-2.—Austerlitz, Ky.—Hill Top Gun Club's tournament.

Oct. 1-2.—Union City, Ind.—Fall tournament of the Parent Grove Gun Club. O. E. Fouts, Sec'y.

Oct. 1-2.—Austerlitz, Ky.—Hill Top Gun Club's live-bird tournament. Alfred Clay, Sec'y.

Oct. 1-2.—Union City, Ind.—Parent Grove Gun Club's fall tournament. O. E. Fouts, Sec'y.

Oct. 1-2.—Allegheny, Pa.—Two-day target tournament of the Northside Gun Club; $100 added money. I. W. Morrow, Sec'y.

Oct. 2.—Rittersville, Pa.—Target tournament of the Lehigh Rod and Gun Club of the Bethlehems.

Oct. 6.—New Paris, O.—One-day tournament of the Peters Gun Club. G. L. Lyne, Sec'y.

Oct. 3-4.—Louisville, Ky.—Jefferson County Gun Club's tournament.

Oct. 7-8.—Greenville, O.—Handicap tournament of the Greenville Gun Club. H. A. McCaughey, Sec'y.

Oct. 9-10.—Irwin, Pa.—Irwin Game and Gun Club's tournament.

Oct. 9-10.—Fort Wayne, Ind.—Annual target tournament of the East End Gun Club. F. W. Leidelf, Sec'y.

Oct. 15-16.—New London, Ia.—Sixth annual tournament of the New London Gun Club. Dr. C. E. Cook, Sec'y.

Oct. 15-16.—Springfield, O.—Springfield Gun Club's tournament. B. F. Downs, Capt.

Oct. 21-22.—Kenton, O.—Second annual fall tournament of the Kenton Gun Club; $75 or more added money. K. P. Johnson, Sec'y-Treas.

Oct. 21-22.—Sistersville, W. Va.—Sistersville Gun Club's target tournament.

Oct. 24-26.—Bisbee, Ariz.—Tenth annual tournament of the Arizona State Sportsmen's Association. M. J. Cunningham, Sec'y.

Newark, N. J.—South Side Gun Club target shoot, every Saturday afternoon.

Chicago, Ill.—Garfield Gun Club's target shoot, every Saturday afternoon until October. Grounds, West Monroe street and Fifty-second avenue. Dr. J. W. Meek, Sec'y.

First Saturday of each month for a year, Burnside.—Contest for the Troisdorf live-bird and target medals; 10 live birds; 25 targets; open to all. First contest, March 1.

CONTESTS AT INTERSTATE PARK.

Interstate Park, Queens, L. I.—Two miles beyond Jamaica, on L. I. R. R. Trains direct to grounds. Completely appointed shooting grounds always ready for matches, club shoots or private practice. Café and hotel accommodations.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have published. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York. FOREST AND STREAM *goes to press on* TUESDAY OF EACH WEEK.

The Kenton (O.) Gun Club announces a target tournament, to be held on Oct. 21 and 22. Entry fee each day, $20; a total of 200 targets in the day's events. Added money, $75. In the 15-target events, the purses will be divided 50, 30 and 20 per cent.; 20 and 25 target events, 40, 30, 20 and 10 per cent. The club publishes further information as follows. "The last event each day will be at 25 targets, and to this event the first day is added $25 for the benefit only of those who have shot the entire programme of that day. To the last event of the second day is added $40 for the benefit only of those who have shot the entire programme that day. There will be no high averages, but this division of the purse and the added money will insure a large number of shooters in every event, and the high guns should be satisfied with what they have won, and the low gun will have a chance to the end to play even. All known 90 per cent. men—and we know them all—and manufacturers' agents barred from participating in purses, but they are invited to shoot for a high average of $10. Shooting commences promptly at 9 A. M. Write K. P. Johnson, secretary committee in charge."

Mr. Russell M. Vernon, secretary-treasurer of the Middletown Gun Club, Middletown, N. Y., writes us as follows: "An open shoot will be held by our club on Saturday, Sept. 27. Targets from both the magautrap and experts. The Wanderers are expected to be present. All shooters are invited."

The Hill Top Gun Club's programme of its annual fall live-pigeon tournament, Oct. 1 and 2, is now ready for distribution, and may be obtained of the secretary, G. W. Clay, Austerlitz, Ky. This tournament will be under the management of the Clay Brothers and J. Q. Ward. Shooting will commence at 9 o'clock. At 10 o'clock, Oct. 1, the Hill Top Handicap, 50 pigeons, $20 entrance, birds extra, class shooting, all surplus added, $250 guaranteed, will commence. On the second day, the Hill Top Handicap, if unfinished, will be continued. Other matches will be shot according to the desire of the shooters. Boundary, 33yds. Dogs will do the retrieving. Competition is open to the world. Interstate rules will govern. Handicaps 25 to 33yds. Guns and ammunition sent to the secretary will be delivered on the grounds free. Visiting shooters should stop at Paris, Ky., where carriages will take them at 8 o'clock A. M. from the hotel to the grounds, an eight-mile drive, at the expense of the club.

The Lehigh Rod and Gun Club of the Bethlehems, announces a one-day target tournament to be held at the club grounds, Manhattan Park, Rittersville, Pa., Oct. 2, situated half way between Allentown and Bethlehem. On the programme there are ten regular and one special merchandise event, the latter at 25 targets, $2 entrance, handicaps made according to the percentages made in the regular events. Total entrance in the ten regular events, $11.50. Shooting commences at 10 o'clock. Class shooting. Targets, 2 cents, of which one-half cent per target will be set aside for first, second and third high guns, shooting through the programme events. Experts and manufacturers' agents may shoot for targets only. Ship shells and ammunition to D. S. Daudt, 22 West Third street, South Bethlehem, Pa. The members of the tournament committee are Messrs. D. S. Daudt, Isaac Hahn, C. N. Miller, H. Koch and E. Heiser.

The Greenville (O.) Gun Club has issued the programme of its distance handicap tournament, to be held on Oct. 7 and 8. The competition is open to all. There are twelve target events each day, of which eight are at 15 and four at 20 targets, entrance $1.50 and $2; total, 200 targets at $20 for each day's programme. A special event on the second day is the contest, open to all, for the Peters Cartridge Company's medal; conditions, 25 targets, $2 entrance, money divided 40, 30, 20 and 10 per cent. Shooting commences at 9 o'clock. Handicaps 14 to 22yds. The committee has power to change any shooter's handicap if it deems it necessary to do so. Guns and ammunition sent to the secretary, H. A. McCaughey, will be delivered on the grounds free of charge. Average money, $30, divided 50, 30 and 20 per cent., for entire programme.

Mr. C. Palmer, Morning House, Farrar Road, Bangor, N. W., writes us as follows: "I inclose cutting from Shooting Times, proclaiming F Gilbert to be a red Indian. I might say I have met Mr. Gilbert personally, as I was one of the defeated English team last year (clay pigeon match). The visit of this team gave me a very high opinion of America, as they were one and all a splendid lot of fellows." The excerpt is as follows: "A wonderful score at clay birds shooting is reported from the other side. A man named Fred Gilbert, who, we understand, is a Red Indian, shooting through a day's programme of twelve events, never missed a single bird, scoring 200 hits straight. The birds were, it is said, very strongly thrown, fully 60yds. This Indian is known among the tribes by the name of 'Chief Heap Talk,' and somehow it seems to us that this title rather spoils the story."

Mr. C. G. Blandford, captain of the Ossining Gun Club, informs us that his club will in the near future offer a silver cup to be shot for by seven-man teams of the Rockland, Orange, Dutchess and Westchester counties, members of teams respectively to be residents of the counties named. The first shoot will be on the grounds of the Ossining Gun Club. The victorious club shall have the privilege of taking the cup and holding the next shoot on its grounds. The club winning it twice owns it. The men must be amateurs. Targets one cent, 25 targets per man. The officers elected at the annual meeting on Sept. 10, for the ensuing year are as follows: President, Franklin Brandreth; Vice-President, Dr. E. B. Sherwood; Secretary, W. P. Hall; Treasurer, Amos Bedell; Financial Secretary and Captain, C. G. Blandford.

The Dewar trophy, which was put in competition in June, 1900, and was to so continue under certain specific conditions till June, 1902, had a disputed title, it being contended by Dr. A. A. Webber that under the conditions the cup was his property, while a part of the committee which drew up the conditions held the contrary. Capt. J. A. H. Dressel, who was made the sole arbiter under the conditions, called upon the donor, Mr. Frederick Glassup, agent of the Dewar Company, who proved to be a gentleman of eminent fairness. On the original conditions and facts being submitted to him, he readily conceded Dr. Webber's claim to the Dewar trophy, so that the matter is pleasantly settled.

On the third day of the Du Bois (Pa.) Rod and Gun Club's tournament, Sept. 11, six four-man teams contested for the Hibner trophy, valued at $100, and $20 in gold. The Pittsburg team won with a score of 87, Atkinson making a straight score of 25. The other teams were Williamsport, Clearfield, Kane, Du Bois and Windber. The conditions of this competition were open to any recognized gun club in Pennsylvania, no entrance fee, targets 5 cents, 25 targets per man. To become the property of a contesting club, it must be won by it three times in succession at the annual shoots of the Du Bois Rod and Gun Club, which will add $20 each year to it.

The secretary, Mr. M. J. Cunningham, writes us as follows: "The tenth annual tournament of the Arizona Sportsmen's Association will be held at Bisbee, Ariz., Oct. 24, 25 and 26. The Bisbee Gun Club will spare no expense in making this meeting one of the most successful ever held in Arizona. We have assurances that all gun clubs throughout the Territory will send large delegations, and we are now preparing for one hundred shooters to participate. The official programme will be issued in the near future."

At the Indian shoot, Battle Creek, Mich., Sept. 9 to 12, the high averages were won in the following order: F. Gilbert 756, R. O. Heikes 731, H. C. Hirschy 729, J. A. R. Elliott 728, W. R. Crosby 720, J. S. Fanning 719, J. M. Hughes 715, C. W. Phellis 700, T. A. Marshall 699, C. W. Budd, 694. The total number of targets for the four days' programme was 800. The ten high average moneys were $20, $15, $12.50, $10, $10, $8, $7.50, $7, $5, $5, a total of $100. On the third day Crosby made a run of 77, but Hirschy started shortly afterward and ran 112.

Mr. John S. Wright, manager of the Brooklyn Gun Club, announces a tournament to be held on Sept. 24, at which he will offer $17.50 in gold for high averages. Competition commences at 1 o'clock. This is an exceedingly liberal addition of money for an afternoon's shooting, and the many friends of Mr. Wright should respond with their personal support. The main event will be a handicap, with allowances added to the scores. It will be an afternoon of good shooting with something for which to shoot.

Mr. Albert A. Schoverling, corresponding secretary, informs us that the Fulton Gun Club will hold a shoot on Sept. 21. To reach the club grounds, Brooklyn, take Kings County Elevated to Crescent street, or from New York, Twenty-third and Forty-second street ferries; thence on Old Mill road to the grounds. At a meeting of the club, held on Sept. 11, Mr. Ike E. Lay was elected secretary. There will be merchandise prizes for members only while other prizes will be open to all.

The Indians, at their annual meeting at Battle Creek, Mich., last week, re-elected the outgoing officers, and took into the tribe the famous chiefs J. Burmister, E. Kike, A. W. du Bray, E. B. Coe, J. M. Lily and Hood Waters. The officers are: Hon. Tom A. Marshall, High Chief; Frank C. Riehl, Chief Scribe; C. W. Budd, Chief of Wampum.

The Crescent Athletic Club will begin its fall and winetr season of target shooting on the first Saturday in October, a six months period of enjoyment. The membership of the Shooting Committee is as follows: Messrs. A. W. Higgins (chairman), C. A. Sykes, F. B. Stephenson, T. W. Stake and H. M. Brigham.

The Interstate Park Trotting Association has jumped into ominence and success from the start. Its races have been conintly growing in importance and interest. Sept. 30, and Oct. 1 d 2, there will be a meeting of special attractiveness. There will trotting and pacing races each day of a high order. In preiums there will be $1,500 offered. Entries close Sept. 20. Later the season target shooting will be given special attention.

At the Bristol, Conn., Gun Club's tournament, Sept. 10, there ere forty-four participants in the competition, and seventy parcipated in the old-fashioned sheep barbecue, which goes to show at an event, with all the essentials of popular appreciation, with l the true equity of a division satisfactory to each participant, is been an over-long time neglected by tournament managers.

The Richmond Gun Club, through its secretary, Mr. Albert A. choverling, announces that its next regular shoot will be held 1 Sept. 20, at Silver Lake, Staten Island. Traps and targets will e ready at 2 o'clock. The main event will be a 50-target handiip for a $10 gold piece; entrance $1.

Secretary R. T. Gowan mentions that the Raleigh (N. C.) Gun lub has almost perfected arrangements for a two days' shoot, to e held in the latter part of October, at which not less than $100 dded money will be offered for competition. It will be held in onnection with the State fair.

In the contest for the Iroquois cup, at Du Bois, Pa., on Sept.), between five-man teams, of the Du Bois and Clearfield clubs, 5 targets per man, the former club won by a score of 102 to 98. Ir. E. W. Kelly, of the Du Bois club, scored 24, and was high ian in this contest.

We acknowledge the receipt of a souvenir China bluerock, the ellow band of which is of gold, a very artistic piece of work. t was sent to us by Mr. R. W. Sample, secretary of the East .iverpool (O.) Gun Club, to whom we extend our thanks for the ind remembrance.

Messrs. T. W. Morfey and Aaron Doty, the former of Queens, .. I., the latter of Paterson, N. J., are said to be matched for 100 a side, 100 live birds each. November will be the month in hich this interesting contest may take place.

The Fostoria (O.) Gun Club announces that it will hold a tournaient on Oct. 1 and 2; $100 added. The first day will be open to ll; the second day will be devoted to the merchandise handicap. Ir. W. R. Alspach is the assistant secretary.

BERNARD WATERS.

WESTERN TRAPS.

Missouri Twenty-Fifth Annual.

CHICAGO, Ill., Sept. 13.—The twenty-fifth annual tournament of he Missouri State Fish and Game Association will begin at the ark on the Blue, Kansas City, Sept. 17, and continue four days. The shoot is held under the auspices of the Kansas City gun clubs. Live birds only the first two days; targets only the last two days. How nice it must seem to be allowed to shoot live birds. Our Ma won't let us up here. The programme is of course good, and any "K. C." shoot is of course good. E. H.

HARTFORD BUILDING, Chicago, Ill.

Garfield Gun Club.

Chicago, Sept. 13.—The appended scores were made to-day on he occasion of the sixth trophy shoot of the third series. Hellman and Midgley tied on 21 out of 25, and as Midgely had to go away, he forfeited Class A trophy without contest; that is to say, there was no shoot-off, and Hellman stands winner. Class B trophy was won by McDonald on 18, and Class C by Eldred on 17.

In the cup contest, which followed, Hellman and Dafter tied on 21, and Hellman won on shoot-off.

The day was a fairly good one for target shooting, only a little bit chilly. The attendance was fairly good, considering the open game season is on, and so many members are away after game:

Twentieth trophy shoot:

L Thomas	1111101110110110111111001—19

A Challenge.

DAGSBORO, Del., Sept. 15.—I see in public print that Mr. C. W. Floyd, of New York city, has won the great honor of being a champion shooter of New York. I have met Mr. C. W. Floyd years previously, and would like to meet him again.

I met him in the field quail shooting and got the best of him, and in 1896 I was up to New York, and Mr. Floyd came up on me and challenged me for a trap shoot. As I had never seen a trap or a bluerock pigeon, I was somewhat slow to take up with the offer. I had to use a strange gun, but he tantalized me so I met him on the Hudson Gun Club grounds, and he rather got the best of me; but since that time I have made myself more acquainted with trapshooting. I would like to have the chance to shoot him again, but as my capital is so small I hardly know how to make it interesting for him. I have a little farm in Dagsboro Hundred, Sussex county, Del., and he has one near by me I would like to own, and if he can make it convenient to come down this fall on Nov. 15 or after, I will shoot him in the field or trap. He could not please me any better. I will try and make it interesting for him. I will back his expenses while he is here.

ISAAC A. HUDSON.

Indian Tournament.

When Brave Meets Brave.

THE Indians held their annual tournament and pow-wow Sept. 9 to 12, at the beautiful city of Battle Creek, Mich. This is the first time these modern red men of the scatter-gun-man game have come so far east, and certainly the move was a complete success. The entertainment accorded the shooters, and accommodations of hotels, the press and local gun club on whose grounds the meet was held, were all of the best and highest order.

Arrangements for the occasion were made by those two old-time and ever-young hustlers, Rolla Heikes and John Parker, and with the local assistance of the Hensler brothers, they left nothing undone that might have been suggested.

The tournament was held on a level tract less than a mile from the center of town and directly upon the street car line. Three sets of expert traps were operated on the Sergeant system, so that the programme, though long, was easily disposed of each day, with from fifty to sixty entries. Local and weather conditions combined to make the conditions exceptionally hard, and the averages, though perhaps not as high as usual, represent much of skill and hard work.

The programme consisted of 200 targets per day, in 20 and 15 bird events, four and five moneys, class shooting. The Indians added $15 and $20 respectively in each race, and in addition $100 was hung up for high averages to first ten guns. Fred C. Whitney and W. M. Bryant did the office work perfectly.

There were in attendance altogether, twenty-one Indians, twenty of whom shot the programme through. The annual meeting of the tribe was held Tuesday night at the Post Tavern. Many matters of business were disposed of, the reports of officers showing a most satisfactory condition. This was the time for the annual election of officers, but that order of business was cut short by the re-election by acclamation of Tom A. Marshall, as High Chief; Frank C. Riehl, as Chief Scribe, and C. W. Budd as Chief of Wampum. There being six vacancies on the roster, these were filled by the election of John Burmister, of Spirit Lake, Ia.; E. Rike, of Dayton, O.; Capt. A. W. du Bray, of Cincinnati, O.; E. B. Coe, of Baltimore, Md.; John M. Lilly, of Indianapolis, Ind., and Hood Waters, of New York, to make up the full quota of the tribe. The initiation ceremony was dispensed with for lack of hall accommodations.

First Day, Sept. 9.

The weather was rough and raw, and a fierce wind made shooting very difficult. Only one man in fifty entries was able to score in the 90 per cent. class, and all shot at times below the moneys. Gilbert, Elliott, Heikes, Roll, Fanning and Phellis did the good work of the day. Scores:

Third Day, Sept. 11.

The weather was heavy and threatening, and the latter end of the programme was shot in the rain. There was no wind, however, and several of the braves piled up their old-time good scores. Rolla Heikes went out with but eight misses, with Gilbert, Hirschy and McMurchy in two, three, four order. Crosby, starting from the second event, made a run of 77 straight, but Hirschy got away a little later, and ran up a string of 112 without a miss. The scores:

Events:	1	2	3	4	5	6	7	8	9	10	11	12

Fourth Day, Sept. 12.

The weather culminated to-day in a downpouring rain, but such is the zeal of these Indians that they went right ahead and finished the programme. The honors went to Gilbert, Crosby, Hughes and Hirschy. Scores:

Events:	1	2	3	4	5	6	7	8	9	10	11	12

Du Bois Tournament.

Du Bois, Pa.—The shoot of the Du Bois Rod and Gun Club, Sept. 9 to 11, was a success. It was one of the largest held in the Western part of Pennsylvania for some time past. It was held on the Fair grounds, in front of the grand stand, and drew an audience of about 1,000 people.

The Hibbard and Iroquois cups were objects of special interest. Mr. Frank Lawrence. an expert in trapshooting matters, won much good will by his active assistance in the interest of the tournament.

Sept. 9, First Day.

The weather was unfavorable, being cold, wet and sombre. There was a good number of competitors notwithstanding, thirty-seven contestants participating in the events, of whom 19 shot through the programme. Mr. J. Atkinson was first in averages of the day, with 192 out of 200, and Mr. L. Squier was next with 190. Of the local men, Mr. E. W. Kelly was first with 158.

In the afternoon there was a friendly match at 100 targets. Mr. J. Atkinson, of New Castle, scored 98, of which 86 were a straight run. Mr. L. Squier accounted for 91. The scores follow:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	Total

Sept. 10, Second Day.

The Iroquois cup was the special contest of general interest, though the number of contestants for it was not equal to anticipations, there being but two, the Du Bois and Clerfield clubs, the former of which won by a score of 102 to 98. Kelly, of the Du Bois team, was high man with the score of 24. Forty participated in the tournament to-day. Squier was high man in the averages of the regular programme. He broke 184 out of a possible 200, and this also pulled him into the lead of the two days' averages. Mr. Atkinson was second with 181. The weather was not unfavorable nor uncomfortable. The scores follow:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	Total
Targets:	15	15	20	15	15	25	15	15	20	15	15	15	Broke.

Quinn	22	Woodward	18
Sullivan	21	Connelly	19
Williams	22—102	Plympton	18—98

Sept. 11, Third Day.

The weather was exceedingly pleasant to-day, making agreeable conditions for the closing of the excellent competition. The North Side Gun Club, of Allegheny, had the honor of winning the Hibner silver cup, valued at $100, though this by the exceedingly small lead of one target. The contest for it was between four-man teams, 25 targets per man. The winners must defend it at the tournaments of the Du Bois Gun Club, and it must be won three times in succession by a club before it is the club's property. The merchandise event was keenly contested. Dr. L. J. Quinn won first prize. The championship medal, a contest among the Du Bois Gun Club members, was won by Mr. J. Williams. Mr. L. B. Fleming, of Pittsburg, was high for the day with 191 out of 200. Fox was second with 187. Mr. L. J. Squier was high average for the three days, 600 targets, with 558. J. T. Atkinson was second with 554. Fox was third with 545. L. B. Fleming was fourth with 544. The scores follow:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	Total

Bristol Gun Club.

Bristol, Conn., Sept. 10.—The annual tournament of the Bristol Gun Club was held on their grounds, at East Bristol, to-day. The grounds were in excellent condition, but a high wind most of the day interfered with the shooters' scores. There were forty-four shooters took part in the events, and seventy were at the tables when the old-fashioned sheep barbecue was served.

F. L. Fairbanks.

Ossining Gun Club.

Ossining, N. Y., Sept. 13.—In spite of the rain, there was a fair turnout of shooters at the regular Saturday afternoon shoot of the Ossining Gun Club. Event No. 4 was for the Bissing prize, a Winchester rifle. Coleman carried it off with a score of 23 out of 25. This club will shortly offer a silver cup, to be shot for by teams of seven, of gun clubs of Rockland, Orange, Dutchess and Westchester counties. Teams must be composed of residents in the counties named. Any clubs may send a team. The first shoot must be on the grounds of this club. The team winning has the privilege of taking the cup and calling the next shoot on their grounds. The club winning the cup twice owns it. Conditions, seven-men (amateurs) teams, 25 birds each, at one cent, optional sweeps. Date for first shoot to be announced later. Secretaries of clubs in the counties named are requested to interest themselves in this plan, as it will promote good fellowship, thereby guaranteeing better attendance at forthcoming tournaments. The yearly meeting of the Ossining Gun Club was held on Wednesday, the 10th inst. Officers elected for ensuing year: Franklin Brandreth, President; Dr. E. B. Sherwood, Vice-President; W. P. Hall, Secretary; Amos Bedell, Treasurer; C. G. Blandford, Financial Secretary and Captain.

ON LONG ISLAND.

Brooklyn Gun Club.

Brooklyn, L. I., Sept. 13.—The weekly shoot of the Brooklyn Gun Club to-day was unfortunate as to weather, the afternoon being raw, dark and rainy, yet there was a good attendance, there being twelve shooters who participated. Welles, Hopkins, Schneider, and Griffith were the leaders in the honors, as the appended scores will show. Mr. John S. Wright, the manager, announces that, on Sept. 24, he will hold a tournament, at which he will add $17.50 in gold for high averages. The main event will have handicap allowances. Shooting commences at 1 o'clock. This is a very liberal proposition, and the New York shooters should manifest appreciation of attending.

Events:	1	2	3	4	5	6	7	8	9

The East Liverpool Tournament.

East Liverpool, O., Sept. 10.—The tournament of the East Liverpool Gun Club, held to-day, had a small but enthusiastic attendance. Among the visitors were G. E. Kingsbury, S. W. Bilsing, New Brighton, Pa.; Dr. W. H. Beecher, E. F. Haak, Canton; L. T. Besserer, Zanesville; M. Saffold, Cleveland; V. Hunter, Brilliant, O.; George Cochran, Washington, Pa.; V. J. Agnew, New Castle, Pa. A pleasant feature was the presentation of a China bluerock, decorated with a gold band and stamped with name and date of the tournament.

Competition began at 11 o'clock and ended at 5 o'clock. The $25 for the four high average shooters was won by Messrs. E. F. Haack, Canton, first; G. Cochran and Saffold tied for second, and Early and Agnew tied for third; Besserer was fourth.

Raleigh Gun Club.

Raleigh, N. C., Sept. 11.—We have almost perfected arrangements for a two days' shoot, and possibly three, the last week in October. I cannot say positively just now, but there will not be less than $100 added money each day, and we hope to draw seventy-five or one hundred good shooters. This will be our second annual shoot in October at our State fair, which attracts visitors from all over the State, and some outside. We had a very nice shoot last year under the able management of Mr. L. D. Thomas, and we hope to attract many more shooters this year. Two sets of traps will be used, magautrap and expert.

The following scores were made to-day, 50 targets each: Whitaker 44, Johnson 43, Parker 43, Pearce 38, Gray 35, Stark 30, Galloway 28, Pullen broke 18 out of 25.

R. T. Gowan, Sec'y.

Cincinnati Gun Club.

Cincinnati, O., Sept. 6.—The scores made in the fourth contest for the Troisdorf medals, under the auspices of the Cincinnati Gun Club, to-day, resulted as follows: See (18) 43, Peters (19) 41, Van Ness (20) 41, Nye (18) 40, Boyd (16) 39, Harris (19) 39, Heyl (21) 39, Ward (16) 37, J. B. (18) 37, Faran (18) 37, Ahlers (20) 37, Steinman (18) 36, Lindsley (16) 36, Maynard (18) 36, Butts (16) 35, Verges (21) 35, Capt. (17) 35, Randall (19) 34, Jack (16) 34, Roanoke (16) 32, Falk (16) 31, Corry (18) 30, Ackley (16) 29, Colonel (14) 11. See won Class A; Harris and Boyd tied for Class B. The conditions were 50 targets per man, with a handicap in yards.

Answers to Correspondents.

No notice taken of anonymous communications.

G. W. G., Rye, N. Y.—After Oct. 1 will the game laws of Connecticut permit me to enter that State and kill a few game birds and ship the same without the State in a package with its contents plainly marked on the outside? Ans. No. If accompanied by owner and plainly marked game may be shipped within the State, but its export under any condition is forbidden. See Game Laws in Brief, July issue, page 68.

W. O. W., Charlottesville, Va.—Will you kindly tell me what kind of a bird this is? Ans. The bird is a black tern (*Hydrochelidon nigra surinamensis*). It is found in summer throughout temperate North America, migrating southward in winter to South America, as far as Brazil. The specimen sent in is a young bird, the adult in summer plumage is much darker. Our correspondent may have noticed the curious webbing of the feet, which, as Coues says, are little more than semi-palmate. These black terns are a summer feature of the Western prairie States, where they nest in great numbers in marshes along low slow streams and near little lakes. Their food consists largely of insects.

PUBLISHERS' DEPARTMENT.

At the National Rifle meeting, which was concluded at Sea Girt, N. J., Sept. 6, the pistol championship of the United States and the pistol re-entry match were won by Mr. Thomas Anderton, of Massachusetts. He also won the revolver championship match. The revolver re-entry match was won by Mr. C. F. Armstrong, of Boston. Mr. Anderton was second. He and Armstrong used Peters cartridges. The Schuetzen rifle contests, Match A, on the Standard American targets, was won by Dr. W. G. Hudson, of New York. One of his tickets of five shots was perfect, a possible 50. In Match B, on the German ring target, the winner, Mr. F. C. Ross, of Chicopee Falls, Mass., made a perfect score of 75. Hudson and Ross used King's Semi-Smokeless.

The sportsmen's trunk, manufactured by Crouch & Fitzgerald, has one welcome new point. Most trunks open at the top, and so, if anything placed at the bottom is needed, the trunk must be unpacked. This trunk, however, opens in front, as well, and is so subdivided that anything it contains can be reached at once. The arrangement not only saves labor, but time and patience as well, and whether in tent, log cabin, steamboat or wagon, the articles in the trunk are immediately accessible.

Using U. M. C. ammunition at flying targets, W. W. McQueen, Greenville, Mich., broke 267 out of 295; Rolla O. Heikes, Aug. 13, Birmingham, Ala., broke 96.8 per cent, and at Paducah, Ky., Aug. 27, he broke 340 out of 350. Aug. 13, B. J. Nobels won the W. New York and N. Pennsylvania championship, breaking 94 out of 100. Aug. 14, Geo. Flint won high average, Americus, Ga., and same date, J. Lettler won high average, Warsaw, Ind. Sept. 1, M. E. Hensler won high average, Battle Creek, Mich.

The catalogue (1902) of the Remington Arms Company contains 64 pages of interesting matter, a revised price list, excellent illustrations of the many different kinds and grades of shotguns, rifles and pistols, parts and extras, manufactured by that company. There are a number of sectional views. It also contains patterns of shot in circles, illustrating the difference between cylinder, modified choke and full choke guns. A table showing 40, 60, 75 and 100 per cent. of number of pellets in loads of shot from ⅞ to 1½oz., is embodied in it.

At the Du Bois (Pa.) tournament, Sept. 9 to 11, Mr. L. J. Squier was high average for the three days with 558 out of 600; he shot Winchester gun and ammunition, and Dupont powder. J. T. Atkinson was second with 554; he shot a Parker gun, Peters ammunition and Dupont powder. A. H. Fox was third; he used Winchester gun and ammunition and Dupont powder. L. B. Fleming was fourth; he used Winchester gun and ammunition and L. & R. powder.

The index to the new sporting goods catalogue, recently issued by Siegel Cooper Co., of this city, seems to name about everything needed by the outdoor person, from "air rifles" to "war relics." If one reads across the page he sees "snipe calls," "kodaks" and "hammer shotguns." The catalogue is profusely illustrated on all its 116 pages, and will be sent without charge to any one who may apply for it.

A Charming Nature Book.

Neighbors of Field, Wood and Stream.

By MORTON GRINNELL.

This is a book of country life, but it deals not with people, but with the wild creatures which, though for the most part unseen, live their lives all about us in Field, Swamp and Forest. Its natural history is accurate and its facts are given most entertainingly. It is copiously illustrated from the author's own specimens and from life. 12mo, cloth. Illustrated. Price $1.30 net, $1.45 postpaid.

FOREST AND STREAM PUBLISHING CO., 346 Broadway N. Y

For Anglers and Big Game Hunters.

A Big Game and Fish Map of New Brunswick.

We have just had prepared by the official draftsman of New Brunswick a map of that province, giving the localities where big game—moose and caribou—are most abundant, and also the streams in which salmon are found and the rivers and lakes which abound in trout.

The resources of New Brunswick in the way of game and fish are only just beginning to be appreciated, and we are glad to offer to FOREST AND STREAM readers the first authentic information as to localities where sports may be had. The map is printed in colors, on a tough paper, and is enclosed in a stout manila envelope for protection in carrying. Price $1.

FOREST AND STREAM PUBLISHING CO., NEW YORK.

OUR SPECIAL FIELD AND TRAP GUN

Fitted with genuine "Krupp Fluid Steel" barrels (and every gun so branded), dark curly English walnut stock and forearm, finely checkered. Full pistol grip with rubber cap very highly engraved, double thick breech with concealed cross-bolt, reinforced frame and stock fastening, narrow skeleton rib. Made in 10, 12 and 16 gauge.

PRICE, $50.00.

Positively the best bargain ever offered in a high grade hammerless gun at a moderate price and superior to most guns selling for $25 more.

Your old gun taken in exchange.

FIELD GUNS.

When, 15 years ago, we introduced the light weight, short barrel 12 gauge **Featherweight Francotte Guns,** most hard practical field shooters who were lugging their 8 or 9 pound guns when following their bird-dogs, shook their heads and very much doubted that anything like the same bag could be made with these "grasshopper" or "mosquito" guns as with their heavy old-fashioned guns.

When, however, one of these full-choked little guns made highest percentage of pattern and penetration in gun trial where most of the leading guns competed and when others were winning highest honors at the trap—then, public opinion began to change. Since then thousands of our Francotte and Knockabout Guns have gone into the hands of leading sportsmen.

FRANCOTTE AND KNOCKABOUT GUNS have always kept well ahead of all competition as regards shape and model, strength coupled with light weight, shooting and wearing quality, fit and finish, and the ownership of either make of gun is a testimonial as to a sportsman's standing.

FRANCOTTE GUNS, all gauges, weights, length of barrels and shape of stocks from $80.00 to $450.00 net.

A New English Gun.

"Great Value for Little Money."

THE REGENT. PRICE $65 NET

We have just received the first few cases of a new English gun which we have named "The Regent". They are made for us by the best gunmaker in England and bored on the same principle that has won world wide honors for English guns. The barrels are best Siemens Martin steel, and the shooting is unexcelled. The stocks are selected English walnut, half pistol grip, latest model Anson & Deeley action, nicely engraved, and the finish and workmanship throughout are up to the English standard. English guns have long been the standard of the world, and this new product will mark a new era in price as well as quality. We have never before been able to offer so fine and good a gun for so little money. They can be supplied in weights from 6¼ lbs. to 8 lbs., in 12 bores, and from full choke to true cylinder.

We carry a large line of guns and rifles from $6.00 to $600.00, and are sole U. S. Agents for the celebrated guns of W. W Greener.

CANOE CRUISING AND CAMPING.

By Perry D. Frazer. Illustrated. 95 pages, cloth. Price $1.

This interesting little volume is a practical guide for the cruising canoeist, the man who wishes to start away from the city and for a short time to make his canoe his home. With this in view, Mr. Frazer, who regards canoeing as a healthful and economical method of passing away leisure hours, has written briefly but attractively of canoes, camping outfits, clothing, firearms and ammunition; fishing tackle, photography, and in general of cruising, camping and all that pertains to this phase of outdoor life. While the volume has been written chiefly for the younger men, it is yet full of practical information and suggestion that appeals to those who have had a wider experience.

Such a book as this should be in the library of every man who is interested in outdoor life or the things which pertain to it. It is one of the manuals which should stand on the shelf alongside of "Woodcraft," of which, in fact, it is a part.

FOREST AND STREAM PUB. CO.
346 Broadway, New York.

ROWLAND E. ROBINSON'S Danvis Books.

These books have taken their place as classics in the literature of New England village and woods life. Mr. Robinson's characters are peculiar, quaint and lovable; one reads of them now with smiles and now with tears (and need not be ashamed to own to the tears). Mr. Robinson writes of nature with marvelous insight; his is the ready word, the phrase, to make a bit of landscape, a scene of outdoors, stand out clear and vivid, like a startling flashing out from the reader's own memory.

The Spaniel and Its Training.

By F. H. F. Mercer. To which are added the American and English Spaniel Standards. Cloth. Illustrated. Price, $1.00.

FOREST AND STREAM PUB. CO.

YACHT ARCHITECTURE.

By DIXON KEMP, Associate of the Institute of Naval Architects, and Member of Council. Second edition. Super-royal 8vo. Price, $16.80.

This work enters into the whole subject of the laws which govern the resistance of bodies moving in water, and the influence a wave form of body and wave lines have upon such resistance. It also deals comprehensively with the subject of steam propulsion as applied to yachts. An easy system for designing is provided, and every necessary calculation is explained in detail. The latter part of the work is devoted to yacht building, and engravings are given of every detail of construction and fitting, including laying-off, taking bevels, etc. The list of plates (exclusive of over thirty devoted to the elucidation of the text, and nearly 200 wood cuts) exceeds fifty, and comprises the lines of some of the most celebrated yachts afloat by the most successful builders and designers.

FOREST AND STREAM PUBLISHING COMPANY, NEW YORK.

Hints and Points for Sportsmen

Compiled by "Seneca." Cloth, illustrated, 224 pp. Price $1.50.

This compilation comprises six hundred and odd hints, helps kinks, wrinkles points and suggestions for the shooter, the fisherman, the dog owner, the yachtsman, the canoeist, the camper, the outer; in short, for the field sportsman in all the varied phases of his activity. The scope of the information it contains embraces a wild field, and "Hints and Points" has proved one of the most practically useful works of reference in the sportsman's library.

SEND THE NAME WITH THE MONEY.

WE often receive remittances of money unaccompanied by the name of the sender. When sending money one should always be very sure to sign his name. The sender of money who does not sign his name when he sends the money can hardly expect to receive in return from those to whom he sends the money that for which he sends the money, and failing to receive that for which he sends the money from those to whom he sends the money, he naturally blames the people to whom he sends the money because they do not send him that for which he sent the money, whereas if he sends his name when he sends the money, the people to whom he sends the money would send him the things for which he sends the money. The transaction would then be capable of being ended. But when the sender sends the money without his name the receiver of the money can only hold it, awaiting further developments. Sometimes nothing develops. In such cases the money must be held. It still belongs to the person who sent it and not to the person who receives it, and it is generally speaking a nuisance for the persons who receive it to hold it in trust for the person who sent it. The Forest and Stream Publishing Company is holding and has held for some time several such remittances from carelessly, and it is to be assumed unintentionally, anonymous correspondents. When the fund is large enough to furnish adequate compensation for a struggle with the problem, it will be used as a prize for the best explanation of why people send money for things without sending to the people to whom they send the money the address to which the things for which the money is sent are to be sent by the people to whom the money is sent.

THE FOREST FIRES.

IT has been years since there have been so many and so extensive forest fires as within the past few months, and it is probably not too much to say that millions of dollars' worth of standing timber have been destroyed; while in Oregon it is believed that more than 40 persons have lost their lives in the flames. The destruction of timber in the neighborhood of Grand Encampment, Wyoming, and on the borders of the Yellowstone Park Forest Reserve has been widespread, and many, many years must elapse before nature or art can repair the damage. Not only have the mountains been stripped of their timber, but in some cases the winter range of the stockmen has been burned over, and their cattle and horses will have to be moved somewhere to a winter range.

In Wisconsin and Minnesota there have been serious fires, which, happily, have been put out. Montana, Washington, and northern California, as well as Oregon, are said to have suffered severely, and it is reported that the smoke of the forest fires along Puget Sound and some other points on the coast is so thick as to make navigation difficult and dangerous. There have been many fires in Colorado also; and at last advices most of the fires which have been raging for months over the mountain country west of the Missouri River are still burning.

If the United States had a proper forestry system and service, such extensive and disastrous conflagrations could not occur.

The first step looking toward such an improved service was taken at the last session of Congress, when a bill was introduced which had practically the unanimous approval of the best equipped foresters in the country. The purpose of the bill was to transfer the control of the forestry service from the Department of the Interior to the Department of Agriculture. Largely through the instrumentality of Mr. Cannon, of Illinois, this bill was killed, chiefly, it was reported, on grounds of economy. It is to be hoped that the loss of property and loss of life which have taken place this summer may open the eyes of Mr. Cannon and other economical persons of his caliber to the importance of providing against a recurrence of such fires in the future. If we take into consideration the value of the water stored by these forests to the inhabitants of the arid West, it will seem that it is a good investment for the Government to take all steps that will insure a permanency of this water supply.

THE RAIL TIDES.

IN the Northern States the closing days of September mark usually—though not always—the closing also of the rail shooting season.

The broad fields of corn grass or wild rice, which a month ago showed unbroken surface of tasseled heads that bowed before each passing breeze, are interrupted now by many narrow lanes where the boats of the rail shooters have passed to and fro, breaking down the grass which now lies in unsightly tangles on the water's surface. The heads of the grass which still remain upright no longer bend beneath a burden of long, slender grains, but stand upright, straight and naked, stripped of their fruitage by the birds. For beside the rail which run over the floating vegetation, and squeeze their way among the close set stems, and sometimes climb part way up the stalks of the grass; and the ducks which pick up the falling seed and at low water dabble in the mud of the bottom, these rice fields are the resort and feeding ground of great flocks of other birds. But now since most of the grain is gone and food has become scarce and the nights are growing cooler, the metallic cluck of the red-winged blackbird is heard less often, and the high-pitched musical tinkle of the reed bird no longer comes to the ear.

The wet meadows have long been mowed, and on the higher ridges along their borders, goldenrod and aster are beginning to mature. On the hills back from the water, patches of brown appear on the chestnut trees and the birch leaves are letting go their hold on the slender twigs, and are slowly falling to earth. Here and there, the soft maples of the lower ground are patched with vivid red, foreshadowing the general blaze of color that the next month will show, and the conical cedars which crown the higher rocky knolls are twined with streamers of the Virginia creeper, already turning crimson, and soon to glow yet more brilliantly against the dark green background. The heats of summer are still felt at midday, and the air is smoky with a presage of the autumn which is not yet here. At morning and evening in quiet weather, light fogs hang over the streams—fogs which hardly obscure the view, but distort and magnify well-known objects so that they are hardly to be recognized.

A morning tide is always a low tide, and so is favored not at all by the average gunner, but if one starts for the rail grounds early in the morning, he may see strange things. Once in a while a woodcock may be seen to fly across the stream with the air of one who has been out all night, and is ashamed to be caught abroad by the rising sun. Even a ruffed grouse has been seen to cross the river—perhaps influenced by the curious wandering instinct which in early autumn attacks this noble bird, and leads him to show himself in all sorts of unexpected places, careless of his own safety and quite without the wisdom which will characterize him a month or two later.

Rail shooting is a charming sport, but a sport for women and children and aged men, rather than for the hardy sportsman, who, tough of muscle and long of wind, is able to tramp hour after hour through New England woods and swamps, or over the slippery prairies or the rough mountains of the Northwest, or among the pine woods and old fields and briery thickets of the South. What can be more luxurious than to stand or sit in the boat, and to be shoved smoothly and slowly among the wild rice fields, while the tame and slow-flying birds rise in front or on either hand and gently flap their way to a hoped-for place of safety? The gunner has abundant time, a clear field. There is no need to allow much for crossing shots. Rarely, to be sure, if a bird is started within a foot or two of the shore, or of the thick cattails which the boat cannot penetrate, a snap shot is called for, but for the most part the shooting is open and easy.

For this very reason the rail grounds offer a capital school for the small boy or girl who desires to learn to shoot. Properly equipped and standing in the bow of the boat, the novice has every opportunity to do well, while the instructor, sitting on the midship thwart, may coach the pupil, and explain why each shot was missed, why each mistake was wrong, and what should be done when the next bird gets up. The pupil who shoots too quickly may be checked by a word of warning just as the bird rises, and urged to be deliberate; and lesson after lesson may be given which should greatly profit the learner.

In these latter days such instruction is much more important than it would have been to those who were learning to shoot twenty-five or thirty years ago, since to-day the opportunities for practice on wild birds are fewer than they used to be.

Unfortunately, not every one has access to rail grounds where lessons of this sort may be given, but those who can spend a few days each autumn in the pleasant task of giving instructions to their young people in such matters, should avail themselves of the school of the rail grounds.

VANISHING GAME BIRDS.

THAT certain species of North American mammals and birds have become absolutely extinct is too well known to make it necessary to enlarge on the fact. That certain other species are approaching, or have already reached, the danger line is well understood by those who watch such matters. One of these species is the woodcock, and it is only last week that Mr. Theo. Gordon called attention to some of the special dangers which threaten this simple fowl, so easily found, and when found so easily secured by the competent shooter. Like other game birds, it has to run the gauntlet of many dangers, and it is far less well able to take of itself than are the gallinaceous game birds, and suffers in consequence.

On another page Dr. A. K. Fisher, the Ornithologist of the Biological Survey, sounds a timely note of warning which it will be well for sportsmen and legislators to heed. He points out that the woodcock and the wood duck are becoming so scarce that they are in danger of extinction, and gives the reasons for their scarcity, which are not far to seek for any one who has followed the course of shooting and alleged game protection in the United States for the last twenty years.

For many years the woodcock was everywhere shot during the summer; sometimes before its eggs were hatched, usually before its young had lost their down or were able to take care of themselves. Even to-day during autumn and winter it is wholly without protection in its Southern home. The two facts, coupled with the small number of eggs laid and the further fact that it is a bird very easily found and shot, have contributed to the overdestruction of the woodcock, so that it has now become actually a rare bird.

The case of the wood duck is somewhat similar. By some strange mental twist, our legislators seem to think that wildfowl need no protection, and in many States the close season covers but four or five months, and these the months when few or no ducks are found in the Southern or Middle United States. There is thus no check on the duck shooting habit, and people have come to believe that whenever a wild duck is seen it is open season for that duck. The wood duck breeds over much of the United States, and is therefore present with us during the close season, and to some extent destroyed even then. It is encouraging to observe that there are seven States in the Union—New Hampshire, Vermont, Michigan, Wisconsin, Minnesota, Utah and California—and three Provinces of Canada—New Brunswick, Ontario and Manitoba—which have abolished spring shooting, not in terms, it is true, but by making the open season close during the winter. One of the counties of New York offers an interesting object lesson in duck protection during the spring, and in consequence duck abundance during the legitimate shooting season.

In matters of game protection we Americans are great hands for locking the stable door after the horse has been stolen, and then talking largely about what ought to have been done a long time before. There have been not a few examples of this in recent times, and in the matter of the wildfowl generally and of the dainty woodcock—once regarded as the especial game bird of America—we are threatened with evils which there is yet time to avert. The most effective action that can be taken to protect these birds is to shorten the season during which it is legitimate to kill them. Spring shooting should be abolished in all the States, and those of the South especially should enact laws closing the season on the woodcock and on all wildfowl not later than Jan. 30. Such laws if enforced, together with non-sale laws in the different States, might readily enough bring back the wildfowl and the woodcock in something like their old-time plenty.

Dr. Fisher is entitled to the thanks of all sportsmen and naturalists for his strong plea for the woodcock and the wood duck.

The Sportsman Tourist.

A Burning Mountain in Cibiria.

THE scene is on the Amyp River, in eastern Cibiria (the native and only correct way of spelling what westerners erroneously write as 'Siberia.') I have said 'mountain' in the head-line, although the burning ridge of gas and coal is more correctly a ridge of hills, but quite high hills—from 600 to 800 feet altitude. But sensational newspaper hacks write in the gutter press of "sea waves 'mountains' high" (whereas the highest waves in the worst storms on record have never exceeded forty-five feet above mean sea-level); the writer's "stretching-it" is a truth in comparison.

On the Amyp River, there was a current that ran past the steamer so quickly, it made us think at times we were traveling at greyhound speed; whereas in reality the vitec (Russian for mileage), was often quite sluggish. This may be readily inferred when I state that the river journey from Kabapofck, on the Pacific side of Cibiria, to Ctpeteнck (pronounced Ctretençk—ç soft, as in façade, garçon, etc.), on the head-waters of the Amyp, in the Iabloni range, took fourteen days for a distance of 2,000 bepcti (versti), or, say, 1,280 miles. Less than 100 miles a day cannot be rated among speeds of note, although we traveled day and night, except at shallow spots, which were too much even for the trained river pilots.

The fuel on these British-built but slaf-manned steamers—(there are also a few Belgian-built ones)—is always wood; and a richer fuel-wood I never saw in my life. It is from the dense fir forests on the river banks, and as it lays piled up on the decks in the warm midsummer sun, you can see the solidified turpentine in chunks in the wood, softening under old Sol's rays, and ready to ooze out, thick as molasses. Keeping up steam with such volatile fuel is an easy matter; still, the current was too strong against us to "make a record." The return journey, with the current, is made in six or seven days.

During that trans-Asiatic journey, of which mention has already been made in these columns, in Locomotive Engineering, and in special articles which our public library of Manhattan has indexed from the American Gas-Light Journal and the Coal Trade Journal into the library catalogues as representative magazine articles on exclusive subjects, this steamer trip on the Amyp River was the only part of the trans-slaf country (stretching from the Pacific Ocean overland westward for 8,000 miles to the old Polonia republic on the Teuton frontier) that the writer covered by conveyance, with one solitary exception of a couple of hundred versti in the torture-racking tapaнтac (pronounced tarantaç). [Both Russian and American spellings and pronunciations are herein occasionally given, to furnish the reader an idea of the difficulty of grasping the slaf idiom—the words being spelt one way, and sounded another.] The tapaнтaç—the Russian small-capital и having the sound of our n—is a springless national vehicle; and travelers apply to it a vulgar but peculiarly appropriate expression, when they refer to it as "enough to shake your guts out." This is literally true—in feeling, as every victim will admit. And yet the tapaнтaç is said by its undulating motions to be curative of heart troubles, nervous diseases, rheumatism, kidney and bladder diseases—especially in advanced stages.

But about the burning coal mountain? I have been working gradually up to it, to enable the peruser to form some opinion of the country and people in which it is located.

The fluvial journey was about ten days through. The town of Blagobeçhenck, midway on the Amyp River, had been left far behind, and the steamer ran into the cañons of the sidereal spur-ranges of the Iabloni mountains. Winding in and out, from morn till night, the scenery is ever changing. You feel like doing nothing but sit on deck watching the eternal changing panorama. Scenery! Have you visited the Italian lakes? Then imagine a chain or series of Italian lakes a couple of thousand miles long, and you will have a good idea of the scenery of the Amyp River.

One evening, as the steamer forced its way through the river gorges, there burst into view a particularly beautiful combination of ravishing river and mountain scenery, charmed with all the poetry of distant prospects and vast horizons, and in the near distance was a gentle curl of smoke arising from one bluff, which ever and anon in the gloaming or twilight (which in this sub-Arctic zone is lengthened out to 10 P. M.), shed a shower of crumbling ash-sparks down the cinder-strewn slope. The pyrotechnic display was exceedingly pretty, and the effect enhanced by the solitude of the region. Not a sound—the steamer stopped in this widening-out river cañon for the night—except the inimitable warblings of the colobei (nightingale). The sight was the nearest approach to a small-scale Vesuvio I ever saw; and all the passengers looked with silent admiration on the scene.

Explanations were soon forthcoming. One of the steamer's officers said the bluff had been afire for many years—how long he could not tell; nor could anybody else. Year after year, both summer and winter, the fire was gradually burning or eating its way along the ridge of bluffs, but at so small a rate of speed from year to year that its progress was almost imperceptible even to the river men.

It was supposed, said the informant, that a forest conflagration originally started the fire. But what was it that was burning (the forests about this and immediate hill-ridges having been burnt off), was asked. That, replied the officer, was the subject of research some years ago by a party of Russian geologists who went over the ground. They reported the fire was burning on "kamen lec" (stone forests), that is, petrified forests thousands of years old. Coal, I may remark, has never been used in this part of the globe.

The inference is clear. Extensive coal ridges are slowly being consumed, meaning that thousands of tons of good fuel are wasted. And yet the fire was certainly not so formidable that it could not be extinguished by a pipe line from the nearby river. A couple of days' work from a steamer's pumping engine, through half a mile of hose, would probably suffice.

In a lengthy former paper on fuel in Cibipia (as the slafs spell the country, but pronounce it as we do), mention was made that I never saw any evidences of coal during a year's journeyings hither and thither across the land. But that burning "stone forest" ridge (although I have never forgotten it) did not occur to my mind as that article was written. The consuming coal-mountain incident, however, was down on a list of subjects for treatment in a projected book of travels, which, promising to prove a complete financial fiasco (like 95 per cent. of all books published), was abandoned for the safer method of getting the special-feature articles published in a representative journal.

The other day I came across in my vest-pocket diary the entry that reminded me to write this chapter. It is in French—because all American tourists find it extremely useful to know that idiom, and, after a long spell of foreign travel, get to think and write in it. The note is as follows:

19 June (1 July), Wednesday.—Nuit, petit volcan; charbon brulant.

Which means literally: "Night, petty volcano; coal burning."—The first date is the old-style slaf one, as they are always a dozen days behind us; and almost always as many years behind us even in the simplest improvements.

L. LODIAN.

Tales of the Frontier.

III.—The Flight for Life.

FROM a woman member of one of the little bands of pioneers who fled from the wrath of merciless foes on the Minnesota frontier at the beginning of the great uprising of the Sioux, my brother, I. N. Belknap, obtained the following story, and from him it came to me. The full history of the great Indian massacre of 1862—the bloodiest of all savage slaughter in American story—has never been written, and never can be written. And only occasionally is it possible to add anything authentic to our partial knowledge of that terrible time. I take pleasure in sharing with the readers of FOREST AND STREAM this short additional chapter of that tragic story, of the truth of which I am fully persuaded:

Above the town of New Ulm, Minnesota, on the north or left bank of the Minnesota River, a small tributary creek known as the Sleepy Eye empties into the main stream; and a few miles above its mouth its first little colony of pioneer settlers made their home near the timber that lined its banks. But few in numbers—four families, if I recollect aright—they by common consent built their little hamlet on the plan similar to that of the Russian peasants—each family on that corner of their adjoining "quarter sections" that brought the houses closely together—and save for monotony inseparable from pioneer life, their days were those of enjoyment and pleasurable anticipation, as they toiled in the building up of more comfortable homes; and were all unconscious of the coming visitation of savage wrath soon to be let loose upon the frontier.

As time went on, and the wandering bands of Sioux, passing back and forth, became familiar objects to their curious eyes, they were occasionally visited by aged and partially decrepit members of the tribe who came on various begging errands; and among them was one old woman who appeared to be more than usually willing to be helpful to them in any of their work which she could understand, and which she promptly volunteered to do in return for the little kindnesses of the Christian white women who pitied the hard lot of the poor old creature, and who vied with each other in small favors to the one member of the savage race who appeared capable of gratitude.

Months came and went, and little by little the old Indian woman grew to be a more familiar object in the little hamlet; and she, having become fully convinced that the mode of life of the white people was better than that of the Indians, and that the comforts of their every-day life, which they kindly shared with her, were much greater than any she could hope for in the teepees of her own people, finally, and with the full consent of all in the little settlement, took up her abode with them.

Little did they then imagine that in extending Christian charity to the poor old creature, they were really casting their bread upon the waters, and were to find it again "after many days."

Her defection from the tribe was promptly noticed, and scowling looks and muttered imprecations of her former associates soon convinced the old woman that whatever she might afterward know of friendship could be expected only among the whites.

In the early part of the fateful year of 1862 the settlers became gradually aware of something of change in the demeanor of the savages, but so cunning were these crafty sons of deceit and treachery that only a slight uneasiness was noticeable among the settlers as the days drew on.

It was a lovely summer evening. As the sun sank low in the west and the cool of the evening came on and the breeze was sighing itself to sleep among the wild flowers of the prairie, all the white members of the lonely little colony on the Sleepy Eye were gathered on the common in front of their little hamlet in quiet enjoyment of the peaceful evening. The old Indian woman remained in one of the houses alone.

And now what nameless dread began creeping into their hearts? Had the breeze from the north been whispering some terrible story—all too unintelligible to the dull ears of the listening white people—of an unspeakable terror brooding over all the land; and were the drooping wild flowers of the prairie nodding only in mute recognition of the awful tale?

A glance to the northward from one of the party detected a moving object in the distance which seemed to be rapidly growing larger, and as all eyes were now turned in that direction it was soon made out to be a mounted man urging his horse to its utmost speed.

Wondering at the cause of such precipitate flight, they watched the rider's approach along the road leading down the creek, and when he came opposite them, instead of turning in toward them, he drew up his foaming horse and cried, "Get your wagons and horses just as quick as you can! Mount and ride for your lives to New Ulm! War has broken out, and they were fighting at the Agency all day yesterday. The Sioux are swarming everywhere, killing everybody they can find. Go just as quick as you can, and spread the warning as you go." And again the horse was spurred to rapid flight, and the rider disappeared down the road.

Turning from the last glimpse of the vanishing messenger, they stared in blank amazement into each other's eyes, for it was on the moment impossible to realize the horror of it all! And even in the hurried council that followed, it was urged that the man was probably unnecessarily excited and frightened, and it was finally decided that while it was doubtless best to heed the warning, that as night was now at hand, they would wait and take an early start on the following morning.

At this moment the old Sioux woman, coming out of the house, saw the little group in earnest council and hurried up to learn the cause of their apparent excitement. The story was repeated to her, together with their decision to begin their flight on the following morning. Instantly the old creature fairly danced with excitement. "O you go now! You go now!" she screamed. "You don't know Dakotas. I do! You go now! You go now. They not wait for morning."

"No," replied one of the men, "we think we know what we are doing. We can't travel well in the night; but in the morning we can go faster, and see what we are doing."

"Well, good-by!" said the old woman. "I go now." And suiting the action to the word, she drew up her blanket over her shoulders and started off at a rapid pace down the creek.

"Hold on, there, old lady," cried another of the men; "wait a moment. Boys, this old woman knows more about these things than we do. I move that we go with her—right now."

The wisdom of his proposition was at once so apparent that it was instantly agreed to, and in a moment more all were in hurrying preparation for flight.

While the men and boys ran for their guns and ammunition, threw saddles and harness upon the horses, opened corrals, pig-pens and chicken houses, turning everything loose to care for itself, and brought the wagons to the doors of the houses, the women gathered food, bedding and extra clothing, and a few minutes later the little band of fugitives were moving rapidly down to the mouth of the Sleepy Eye, where they forded the Minnesota River, and drove south across the river bottom and the wagon road leading down the river to New Ulm and out upon the high prairie land to the southward, and camped for the night in the darkness of the prairie. "And," said the narrator, "we had not got out of hearing of our homes when there came to our ears the sound of guns, as the Sioux were killing our cattle."

Sleep was a long time in closing the eyes of our fair informant that night. When she awoke her first glance was toward the river, when, out from the edge of the nearest timber came two of the boys of her own party bending low over the necks of a pair of the swiftest horses of the fugitives, urging them to their best speed, while a short distance behind them raced three mounted Sioux in the endeavor to cut them off. But the ponies of the Indians were no match for the horses of the white settlers, and soon the savages gave up the chase and rode back into the timber. The boys had risen very early and gone on a scout of their own, with the result of fully satisfying their curiosity.

All was now excitement in the little camp. A mouthful of breakfast was hastily swallowed, and the horses were soon in harness ready for the forward movement.

"Where you go now?" inquired the old Sioux woman.

"To New Ulm," was the reply.

"Which way?" she persisted.

"Right down the main road along the river," said one of the men.

"No, no! You no go that way," earnestly entreated the old woman. "Dakotas lie in the tall grass along the river, and they shoot you all!" she cried.

A tumult of discussion now arose. The wisdom of the old woman's counsel seemed evident, as she pleaded for them to keep out on the high upland prairie, away from the river, and follow a course parallel with it. But the smooth wagon road along the river bottom—where they could travel so very fast. It proved too great a temptation, and in spite of her frantic gestures and impassioned pleading in broken English, the decision was at length made to take the river road.

"Well, then, good-by! I no go that way," said the old creature, and again her blanket was drawn up over her shoulders in preparation, and again she turned her back upon her new friends and started off on the prairie.

"Hold on! Hold on, there! Wait a minute!" cried one of the men. Turning to the anxious group, he said, "Here, now, listen to me. This old woman was born and raised among the Sioux, and it stands to reason that she knows how they act in war better than we can possibly know. And now, I just make a move that she be made the general of this expedition right here now, and that every man, woman and child be put under her orders; to do just exactly as she says in everything."

This was promptly agreed to, and the old woman called back and invested with the full command.

Mounting to the top of the highest load of the things piled in the wagons she now directed the course of the little caravan, and with a vigilance which never for a moment relaxed, and an eye that instantly detected every movement of bird or beast in the distance, she marched her small force along the prairie highlands, where the short grass of the prairie afforded no screen for ambushed foes.

The sound of guns began to come to their ears, and as the direful day drew on, the sound of firing grew more continuous. The world was up in arms around them

s they pressed forward in their anxious march over he rough ground of the high prairie.

But now they saw with dismay that a ravine which ran lown to the bottom land of the river, and which was illed with tall grass, ran directly across their line of narch. The tall grass had now grown to be an object of dread to their anxious eyes. Calling a halt, their general now ordered forward all her troops. Every boy nd man, armed with any kind of gun, was now ranged n front, and forming them in line abreast and some hirty yards apart, she made them a short speech.

"Now," said she, "you all go on at the word. Be eady to shoot, and shoot quick! If Dakotas are in the all grass and they see you coming and see that you know ow to fight and are ready to fight, they not wait for ou; they jump and run. I know!"

The word was given, and directly in the rear of the xtended skirmish line moved the caravan, safely across nd out again upon the high land of the prairie.

Several times this was repeated during their march, nd when in the afternoon they came opposite the illage of New Ulm they turned at a right angle and noved down into the protection and safety of the town vithout harm to a single member of the little band, so visely led and guided. But along the road which wound s sinuous course along the river bottom, between the nouth of the Sleepy Eye and the village of New Ulm, he mangled bodies of over fifty pioneers—men, women nd little children—lay strewn in all forms of mutilation nd savage slaughter, as the darkness of night closed own upon the frontier at the end of that sad and fate- al day.

ORIN BELKNAP.

Summer on the Labrador.

(Continued from last week.)

We were pleasantly received by the missionaries and rranged with them for the use of a boat. Among the ew Eskimos about, however, we were unable to find ne who would accompany us as guide without the aily compensation of plenty of tobacco and the value f two quintals of fish, about $6. We decided to go lone. After one false start, when our boat proved erself in the first hundred yards, utterly unfit for our urpose, we returned, reloaded everything into a big hree-masted "Jack" and tender, received our final in- tructions from Capt. Mercer of the Idalia as to direc- ion, and shortly before six in the evening manned the wenty-foot sweeps and forced our craft out into the ind.

The night was beautiful and clear, the air tinged with a light sharpness as of early fall, and as we lost sight f the buildings of Nain they were flooded with the red ays of the sun just sinking behind the distant islands. With Jake at the helm, while I watched for rocks and igeons from the bows, with every sail drawing, we tarted off in high spirits and laid a course up the outh branch of Nain Bay. We sailed until after dark nd made camp about 50 yards from the shore on a rassy slope. It was an unusually attractive looking spot or a camp, being sheltered on three sides by high walls nd trees, while within a few steps was a clear running rook of ice water. But in our choice of a camp we had eft out of consideration the ubiquitous mosquito, and ound we had chosen a spot already occupied by him as breeding ground. We suffered in consequence, and n self-defense broke camp at the first break of day.

About noon, finding we were getting into the shallow eadwaters of the bay and having covered, as we thought, bout twenty miles, we selected a site for a permanent amp on high ground, well protected in front by a high ocky precipice and in the rear by a considerable growth f trees. Such protection as we had, however, was not ufficient to prevent the capsize of our tent—and the onsequent destruction of several valuable articles, in- luding a pot of beans just finished baking, a luxury xpensive in time and oil—during the northwest gale, hich blew for thirty-six hours after we landed.

The appearance of the country here resembled very uch what we had already seen of the coast. High, ocky headlands, barren of everything except the rein- eer moss, rise abruptly on both sides of the bay. Above hese often stand much higher hills, which finally slope way into a rolling country intersected in every direc- ion by waterways. In the valleys we often found a rowth of fir and spruce in small areas, and directly in he rear of our camping ground was an area of a quar- er of a mile square, some of the trees reaching thirty eet in height.

As we landed the first day in our tender, we imme- iately made the acquaintance of a family of Arctic ulls, which we found later, occupied the bluff directly n front of our camp. They greeted us with loud and ngry cries, and flying over would often swoop down lmost within arm's reach. These gulls, an occasional lock of ducks flying over, and now and then a spruce artridge or a woodpecker, seemed to comprise the ird life in our vicinity just at that time. Since reach- ng the shore, our early impressions received from the eographies, of the vast clouds of migratory birds to be ound on the coast, had received a set back. Off Iron Bound Island we had passed a great flock of "Tickle Elsies," and occasionally from the top of an iceberg or rom some rocky headland would rise large numbers of ulls, but we soon came to the conclusion that the reat breeding grounds were further north and in more naccessible places than the Labrador coast furnished.

It is a feature of Labrador streams that hardly one lows into the sea, but swarms with brook trout. At Holton we took several weighing two pounds and those rom a quarter to half a pound in large numbers. In he brooks about our camp we found them plenty and amy and kept ourselves well supplied, but our efforts vith the sea trout, which the Eskimos take in large num- ers in the spring and which find a ready market in St. Johns, resulted in the capture of a fine mess of flatfish.

The game signs around our camp, however, were isappointing. While there was a network of trails lead- ng in all directions, showing where the caribou had ome in large numbers in the earlier part of the summer, nothing showed any recent visits. Across the bay we found an Eskimo camp used during their spring trout fishing, and all about here was a veritable boneyard. Antlers, hoofs and whole skeletons bore evidence that the natives found caribou plenty enough at times. To the mosquito, of course, can be laid the absence of the caribou, and it is not surprising that they flee inland and to the tops of the highest hills to escape this pest, which even to a man with his means of protection, is almost unbearable at times. We had them in our tent, in our food and on our tramps. When we rested, as we often did in climbing the hills, for the exertion was severe, every portion of our clothing would immediately be covered by a hungry, buzzing crowd, and it was not unusual for them to bore through the thin parts and even through a soft leather glove. Headgears of net- ting, which we wore continually and tar soap constantly applied, were both wholly inadequate against these lustv fellows. By vigorous smudging we always cleared out the tent before getting into our sleeping bags, and if there happened to be a breeze blowing, were sometimes undisturbed until morning. If there was no other rea- son why Labrador would probably never become a summer playground for the people, this reason of the mosquito would be sufficient.

We were unsupplied in our camp with a time piece, and so were obliged to rely on the sun for our hours of going and coming. This did very well on days when the sun could be seen, but there came a day when it was hidden behind a dark mass of heavy clouds.

Rising at what we supposed was our usual hour, we had breakfast and went over the hills a short distance. We were gone perhaps a little over three hours, and on our return set to work to prepare dinner. We had hardly finished, when it began to grow perceptibly darker, and by the time we had cleaned up another night had come. So we again crawled into our sleeping bags, pulled our pea-jackets up over us and wondered what had become of the day, and if the long Arctic winter night was upon us so suddenly. The next day, however, was of the usual length. We spent a week in this camp and covered a large part of the surrounding country in our tramps. From the tops of the highest hills we covered with our glass miles and miles in every direc- tion, and always had the same view of a limitless ex- panse of rock, trees, snow, and water, but not the slight- est trace of the caribou. Breaking camp at high water early one morning, we started toward Nain with a fresh northwest breeze. This increased until it became a gale, and with sail shortened to a reefed mainsail, we bowled along at a tremendous rate, reaching Nain shortly be- fore noon, much to the surprise of the inhabitants, whose opinion of our ability in the management of a boat was plainly not flattering when we left them the week before.

It was during the afternoon of this day, while talking with the crew of a schooner unloading missionary sup- plies, that we learned of the loss of the Lily of the North. She had parted one anchor chain and dragged the other anchor in the gale of Saturday before, and had gone on to the rocks in Paul's Harbor, Black Island. The second pound on the rocks had torn the keel out and the crew had quick work to get their belongings on shore, so quickly did the water rise in her hold. Wrecks among these people are of the commonest occurrence, and our informants seemed to take the whole affair as a mat- ter of course, our interest in every detail seeming very surprising to them. They said the cargo was being sold at auction as they came by. It is the custom at the time of a wreck to appoint from among the captains of the schooners at hand one who shall act as auctioneer. and by him the cargo and craft are sold. Certain rules are followed which are agreed upon by the schooner clubs, whose formation takes place at the principal start- ing points in Newfoundland. Those who are independ- ent of any club, however, often become somewhat piratical in their movements and make the occasion of a wreck the scene of much highhandedness. From con- versation afterward with the man who bought the schooner and spars for six dollars, we learned some- thing about the prices received for the different articles of the cargo. It is, perhaps, enough to say that they were absurdly low and showed how great a sacrifice in value must be made in order to make a sale.

We were fortunate in getting Mr. Ford, who is in the employ of the missionaries at Nain, and a life-long resi- dent of "The Labrador," to accompany us on a second camping trip of a few days. Again leaving Nain in the boat which had already done us good service, we took a southeasterly course and camped during the afternoon on Sactushook (long, low) Island. I suppose the un- usual noise attending our making camp was what at- tracted the magnificent bull caribou which came trotting round a bend in the shore as we were putting up the tent. His presence, first noticed by Mr. Lord, was a signal for the dropping of all camp preparations and a frantic stampede for firearms, just then lying scattered about the ground. Mr. Ford's quick shot, followed by ours, brought him down, and there was soon a good prospect for the first fresh meat we had had in six weeks.

The caribou was a fine specimen, with an exceptionally good set of antlers, but in our hunt of the island we could not find a trace of another. The place made an ideal camp, however, being well protected, with plenty of water and material for a fire at hand.

Ducks, geese and shore birds, notably the curlew, were in great numbers, and just after light one morning, when stalking a flock of geese, we caught a glimpse of a black fox skulking along the shore, and on the same errand as ourselves. He had frightened the geese, and was himself too far off to give a shot, so we returned empty-handed. We reached Nain again on the 27th, to be ready for the steamer, which was expected daily.

One evening, as we were seated in Mr. Ford's house with his family and three Eskimo women who were engaged in softening some skin boots, about half past 8 we suddenly heard a steamer's whistle. The Eskimo women jumped with cries of "Umiaksuak!" "Umiak- suak!" (big boat! big boat!), and we all rushed for the shore, where a torch was lighted to guide the steamer on her course.

The night was clear and cold, with a keen wind blow- ing from the northwest, and the brilliant northern lights with constantly changing colors, covered half the sky from horizon to horizon, in a general direction of north- east to southwest. A boat was soon manned, and by the time the steamer, which proved to be the Grand Lake, had come to anchor, a large part of the population of Nain was ready to clamber aboard. On her first trip of the year, word had been left that the steamer might on her next trip go north from Nain to the other station, and this was the principal question asked as we flocked on board.

Up to this time Nain had been the most northerly point touched by the regular mail steamer, the traffic between the other stations having been carried on by schooners. We were told that the steamer sailed the first thing in the morning for Okah, Hebron and Rama, and our plans were soon made to accompany her, as there seemed to be too little time during her trip north to camp again.

A general feeling of expectancy and of pleasant an- ticipation was noticeable as the steamer left Nain, and there was a sort of "first time" novelty to everything. The coast below Nain being new to the captain, our friend, Mr. Ford, was taken as pilot, and ten miles out- side Nain took us safely over a sand reef when it looked to many of us as if we must surely strike, with our 18 feet of draft, so clearly could we see the bottom. We were shortly afterward approached and hailed by a whale boat load of ten men, who, with their provisions and sea bags, plainly told the story of another wreck. As the steamer stopped, they came alongside, and re- ported themselves the crew of the schooner Mariner, wrecked two days before off Cape Mugford. They were told by the Government official to proceed to Nain and remain there until the steamer should return, when they would be taken south. Proceeding, we were loudly cheered by the natives as we passed their summer camps, and shortly after noon passed Black Island, with the wreck of the Lily of the North plainly seen through our glasses. Past the jagged and snow-capped Kigdlapiegh we steamed, and toward night were brought to a halt by a thick fog, which hid all land marks. The steamer was put about and turned in shore toward a fishing boat which was coming in from the day's work and making for its customary harbor. Taking one of the men aboard and the boat in tow, we were guided into the harbor behind Cutthroat Island, where we spent the night.

"Oksunai!" "Oksunai!" was the first thing we heard on going on deck the next morning. Already nearing Okak, the steamer had picked up a large number of Eskimos from the outlying islands, and was taking them in to assist in the unloading of the stores. As the steamer sounded her whistle half a mile from the station, answering shouts could be heard coming from different points along the shore, and as we came to anchor we were surrounded by boats and kayaks containing the missionaries and Eskimos. Everybody came aboard, and then began the bustling work of unloading the stores and taking on the trout, seal oil and whatever else was to go to St. Johns.

Okak is about 100 miles north of Nain, and as its name signifies (tongue) is placed on a long, narrow jab of land. It was started in 1782, and in appearance is similar to the other stations, having the mission house with adjoining chapel and the outlying Eskimo huts. Okak is the largest in population of the stations, the Eskimos numbering about 380. Men, women and chil- dren, they all impressed us as being the most sturdy and lusty looking crowd we met on the coast. The healthy color in their faces fairly shone through the dark skin, and the large number of children of all ages spoke well for the continuance of the race, a fact noticeably absent at some of the stations. It is evident that they still use their natural food of seal blubber and dried fish, for it is a well-known fact that as soon as they leave this diet and take up the civilized fare of bread and molasses the health of the people begins to deteriorate. They are in many ways an interesting people to meet. Of course, one must first overcome the natural dislike to the odor which is noticeable in their company. This seems at first impossible, until the interest aroused by the native, his life and language, helps one to forget about his negative charms, and if this feature is after- ward at all noticeable it is simply as an agreeable part of his personality. Cleanliness is decidedly not one of his strong points, and water is known to him principally as a good thing to drink. However, in some of the southern stations they are beginning to observe a little more neatness in their personal appearance, and often signify their knowledge of the day being Sunday by pointing to their hair, which has perhaps been a little smoothed, or to a change in their "addichek," an outer garment shaped like a blouse, with a hood. Will- ing and cheerful in their disposition, their "Oksunai" is always accompanied by a smile, and during our contact with them we saw but a single instance of surliness, and that in one afflicted with the grip, which has found its way to that far-off shore.

Abias, a leader and adviser among the Eskimos, lives at Okak. He has reached the age of seventy-three, an unusually long life for an Eskimo, and has qualities of mind which make him a natural leader and his in- fluence great among the natives of northern Labrador.

C. S. HAWKINS.

[TO BE CONTINUED.]

THE shooting season opened with more or less eclat in the neighborhood of Comox, Vancouver Island, as we are told by the excellent paper, the Cumberland News. J. Reis shot a large panther Sept. 6 on the Gor- don ranch, and the same week T. Kirkwood killed a large bear. Other bears were seen by different people even if not secured.

The News intimates that poaching goes on in the vicinity of Cumberland, as it does in very many other places. The season opened this year with good pros- pect of fair bags, but those who went out on opening day found the birds few and scattered. It is said that on the Sunday preceding the opening there were many gun- ners abroad, and there was a considerable destruction of birds. The law-abiding citizens ought to take hold of matters.

Cruising on the White River.

Editor Forest and Stream:

The sketch given below, signed Rowlock, was not written for publication, but as it may prove of interest to your readers, I send it, to be disnosed of as you may see proper. Rowlock and his two younger brothers, sons of Coahoma, being temporarily resident at Fayetteville, in the extreme northwest county of Arkansas, being bent on enterprise, built for themselves a skiff, which was transported by rail to upper White River and launched in that stream for a voyage of discovery and adventure. They were eleven days on the journey, of which the said sketch gives an account. COAHOMA.

WHILE our trip was a pleasurable one, in a way, it was something of a disapopintment to us, and it was not infrequently the case that we wished ourselves back at Cousin A.'s, with you all, enjoying the cool breezes, the tennis and cards, and the hospitality of her home. We found that we could not run nearly as long each day as we had anticipated, and that, except where there were rapids, the current was so slow that it afforded us little assistance. Consequently, we had to work hard to make any progress, and had to push on as long as we had daylight. Had we been able to loiter along and fish and swim more, we would have had a more agreeable trip.

The agent at Fayetteville had told us that our boat would go all the way to Beaver (The Narrows) on the same car, and we were surprised when we arrived at Seligman, to find it lying on the ground by the platform. It had apparently been knocked about a good deal. We were told by the Seligman agent that no freight train would go over until the next day, but that he would see if the passenger conductor would take it over that night in the baggage car. This the conductor agreed to do, so we were put off in the dark at Beaver about 11 o'clock Tuesday night. We lit our lantern, and Jim went in search of the river, while Fred and I stood watch over the baggage. Jim found the river and some farmers returning from a frolic, who assisted us in getting the boat to the water. When first launched, the boat didn't leak a drop, but the dampness made it come together a little, and for several days it took in a little water, until it swelled, and then the leaking stopped. We had had supper at Seligman, at a little hotel, so after launching our boat and carrying our baggage down to the river, we rolled up in our blankets and tried to get some sleep. Jim slept in the boat, and had a pretty comfortable time, but the rocks punched Fred and me through our blankets, and our repose was rather broken. We were up pretty early and cooked us some breakfast, and then it was that the first disappointment of our trip occurred. We discovered that in the dark and confusion of the preceding night the little telescope containing the bread and preserves had been lost. The train was almost due, and we sent Fred out to see if it was left on the baggage car, but if it had been they put it off at Eureka, for it was gone. We grieved sorely on account of this loss, and lived on crackers and corn dodgers instead of that nice light bread. We had not rowed more than a few hundred yards, when we struck a rapid, where our boat went aground on a shoal. Two of us jumped out and shoved her over, then got back and proceeded, to experience the same difficulty a little lower down. This continued all day, and every day during the trip, but the shoals became more and more widely separated, and some days later on we had to get out only once or twice. Fred and I very foolishly left our trousers rolled up after we would get through wading and re-enter the boat, and in about half a day our "waders" were in a fearful fix. We suffered very much from the burns for two or three days, after which the peeling process set in and our condition improved. Jim had a rip in the back of his shirt, and the sun presented him with a beautiful blister about four inches long and one wide. Fred's wrists, too, were pretty well cooked. The scenery along the river was beautiful, as it was during all our trip, and we enjoyed it very much. At 1:30 we landed and had our dinner, consisting of chipped beef, crackers, corn cakes, molasses and preserves. (Our jar of peach preserves was not lost.) Soon after we started, a bass jumped out of the water, hit Jim on the ear, flopped into the boat and out again before we could say "Jack Robinson." In the evening we stopped at a farmhouse and bought two chickens, which we had to shoot, some eggs and potatoes. At 6:45 we stopped for supper, consisting of eggs, potatoes, bacon, molasses, coffee, postum and crackers. Our camping place that night was ideal. We found a fallen sycamore consisting of two large trunks, lying parallel and about four feet apart. We erected two end poles, stretched our ridge rope between them, threw our boat covering over it and tied the sides just outside the tops of the logs, the canvas forming the roof and the logs the sides of our house. We threw sycamore leaves on the ground and spread our blankets upon them, and were soon lost to the world.

The next morning, Thursday, the 31st, we got up at 6 o'clock, cooked our breakfast and struck camp. We had oatmeal, coffee, bacon, chicken, corn cakes and molasses. The morning run was without incident. We stopped for dinner at 2 o'clock, and resumed our voyage at 3. Toward evening we discovered a big frog on a rock and I shot and wounded him, but before we could get him he had wiggled under the water. That night we camped on a gravel bar covered with sycamore and willow trees. We had had good running all the afternoon, and felt more encouraged and in better spirits. I did not mention that the day before this, we passed two pretty good-sized streams flowing into the White. The first was quite muddy and colored up the clear waters of the White. The second was clear and pretty. For about five miles after we passed its mouth the clear and muddy waters flowed along side by side and refused to mix, then they mingled and the river was not more than half as muddy as it had been before. This clear stream was the James River. The muddy condition of the water worried us greatly, as it made it more difficult for us to see the rocks, and we occasionally ran over one, but our boat proved tough enough to withstand the strain. Friday, Aug. 1, we got up at 4:30, struck camp, cooked breakfast and were off by 6. We doubled up at the oars and made pretty good progress during the cool of the morning. We asked a man how far it was to Forsyth, and were told that it was twenty-five miles. After going about fifteen miles we asked another, who said that it was forty miles. Later in the day another man told us that it was twenty-five miles by land and about 125 by water. This is only a sample of the experience we had all the way down when we undertook to gain any information from the natives. In the afternoon we bought a watermelon, some tomatoes, cantaloupes and eggs. We camped that night on a beautiful, high, level spot two miles above Forsyth. The next morning we ran on down to Forsyth, went up town, found that there was no mail, telegraphed to Mr. P., as we thought you might be getting uneasy, and it would take several days to get a letter to you from Forsyth, part of the trip having to be made by stage. We replenished our larder and proceeded on our way.

Up to this time I kept a rough diary of our movements, but was always too tired at night, after that, to worry with it. The next day was Sunday, Aug. 3, and it was during that forenoon that we had the most exciting experience of the trip. We encountered, from time to time, a number of rock ledges or dams, extending entirely across the river, over which the water flowed with great force. We could usually shoot over or jump these without much difficulty or risk, for the water below was nearly always clear of obstructions and deep. It is impossible to see from above what the conditions are below, so we would have to take our chances on hitting the right place. The most important thing to watch is the direction of the current, for the boat must be kept parallel with it at all hazards. At the time in question we heard the roar of one of these cataracts, and it sounded big enough to make us quake a little. Jim and Fred were at the oars, and I had the steering paddle in hand. I selected as "likely" looking a place as I could find, told the boys to pull with a vim and we shot over. But as the bow dropped down to the water below it struck a big rock full in the face. The blow seemed enough to split the boat from stem to stern, but she only gave a quiver and swung round, dashed broadside against the rocks by the strong current. The water began to pour over the side, and almost before we knew what was happening, Fred was out in the water, nearly up to his waist, holding up the side of the boat to keep the water out. We managed to swing her head down stream and get her off the rock, then landed and bailed her out. On a gravel bar just below us we counted 100 buzzards, and we surmised that they had expected us to be killed and were waiting for us. On two other occasions we shipped a little water, but this was the nearest to a "swamp" that we had during the entire trip.

At Forsyth we purchased a troll, and for several days caught all the bass we wanted to eat. We would run it out behind the boat to the end of a 75-foot line, and every now and then would feel a jerk and pull one in. Some of them weighed as high as a pound and a half. We could see bass darting about in shoal places and striking at minnows. The mountains were rather low where we started, but increased in altitude as we proceeded, until they played out just below Batesville. Sometimes they sloped up from the water, and then again they would rise sheer out of the stream in perpendicular cliffs from 100 to 400 feet high. We would occasionally see big rocks jutting out as if they would fall if a fly lit on them, and the action of the water in ages past has rounded off some of the projecting rocks so as to give them the appearance of turrets on some old English castle. The valleys were cultivated, and we could catch an occasional glimpse of a cornfield, but whatever civilization existed was shut out from our view, for the most part, by a skirt of woods along the river bank. We seldom saw habitations of any kind, until we got pretty low down the river, when we would occasionally pass a pearl hunter's tent; and we would go for half a day sometimes on the upper river without seeing a soul. One day, as we passed the mouth of a dry creek, one of the boys said, "Look at that queer animal over there." I looked, and saw that it was a cow bogged up just inside the creek. We landed and found that the poor creature was deep down in the mud, where it had probably been for several days. It was thin and weak and looked wistfully at us, as if to implore assistance. We went in search of some one whom we could notify of its condition, and found a house about half a mile from the river, and a man who said that he would look after it. We three boys and the man tried to get it out, but could not budge it, so he said he would notify the owners and they would bring a team and some ropes. As they lived two miles away, we did not wait to see the outcome of their efforts.

About this time the mosquitoes began to worry us considerably at night, so we rigged up a bar in the hope of keeping them off. We pinned the bar around our awning and let it fall to the ground, then laid the oars on the edges to hold them down. Somehow, the mosquitoes would manage to get in every night, and would wake us up at daylight with their singing and stinging. We suspected finally that they crawled through the meshes in the netting, as we could find no holes.

Our next objective point was Buffalo, and before we could reach that little town, we knew that we would have to shoot the dreaded Buffalo Rapids. The boys plied me with questions, from time to time, as to what the Buffalo shoals were like, but I could only tell them that they were a series of rapids about a mile long with a fall of nine feet, and were full of jump-offs and big rocks that were hard to avoid. We reached the head of this bugbear about 6 o'clock Tuesday evening, the 5th, and having bought us a watermelon, landed on a little rocky island to eat it before we entered the turbulent waters, for, we thought, why not get all the pleasure that is possible out of life, for we may never reach the foot of these shoals alive. So we ate our melon, and then pushed off, with Jim and Fred at the oars and I at the helm. We could see a perpendicular rock cliff about a mile down the river, where there was an abrupt turn to the left, and I told the boys that just above that lay Buffalo City, our temporary destination, bounded by a crescent of mountains on the one side and the river on the other. By close attention to my paddle and the making of some pretty short turns, we managed, within a few minutes after our start, to swing out of the rapids into the still, deep water at their foot, without having hit a single rock. We breathed a sigh of relief and made for the landing. Just as we stepped out of the boat we were warned by a man across the river to seek shelter quickly, as the railroad constructors were about to fire a blast. We dodged behind some trees and the blast went off, awakening the echoes for miles around. The rocks were scattered in every direction, but none of them came near us. Up to this time the sky had been almost clear, and there was no sound of thunder or evidence of a brewing storm. A small black cloud hung almost directly over us, and suddenly, almost as if from a clear sky, a livid flame shot from the cloud to the top of the mountain just across the river, and there was a report that eclipsed the blast that had so recently taken place about a hundred fold, it seemed. The rain began to pour down and we sought shelter under some thick sycamore trees, after covering our baggage up with the oil cloth. The rain did not last long, but the clouds began to gather, so we stored our things away in a store up on the bluff and sought the hotel. Later on in the night we were awakened by a violent electric storm, and congratulated ourselves that we were not out under our flimsy little tent fly.

We had expected to visit the Jackpot mine from Buffalo, but were unable to communicate with Capt. Stone over the 'phone, and could not get a team at Buffalo, so abandoned the expedition. The mine was sixteen miles away, over a rough mountain road, and we had not the time to tramp it.

Our run to Batesville was accomplished in twenty-six hours, just seven hours less than it took us a year ago in the bateau. The river was considerably higher on this trip, but the current seemed to me to be more sluggish. The rapids were fewer, hence the trip less exciting. A railroad is being constructed from Painter's Bluff to Buffalo, an extension of the road from Batesville to Painter's Bluff, and we encountered gangs of workmen quite frequently, and heard a great many blasts go off. This will be a beautiful road, as it follows the meanderings of the river, and is hollowed out of the sides of the mountains where they are adjacent to the river. We were told by the proprietor of our hotel at N. that a panther and a rattlesnake were blasted out of the same den at Painter's Bluff, and that the rattler was twenty-one feet long and had 111 rattles; that they ran an excursion up from N. for the people to see them. Had we known of this terrible reptile, we would probably not have slept so soundly in our camp two miles below Painter's Bluff, but "where ignorance is bliss, 'tis folly to be wise." Just before we got to Painter's Bluff a bass jumped into the boat and I managed to get my foot on him and my finger into his mouth before he could flop out again. Jim passed a string through his gills and we had him. We had to cut him in two to get him into the skillet, which was a good-sized one, and he was more than the three of us could eat for supper. We shot one more frog, but he was in deep water and sank out of our reach.

After getting down to where the pearl hunters were numerous, we could no longer use the White River water for drinking, and as springs were scarce, had some trouble about procuring drinking water. When we would come to a good spring or a well or pump, we would fill our buckets and coffee pots with water and carry it along. It is fortunate for us that none of us are superstitious, for every night, when we would land to camp, a screech owl would light almost over us and serenade us. One night we camped in somebody's pasture, near a landing where were some cross ties and staves, piled up on the bank for shipment. When we were almost ready to put out our light and retire, a glimmer appeared among the trees up on the hill, and some one began to halloo at us. I answered and the voice asked us if we were "ketchin' um." I replied that we had not caught any yet, whereupon he inquired, "Is that you, Alex?" I said that it was not, after which the colloquy ceased, and we saw the light disappear through the woods. The farmer probably thought we were making away with his staves, but was afraid we were too many for him. We put out our light and were soon in the Land of Nod.

On Friday night, the 8th, we camped about thirty miles above Newport, on a bluff about thirty feet high. We had rowed in the rain some during the day, but it was not hard enough to wet us much, and our baggage was covered with an oilcloth. About 7 o'clock it began to look quite threatening, so we made for the nearest good-looking place for a camp. The bluff was hard to climb, but when we reached the top we found ourselves in a heavy switch canebrake. We chopped out a space in the cane under a pecan tree, the foliage of which was quite dense, and got our tent up just as the rain set in. The tree was so thick that very little water got through to us, and we cooked and ate our supper without paying much attention to the rain. The next morning we were off soon after daylight, for it was important that we should make it to Newport that day, being Saturday, as we would have to wait until Monday to get our money if we did not. We had expected to find boats running down the river from Batesville, but were disappointed in this hope, and were told that we could surely catch one at Newport. As we were growing somewhat tired of our trip, and my time was more than up, I thought we would put our boat aboard the steamer, the boys could take passage and I could run through by rail. We got to Jacksonport about 2 o'clock, and finding that I could just catch a train for Newport, and that it was ten miles further by river, I left the boys and took the train.

Arriving at Newport, we held a council and decided that we would sell the boat before the train time that night, if possible, and all go to Memphis, where we could get some money. We had only $6 among us, and the ticket to Memphis was $3.35. Our efforts to sell the boat were unsuccessful, though we offered it for almost nothing, so we went to a hotel and put up for the night. The next morning I left for Memphis, leaving the boys to await some funds. And thus ended our river trip.

The next time I take a long trip on the water, it will be in a launch, a sailboat or some other kind that can be propelled with some other force than muscle. The fact that we had to work so hard and so constantly, took away the greater part of the pleasure of the trip, for we had no time left for anything else. It was just a constant grind day after day. ROWLOCK.

Natural History.

Scientific Forestry.

Editor Forest and Stream:

It is quite apparent to one who observes things with any kind of careful attention, and at the same time has some degree of practical knowledge of things, that what we call science is now very much of a fad. We have had now about forty years of scientific agriculture which has cost many millions of dollars, and in spite of all this vast expenditure the average of the farm crops has not increased to any extent sufficient for the statisticians of the Government, working at a cost of millions of dollars, to base any figures upon. The agricultural colleges, so expensively maintained, after thirty years of gradually increasing expense, charged to the public, have not, so far, had the slightest effect in increasing the average yield of any crop, and the only good, so far, apparently done is the providing managers for the show farms of the wealthy people, which are kept up at excessive cost, and, as one owner of such a farm recently said to me, every egg laid on his farm cost him twenty-five cents, and his butter two dollars a pound. But he remarked it is something to show to my friends and brag on. And now we have a forestry fad on the stage, and thousands of dollars are spent in teaching the boys, who never before knew one tree from another, the science and practice of forestry culture. All this time, without the slightest fuss or noise, the French and German people and Governments have been improving their forests, private and public; planting the wind-swept ocean beaches to prevent the inroads of the sea on the land, and, just as if it were some new thing, some Yankee invention, we are taking this ancient thing up and claiming it as such. There is in fact nothing new or strange in this thing. The student of this new art, owners of wood lands, and others interested in it, may procure plenty of literature, new and old, in the German French and Dutch special journals, and by making a few trips to the European sea coasts, to the private wooded estates in any European country, or to the English coasts and prominent show estates of the wealthy land owners, as well as the ancient Government forests there, they may see samples of this work, which will show what has been done for many years back—centuries in fact—with such success as to have made these private and public woods most profitable property, paying as good interest on their high values as the beautiful fertile farm lands do, and these, too, showing a good profit from their crops, far greater than any of our show-farmers can do. In fact, the most notable of the show places of Europe, England included, pay a large income in spite of the fine gardens, great glass houses, clean, well-tended woods and forests, these all in fact being turned to practical use, and managed by apparently common-place workmen who never heard of an agricultural college or a scientific forester.

In fact, the art of forestry is a very simple thing. Simply to let trees grow, which nature planted, and when these are mature and harvested, to replant from a nursery, kept for the purpose, a new generation, to fill the place of the old and mature trees, which are cut and sold. It is just precisely what agriculture is, with the only difference that trees are grown instead of potatoes, corn or other crops. It is orchard culture on a large scale. I saw once in eastern New York an orchard of over three hundred acres, mostly in apples, from which some thousands of barrels of fruit were shipped annually by the owner; and it was one of the finest examples of forest culture to be seen. There were the trees grown in the most skillful manner and with exemplary profit. There was no fuss about it. The owner of it was unknown to fame, and his name had never been in print in connection with this enterprise, until it was introduced by me in an account of his grand orchard. A noted peach grower has a forest of these trees in the South which is annually extending its boundaries, as well as the bulk of the owner's bank account. And there are ample opportunities of getting information in the peach and other orchards—forests in fact—of the same kind in Maryland and Delaware, as well as in other localities too numerous to mention.

Indeed, there is nothing new in this thing. Over forty years ago I cut the timber off a section of pine land in northern Michigan, and it has been so well reforested since then by the simple preservation of it from fire, that the second crop is now in course of cutting, and it will make easily four times the profit it made in 1860. Beside this, there will be sufficient young hardwoods of great value left to bring a still more valuable crop in years to come.

I might mention the fact which appeared to me when in that region engaged in a sort of pioneer lumbering, which is of great interest, I think, as an instance of the natural rotation of crops applicable directly to the subject of arboriculture. This is that I there discovered, through a most striking occurrence, that there is as strict a rotation of crops or growth of plants in forests as there is in fields. I have found the same thing here in the North Carolina woods, which, I think, I may have mentioned in a letter some time ago. But it may be worth repeating in this connection, which is one more conspicuous instance of what may be called rotation of crops in nature. This former dense pine forest above mentioned, as it was in 1860, is now one-half covered with maple—some beautiful birdseye quite largely—bass woods, white oaks and other hard woods, and among these the white pines are growing. The tall pines force the other trees to a high straight growth of stem, free of low branches, the very best condition for the most valuable timber. This seems to me one of the most important features of our future forest industry, for it is, as I have observed continually, that the same kind of growth covering the soil gives place to a different one when the first has been removed. And in regard to forest culture as a science and an art, it is well worth notice, as it is in ordinary agriculture.

H. STEWART.

The Frolics of Nature.

IN mood most debonair, just as though to convince us of unused power held in leash, staid Mother Nature often fashions her wonted material in unwonted guise. On rocks we have her carvings of faces human; some so finely chiseled and impressive as to make us suspicious that mortal hands had offered no aid to her design; here and there we find structures of stone and earth resembling the most capable of man's building, and everywhere can we discover her wonders, if we do but have a watchful eye. Small odds, therefore, if she seems occasionally to frolic in patterning after the superior animal creations.

Among the second forest growths (or maybe third, for all we know accurately), bordering on Lake Kenoza, in Sullivan county, New York, a seedling dropped by bird or blown by the winds, took root, and in the period of its uprearing, even as the slender limbs commenced to feel for neighboring comfort among its kind, our Mother Nature selected this sapling for a demonstration of her ability to mock at the usual order of things. A spot on the spreading thickening bark commenced to bulge, and wonder must have gripped the heart of that sapling, for there on its trunk was growing an excrescence that gradually took the form and shape of a climbing bear. As our tree became larger, this representation increased in size, and the accompanying photo will easily show

THE TREE OF THE CLIMBING BEAR.
Photo by A. Haddsell.

how true to life the animal of pith and pulp is. The tree has weathered the storms of many years, and unless some other decaying weakened friend topples over and carries it down amid a battle of the elements, it bids fair yet for many years to stand an attraction and wonder to sportsmen and the summer tourists who visit that portion of Sullivan county in largely increased numbers every year.

Kenoza Lake, or Pike's Pond, as it used to be called, is reached via Cochecton or Callicoon stations on the route of the picturesque Erie. The distance to these points is about 135 miles, and a matter of four and a half hours' traveling, the only discomfort is the abundant soft coal dust that smuts, distinguishes and disgusts Erie passengers. By stage from Cochecton or Callicoon one goes over the mountains to the lake, nine miles in a general northerly direction. Accommodations in the summer and the fall have to be secured in advance, and both at Miller's Lake View House and at the Gedney House, clean, cool rooms and good board at reasonable prices is obtainable.

Kenoza is within easy driving distance of Liberty, White Lake, Sulphur Springs and the neighboring resorts. Every one around Kenoza will point out the road to the bear tree, and as the roads thereabouts are of uncertain nomenclature, inquiry is easier than direction.

There is good fishing to be had in the lake, and quail, partridge and woodcock are reasonably abundant.

The last abiding place of this frolic growth of nature should be in the Museum of Natural History in New York. Rumor has it that the owner of the property refused a substantial sum for the tree.

A. HADDSELL.

GREAT KILLS, S. I., Sept. 8.

Old Trees.

PIKE'S PEAK, Colo., Sept. 14.—*Editor Forest and Stream:* I read with much interest an editorial in a recent number of FOREST AND STREAM, entitled "The Old Oak." In my younger days I myself knew such a tree, as no doubt many of your readers have known one or more.

An interesting occurrence bearing on the age of trees took place near here, not long ago in the Garden of the Gods, during a visit of Prof. Chas. E. Bessey, of the University of Nebraska, who is so well known as an authority in botany and a student of trees.

On the slopes of the mountains hereabouts are many cedar trees, of the species known, I believe, as the brown cedar (*Juniperus monosperma*). Many of these are very large, and in August last Prof. Bessey while here counted the annual growth rings in the stump of one cedar which had recently been cut down. These rings were counted with the care peculiar to the scientific man, and from the count the number of rings calculated for the whole stump, the result of this calculation gave 800 or 1,000 years as the age of the tree. Thus, this tree may have sprouted about the year 1000 A. D., or not far from the time when Lief Erikson, the Norseman, is supposed to have discovered Vinland the Good.

C. O. P.

A Great Western Meteorite.

MEXICO has long been interesting for the meteorites which have fallen there, and the naturalist Humboldt in his great work on New Spain, published in 1811, describes some of them.

Some of the Mexican meteorites are of astounding size, weighing many tons. A dozen years ago the Mexican Government brought five of the largest to the City of Mexico, where they may still be seen mounted on iron pillars in the entrance court of the School of Mines. In a recent number of Science, Prof. Henry A. Ward, the veteran student of meteors, describes the largest known meteor of Mexico, which is perhaps exceeded only by one other, the great meteorite of Greenland. The actual size of this last is not definitely known, and it may be that the Mexican meteor is the largest. Prof. Ward says:

Through Señor Jose C. Aguilera, the Director of the Instituto Geologico, we obtained from the Minister of State letters to the Governor of Sinaloa and to the Director of Mines in that State. Western Sinaloa is practically impossible to reach in a direct line from the capital. The northern route through Arizona and Sonora involved a journey of over 2,000 miles. We took the shorter but harder route across the Cordilleras to the port of Manzanillo on the Pacific, and thence by steamer up the coast of the Gulf of California. There at the adjacent city of Culiacan we took a carriage with a four-mule team and an American photographer, who accompanied us with his camera. A drive of ninety-five miles to the north and west took us in three days far up among the foothills of the Sierra Madre. Bacubirito is a small but very old mining town, situated on the road to Sinaloa in latitude 26 degrees, and in west longitude 107 degrees. The elevation above sea level is some 2,000 feet. The meteorite is seven miles nearly due south from there, near the hamlet called Palmar de la Sepulveda. Here we found it on a farm called Ranchito, which fills a narrow mountain valley beneath two spurs of the main range. It was there struck by the plow of Crescencio Aguilar in the summer of 1871. He soon uncovered enough of its bright surface to satisfy himself that he had found a silver mine. Its surrounding is now a cornfield with a black vegetable soil of some two yards in thickness. In this soil we found the great meteorite deeply imbedded. Its surface was but little below the surface of the ground, but with one end slightly projecting above the level. It was a long, monstrous boulder of black iron, which seemed to be still burrowing to hide itself from the upper world. Its surface form was something like that of a great ham. We could walk for many feet along and across its surface, surveying these dimensions, but knowing nothing of how far the mass penetrated the soil beneath. Our first work was excavation. We soon got twenty-eight able-bodied persons for this. We undertook an area of thirty feet on a side, with the great meteorite lying within. In a single day we passed down through nearly four feet of soft vegetable soil, and the meteorite began to show in its entirety. The general form of the mass seen from the side was that of one ramus of a huge jaw. The surface was entirely covered with "pittings," very regular in size, and about two or three inches across; shallow, but with well-defined walls. There were no areas which showed the devastation of deep rust; a fact due both to the dryness of the soil and to the large alloy of nickel in the iron. On one side there was a deep crack, running horizontally through half of the mass. At its inception this crack was too narrow to insert a knife blade; at the other end it was nearly three inches wide. Our Mexicans were astonished at the result of their own labors; they marveled alike at the size of the mass, and at our credulity in believing that it had ever fallen from space above.

By the end of the second day we had carried our excavation to an average depth of six feet. Over the area the vegetable soil was from three to four feet deep, while below it was a porphyry rock, common in this part of the country, much broken up by natural cleavages and decomposed *in situ*. Immediately around the meteorite we had dug much lower, leaving the great iron mass poised on a pillar or pedestal of the undisturbed rock. Finally we performed a feat of moving the great block. To lift one end with heavy tackle or machinery would have been impossible for us; but it needed little mechanical aid to make the mass move itself. We attacked with our long iron bars one side of the supporting pedestal. After long chiseling away on one side of this, the center of gravity was reached, and, with a slow, almost dignified, movement, the great meteorite sank at one end and assumed a partially vertical position. Looking beneath it,

we found that its late bed was a clean depression crushed into the rock, with absolutely no soil between it and the mass which had lain above it. It would thus seem that the meteorite had fallen on the bare rock surface of this district at a period before the vegetable soil had begun to form here. This would be an interesting and astounding fact, carrying back the fall of our meteor to a remotely distant period, perhaps of thousands of years. But there are other conditions which would need careful consideration before accepting so momentous a conclusion. The wonderful preservation of the mass, with its little oxidation, and the clean, sharp-rimmed pittings which cover its surface, seem to point to a more modern sojourn within the destroying influences of our air and moisture. We leave this for further consideration.

It is an interesting fact that this, perhaps the largest and heaviest meteorite yet discovered on our globe, should have fallen so near the present borders of our country. Interesting, too, that Mexico, with all its other extra large meteorites, should have received this champion mass. The extreme measures of Bacubirito, for so our meteorite from the first has been called, are:

	Feet.	Inches.
Length	13	1
Width	6	2
Thickness	5	4

The form of the mass is extremely irregular, and though measures have been taken around the mass at many different points, its cubic contents can not be calculated with more than an approximation to accuracy.

The five largest meteorites known to science to-day are:

	Tons.
Bendego (Brazil)	5 1-3
San Gregorio (Mexico)	11 1-2
Chupaderos (Mexico)	15 2-3
Anighito (Greenland)	50
Bacubirito (Mexico)	50

The first three are weights proven on scales. The latter two are thus far simple estimates.

Two Vanishing Game Birds.

The Woodcock and the Wood Duck.

BY A. K. FISHER, ORNITHOLOGIST, BIOLOGICAL SURVEY.
From the Year Book of the Department of Agriculture.

UNLESS strong protective measures are soon adopted the woodcock and wood duck, two popular and valuable game birds, will become extinct—the woodcock absolutely, the wood duck over a large part of its range. It is the purpose of the present paper to call attention to the impending extinction of these birds, to point out the causes, and, so far as possible, to suggest means of prevention.

These game birds differ materially in habits as well as in other particulars, but the conditions affecting their decrease are very similar. As winter approaches they leave their summer homes, where they have been scattered over broad areas, and gradually work southward until finally they become more or less concentrated in their respective haunts in the Southern States. Within the confines of this winter home, where almost no protection is afforded them, they are slaughtered in large numbers; and as the Southern States place little restriction on their export, they are shipped North in quantities limited mainly by the demands of the market or the endurance of the gunners. Not only are the birds subjected to this exterminating treatment throughout the winter, but when the season of migration comes and they return to their summer homes they fare little better; for a majority of the States in which they are found permit them to be shot while nesting or at the time when the young are unable to properly care for themselves. In view of these facts, it is not surprising that the woodcock, with its limited distribution and moderate fecundity, is very rapidly passing away, and that the wood duck has disappeared or become rare in many places where once it was common.

Woodcock (Philohela minor).

It is probably true that none of our game birds is so universally esteemed as the woodcock. The many sportsmen who find pleasure in following coveys of bobwhite through the stubble field and covert in autumn, and those who enter the wild and rugged haunts of the ruffed grouse, frequently abandon their chosen pursuit to search alder swamp or hazel hillside to add the woodcock to their bag. Nor is the bird a favorite with sportsmen alone; it is equally highly regarded by the epicure, and to fill the demand for the table it is much sought by those who shoot to supply the market. The high price it commands is a great incentive to its slaughter at unseasonable times, and this is the most potent factor working to its ultimate extinction.

Distribution.

The woodcock is an inhabitant of the eastern United States, and is rare or accidental west of the ninety-seventh degree of longitude and north of eastern Manitoba, the Great Lakes, and the Ottawa and St. Lawrence rivers. Its true home is the Mississippi Valley and the northern and middle tiers of States, where cane or alder swamps abound, and where springy hillsides and marshy ground along the streams furnish extensive feeding places. In winter it is to be found chiefly in the South Atlantic and Gulf States, particularly in the extensive alluvial tracts of Georgia and Louisiana, although in mild seasons a few may winter about open spring holes as far north as the southern parts of Illinois and New York.

To the west of the States which lie along the western bank of the Mississippi, swamps affording suitable food and shelter are rare, and here, except for a few records of its appearance in the region just east of the foothill country of Colorado, and one recent breeding record from Timnath, in the same State, the woodcock is practically unknown. There is no satisfactory evidence that the bird ever visits any of the West Indian islands; so far as known, the only extralimital record is one of a storm-driven waif which reached the Bermudas.

Woodcock are early migrants, reaching the latitude of New York by the 1st of March, and in favorable seasons at least two weeks earlier. As they breed throughout their range, the time of nesting is quite varied. At Covington, La., young birds fully 10 days old have been found as early as January 29, and in Florida, it is stated, eggs are deposited early in February. This is fully a month in advance of the time of nesting in southern Illinois and the vicinity of Washington, D. C., and more than two months earlier than the regular nesting season in the latitude of New England. In the more northern parts of the range it is often as late as June before the young appear, and well into July before they are wholly able to care for themselves.

Habits.

The general appearance of the woodcock clearly suggests its nocturnal or crepuscular habits. During the brighter parts of the day it seldom takes wing unless disturbed, though it may perhaps feed in secluded places during dark, cloudy weather, or when protected by unusually thick cover. When dusk comes, however, it is all activity, and leaves its hiding place to visit the feeding grounds in marshes, along streams in low meadows, or in fields of growing corn. In favorable localities, woodcock can be heard at dusk flying back and forth, and occasionally the glimmer of their wings can be seen as they alight in the open. In former days, before they had become too scarce, it was a common sight from early twilight until dark to see or hear them flying about the open pastures or springy hillsides of northern New York, nor was it a rare event to flush them from the kitchen garden or barnyard, or even from shrubbery close to the house, where they had come in search of food.

THE WOODCOCK (*Philohela minor*).

The flight is variable, not only in character, but also in force and swiftness; at times, when the bird is flushed, its movements are seemingly labored and irregular as it zigzags up toward the treetops; at other times it has the swift, regular motion characteristic of other members of the group.

The earthworm is the staple food, and the presence or absence of this annelid doubtless governs to a great extent the distribution of the bird, though other forms of subterrestrial life, especially the larvæ of insects, undoubtedly make up a portion of its daily fare. It has been shown that a woodcock weighing 6 ounces devours at least half a pound of worms in twenty-four hours, and during protracted droughts there must be difficulty in satisfying this voracious appetite.

The nest, a loose structure of grass or other herbage, is usually placed among the leaves in a more or less elevated part of the swamp, out of danger of rising water. The eggs are buffy in color, mottled or spotted with darker shades, and are generally four in number.

The Danger of Extermination.

The growing scarcity of woodcock is a matter of serious alarm, and one demanding prompt action. It must be remembered that there is far more difficulty in saving it from extinction than in preserving gallinaceous birds, such as quail and grouse. In the case of these birds, with their extraordinary fecundity, it is not difficult to restore a depleted covert; for with the addition of a few imported birds, aided by a short term of protection, they should soon reach their former abundance. With the woodcock, however, the situation is different; for the impracticability of restocking, the nature of the food, the migratory habits and the small number of young are serious obstacles to successful restoration. Quick and effective measures are needed. In many localities in the North where 25 years ago a fair shot with a good dog could secure 40 or 50 birds in a day's hunt it is doubtful if 10 per cent. of the former bag could now be obtained. During the past autumn (1901) the writer visited hundreds of acres of good woodcock ground in northern New York without flushing a bird or seeing any considerable signs. Reports as to the scarcity of birds come from numerous points, and even in the most favored localities the decrease within the past twenty years has been 50 to 60 per cent.

The causes that have led to this deplorable state of affairs may be summarized as follows (the first two being of minor importance compared with the last two): (1) Natural enemies; (2) severe storms during migration; (3) lack of protection in winter; (4) spring and summer shooting.

Natural Enemies.

Although there is little positive information on which to base an opinion, still it is probable that the cat, red squirrel, sharp-shinned hawk, and mink are among the most important natural enemies of the woodcock. If the influence exerted by man be eliminated, natural enemies doubtless produce, within certain limits, a beneficial rather than injurious effect on a species as a whole. As pointed out years ago by Professor Baird, the weak, diseased, or wounded individuals, on account of their lessened activity, are almost sure to be the first to fall victims, whereas the strong and vigorous, through their agility and alertness, have comparatively little difficulty in eluding their foes. By the removal of the weaklings, disease and degeneracy are kept away from the breeding stock, which is able through its healthy vigor to escape epidemics and other sweeping fatalities. It is only when man lends a heavy hand in the work of destruction that the inroads of natural enemies ever become apparent. The man who in a few days kills 500 or 600 birds, or even half that number (a destruction far beyond his needs), is much more of a menace to game than the passing hawk, which takes only the food it requires.

Storms During Migration.

Cold storms in spring often are very destructive to bird life, especially when accompanied by snow or occurring in the height of migration. Mr. Arthur T. Wayne gives the following account of the effect on the woodcock of a cold wave which struck the coast of South Carolina Feb. 13 and 14, 1899:

"The woodcock (*Philohela minor*) arrived in countless thousands. Prior to their arrival I had seen but two birds the entire winter. They were everywhere and were completely bewildered. Tens of thousands were killed by would-be sportsmen, and thousands were frozen to death. The great majority were so emaciated that they were practically feathers, and, of course, were unable to withstand the cold. One man killed 200 pairs in a few hours. I shot a dozen birds. Late Tuesday afternoon I easily caught several birds on the snow and put them into a thawed spot on the edge of a swift running stream in order that they would not perish, but upon going to the place the next morning I found one frozen. These were fearfully emaciated and could scarcely fly. Two birds were killed in Charleston in Broad street. It will be many years before this fine bird can establish itself under most favorable conditions."*

Lack of Protection in Winter.

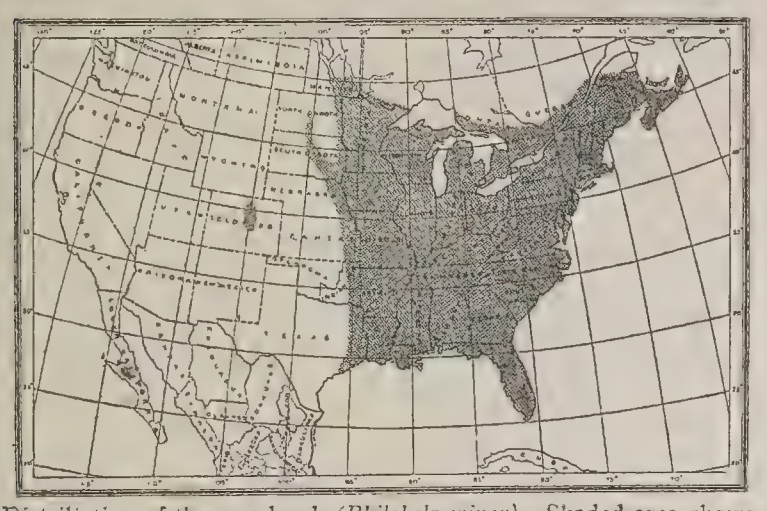
During the winter practically all woodcock inhabiting the United States are massed within the borders of the South Atlantic and Gulf States. It may be stated without fear of contradiction that the wider the area over which a species is distributed the less danger there is of its extinction; and conversely, the smaller the area of distribution the greater the danger of extinction. It would seem that when a desirable species takes up its habitation in a certain region the residents of that region would encourage its presence and give it some sort of protection. But the history of the bison, wild pigeon, and many other mammals and birds shows that such support cannot be depended on. Nor does the woodcock form an exception. Of the nine States within whose borders most of the woodcock make their winter home, seven (namely, North Carolina, Georgia, Florida, Mississippi, Arkansas, Louisiana and Texas) give the birds absolutely no protection—all winter long from the arrival in the fall until the departure in the spring they are killed ruthlessly. Moreover, none of these States prohibit the shipment of woodcock, which consequently can be sent to market without restriction. The other two States (Alabama and South Carolina) protect the birds, the former from March 2 to Nov. 15, the latter from April 1 to Nov. 1, and if Jan. 1 were substituted

* The Auk, Vol. XVI., p. 197.

for the first date in each case, thus cutting off spring shooting, these seasons would be ideal.

Spring and Summer Shooting.

Fortunately, a number of States that formerly countenanced the unseasonable slaughter of woodcock in spring or summer (which is only comparable to killing nursing does or taking trout from the spawning beds) have now enacted proper laws. Nevertheless, spring or summer shooting, deplorable as it must seem to anyone who has even a passing interest in the bird, still exists in half the States which have protecting seasons.† Twenty-six States and the District of Columbia give protection for at least part of the year. Of these, Virginia, South Carolina, Alabama and Tennessee still



Distribution of the woodcock *(Philohela minor)*. Shaded area shows range of species.

tolerate spring shooting. The season closes in Virginia and South Carolina on April 1, and in the other two States a month earlier. It is pretty certain that in Alabama and Tennessee the summer residents commence nesting early in February, and that in South Carolina and Virginia they have eggs, or possibly young, by the middle of March. Consequently, four eggs, or as many callow young, are apt to perish with each pair of birds shot during the two or three weeks prior to the close of the season in those States.

Summer shooting is still permitted in nine States and the District of Columbia and on Long Island. It begins on June 20 in Kentucky; on July 1 in the District of Columbia and Indiana; on or before July 15 in West Virginia, Minnesota and Iowa; on Aug. 1 in Missouri and on Long Island; and is restricted to the month of July in Pennsylvania, New Jersey and Maryland. There are no statistics to show what proportion of the young birds hunted are able to fly as early as July, but judging from the experience of ornithologists and the statements of a few market hunters the proportion must be large. One rather frank market hunter stated that he quite often killed the parent and young without moving from the position where the birds were first flushed. He would kill one or two as they took wing, and secure the others on the ground when they had alighted, usually within a hundred feet of the point at which they were flushed.

If a locality is closely hunted during the summer most of the birds are killed, and not enough are left to keep up the breeding stock. The District of Columbia is a good example of the pernicious effects of this unseasonable shooting. Twenty-five years ago there was hardly a swamp of any size that did not have its pair of breeding woodcock. It is stated that at least two pairs bred every summer within the limits of the present Zoological Park, and that it was not rare to flush a bird in the less populous sections of the city. At present, breeding birds are far more difficult to find; it is doubtful if they equal 10 per cent. of the former number.

Preventive Measures

To prevent any further decrease of the woodcock, one of the first steps is to abolish all spring and summer shooting. It has been shown that spring shooting is harmful on account of the number of parent birds killed, either when nesting or while caring for dependent young, Summer shooting is even more disastrous; in many localities practically all the resident birds are destroyed before the young are strong enough to care for themselves.

In the Southern States, where the bird winters, and where it has utterly inadequate protection, the sportsmen should rally, and by concerted action make a strong effort to have proper laws enacted. A short open season of not over six weeks should take the place of the present practically unrestricted one; a limit should be placed on the size of the bag; and, beyond allowing a sportsman to carry a few birds with him on his return home, all shipment should be prohibited.

With the adoption of the measures here suggested, the principal danger would be averted, and if, in addition, sportsmen and others would take an unselfish view of the matter and work for a universal close season covering two or three years, the restoration of this noble bird would be assured. One locality has already taken this course. In Rensselaer County, N. Y., woodcock cannot be lawfully shot until 1903. If this creditable example were to be generally followed throughout the region inhabited by the woodcock there could be no question as to the result. Such action on the part of the Northern States would have the cooperation of Ontario, which has a law empowering it to act with two or more of the States lying to the south of that Province (one of such States being either New York or Pennsylvania, or Michigan) in prohibiting for a period all hunting, shooting and sale of any migratory game bird that appears to be in danger of extinction.*

Unless sportsmen and others especially interested will take this matter in hand and secure proper legislation for the better protection of the woodcock, future generations will have cause to grieve over the loss of one of the finest game birds that ever graced a covert.

Wood Duck (Aix Sponsa).

The wood duck, or summer duck, is the most beautiful of all the members of the large and diversified duck family, and, on account of its beauty and lack of shyness, is one of the best known species in the country. It is not seclusive, often making its abode near towns, or perhaps in the vicinity of farmhouses, where it may be found feeding or associating with barnyard ducks. It takes kindly to domestication, and is easily tamed and induced to breed in captivity. Its favorite haunts are small lakes, weedy ponds, or shady streams in the midst of, or in close proximity to, scattered woodlands, and, except during migration, it is rarely met with about open bays or large bodies of water.

Distribution.

The wood duck is found from Nova Scotia, New Brunswick and Ontario westward to British Columbia, and southward through the United States to its southern border and Cuba. It is rather uncommon in the eastern Canadian Provinces, but in parts of Manitoba and British Columbia it is abundant. In the Saskatchewan region it has been found as far north as latitude 54°, and on the west shore of Hudson Bay as high as latitude 60°, but it is rare north of latitude 50°.

In the United States it is commonly distributed in the Mississippi Valley and eastward, as well as along the Pacific coast from Washington to southern California, but, except in a few isolated localities, it is very rare or absent in the Great Basin, Rocky Mountain, and Great Plains regions. Although it is common in Texas, evidences of its occurrence in Mexico are unsatisfactory, though it probably may be found in the more northern portion during winter. It is resident in Cuba, and stragglers have been taken in Jamaica and Bermuda. It breeds throughout the greater part of its range, and since over a considerable part of its breeding area it is the only representative of the duck family during the nesting season, the name "summer duck," by which it is often designated, is very appropriate.

THE WOOD DUCK (*Aix sponsa*).

Habits.

In the South the wood duck commences to breed early in March, and in the more northern parts of the range about a month later. In Florida and Texas full complements of eggs have been found by the 1st of April; in Maine by May 10. The nests are almost invariably placed in cavities in trunks or limbs of trees, often at a considerable height from the ground, and are occasionally quite a distance from water. The eggs, which vary in number from six to fifteen, according to the age of the bird, resemble old ivory in color.

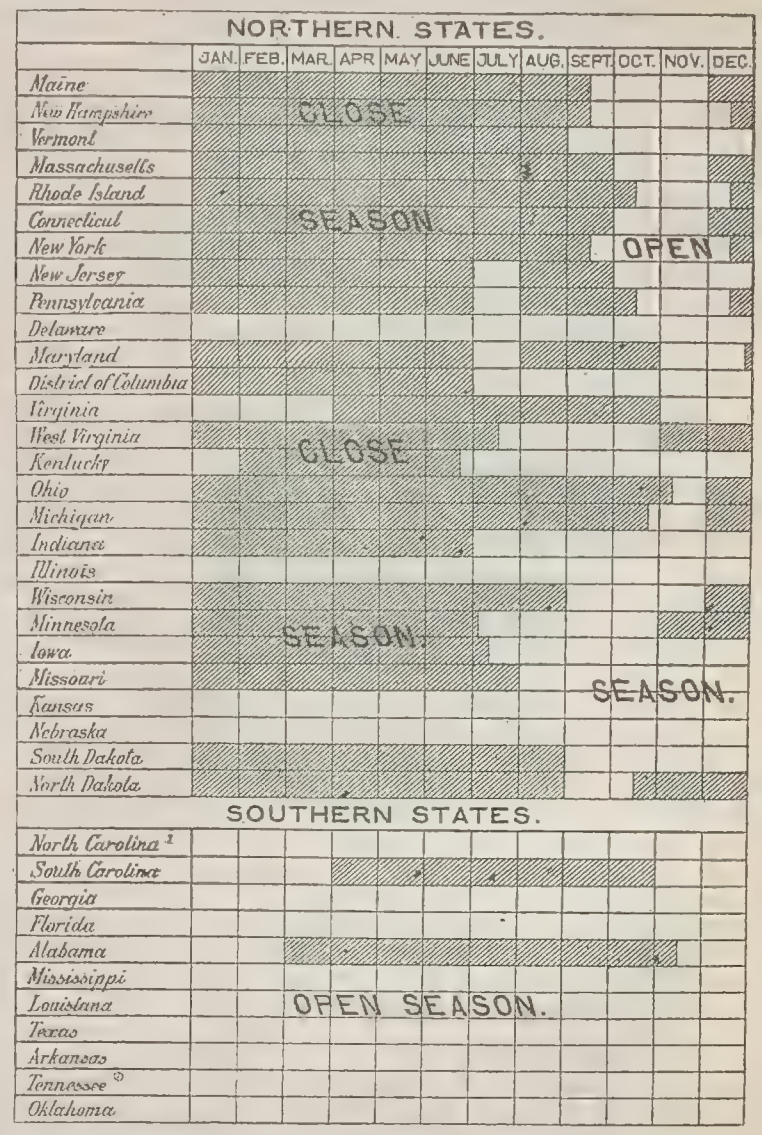


Diagram of Woodcock Season Variations.

While the females are incubating or caring for the young, the drakes of a neighborhood band together and may be seen flying about or feeding in company. Observers differ as to whether these bands remain unbroken and aloof from the females and young through the entire brooding period or separate at intervals during the day to visit their mates.

The flight of the wood duck is swift and graceful, and the bird rivals the grouse and quail in the ease and facility with which it glides through the woods and among the branches.

The food consists of various kinds of insects, the seeds and leaves of aquatic plants, and beechnuts, chestnuts and acorns. Its fondness for the latter, on which it feeds largely in autumn, gives it in some localities the name "acorn duck."

Spring Shooting.

Within the past few years friends of game protection have felt encouraged not only by the apparent awakening of a more healthy public sentiment against undue destruction of birds and mammals, but also by the progressive movement in the direction of more extended and more uniform close seasons. But although much has been done for the protection of upland game, little has been accomplished toward saving the waterfowl. Unaccountable as it may seem, ducks are considered legitimate game at a season when they are hurrying to their nesting grounds, and spring shooting is still tolerated in a great majority of the States. Ducks killed in spring are often in wretched condition, and thousands find their way to the big markets that certainly would be condemned as improper food if inspection laws were rigidly enforced.

Let it be said, however, to their lasting credit, that seven States (New Hampshire, Vermont, Michigan, Wisconsin, Minnesota, Utah and California) and three Canadian Provinces (Manitoba, Ontario and New Brunswick), by closing the season before Feb. 1, have abolished spring shooting within their borders.

On the other hand, more than half the States permit duck shooting as late as April and at least eighteen allow it throughout this month. It is to be regretted that such States as Iowa, the Dakotas, Montana, Wyoming and Colorado, which contain large breeding grounds, should be among the number that extend the open season to April or later. This unseasonable slaughter is steadily depleting the ranks of even the most abundant species. And if the migratory ducks (those merely passing on their way to their more northerly breeding grounds) are thus affected, what must be the effect on a species like the wood duck, which breeds over a wide extent of unprotected territory? The question is not hard to answer. It is only necessary to point to the fact that this handsome bird is now almost unknown in many places where once it was common, and where it added both life and attractiveness to the surroundings.

It goes without saying that birds are more easily and more completely destroyed on the breeding grounds than on areas which they merely pass over during migration; for when the breeding season arrives and the nesting site is chosen, birds become less shy and more inclined to remain in the neighborhood, so that gunners (the term "sportsmen" cannot be used in this connection), while in search for late migrants, have little difficulty in killing all the wood ducks that are to be found.

Massachusetts and four counties of Maryland recognize the special danger surrounding the wood duck, and make the season much shorter than for other ducks. This is as it should be. But Louisiana reverses the proper course, and permits the wood duck to be killed

† Ten States, which in the aggregate include nearly half the area inhabited by the woodcock, give it absolutely no protection.

* New York within the past year has taken steps looking to the establishment of such cooperation as Ontario suggests. The game warden of that State has communicated with game associations in several States with a view to establishing, in conjunction with Ontario, a close season for woodcock and wood ducks for a term of years.

a month after the regular duck season closes; and Delaware, for some unaccountable reason, specifically exempts it from the protection accorded all other ducks.

Jefferson County, N. Y., furnishes one of the most practical and at the same time convincing demonstrations of what sound judgment and proper laws may do for bird protection. The County Sportsmen's Association secured the passage of a law protecting ducks in spring on their breeding grounds, and the following extract from a letter written by the president of the association shows the result of the measure:

"We have claimed as an argument for the passage of this bill that if the fall ducks or divers were unmolested in our waters in the spring, they would find choice feeding spots, and would return earlier and in larger numbers and stay longer in the fall—a fact which yet remains to be proven. We also claimed that if the summer ducks, the black duck, the mallard, the wood duck, and the teal, were unmolested, they would remain with us and nest and rear their young. That they have done so this year is an undisputed fact, as never within the memory of the oldest sportsman have there been so many of these ducks in this county on the opening day."*

If in one season such results can be accomplished in a restricted locality surrounded by unprotected areas, it is easy to predict that an enormous increase of birds would follow the universal suppression of spring shooting. But as long as this murderous custom is tolerated, just so long will the wood duck be absent from our ponds and streams. Sportsmen willing to deny themselves a little present sport for the sake of future gain to themselves and posterity, should spare no efforts to save and restore this beautiful bird. If spring shooting be abolished the wood duck will gradually return to its old haunts and by degrees reestablish itself—to the joy and satisfaction of all lovers of nature.

*FOREST AND STREAM, Vol. LVII., Sept. 28, 1901, p. 245.

Vipers Swallowing Their Young.

I HAVE recently received from a correspondent, Mr. F. G. Short, of Lyndhurst, a specimen bearing on the evidence as to the truth or fallacy of the statement respecting vipers swallowing their young when approached. Mr. Short writes to me as follows:

I have again to trouble you on behalf of Mills, the snake catcher. He brought me an adder which he declares had swallowed its young, and I have forwarded it to you by parcel post for inspection. The adder is alive in a tin.

I obtained a copy of the Field and read the result of your examination of the adder (previously sent by me) to "Brusher" Mills, and he was much mystified by your description of the dissection of the reptile. I have never studied snakes, so know nothing of the subject in question. I only act for Mills, who cannot read or write. If you think it useless for Mills to send adders please let me know, and I will stop him so doing.

F. G. SHORT.

As there has been so much doubt thrown on the accuracy of the observers regarding this matter, I decided to get the evidence of an impartial witness as to this particular example. Without opening Mr. Short's parcel, I took it to the Royal College of Surgeons, Lincoln's Inn Fields, and requested Mr. Shattock, the pathological curator, to make the necessary examination. On breaking the seals and opening the tin box containing the reptile, we found that it was the sole occupant, and in a most lively condition. Turning it on to the dissecting table, I secured it by the neck, and divided the vertebræ immediately close to the head. The viper was then pinned down on the back, and most carefully dissected by the skilled curator, with the result that the gullet, nine inches long, was found perfectly empty, as was the stomach. There were eight eggs in the oviduct, the young being perfectly mature, and each five inches in length. This is a very good example of the want of accuracy on the part of those who state that they have seen vipers swallowing their young.

Brusher Mills, perhaps the most experienced snake and viper catcher in the kingdom, who declares he has seen the performance "hundreds of times," cannot send us an example of a viper with young in its stomach, and I must again state that the reward offered by the Field still remains unclaimed.—W. B. Tegetmeier in London Field.

Mr. Tegetmeier and the writer of the article on the subject which appeared in the Field of Aug. 30, wrote down the law in a very satisfactory fashion upon a point which has puzzled and divided naturalists for a great number of years, and both fall into grievous fallacies themselves.

Both of these gentlemen seem to agree that the structure of the viper's œsophagus makes the swallowing of her young by the female impossible, and Mr. Tegetmeier goes further, and alleges—or rather I should again say lays down the law—that the stomach also would not allow of the young being swallowed. They seem entirely to forget—I will not, as they would, allege ignorance—what bulk a viper is capable of swallowing, and, if necessary, throwing up again. The gape of the mouth is, beyond doubt, large enough to allow the young to seek refuge through it, and surely it is common knowledge that the swallowing of frogs, birds, mice, and even small rats is an everyday occurrence.

Further, it is not quite correct to term the operation swallowing; there is a difference between an adder swallowing her young and merely opening her mouth to enable the young to pass through it, making a passage for themselves into the gullet and stomach.

Both in the article and letter, the young vipers are quoted as being five inches long. That this was so in the cases referred to, I do not doubt, but the length of newly born vipers is usually nearer three inches, and I think that five inches would, in most cases, be an overestimation of length.

Then again, the writer of the article alleges that, even if it were possible for the young to get through the gullet, they would not be able to breathe there. But surely it is a well-known fact that vipers have a wonderful vitality, and can live for a very long space of time without breathing becoming a necessity; many snakes can remain under water for a considerable period. No one has, so far as my knowledge serves me, ever suggested that the female carries her young in her stomach for days on end.

I have lived among, and been an ardent student of, nature since my early boyhood, and that which Mr. Tegetmeier and your editorial declare in so decided a manner to be impossible, I have most certainly myself seen.

On more than one occasion have I seen young vipers entering their mother's mouth, the latter lying on her belly with jaws wide open. On one occasion, which is especially clear in my memory—the first week in June, one year in the sixties—I saw this happening on the edge of a copse near Shepham Woods, Westham, Sussex. The viper made off on my approach. I went to the copse the next day. and saw the adder again (this time in the copse) about five yards distant, and I again saw the youngsters going into her mouth. I shot its head off with my gun, and, hurrying up, stamped upon each young adder, to the number of fifteen, as it came out of its mother's body. I was then with my father at Priesthawes Farm, Westham, not far from Eastbourne.

Another case I well remember is that of an adder which was frequently seen in old Lewes Castle with young vipers going in and coming out of her mouth.

For Mr. Tegetmeier, under these circumstances, to class all those whose views on the subject do not coincide with his own as "superficial observers," and to insinuate an utter lack of anatomical knowledge as the bar to their attainment of his height of scientific bliss is, to say the least of it, annoying to one, like myself, who has not only been a keen observer and lover of nature for over forty years, but has most assuredly seen the phenomenon the existence of which he so dogmatically denies.

I trust you will see your way to insert this letter out of fairness to those who believe that it is not only possible, but that young vipers, as a matter of fact, do pass through the mouth of their mother.—Horace Tuppen in London Field.

The Red Squirrel.

TORONTO, Canada.—*Editor Forest and Stream:* It is with great pleasure that I read your interesting paper. Recently I was out hunting with a .22-caliber rifle looking for a rabbit or a few squirrels, when in front of me I saw a red squirrel putting his head in and out the top of a post about four feet high. Hoping to capture him alive rather than shoot him, I waited till he had his head in the post. I then shouted and ran toward him, thinking the noise would frighten him into the post, and so he would be trapped, but instead of going into the hole, he ran off into the woods. I then walked over to inspect the post, and to my astonishment the post had in the top a little hollow which looked much as if it had been gnawed, and this hollow was almost full of clear water, which I tasted and found quite good. I wondered if the squirrel had gnawed the hole to catch rain water to drink or wash in. On another occasion I found the squirrel there acting in the same way, but I can't say whether he was drinking it or just putting his nose in the hole. I should like to know whether squirrels drink or not, and if so do they do it in this manner?

Another strange thing I once noticed was a little squirrel eating an icicle on a maple tree. I shot him, and he caught in the tree, and when going up to get him, I noticed many more icicles, and on tasting them found that they were very sweet. On looking under a bough I noticed it had been tapped, and the icicles formed from the dripping sap. I am positive the squirrel made these tappings with his teeth, as I can distinguish pretty well a squirrel's tooth mark in a maple tree's bark.

S. C. S. T.

[We fancy that squirrels drink, and it is quite certain that they are fond of maple sap. No doubt the maple was tapped by the squirrel, as our correspondent suggests.]

Iowa Forestry and Park Association.

A GRATIFYING evidence of the continually increasing interest in the protection of our natural products is the formation in many States of forestry associations, and in many counties of associations for the protection of special areas of woodland, or of natural features which deserve the special care of the locality where they exist.

The Report of the Proceedings of the First Annual Meeting of the Iowa Park and Forestry Association is a handsome volume of eighty pages, and contains much that is interesting. The purpose of the Association is to arouse interest in and secure the establishment of one or more State parks, of smaller parks about cities and villages, to awaken interest in forestry in the State at large, and to urge Congressional and State legislation in furtherance of these objects.

The Association took strong ground in favor of the establishment of the proposed national park at the headwaters of the Mississippi, and of the purchase of land by the Government for the Appalachian National Park. Its Proceedings contain a number of papers of great value and usefulness, and it is handsomely illustrated.

It is within our recollection that wild elk were found within the State of Iowa. Since that time the work of destruction of natural things has been going on at a rapid rate. It is high time that the inhabitants of all our States began to consider the importance of calling a halt in the work of destruction and to take such action as has been taken by the thriving and progressive State of Iowa.

Bull Moose Reported Killed in Vermont.

SWANTON, Vt., Sept. 17.—*Editor Forest and Stream:* I wish to call the attention of your Vermont readers to a report that has just reached me, and it requires prompt investigation. A few weeks ago a bull moose and cow with calf came into the eastern part of this State, and the bull and calf were killed near Silsby's mills, some two miles from Lunenburg, Vt. A piece of meat was cut out of the bull and the remainder of the carcass was left where it was shot. It is said that both the State's Attorney, Hale, and Game Warden John Folsom, have knowledge of this fact, but so far have not taken any action to punish the guilty parties who committed this dastardly outrage. It is very evident that the Hon. John W. Titcomb is not at the present time residing at his old home, St. Johnsbury.

This is a matter that the Fish and Game League should have thoroughly investigated, and if this report proves true, have the guilty parties punished. My informant received his information from Warden Folsom.

"That reminds me."

Listerine Cocktails.

A Modern Indian Story.

SIOUX names are nothing if not expressive, and this fact was particularly apparent in the case of Lame Eagle (who happened to be "heap sick" and incidentally responsible for this narrative), as the poor wretch, with the aid of a cordwood stick in lieu of a crutch, came hobbling up to the tent and peered through the fly, with only the guttural "How!" for an introduction.

I have a faculty, like dogs and horses in their ability to detect the approach of man and beast, and always imagined that I could scent an Indian, and still think so. With this instinct, my black whiskers and a complexion which is said to command respect from savages, I was able to reassure the other members of our party who were somewhat in doubt as to the proper etiquette in dealing with the lordly Sioux on whose reservation we were camped hunting ducks. Three days of hard hunting had about tired us out and I was resting up for a day, my companions being a mile or more away trying to annihilate a flight of mallards which had settled in the lake the evening before.

Up to this time we had not seen an Indian, and this sudden appearance of so poor a specimen as stood in the doorway, knocked all my plans for a spectacular reception galley-west and crooked, beside the boys were not in camp to see even this disappointing show.

We had been warned not to display any liquor on the reservation, and under no circumstances was an Indian to be given a drop, under penalty of having our permit cancelled; therefore, our small supply of snakebite antidote was well hidden and guarded.

I was not long in arriving at the conclusion that our red visitor had called for a drink. "How!" said I, rising and extending my hand as cordially as possible, but without smiling. He shook hands rather timidly and glanced about the tent, then looked me straight in the eye, tapped himself upon the breast and began the conversation which was notable for its very few words of English and its many expressive signs, which we both seemed to understand perfectly—"Me Lame Eagle, heap sick" (rubbing his solar plexus). I endeavored to express to him how sorry I was—not, for if he had really been sick he could have been relieved at the Agency without all the exertion of coming to our camp. "Where sick?" I asked. Again he rubbed that portion of his anatomy about the equator, tapped his head and crippled leg and with a wave of his hand again repeated, "Lame Eagle heap sick." To humor him I gave him a cigar and pointed to a camp chair where he seated himself, and I began rummaging among our supplies to see if we had anything to relieve his "heap sick," and if possible, get rid of him. I knew this beggar was trying to work me for a drink in spite of the rules of the reservation, which he understood as well as I, and it occurred to me that, with my natural ability to do things—and Indians—I could satisfy his cravings and still not violate any rules, unless those of the Humane Society. "Lame Eagle want cocktail?" said I with a broad grin. He grunted, but the expression of his face never changed. I then began brewing a bowl which I am sure was never offered a human being before. With two teaspoons of listerine and an equal portion of sugar for a basis, I put a teaspoonful of paprica and five quinine capsules, mixing them thoroughly; then out of the grub box I pulled a quart bottle of malt vinegar, which had all the appearance of being good whiskey, and half a teacupful of this had to go for appearance sake, and as I poured this in I noticed the look of extreme interest on the face of the patient, who, I fancied, would be one indeed if he took the whole dose.

I filled the cup up with cold coffee and dropped in a piece of very dry lemon rind, and then the cocktail was ready to cheer the heart of the noble redman, and with some misgivings as to the result and what would happen if it should kill him and he should die about the camp. I handed him the cup, without the formality of "drink hearty," which he would hardly have understood and which was quite unnecessary, for he seized it and for the first time grinned, then down went the decoction at a gulp. The patient shivered and his eyes glistened for a moment as I stood transfixed, awaiting further developments, then with a yell that fully sustained the Sioux reputation, he rolled off the chair and writhed about on the grass. I was now alarmed, and was thinking he would have to have the water cure, when he leaped to his feet, regardless of the crippled leg, and began a wild dance, which was certainly amazing. He tore off his blanket, waving it aloft, and as he pranced about chanting something which might have been a war song, I caught sight of an ugly looking knife which I had not seen before, and on the strength of this backed into the tent, where I could reach my gun if it was required. He soon left off dancing, the perspiration pouring down his face and breast, limped over to where his stick lay, with its assistance straightened himself up to full height, swelled out his chest, threw back his head, pointed to the west and was away much faster than he had come. He soon disappeared behind a sandhill, and I began to realize that quite a sensational incident had just closed—or I should have been glad to be sure that it had just closed, in fact, for I was getting somewhat uneasy and appreciated the fact that an Indian is an unknown quantity, and I could not guess whether this one had left satisfied, or planning revenge for having been scorched from gullet to gizzard, and would kill me at the first opportunity. This train of thought made me suddenly anxious to join my friends down the lake, so taking my gun I lost no time in getting to them.

Burt and George immediately began reminding me that I was a quitter, laying around camp all day when shooting was good, and were ready to throw me in the lake when I admitted that I had forgotten to bring them a bite to eat or anything to drink. Then, when I, in my preoccupation of mind, let a fine flock of mallards go by

without a shot. Burt became solicitous. "What ails you?" he asked. "You look worried." "I am," I replied. "What seems to be the trouble?" "Indians," I replied. "Where?" "At the camp." "Steal anything?" "No." "Have any trouble with them?" "No! Oh! No(?)" "Well, you look as if they had stolen all the grub." "No; nothing has gone—but the Indian—and as I was getting lonesome I thought I would come down here." "Well, brace up and get in the game; the shooting will be great this evening"—and it was.

In the excitement attending the flight of ducks we had no time to talk, and the Indian subject was dropped. At dusk we started for camp, loaded down with ducks, and being too tired to cook anything when we reached camp, rolled up in our blankets after a cold lunch and were soon sound asleep.

The next day Bob and I went to the nearest railroad station, seventeen miles away, with a half-breed whom we had engaged to haul our bag of ducks.

On our return to camp that evening it was apparent that Burt and George had news for me. "You had a caller," said Burt. "Who?" "Cripple Buzzard or Limping Eagle, or whatever his name is," said George. "Why do you say he called on me?" said I, trying to appear indifferent and at the same time making haste to get my Colt out of my grip and placing it in my hip pocket. "Because he inquired for the white Medicine Man with the whiskers, at least that's how we interpreted his few words and many signs, and I guess you are 'it' old man." That settled it in my mind; Lame Eagle was looking for trouble, and me. I looked at the boys in a half-hearted way and told them they were joking, but they insisted not.

We were in the midst of supper of broiled jacksnipe and other good things when a slight noise at the door attracted my attention, and looking up I beheld Lame Eagle. I reached for my pistol but did not draw it. "How!" grunted my guest of yesterday, who I was now confident was my deadly enemy. "How! Lame Eagle," I replied. "White man come out teepee." "All right," I replied, as he turned away; then to the boys in an undertone I gave them to understand that their guns should be ready for quick use, and to look out for other Indians, and at the first shot to pump it into 'em, but not to follow me out of the tent. Then, with my hand on my Colt, I went to the door. My suspicions were confirmed, for there in the darkness stood Lame Eagle and another Indian. I stopped at the door, deciding that they would have to "get me" with a gun, for I would not get close enough for knife or tomahawk. "What do you want?" I asked. The reply from Lame Eagle was more surprising than a shot. "Squaw heap sick." I nearly fainted. The strain of prospective hostilities broken, I was willing to make cocktails according to formula before mentioned, for a tribe of Indians, and as I went into the tent the boys, who had had their ears to the ground, hailed me with, "Anything serious, doctor?" I went straight to the "buffet" and soon had a draught for the lady, rather milder than that prepared for her better half, which she stowed away with much scowling and shrugging and several grunts of approval. Then Lame Eagle gave the squaw a command and she hurried away into the darkness.

"White man wait," said our guest, and soon back came her ladyship leading the ugliest pony I ever laid my eyes upon, and carrying a papoose on her back. Again Lame Eagle made a brief talk—"Papoose heap sick," and at that moment a howl of laughter came from the tent. As I went in once more to the "buffet" I struck right and left, clearing the way, with a streak of blue air following me. Having dosed the baby with a diluted portion of the formula, which nearly threw it into spasms, the climax of the affair occurred. The squaw addressed me with, "White man got squaw?" "Sure, Mike!" I replied. "Me give white squaw this," and out of the folds of her blanket she pulled a beautiful pair of beaded moccasins. Now, I did feel guilty; these people, grateful for something that had started in a foolish joke, and which might have had a very serious termination, were actually returning good for evil. Lame Eagle then came up and tied the pony to the tent pole, and again, in his characteristic fashion, said, "Lame Eagle give white man pony," and with that the squaw took the papoose on her back and began to hike homeward with her liege lord limping after her. The only reply to a good-by sent after them was a grunt.

"Well, what do you think of that?" I said, throwing myself down on a pile of blankets and filling my pipe. "We could tell better if you would give us some of the first chapters of the romance and the recipe for the dope," said Burt. So, with the understanding that we would not tell of the matter, for fear of being refused the privilege of hunting on the reservation in the future, I explained it all, and I am sure that in the five years that have elapsed no one has heard of the incident.

My wife prizes the moccasins highly and will no doubt be surprised to read the history of them.

The pony we found useful in going to and from Anson's Ranch, and on leaving we turned him loose and he took the trail for the reservation without loss of time. Anson tells me that the Indian came to his ranch several times since with the pony, explaining that he was looking for the white Medicine Man with the whiskers, who had lost his pony.

We expect to visit the Sand Hills again this fall and will probably see Lame Eagle, who, I hope, will not be heap sick, so I can present him with something worth while and not have to make more listerine cocktails.

WILLIAM BURTON.

A Quaker Designation.

IF you can spare the space, I'd like to tell a story, merely to show how little some people know about guns.

When I was a boy I was at the house of an old Pennsylvania Quaker, and even then the shooting fever was strong, and I had my gun with me, which stood, when not in use, in one corner of the sitting room.

One day the good old lady came gently up to me, and pointing toward that corner said: "If thee don't take that thing away I'll cut the spout off."

DIDYMUS

ST. AUGUSTINE, Sept. 1.

Game Bag and Gun.

Proprietors of shooting resorts will find it profitable to advertise them in FOREST AND STREAM.

Across New Brunswick on Snow shoes.—II.

Why there is Game in New Brunswick.

THE extent of a country is not always to be measured by its area in miles, but sometimes rather by its accessibility. It takes less than two days to go from Chicago to the Blackfoot reservation of Montana, and another day will take one into the hunting grounds there—a trip running into the thousands of miles. Yet at the best, Adam Moore and I could not get into the actual hunting country of New Brunswick in less than three days from Fredericton. This difficulty of access might at hasty glance be thought something disadvantageous. Not in the least so, but quite the contrary. The game region of New Brunswick, although it is a small one so far as the question of miles is concerned, is really a very large one, and one not soon to be exhausted. It is in fact hedged about by so many difficulties of transportation that it is not only a natural game preserve, but one naturally protected. It would not pay a market-hunter to try to kill game for the market anywhere in the region we visited. The game wardens would prevent him from selling his moose meat or caribou meat to the lumbering camps, and he himself could not bring it out to the railroad, even were he sure of escaping detection, and sell it at any profit to himself. The only access to the interior of the big strip of country which lies between the forks of the railroad which runs northeast and northwest from Fredericton are the truly terrible "tote roads" of the lumbering camps. One does not always find game close to a tote road. He must kill his game and get it out by man power. There are no horses used in hunting in New Brunswick. A pack train could be taken in, as I believe, over a good part of the country, but the trouble is that there is no food for the horses. Out in the Rocky Mountains the question of horse feed is one which gives no concern. This cutting down the transportation to one simply of man power is of the utmost consequence in the preservation of the New Brunswick game. Of course there are the streams, but they are streams in nearly every instance leased and guarded. If you kill a moose, the fact is known. If you send out too many caribou hides the fact is known. If you start a toboggan load or canoe load of meat or fur, there is always some one to ask where it came from and where it is going.

They have game in New Brunswick, and they are going to have it for a good deal longer time than you and I will be interested in the matter. One of the greatest reasons for this is the inaccessibility of the country, another reason is the excellent enforcement of the game law, yet another is the fact that the game law limits the bag to a single moose and a single caribou to each gun. And still another reason, in the opinion of all New Brunswick guides and citizens, is the non-resident license, which excludes a great deal of the thoughtless public. However we may look upon the license on this side of the line, the New Brunswick man regards it merely as so much insurance for a good sporting trip.

"You put up your license, and it's a very little item in a trip that is going to cost $400 or $500, anyhow," say they. "Would you not better pay that extra item of insurance and get what you come after, rather than save that small amount and go somewhere and not get what you want, or than to come here and not get what you want? It's just like fire insurance. It costs a little something, but you are willing to pay it for the feeling of safety and for the guaranty which it offers."

So much for the New Brunswick point of view. They sold about $8,000 worth of licenses last year, and they think that something like $75,000 or $80,000 was left in the Province by sportsmen. The guides have a proverb that "it takes a month to get a moose," and that it costs a sportsman about $500 for his trip. Of course these figures are subject to all manner of change, for sometimes the trip costs very much less and sometimes the moose is had very much sooner. The man dreaded of all others by the honest New Brunswick guide is the one who has been so inflated with ideas of the ease and certainty of sport in New Brunswick that he is persuaded he ought to go out and kill his moose and caribou within a few days or a few hours after he strikes camp. Indeed, this is sometimes done, often done, but the guide wants no sportsman who is not sportsman enough to know that the pursuit of this big game is full enough of doubt and difficulties to be worthy indeed of the name of sport. Of which more presently.

Going into the Wilderness.

Adam and I struck a belated railway train on the Canadian Pacific from Fredericton. We reached Plaster Rock, after our long rail voyage up the beautiful St. John River, at 9 P. M. We took supper at 10:30 at a country inn and then started out, with the thermometer around zero, for a beautiful winter night's sleigh ride, it being our resolution to push on into the wilderness as rapidly as possible. We reached another wayside inn known as Riley Brook at 3 o'clock in the morning. We were now pushing up that bold and beautiful river known as the Tobique—a river which I had read about for years, and which I imagined was about the jumping-off place of all the world. I chuckled to myself as we spun along up the river, thinking how, sooner or later, everything comes to us which we really desire. I had seen pictures in the FOREST AND STREAM of Tobique sable traps. Now here I was on the Tobique and about to learn more of sable than perhaps ever I wot of.

Riley Brook is on the banks of the Tobique, and the local landlord, Mr. Ross, controls the riparian rights to the salmon pool here. The entire stream and its tributaries are leased to a salmon fishing club, and be it remembered that, when one goes fishing in New Brunswick, he must be mighty careful where he is and on whose toes he is treading before he begins to cast his fly.

On Tuesday morning, Dec. 3, we continued our journey, not indeed having slept more than an hour or so at Riley Brook. Our team was a good one, and by 9 o'clock in the morning we were at the forks of the Tobique. Here we found the lodge of the Tobique Salmon Fishing Club, situated at the foot of a noble pool, where I am told there is grand fishing in season. We found this pool covered with ice not quite strong enough to safely carry our team. The right hand fork of the stream was frozen half over, and the other half showed a ford of perhaps a couple of hundred yards of swift and icy water belly deep to the horses. It was a bit cruel, but nothing better offering, we had to put the team through this ford, running our loaded sleds across by hand power. Luckily no harm resulted, and by noon we found an abandoned lumber camp, known as the Red Bank, of the Hale lumber operations, and here we put our horses in the warm barn while we "boiled the kettle," as the New Brunswick saying goes, in what was originally the bunk house.

We were now well entered upon a journey up a lumber tote road, one of the best tote roads in New Brunswick, and on one of the best chains of lumber camps in the Province. What that road would be if stripped of its covering protection of snow, I would rather not imagine. It crossed a continual succession of little choppy hills, winding around the bottom of these slopes and sticking to the Tobique Valley closely. There were several bumps and jolts on that tote road, perhaps even more. We were not sorry when we reached the Red Brook camp kept by a quiet old man named Glasier, who cooks for the tote teamsters, and is glad to see strangers at this time of year. We ate his pork and beans and drank his tea with cheerfulness, and passed a good night in the camp.

In the morning we found the appearance of nature offering much change. A tremendous storm had come up, the first of the great storms this winter in New Brunswick, and the air was filled with a mist of the softly falling snow. It was a dozen miles yet to the next camp, which would be the end of horse transportation on our road into Adam's first camp. The team, plucky little horses they were, now showed signs of wear and tear, yet they carried us up to the next camp in time for lunch, though by this time the snow was more than two feet deep. Here we found Glazier Dickinson in charge of the camp, and old man Gibson the lumber scaler, and Brown the cook, a fabricator of most excellent brown bread and ginger cake. To all these we gave due and proper attention, and here we dismissed the team, which had brought us sixty-five miles from the railroad.

We were not yet quite in the wilderness, so Adam told me, and not yet quite at his camp. There remained six miles of foot travel, and the question was whether to undertake it that evening or not. Adam at this camp turned up with his son Jack, a strapping young fellow twenty-two years of age, nearly as tall as his daddy, and one of the best men physically that I ever ran up against in my life. Questioned as to whether we should try to make the six miles that afternoon or spend the night at the cheerful camp where we found ourselves, we decided that we would better push on through. Hence we arranged our packs and presently started out, Adam and Jack insisting on dividing my own dunnage, although it made for each of them a pack whose sheer dead weight caused me to shudder.

"Can Jack carry that thing?" I asked of Adam.

"Well, if he can't," was the heartless reply, "he hasn't got any business up in this country." And he did carry the pack.

These two husky products of Canadian soil fairly walked away from me, although I had nothing but my snowshoes and rifle to bother me. We did about two miles or so through the soft snow and at last came out on the shore of that beautiful body of water known as the Nictau or Nictor Lake, along which we were to journey for something like three miles further. Here the going was easier, for the water had come up over the ice and melted the snow underneath, so that it was not so deep. Score one for the shoepacks, and likewise one for the rubber shoes, for had we been wearing moccasins we should have been drenched to the bone. As it was, we traveled along for three miles, the guides looking around occasionally to see how the city man was doing. The city man was pretty tired, having discovered all at once that he was pretty near no good for this trip; this due to all kinds of ideas of what a man can do in the city without killing himself.

"Now," said Adam, as he stopped for a time and swept a comprehensive arm about him into the bleak face of the swirling storm, "we are in the wilderness. Never an ax has been set in a tree from here over to our camps."

Once in a while, through a rift in the blinding storm, I could catch a glimpse of bluff, rolling hills covered with bleak forests and surmounted with twisting weather of fog. Then the sweep of the storm would come again and blot it all out. We could not see more than a few hundred yards in any direction and hence lost one of the prettiest sights of the journey. As it was, twilight was coming with the thickening storm, when at last we reached the end of the lake, broke through a couple of hundred yards of hip-deep snow and came out into a little clearing, in the middle of which there stole up a silent column of blue smoke, and shone the red eye of welcome from a cabin window. So now we clattered our snowshoes free of snow, and dropped our packs upon the floor, and welcomed Charlie Cremin as he welcomed us, the same Charlie being Adam's partner, who had been up in the camp all the fall running his trapping lines, while Adam had gone out to meet me at Fredericton. Charlie had a dozen sable skins, and one fisher, or black-cat, drying on stretchers, and at the time we caught him was skinning a sable which he had caught that afternoon. He had two or three weasels on the table, which later he skinned for his own amusement. He finally gave me a bunch of weasel skins as a present to Madam, who purposes doing all kinds of things with them one of these days.

Presently Charlie disappeared around the corner of the house, and when he came back he had several steaks from a caribou saddle.

"Can we get one of those fellows?" I asked.

"Get one!" said Charlie, and he ended his answer with

a snort. "The pesky things bother me all the time," said he. "I could have killed half a dozen out of the bunch from which I got this one. I came away and left them standing all around me."

Questioned further by Adam, Charlie stated that he had seen three moose on his last run up the trap line toward the "Gap." He thought we might see moose in a day or so, but was not sure. We all agreed that the thing to do was to eat supper and plenty of it, which we did.

The Nictor camp, or Moore and Cremin, is a tightly built log cabin heated by a cook stove. The bunks are two story, the beds are of boughs and the blankets are of abundance. This camp is the central or home camp of the Moore chain, Nictor Lake being at the head of the Tobique River. We were now 210 miles from Fredericton. In the early fall the trip is made in about the same time, three days, but by canoe from Riley Brook, the guides meeting their customers at that place.

As to the successes during the past season, I was told that the first party at Nictor camp last fall was Messrs. Alfred Weed, of Providence, R. I., and John McIntyre, of Dayton, O. Each got his moose. Mr. Weed's measured 48 inches spread of antlers, and Mr. McIntyre's 50 inches. Each man also got his caribou and each got deer.

The second party at Nictor camp was made of Messrs. Geo. P. Bishop and Jerome Trask, both of Cleveland, O. Each got his moose and each got his caribou and abundant small game. Mr. Trask was not lucky in getting a big head, but he got a splendid bull. Adam Moore had out the above gentleman, while Charlie Cremin, his partner, took out Mr. and Mrs. J. W. G. Smith, of Moncton, N. B., each of whom got a moose, Mrs. Smith a very nice one. Charlie's second party was made up of Mr. H. R. Forbes and Mr. Robert Phillips, of Hoboken, N. J. Each of these got a moose and also one caribou and one deer.

Surprised at the completeness of all the details of this camp, I asked the boys how they managed to get their stuff in, and they replied that they brought in everything, even their cook stoves, etc., in the summer and fall by canoe, up the Tobique River, bringing about two tons of supplies each fall. These supplies last them through until the next season.

The First Day's Hunt.

We were now upon the hunting grounds, and deep within the actual wilderness. I had not come any more to hunt moose than to hunt health, and also to hunt information regarding this sporting region of New Brunswick; yet I obeyed cheerfully when Adam commanded me to shoulder my rifle and start out early on the following morning for a trip up the mountain side to a notch in the hills, which they call "the Gap." The snow was what any snowshoer may imagine, three feet deep on the level and still very soft, though not yet thawing enough to soften the shoes. The going was at first up hill, then more up hill, then a good deal more up hill, and then straight up.

Did we see any sign of game? I should say we did. We began to see caribou tracks thirty miles back of the tote road, and we kept on seeing them at different times. We began to see moose tracks as soon as we got across the little Nector Lake and got into the woods. We trailed a new deer track for a while until we became interested in some fresher caribou tracks. Adam plowing ahead up the mountain like some prehistoric giant, tireless, unfettered by any physical ill or weakness. I like his name, "Adam," primeval, simple. He is strong as a bull moose, honest beyond this day and generation, in short, about the kind of man one figures his ancestors ought to have been.

Presently Adam and I came across a place which looked as though some Titan had pushed a carpet sweeper through the forest with the intent of taking out all the roots and the bumps along with him. Adam silently pointed down. I was standing beside my first moose trail. "It is not very big," said Adam, "and I don't think its horns are very big, but it's a bull. Come on! We'll see what it will do."

"Jumped."

What it did was easy enough for the moose, but a little bit hard for the city man. The moose, perhaps driven down by the storm, seemed bound to get into the cedar thickets, like the white-tailed deer, and it led us a merry chase, worming in and out among the snow-covered trees. Needless to say, we were soon thoroughly wetted with the snow, which fell from the trees on our necks and shoulders, but of course one does not mind a little thing like that. The interest of the chase kept us warm. We could see that we were getting closer and closer to our game. Presently we could see that we were getting very close. At last we saw where we had gotten within 100 yards of it. There was the story. A deep pit, as though a great horse had lain there.

"Jumped," said Adam.

"Sure," said I.

Then we sat down and thought it over for a while. We went on some more, and presently we came across two more moose tracks, a big one and a little one, probably a cow and a calf, as Adam thought. We were then three miles from the camp ,and it was not too late in the day, so we thought we would follow on and see what this bunch would do to us. They did pretty much the same as the young bull had done. We followed these tracks through all kinds of country, saw where the animals had fed in among the willows and alders, and on the roundwood, and finally puzzled out their trail until we knew that we were getting very close. This time we were near indeed to seeing our moose. We were perhaps not fifty yards away when we came to a couple more big holes in the snow, and some more regular holes beyond. Jumped again! There was the story, plain enough. This time we might almost have heard the bushes rattle as we went out. As we stood there we heard a hoarse, harsh, curious kind of coughing bark. Adam laughed.

"That old lady is just wondering what in the world it was that scared her," said he. "She is frightened, but is not exactly sure what it is that frightened her. Just listen to her." Once, twice and again that same coughing bark came back to us. Then all was still, and we were again all alone in the white wilderness. We concluded that we would go home after that.

We ate some more caribou, and slept some more, and on the next day hunted some more, this time going further back into the hills. We traveled about eight or ten miles on our first day, and perhaps fifteen miles on the second, part of the distance over a trail which had been cut out earlier in the fall by Charlie. We ran across an old survey line, far back in the interior, marking the watershed between Bathurst and Tobique waters. Not far from here we "boiled the kettle." I had abjured coffee for the time and thenceforth was reconciled to the New Brunswick staple beverage, tea. We made it deep and strong and black and plenty of it, and I must say that after we had stopped for a cup of it, we went on as though we never had known such a thing as fatigue.

Lunch in the Snow.

When you build a fire in the snow for your noonday lunch, always, my dear tenderfoot, observe a few simple rules. In the first place, get some nice dry wood. Pine is best ("easy wood," Adam called it). Split up your pine into faggots three or four feet long. Make your fire by leaning your faggots up against a tree, which will serve as a chimney to carry up the smoke. Keep a good-sized dry log for a seat, and when you sit down, be sure and bury your feet deep in the snow, clear up to the knees, so that the heat of the fire will not melt the snow on your shoes or stockings. If you allow the fire to heat your foot-covering, your feet will get wet. The way to keep your feet warm is, so to speak, to keep them always cold—that is to say, cold so far as the exterior is concerned. You must have on plenty of wool, and the warmth of the foot will do the rest.

"This stick which I am cutting," said Adam, as he hewed down a young tree and cut a pole about eight feet long, "is what the Indians call 'Chiplok'waugan' (or 'Chiplokquorgan'). It means 'the fire stick,' or the 'tea-boiling stick.' You see we don't make a fire and cook down on the ground the way you do out West. We can't 'boil a kettle' in New Brunswick without a long stick to hang it on. You notice I poke this stick into the snow, and the little end hangs out over the fire, and I hang the kettle on that end, so it cannot possibly spill, and it gets all the heat which comes up to the top of the fire.

"Now there is a funny thing about this Chiplok'waugan. After you have boiled the kettle you must always throw the 'Chiplok-waugan' down, and never leave it standing up over the fire, or by the fire. If you do, that is bad luck, just as sure as you are born. No Indian and no guide who knows his business would ever think of leaving the ''waugan stick' standing up by the fire. I was out with two old trappers once, and we had gone about two miles from where we had 'boiled the kettle,' when all at once one of the trappers slapped his leg, and said that he had left the ''waugan' stick standing over the fire. That settled it. He walked back two miles to throw it down. We didn't have very good luck, at that, and he said he knew the reason."

So much for some of the wisdom of the woods. I counsel you, my dear tenderfoot, follow very closely these rules for building a fire and of throwing down the ''waugan' stick.

A Moose Yard.

We went on deeper and deeper into the rough country, getting some six or seven miles back of the camp. At last, just after pushing through a dense thicket of young firs, we came again upon fresh moose sign, not leading straightaway, but scattered here and there. One big track led up to the shallow brook and we could see where the animal had waded in the water. Other tracks zigzagged here and there, and there were many beds where the moose had been lying. This, then, was my first sight of a genuine moose yard. A moose yard, gentle tenderfoot, is not a beaten down or trampled place in the snow, surrounded with a high wall of snow, such as you saw in your youth described in the natural history books. A moose can get out of his yard about as soon as he wants to, and in three feet of snow a moose does not need any trail, unless there is a very sharp crust indeed.

Presently we saw the occupants of the yard, only a cow and a two-year-old, but great, big, splendid-looking animals with black sides, brown backs, and big, ungainly looking heads and long legs which traveled all so easily in the deep snow. For an instant they stood at a distance of about fifty yards, and had either been a bull our hunt for moose would have ended then and there. So now I had seen my first moose.

"You see," said Adam, "that once in a while you can come up with a moose on the snow." He alluded to my own doubt expressed on the preceding day, whether we should be able to get close enough for a shot when traveling on the necessarily noisy crust.

Plenty of Caribou.

It was a long walk back to camp, hence we felt that we did not have time to hunt further. We climbed the high spur of a mountain to find a lookout and were able to save a couple of miles of travel by starting straight across to intercept our earlier trail in the morning. It was dusk when we finally struck the beaten track, and as we descended the trail toward the little Nictor Lake, we found that the caribou had simply cut our trail all to pieces. There had been twenty or thirty, perhaps forty, of them marching up and down on our snowshoe tracks all day long. It grieved Adam very much.

"These blamed caribou," said he, "make me tired. You can't go anywhere here and start a good snowshoe trail but what the caribou come and flock into it like so many sheep. If we had that moose killed, we'd come here and do some business with these boys to-morrow." Indeed, all the country in the lower levels about the lake was literally cut up with caribou tracks, there being a big scattered drove of them feeding in the windfalls at that time. These animals live on the moss which grows on the pine and spruce trees, and much frequent the windfalls or down timber. Jack, who had been out the day before on a little voyage of exploration to the top of Sagamok, or Bald Mountain, which rises up for nearly 3,000 feet just back of Nictor Camp, had also seen plenty of caribou sign as well as a bunch of about two dozen caribou, not to mention deer. We found that the caribou had been out on the lake during the day, quite a bunch of them apparently. Indeed, the country was alive with caribou. "Mr. Bishop used to say when he was in here last fall," said Adam, "that if there were any more caribou they would be a public nuisance."

All the guides agreed that the caribou by this time had pretty well shed their horns, at least all the big bulls had shed. There might be some small bulls or an occasional cow with horns. For this reason we did not care so much for hunting caribou.

About New Brunswick Game.

Around the camp-fire that night I learned the following things: There were no deer twelve years ago in this part of New Brunswick. Deer are very abundant in Maine and are working into New Brunswick now in greater numbers, though not nearly so abundant as caribou or moose.

There have been no wolves known in New Brunswick for more than fifty years.

There are no lynx at all on the Tobique waters; but there are very many lynx on the Nipisiguit Chain.

There are moose pretty much all over New Brunswick now, but twenty years ago there were very few moose indeed. To-day moose are protected west of the St. John River, and they are increasing there very rapidly, and the overflow of the better game country is stocking the whole Province. Adam says that the increase of moose is due to better laws, better protection, and to the stopping of "crusting" by the Indians.

The Indians once got $5 to $9 for a moose hide, and some years ago there were eighty Indians from Quebec who made a sweeping tour from the north to the south as far down as the Tobique River. They piled up their snowshoes and toboggans at Riley Brook, made canoes and thence took their hides down the Tobique River. A certain famous Indian by the name of Tom Bear, with two other Indians, a few years ago, hauled out seventy moose hides. Tom said that they went into the yards to kill the animals, and kept on killing, and came back later to skin the carcasses.

There were sixty-two moose heads which went down the Tobique River in the fall of 1901, among these many splendid heads. Adam Moore killed the finest head he had seen for many years, my recollection being that this measured 61¾ inches. The Tobique heads average large of late, and both Adam and all those with whom I talked believe that moose are distinctly on the increase in New Brunswick. In a little symposium which we held at Fredericton, six or eight men put down their estimates of the number of moose contained in the hundred square miles contained in the middle of New Brunswick. Some thought there were 10,000, some as few as 2,500. The average was about 5,000 or 6,000. Of course this is all guesswork, but when one reflects that there will not be more than 200 or 300 non-resident licenses going into the Province each season, he will see what a good chance each of these has for a good head in such a country. I was well persuaded at the end of my second day in camp that if one could not get his moose here, it certainly was not the fault of the moose nor the fault of the guides.

E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

Some Uses of Common Things.

MANY common things, such as are conveniently accessible and always at hand, can be put to very serviceable and practical uses. Most of these are well known, and familiar to all, but a brief repetition of them may prove interesting and convenient.

Kerosene is the best possible substance with which to remove rust. Mix it with a little powdered pumice, such as is used in polishing knives, and the result is a paste which will obliterate rust in short order. It is also the best means of cleaning machinery, and the parts of the lock or mechanism of a gun, which have become clogged with gummed oil.

The best of all cleaning devices for a small-bored rifle is a stout string more than twice the length of the barrel. Tie a bit of oiled rag in the middle of it and draw it back and forth until the barrel is bright and clear. This arrangement is far better than any brass or iron rod, which is liable to mar the delicately rifled grooves. But the string used must be sufficiently strong not to break and leave the rag lodged in the barrel.

Vinegar and hot soap suds are the best washes with which to clean brass shells. Scrape out as much as possible of the dirt and burned powder inside the shells with a penknife before using the wash.

Rifle shells can be recapped by means of a shotgun recapper as follows: Cut a hole in the center of the head of an empty shotgun shell just the size of the rifle shells; then slip the latter into it, and they can be recapped as neatly and quickly as though the tool was made expressly for them.

It is claimed that fine shot can be made to scatter when thrown from a choke-bored gun by placing a few large shot in the charge when the shell is loaded. Another reliable method of accomplishing the same end is said to be to divide the load into two or three sections with thin cardboard wads.

Bottle-necked rifle shells can be loaded with a smaller charge of powder than that for which they were intended, for small game at near range, by filling the intervening space between powder and ball with crumpled paper wadding. This does away with the vacuum, which would otherwise so reduce the force of the powder's explosion as to prevent it, sometimes, from even driving the ball out of the barrel.

Buckshot make convenient round balls for target practice with small-bored rifles. They can be wrapped in a bit of oiled cloth of sufficient thickness to enlarge them to the correct caliber to fit the bore of the gun.

Paraffine, rubbed on the shoes, or well into the cloth of which the tent is made, will render them as thoroughly waterproof as though they had been soaked in oil, yet without rendering them at all greasy or liable to soil anything with which they come in contact.

A piece of ordinary black mosquito netting hung before the eyes will relieve them from the trying strain which results from the bright sun upon the snow, and will prevent snow blindness.

The Canadian remedy for "mal de raquette," or snowshoe evil, the inflammation and soreness of the legs which results from long continued use of the snowshoe, is to

place a piece of burning torchwood over the afflicted part and allow it to raise a generous blister. A much more agreeable, as well as effective treatment, however, is to rub the legs well with alcohol instead.

Sweet oil, or in want of it, sperm oil, or any animal oil, brings quick relief from the pain of a scald or burn, as it excludes the air from contact with the injured surface. In lieu of any other remedy, plunging the burn into tepid water has a soothing effect, and will allay the pain until a better remedy is at hand.

Woodsmen often suck bits of green pine twigs for sore throat and colds in the head, the medicinal properties which they contain being, as they claim, an effective cure. It is well known that the atmosphere of balsam woods brings quick relief to the consumptive.

Nothing will prove more serviceable in camp than a package of nails of various sizes. For building tables, bunks, benches and so on, they are of course indispensable. A stout nail driven into a tree or tent pole makes a handy hook; such also makes a very good substitute for a punch or awl, will do good service as a can opener, and will extract a cork as readily as anything, next to a corkscrew.

But in building the frame of the camp, if nails are not to be had, willow withes, or the slender roots of trees, can be made to take their place. The writer has seen rude fences built through the woods for miles without the use of a single nail, the rails being bound to the posts with twigs instead.

A marine glass for locating and so recovering the gun, compass, watch or other article accidentally lost from the boat in the water, may be made as follows: Knock out the two ends of a box of convenient size, place one end in the water, and look through the other, after having thrown a shawl or blanket over the head to exclude the light. The minutest objects can easily be seen thus on the bottom.

A blanket lashed between two poles makes a serviceable hand barrow in which larger loads of baggage and equipments can be carried than in any other way. This is a device well worth resorting to in crossing portages and traversing rough roads and woodpaths.

A blanket with an oar for a mast, and a crosspiece lashed to it for a yard, will prove to be an excellent square sail, which will carry a rowboat or light skiff along before the wind at a surprising rate.

If intending to camp in a rough board or brush shanty of a former season's erection, a roll of tar paper carried in the party will prove worth its weight in gold in repairing the roof and making it water tight, and will cost next to nothing at that.

For filling up the chinks and interstices in log or board huts, make a paste of wood ashes and water, and smear it into the cracks. It can be gotten into crevices where the conventional bit of moss will not go, and effectively block out the cold and wind.

Altogether, there are an almost limitless number of every-day uses which can be made of such materials as can be found wherever one is. A little exercise of ingenuity and the inventive faculty will supply the remedy for almost any want. RUPE BARMBY.

Some Observations on Game Laws.

Editor Forest and Stream:

In my younger and more confiding days, when I was devoting such time as could be spared from hunting or fishing to the study of the law, it was constantly impressed upon my mind, so that in time I really came to believe there was some truth in it, that the law was a science, and that it was constantly progressing to a higher state of certainty and clearness; that when a statute was to be framed, the best way was to state the idea intended to be conveyed in the simplest and most concise language. Many of my youthful ideas have been harshly dealt with by later experiences; and while I am not impolitic enough to say that the judges were wrong, I may say that I have my suspicious. Perhaps one of the rudest shocks to one's preconceived notions as to what is essential in drafting a law, will come to him who carefully reads the enactments of the New York Legislature during the past three or four years. I am not going to criticise any of my friends in that body, for we are all fallible—except those of us who have gone through the universities—and I may have some favors to ask from those same friends again sometime. Beside, they, knowing me well, might retaliate, as did a friend lately, when some one suggested that, perhaps, her wings had not yet commenced to grow. She contented herself with repeating the following, at the same time strenuously disclaiming the authorship, however:

"There was a young lady from Wilts,
Who walked into Scotland on stilts;
When they said, 'Oh, how shocking
To show so much stocking,'
She winked and said, 'How about kilts?' "

So, for fear that my friends at Albany might similarly retaliate, I am going to put all the blame on those supposedly evil-minded and subtle cold storage people. They are blamed for everything, good and bad, in our game laws, anyway, and a pound or more to their burden will not overwhelm them.

Take for a mind-illuminating example of scientifically precise expression, the provisions of the game law in regard to bird plumage. In the year 1900 the Legislature passed what was supposed by some to be a complete and comprehensive law in regard to fish and game. This is known as Chapter 20 of the laws of that year. Section 33 of that chapter, omitting the heading, reads:

"Wild birds, other than the English sparrow, crow, hawk, crane, raven, crow-blackbird, common blackbird and kingfisher, shall not be taken or possessed at any time, dead or alive, except under the authority of a certificate under this act."

The certificate referred to was a permit to take birds, their nests and eggs, for scientific purposes, as provided by Section 36 of the same law. No one, not even members of the American Ornithologists' Union, seemed to realize that a literal interpretation of this law prohibited the taking of any wild bird, of the kind commonly known as game birds, as well as all others, except only those specifically mentioned, without first obtaining the required certificate. That such was the effect of the language used is clear; and it is equally clear that such an effect was never intended. But without discovering this obvious incongruity, and almost before the ink used by the Governor in approving the above law was dry, another act known as Chapter 741 of the Laws of 1900, was passed and approved by the Governor, as an amendment to the aforesaid Section 33, adopted at the same session of the Legislature. This later act inserted the words "and birds for which there is an (sic) open season" after the word "kingfisher," as used in the section first quoted; and also added, as new matter, the following:

"No part of the plumage, skin or body of any bird protected by this section shall be sold or had in possession for sale." This, it seems to me, was making matters worse, "the worst ever," as the sage of Montclair would say. The words, "birds for which there is *an* open season" effectually closed the door against all kinds of shooting except with a permit—the fact that it was probably intended to use the word "no" in place of "an" made small difference, because the courts said that they were not going to make laws. But the uniform cheerfulness with which sportsmen continue to hunt game birds showed how much regard they had for the Legislature; and, in this instance, the sportsmen were right. But, in order to make things obscure, and as if (which was not the intention at all, unfortunately) to shut out all selling of game, the words quoted were added to the law, for any one who "sold or had in possession for sale," the body of any wild bird (and surely all game birds are wild) would violate the law, whether the bird be thrush, grouse or any other wild bird.

The Legislature meanwhile having had a much-needed rest, the literary bureau of those wicked, wicked cold storage people was apparently again set to work, the result being Chapter 91 of the laws of that year, this likewise being an amendment to said Section 33, the only change, however, consisting in substituting the word "no" for "an." already referred to. In all other respects the law was the same, and no sportsman could lawfully kill any game bird in this State at any time unless provided with a naturalist's certificate.

Evidently the criticism invoked by this condition of things set some one to thinking, whether the aforesaid literary bureau or not, is unknown; for the last Legislature decided to really accomplish something, and the result was as follows:

"Birds for which there is no open season and *wild birds* other than the English sparrow, crow, hawk, and crow-blackbird shall not be taken or possessed at any time, dead or alive, except under the authority of a certificate issued under this act. No part of the plumage, skin or body of *any bird* protected by this section shall be sold or had in possession for sale."

This is Chapter 359, Laws of 1902. Shades of Solon and Lycurgus! The remark of some one on a somewhat different occasion, is brought to mind when one contemplates the result of this last effort:

"He did his damndest,
Angels could do no more."

Practically, therefore, the law is just where it was, and no game birds can now be taken or possessed dead or alive in this State without the certificate provided for in Section 38; and if any one wants to make a criminal of himself, all he has to do is to shoot a game bird in the season. Such is the only possible interpretation to be put upon the first clause of the section. The latter clause, which was evidently intended to prevent the sale or possession for sale of birds not ordinarily classed as game birds, in order to stop the traffic in their plumage, goes much further, because it prohibits the sale or possession for sale of the skin, plumage or body of "any bird protected by" the section, and as all game birds, under the designation "wild birds" are under the protection of the section, the result is that it is now unlawful to sell or have in possession for sale any kind of game birds at any time.

It may be that the game wardens, seeing the absurdity of the law, refuse to enforce it, or that they put upon it an interpretation which the language used does not uphold. This, to say the least, is unfortunate. It is the business of the officials to enforce the law as it stands. The Legislature is the body to change it, and the best way to secure the correction of a faulty or absurd law sometimes is to enforce it. It tends inevitably to lessen the respect for all game laws to retain such weak and absurd provisions on the statute books. Each private individual has the same right as the game wardens to interpret the law, and this looseness and lack of respect are largely responsible for the frequent violations of such laws. In your issue of, I think, May 31, 1901, you called attention to one phase of this matter, but even with your enlightening editorial to aid them, the lawmakers failed to make the proper correction.

Another curiosity of legislation, to which it is worth while calling attention, is found in Section 28 of the Laws of 1900, which was as follows:

"Section 28. Woodcock, Grouse and Quail Not to be Possessed.—Woodcock, grouse and quail shall not be sold or possessed during the closed season, except in the month of December, and possession thereof during the last fifteen days of December shall be presumptive evidence that they were unlawfully taken by the possessor."

The latter clause of this section should be construed in connection with those provisions of the statute designating an open and closed season for these birds, the word "presumptive," as there used, meaning that in case of a prosecution for unlawful taking, that is, I presume, a taking out of season, the person arrested may prove, if he can, but the birds were in fact taken in the open season; and thus far the purpose of the law is beneficial as not allowing the permission given by the first clause to be used as a screen for those taking birds out of season. The burden of proving innocence is merely placed in the first instance on the person charged with the offense. The section is inartificial, and somewhat harsh in its intent, because it in fact makes every possessor of such game, no matter how acquired, subject to prosecution. A much simpler and fairer way, it seems to me, would be some system of listing or registration of such game by the cold storage people with some public authority, so that there would be no necessity of any presumption at all in regard to it. But a curious phase of the matter arises from a comparison of this section with some other provisions of the same law. If the closed season for these birds commenced in all cases on Dec. 1, the matter would be simpler; but as a matter of fact, the closed season for quail does not, in general, and with certain exceptions begin until Dec. 16, and in certain counties grouse and woodcock may also be killed during the same time; while on Long Island grouse and quail may be killed between July 31 and Jan. 1. Now it would be a hardship to sportsmen to say to them that they are presumptively guilty of a crime under the latter clause of Section 28 merely because they kill and possess game under three other provisions which was taken lawfully between Dec. 1 and Dec. 16; or, as to grouse and quail in Long Island, any time during that month. And yet a literal interpretation and enforcement of the law as contained in Section 28 would lead to no other result.

Section 106 of the act provides that "such birds [that is, woodcock, grouse and quail] shall not be possessed in their closed season except in the city of New York, where they may be possessed during the open season in the State at large." This applies only to Long Island game, so that as to such game Section 28 does not apply outside of New York city, and any one possessing Long Island game of the kind named in December is punishable under the act; and even in New York city is the possession of such Long Island game lawful if it is so possessed during the open season in the State at large; and that open season is not the same for all of these varieties of game.

There is no apparent reason for so many modifications and exceptions as the statute contains covering different parts of the State; and what has been said at least exemplifies the need of greater uniformity in our law on this subject.

But there are still unexplored fields for the student of the science of interpretation in these cherished volumes known, by courtesy, as the Laws of New York. For example, in Chapter 429 of the Laws of 1900, is found, by way of amendment to the aforesaid Chapter 20, of the same laws, a new section to be known as Section 89 (there is no Section 88), this being an attempt to impose a license on non-resident sportsmen for hunting on, or fishing in fresh waters, forming a part of the boundary of the State, or through which the boundary runs; or a license for taking fish or game in waters in this State if such license is imposed on residents of this State by other States or countries for hunting or fishing in the waters of such other States or countries. This was a sort of reciprocity idea; and, while awkwardly and inartificially expressed in the section, as it was framed, was still capable of being construed, and was not so bad as the last Legislature left it. This amendment is known as Chapter 77 of the Laws of 1902, and after following the language of the original act, in part, goes on as quoted:

"If any license fee to take such fish or game in waters not in this State be required o fa resident of this State, a non-resident may take the same kind of fish or game in such waters within the State if a license so to do shall have been first obtained from the Commissioner. Nor shall any non-resident not the owner of real estate in this State and against whose real estate there are no delinquent taxes, take fish or game in this State except on a like license if there is any discrimination by requiring a license or otherwise in the State or country where such non-resident resides against residents of New York in taking fish or game in such State or country."

One thing that suggests itself in reading the latter clause is that it would seem impossible to less clearly state the idea that was struggling for expression in the mind of the framer of the law, if, indeed, it is possible to see what the meaning is. Does it mean that a person who does not own real estate here must, if a resident of a State or country requiring a license, take out a license here before fishing or hunting in the waters of this State? It would seem that such is the intended meaning. But what must such person pay for his license? "A like license" does not necessarily mean, one costing the same amount, although that, too, was evidently the intention. The Forest, Fish and Game Commissioners are not appointed to legislate, but to enforce laws already enacted. And yet, if they undertake to enforce this law, which is in its nature penal and, therefore, to be strictly construed, they must add something which is not now in the law in order to make it intelligible. This they cannot legally do, any more than they can enact laws in the first instance. But if it applies solely to non-residents who own no land here, what is the use of speaking of dilinquent taxes? We have no concern, or should have none, with the payment of the taxes of a non-resident upon property not in this State. That is precisely the meaning of the text, if it has any meaning at all, for it says, "and against," not "or against"; if the latter expression was used it might be held to mean that a non-resident who owned land in this State could not get a license unless all his taxes were paid. I would not be surprised to know that this was what was in the mind of him who was responsible for this law. If so, all that need be said is that he should have so stated, even though it would then be silly and nonsensical, and have not the remotest connection with the purpose of the law which was the protection and preservation of the fish and game of the State. It likewise opens a wide field for speculation to attempt to discuss the meaning of the words "or otherwise," as here used.

It is amazing that there seems to be so much difficulty attending the framing of laws of this nature. One cannot help but wonder why the generally recognized principles of grammar could not be applied to the framing of laws for the protection of the harmless and innocent fishes and birds.

I might continue almost indefinitely with this exposition; but some consideration is due you and your readers.

JOSEPH B. THOMPSON.

NEW YORK, Sept 16.

O Ho.

No cool monsoons blow oft on Oxford Dons,
Orthodox, jog-trot, book-worm Solomons!
Bold Ostrogoths of ghosts no horror show.
On London shop-fronts no hop-blossoms grow,
To crocks of gold no Dodo looks for food.
* * * * * *

Rooks do not roost on spoons, nor woodcocks snort,
Nor dog on snowdrop or on coltsfoot rolls,
Nor common frog concocts long protocols.

CHICAGO AND THE WEST.

CHICAGO, Ill., Sept. 20.—For the past week the duck shooting has been magnificent on the Tolleston Club preserves right at the southern edge of Chicago. These closely protected and well-baited grounds have always attracted good numbers of wildfowl, and this fall seem to be especially well patronized by the early flight. The teal have been in on Tolleston marsh for several days now in very good numbers. Here comes in the beneficence of the Indiana law, which allows only twenty-four ducks to the gun per day. There have been days on Tolleston marsh when a good shot could have killed 100 or more teal. As it is, a good many gunners come in at 9 o'clock in the morning with their limit. One unfortunate gentleman made a shot into a flock of teal and killed thirteen at the two barrels. It did not take him long to finish his twenty-four after that, and he returned to the club house a sadder and wiser man, wishing that he had not been so lucky early in the game. Something of the same sort of luck happened to Mr. Hempstead Washburne yesterday at Tolleston. He came up to a little pond hole which was chuck full of teal, and his first two barrels laid low eight bluewings. We will give Mr. Washburne the full benefit of the doubt, and allow that he shot them all on the wing. None the less, this left him only sixteen more ducks to kill and a whole day on his hands. He, too, was sorry he was so lucky at first. Mr. C. S. Dennis is another Tolleston member who has been down this week and who had no difficulty in making his limit. It is probable that this teal shooting, varied by better sport at bigger ducks, will continue throughout this month, as this marsh naturally catches the flight which passes out at the lower end of Lake Michigan.

At Swan Lake Club there was a little flight six or seven days ago, but it seems to have vanished into thin air. Tim Wood, the keeper at Swan Lake Club house, writes to-day that the ducks are not there.

Mr. Robert Stites, manager of Rector's, this city, goes to Grass Lake Saturday evening for a try after teal, but the chances are rather against him. This early teal flurry does not ordinarily last very long, and the best chance for shooting would be on well-fed and little gunned marshes such as that of the Tolleston Club.

A great many Chicago shooters are getting ready for their fall ducking trips, and one regrets to state that nearly all the parties are planning to go outside of the State limits. Illinois as a sporting region is a bit behind the times this fall. Most of the shooters plan for journeys into Minnesota or the Dakotas.

Mr. Spencer Aldrich, of New York city, writes as below regarding a trip to the Northwest:

"I am thinking of visiting Minnesota and North Dakota in a short time for a trip after chickens and ducks, and write to ask you if a resident of this State (New York), which State requires no non-resident license for hunting, will have to pay any license at all should he shoot in Minnesota?

"According to *Game Laws in Brief*, July, 1902, page 52, I don't think I will have to pay any license in Minnesota, but I have seen in several articles lately that some non-residents were charged $25 in Minnesota and some were charged $10, and I am rather at sea in reference to this license tax in Minnesota. Can you, therefore, please enlighten me on the subject?*

"I have heard that Detroit, Minn., is a very good place for chickens and ducks, and write to ask if a person visiting there would not now have to go some distance away from the town to secure good shooting, and I also write to ask if, in your opinion, you think at this time of the year I would get better shooting at Detroit, Minn., than at Dawson, N. D.?"

As was stated in last week's FOREST AND STREAM, the *Game Laws in Brief* make a non-resident license of $25 obligatory in Minnesota upon all who come from States having non-resident licenses. I have already stated that the game wardens of Minnesota have a way of putting the burden of proof upon the other fellow. I think if Mr. Aldrich will get into communication with the State Game Warden, he will have no difficulty. As to his finding good chicken shooting so late, the chances are all against it. He would probably find more chickens near Gary than at Detroit at this time. I do not think he would find very many ducks down yet, outside of the local birds. He would not find many chickens at Dawson, but would find more hunters there than at almost any other one point in North Dakota. There are good duck lakes out of Dawson, and these should, as usual, furnish good duck shooting, possibly more of it than would be found in the average Minnesota country, and certainly more than at Detroit. I hear a good deal of Elbow Lake, Minnesota, as a good place for both prairie chickens and ducks, offering some good pass shooting at ducks. This latter place, however, ought to be better later in the season.

I have advice from a friend at St. Paul under date of Sept. 15, wro writes: "I was out at Gary last Monday morning, but had only two hours in the morning. A friend took me out in his rig. We had an old dog that was very slow, but sure, and I killed fifteen chickens in less than two hours all by myself. There were none of them got away, and if you had seen me and my Smith gun then, you would not have had a poor opinion of my shooting."

Gary was the point of which I heard a great deal when I was out in Minnesota on my chicken hunt the first of the month. Friend Stephens, the deputy warden at Detroit, said that he wanted us to go up to Gary as he thought there were many more birds there than at his own town.

I hear that some newspaper friend out in St. Paul is quoting me to the effect that we had bad luck with our dogs on our hunt. I do not know the gentleman, and he does not know his facts. I have never seen a better chicken dog than Mr. Fullerton's white treasure. By the way, I must add that I have heard something more of the latter canine. Mr. Fullerton says: "I had my new dog out yesterday, in company with four others, and he held his own in a very creditable manner. I have raised the price on him, not only for his hunting prowess, but because he has so beautifully thrashed my neighbor's two dogs, of which I wrote you. In the future any man who goes past my neighbor's house with his string of hunting dogs can do so with the certainty that he will not be molested by these two nuisances. My meat dog has done the business, and it would have done you good to see him lick both of them. He is getting now so that he is good about the house, not nearly so cross as I thought he would be. He has not eaten any of the family yet."

The Game Laws and the Travelers.

Apropos of these questions regarding what may possibly happen to a man in Minnesota, I may state that I have learned from other sources that three Oshkosh, Wis., men ran against the game wardens in the Union Depot out at St. Paul. They were very cocky at first, and told the wardens what they would do, but they finally separated from $75 and departed well content at that.

Yet another case was that of Dr. Pollman and his son, of St. Louis. Being from Missouri they had to be shown. They were. It cost them $50.

I hear of yet another gentleman, this time from Milwaukee, Wis., who was watched in his shooting near Alexandria, and asked if he could show his license. He did so, though the story is that he started in to shoot without any license, but thought better of it and went to town and got it in time. I would suggest to any non-resident sportsman going into Minnesota that the best thing he can do is to settle this license question before he goes out to do any shooting. These people out there don't compromise, and cannot be fooled with, and a little trouble in time may save nine kinds of trouble later on.

The Donnelly Case.

The case of the State of Minnesota vs. Stanislaus Donnelly, mentioned in last week's FOREST AND STREAM, came up for trial on the afternoon of Sept. 15. Mr. Donnelly, under bad advice, has started in to make a fight on this case. As it happened, Warden Fullerton had taken the precaution to go up into the territory where Donnelly did his shooting. He got the man who it is alleged drove Donnelly, and who it is alleged saw him kill the birds and put them in his wagon. I have already stated that I heard Mr. Donnelly himself admit ownership of these birds as they hung in the sleeping car, and saw Mr. Fullerton take them out of the string in Mr. Donnelly's presence. It would appear that it would have been better for Mr. Donnelly to settle up and resolve to do better in the future. On the contrary, he elected to make a fight. The case was postponed until Sept. 30. This will allow the introduction of the evidence secured out in the country.

Strange Accidents.

On last Monday Mrs. W. F. Barnes, of Rockford, Ill., was walking in the woods not far from the camp of her party near Manitowish, Wis. Her hat was trimmed with the plumage of a bird. A hunter passing by saw the feathers upon the hat, took it for a bird, and, fool-like, fired. The greater part of the charge of shot struck Mrs. Barnes in the right side of the face and head. One pellet of shot passed entirely through the ball of the eye. The name of the hunter is not divulged. The physicians think that Mrs. Barnes may perhaps not lose the sight of the eye.

On Thursday of this week one Phillip Brombaugh, a member of a camping party in the Creek Nation, near Cushing, Okla., thought that it would be sport to frighten the women of his party by posing as a wildcat. He painted two eyes upon his head by means of phosphorus and, coming up to the camp in the dark, undertook to do his wildcat stunt, uttering cries which seemed to him suitable to the occasion. One James Fletcher had not been advised of this merry plan of Mr. Brombaugh. Mr. Fletcher seized a shotgun and fired both barrels at the supposed wildcat. Brombaugh will recover.

Near Brandon, Manitoba, on Sept. 19, Thomas Law, of the milling firm of Alexander & Law Bros., and Miss Sherwin, shot two prairie chickens on the farm of L. Rowe. This so enraged Rowe that he fired twice at the hunters, shooting Miss Sherwin in the stomach and Law in the knee. Rowe ran home and swallowed the contents of a bottle of gopher poison, dying in a few minutes. Miss Sherwin is not likely to recover.

After Wood Bison.

Buffalo Jones, Government game warden of the Yellowstone Park, is the best man who could have been selected for the conservation and increase of the little Park herd of buffalo. Last spring Mr. Jones planned a trip with Harry Lee, of this city, it being the intention to go up into the Peace River country after the herd of wood bison with the purpose of securing some calves. Jones had a permit from the Canadian Government by which he was to give four calves to the Government, retaining six for importation to this country. Just before the time of starting Jones was taken ill with inflammatory rheumatism. It is hardly likely that this veteran sportsman is enjoying so good health now as was originally his portion. He may at a later time go up after the wood bison, but it is not at all certain according to the report of Mr. Lee, who was seen in Chicago to-day.

Forget It.

A press dispatch says: "The Navajo tribe of Indians in Arizona, numbering 20,000 men, women, and children, is rapidly approaching starvation, according to a statement made by Frederick I. Monsor, of San Francisco, the scientist and lecturer, who has just returned with a party from a six weeks' exploration among the Navajo, Moqui and Pueblo tribes."

Habits of the Dusky Grouse.

Mr. F. R. Atkins, of Seattle, Wash., writes interestingly regarding the habits of the dusky grouse or blue grouse, a bird not very well known to most Eastern sportsmen. He says: "I note in a recent article that you speak of this bird as seen in the heavily timbered regions of Washington during the month of January. It is at home in the Puget Sound country of this far northwest State, and furnishes capital sport in the early fall months as well as later on until they begin to bunch, which is well along in December. They then take to the heavily timbered regions, and stay there until the near approach of spring, their mating period. From personal observation and from what I have gathered, I have come to the conclusion that the birds during the winter months take to the tall firs, and there spend their time until the approach of warmer weather, living principally on the buds of the fir as well as other evergreen trees which we have here. To bear me out in this I remember meeting a young man on one of my hunting trips, who had a dog that was looked upon to be one of the family. It seems that whenever the lad wanted a grouse he would take the dog and go to the tall timber, and in a very short time the dog would begin barking at the foot of the tree, which, upon closer observation would disclose the droppings of the bird. In this the dog never failed. His master would then withdraw a short distance to better his view of the tree and its branches, and it would be but a few minutes before the bird would be brought to bag.

"I hardly think the blue grouse can be called a migratory bird, in fact, would say that on the many islands which we have here in Puget Sound (some of them over a mile from the mainland), they couldn't leave if they wanted to, unless they take the long flight necessary to cross the water, and, beside, I have never heard of a grouse being seen on the wing crossing to the mainland.

"At the present time we are having excellent shooting at this bird, and yesterday I killed the limit, 15 birds, in less than two hours' shooting. The coveys this year are unusually large, and they lie nicely to the dog, but it's the hardest kind of hunting, I can assure you. The excitement of the hunt and the pleasure watching your dog work is all that keeps one going. As a table fowl these birds are excellent, especially at this season when they have had a steady diet on our berries for two months past.

"I enclose you a couple of pictures of my dog on point in 'good grouse country,' which will, perhaps, give you some idea of our hunting here. Should you at any time contemplate coming to this muchly written-about section of the globe, you will find the latch string on the outside of my wigwam and a warm welcome and invitation to spend a day afield in one of the grandest hunting sections of the United States."

I could testify to Mr. Atkins' accuracy in calling this bird good upon the table. I think I have never tasted any of the grouse family which is quite so toothsome. As to the picture of the dog, I must say to Mr. Atkins that it almost caused me to jump out of my chair. The photograph might be one of my own old dog, Rex, dead and gone these twenty odd years. I wonder where Mr. Atkins got that dog, and how he happened to be marked so nearly like my old boyhood companion? I wonder if there can be such a thing as the reincarnation of a dog, deep feather, good ears, orange and white markings, and all? I've almost a mind to make a pilgrimage to Washington to see Mr. Atkins and his dog!

E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

Iowa Chicken Grounds.

THE chicken shooting in Iowa this year is not a reality; it is a complete failure (with the exception of the first two days of poor shooting). No sportsmen of sane mind has been out in pursuit of these birds since Sept. 3, for by this time it was only too plain that practically no chickens existed. Of the hundreds of sportsmen who went out on the opening day, the greater percentage returned empty-handed or with several ducks. The best kill I have heard of in this section of the country for the opening day was nine birds for three men. Many after hunting field after field without even getting a glimpse at a bird returned home disgusted with such sport as chicken hunting, or others tried their hand with the countless numbers of wild ducks which were scared up from every little slough.

The chickens that were killed were generally old birds, or young birds which had been hatched very early in the season. All that were saved from the floods were the strongest of course, and were not easy to hit. They were the strongest, hardiest and oldest lot of birds seen in Iowa for years—good size and fine eating. All the weaklings had been drowned weeks before. Farmers have even seen the dead birds floating on the sloughs during the summer, where they were drowned before they could fly. A dog was an absolute necessity to those who hunted, and good rubber boots—even hip—another. But I will stop giving facts and tell a few "lies" concerning my duck hunts since the open season began.

It was with a good-sized quantity of doubt over the outcome of our chicken hunt on the opening day that my hunting partner, Lou Shockley and myself prepared for our campaign on the night before Sept. 1. We had questioned many farmer acquaintances as to the number of chickens seen on their premises, and all had nearly the same reply to give as was given to me by a fireman on a threshing machine, who had ample means for observation, "Few and far between," was his reply.

Notwithstanding all the bad reports, we decided to try our luck just once, and see for ourselves. So long before the sun was up the next morning, we were starting for a six-mile buggy ride to a place we expected to find birds, if there were any to be found. Not a great way from our destination we passed a little slough, and somewhat to our surprise eight ducks arose and flew away. "Well, if we can't hunt chickens, we will have some fun with those ducks, anyway," was my friend's words when the ducks were nearly out of sight, and I seconded the motion immediately, but was sorry we hadn't come prepared for ducks. Upon arriving at the farmhouse, and as we were just about to greet our farmer friend, who had stepped out of the barn where he had been doing his morning chores, a good-sized flock of mallards flew directly over us, which made our eyes open, and when the farmer told us that there wasn't a chicken on his place, and he hadn't seen any for a long time, but that he had killed nine ducks the day before, made our thoughts wander from shooting chickens that morning.

After putting up our horse and receiving a few directions from our host, we started post-haste for the slough, "which held hundreds of ducks." On our way there we passed through considerable stubble, so we were on the

* The *Game Laws in Brief* follows a ruling of the Minnesota Attorney-General that the law still holds exacting the $25 from residents of States which have non-resident laws.—ED. F. AND S.

watch for chickens, but there were none—just as we had been told. And I saw the reason for it very soon, too—water stood everywhere from an inch up to even a foot. The grain was abandoned, either left in the shock to spoil or uncut! What show would prairie chickens have in such a country, where the greater part of the land is under water?

The slough soon was in sight, and it was not long before we were having fair sport with teal and spoonbills.

Since then we have made two visits to the sloughs of that region, and have always returned home with good bags of ducks, the little bluewings being most numerous. I have noticed something about this bird which I regarded as rather peculiar. The upper part of the wing was a marked blue, while the lower part, in some, was just marked a green. Did any one ever notice this, and is it caused by the mixing of the blue and green wings together?

I will give an account of our last hunt on these sloughs. We were well prepared for the ducks this time, having a large number of decoys, which work well, the only trouble about them being to carry them about. As we were placing them in a likely spot, and wondering whether there were any ducks about, we happened to glance to a spot not far distant. The sight which met our eyes was quite satisfactory. In an open spot in the slough the ducks were having a delightful time playing about, giving each other a shower batch, and water was flying in every direction. I now endeavored to wade as close to the ducks as possible, my friend staying secluded in the grass behind in the hope of a shot. I managed to get close to the birds before they took flight, but I made the mistake of rising too soon, and was able to get only two ducks on the wing, while my partner was not able to shoot once. We marked the flock down in a little slough in a distant cornfield and started for them, but before we had gone far, they circled back, and to our joy lit near our decoys, which we had left in a corner of the larger slough. We decided the best thing to do was to try and sneak up on them. A ditch aided us somewhat, for by walking in it we saved a lot of back bending. After getting out of the ditch we were compelled to crawl on hands and knees, and this soon developed into the caterpillar mode of locomotion. Keeping a bunch of weeds between us and the ducks, we managed to get within about ten rods of the birds, when they arose; but we arose with them, and when our guns ceased action we picked up five bluewing teal. Our good fortune continued till nightfall, when we gathered in our decoys and started for our buggy, well satisfied with our afternoon's work. GEO. J. BICKNELL.

[The small wing coverts at the bend of the wing are always sky-blue in the blue-winged teal and the speculum is green. However, in the female and young the speculum is absent or shows faintly. Similar coloration of these parts is found in the shoveller and cinnamon teal. Consult "American Duck Shooting" or Ridgway or Elliott, or any good ornithology.]

The Intelligence of Ross.

BOSTON, Sept. 20.—Shore bird shooting is not very satisfactory to Boston gunners just now; nor has it been good this season. Early there were pretty good flights of peep and other small birds, but yellowlegs have been a failure thus far. Gunners say that there have been very few at Chatham, while nothing has been done with them off Scituate, and further up toward Boston. Down the North Shore the shooting has been equally poor. L. W. DePass' son, H. C. DePass, an expert boy gunner of fifteen, has made several shooting stops at Plum Island, since the open season begun, but has got no large birds yet. He has shot a good many peep and small birds. One Boston gunner made a trip to Chatham last Saturday, with the result of only two stray yellowlegs, and no large birds. J. H. Jones was down the North Shore the other day, with his Irish setter, Ross. Mr. Jones shot six grass birds, and Ross retrieved them in fair shape, though with a look of disgust, disinterested disgust, as much as to say, "They're not quail, and you, big man, ought to know it. They smell fishy." Jones thinks Ross is worth more than a week ago, in fact. The other morning he went down to the station at East Somerville to come to Boston. Ross followed, but was driven back, with the order to go home. This the dog did in good shape, but just before the 7:10 train got in, hearing the whistle, he started for the station. Boarding the right train he came to Boston alone. Getting out at the North Station, he scoured that great depot all over with nose to the floor. Not getting his master's track by the scent, he quietly boarded the next train out and went home; getting off at the right station, without hint or suggestion from anybody, though the trainmen, who know both the dog and his master, saw him. The trainmen are ready to vouch for this action of the dog. They saw him and were ready to offer him hints or suggestions, if there was danger of his being carried by. But he was up and on the alert before the train stopped at his home station. Jumping off, he quietly trotted home, and was ready to meet his master when his train arrived at night.

SPECIAL.

Fur Market of Leipzig.

CONSUL-GENERAL OLIVER J. D. HUGHES writes from Coburg: Nearly the whole fur trade of the world concentrates itself in the two cities of London and Leipzig; but as about two-thirds of the London furs which are sold at auction, go to Leipzig, the result is that the fur market of Leipzig is really the greater of the two. The Leipzig warehouses receive raw and half-prepared furs from Siberia, European Russia, America, Australia and China, making the business of the fur exchange worth from $15,000,000 to $17,000,000 yearly. The chief article of import is the raw astrakhan from Bokhara, which comes via Nizhni Novgorod, this product reaching an importation figure of about 1,000,000 skins, each of which is worth from $2.06 to $3.35. With the cost of tanning and dressing added, the value of this trade amounts to from $3,000,000 to $3,500,000.

The second most important division of goods includes sable furs, of which about 50,000 skins, each worth from $50 to $100, are imported yearly. Of fox skins, nearly 30,000 pelts are tanned and dyed yearly. Lamb skins average about 1,000,000 per year.

Formerly, Leipzig handled annually about 4,000,000 Russian squirrel skins, which were bought mostly in England; but as the fashion of long-fur garniture on ladies' dresses disappeared, the demand was reduced to 2,000,000 pelts. The tails for boas are mostly imitations of marten and sable tails. The sale of the pelt of the white fox in this market amounts yearly to about $500,000, which is about the whole available product of the world's markets.

The Rail Shooting.

MILFORD, Conn., Sept. 20.—*Editor Forest and Stream:* Once or twice within the last week we have thought that the rail were gone for good, but each time a new flight of birds has been found on the following day, and we have had good shooting. On two or three occasions, men have killed up to the limit. The old shovers tell me that it is long since the shooting has been so good.

I went out on Tuesday and killed a few birds. There were two or three other boats out, but by good luck I had the cream of the shooting. Unfortunately, however, the tide was not a good one, and many of the birds were found just at the edge of the reeds and the cattails, and dodged into the cover so quickly that they escaped. Then, too, in several places I found birds so numerous that to tell you the honest truth I got excited and missed a good many shots that I ought to have hit. Sometimes five or six birds would get up at once, and before I could do more than fire my two barrels, they would all be under cover.

It looked to me as if these birds had just come in, and dropped down in the grass anywhere, and had hardly moved about at all until my boat came shoving among them.

I do not say how many birds I killed, but I may confess that I ought to have had a good many more than I got.

The season is pretty nearly over now, and the first hard easterly storm that we have, followed by clear cold weather with a northwesterly wind, will undoubtedly send all the birds along, and for us in New England will end the rail season of 1902. R. P.

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in FOREST AND STREAM.

CHICAGO AND THE WEST.

Chicago Fly-Casting Club.

CHICAGO, Ill., Sept. 19.—The semi-annual return contest for the cast-iron medals between the Chicago Fly-Casting Club and the Grand Rapids Fly-Casting Club, will take place on the afternoon of Saturday, Sept. 20, on our grounds. An effort will be made to allow further re-entries to our members, to complete scores not already filled. The contest will be continued on Sunday morning at 9:30, and this will be the last tournament day for this season. It is hoped the members will attend, especially those who have not completed their scores.

On Saturday, Sept. 20, a dinner will be held at the Chicago Athletic Club at 7 P. M., complimentary to the members of the Grand Rapids Fly-Casting Club visiting the city. The local club sincerely hopes for a generous attendance.

Among those who are expected to come over from Grand Rapids to-morrow afternoon are Messrs. John A. Waddell, C. B. Kelsey, Asa Stuart, Eber Rice and Douglas Berry. It need not be said that the little dinner at the Athletic Club will be a very pleasant reunion of these angling companions. The relations of Chicago and Grand Rapids in the matter of the angling craft are very pleasant and will ever remain so.

Mr. F. N. Peet, a prominent member of the Chicago Fly-Casting Club, speaking of the late trip to the Pacific Coast, states that while there he met at Seattle Mr. W. S. Phillips, El Comancho, formerly of Chicago, and now of Seattle. Mr. Phillips entertained the Chicago men royally and did what was possible in the way of fishing, though the salmon run was not at its best at that time. All the Chicago party had good fishing in the Rogue River, and were able to show the Coast anglers something about spoon hooks and little casting rods, to say nothing of learning something themselves in the matter of flies and fly-rods.

By the way, Asa Stuart made Mr. Peet a fly-rod which excited the envy of about every fisherman on the Pacific Coast. I violate no confidence in saying that Mr. Stuart will perhaps have two or three of these same rods with him when he comes over here to-morrow. He will never get out of town alive with them. We'll get them by peace, if possible, by force if we must. There are some drawbacks to being an amateur rod maker, one of which is that you cannot keep any rods you make—that is, if you make them as well as Asa Stuart does. He makes the kind of fishing rod which will go out at night and fish by itself, unless you lock it up, and his split bamboo creations have been the undoing of many a lusty rainbow on the Pere Marquette.

Good Bass Water.

Mr. Harry L. Notter, of this city, tells me something about Gun Lake, of Michigan, which he says is about the bassiest water he ever saw in all his life. This sheet of water lies between Kalamazoo and Battle Creek, and has a total shore line of about ninety miles. It has large and small mouth bass, pike, some croppies and an occasional muscallunge. The bass there will rise to spinning baits, wooden minnows or almost any kind of a thing which moves, whirls or jumps. There are some cottages in there, but the lake does not seem to be very much touted or tipped off. I suggest it as something very well worth remembering. Incidentally, I may say that there is a big marsh at one end of the lake, which is stated to be a good duck ground in the fall.

Contents of Fish.

A local paper prints as "news" the story of a New York paper which states that Mrs. Thomas Young, of Sebago Lake, Me., caught a trout which disgorged a red stone which fell into the bottom of the boat. This red stone was preserved by Mrs. Young, who later discovered that it was a ruby worth about $100. Since this thing has been printed as news in more than one paper, there can be no doubt whatever as to its accuracy, though I do not myself believe the story itself is so remarkable as that of the Wisconsin trout captured by Mrs. William Jones, of Ashland, Wis., which, when taken from the hook, disgorged a red hot cooking stove. It is stated that Mrs. Young intends to have the ruby set into a ring for her own use. I see no reason why a cooking stove discovered in this way by a lady could not also be used to her own personal use and behoof.

Strange Revival on the Kankakee.

A very singular state of affairs exists at this writing along that historic stream, the Kankakee River. I first got track of this through a Mr. Jensen, who has been camping out for a couple of weeks at a point on the Kankakee, about five miles from Koutts, Ind. He states that he is in a country which is practically wilderness. He has seen no sign of human being or human habitation during his stay on the timbered banks of this strange and fascinating river. He has been putting in his time doing a little fishing. He reports bass very scarce, but has been having great sport with big catfish, taking one which is stated to have weighed 87 pounds. He came back to Chicago on a visit and takes with him to his camp a lot of big tarpon hooks, saying that he intends to do business with big catfish.

A strange part of Mr. Jensen's story is that he tells of a great run of small pickerel in the Kankakee. No one at Koutts could tell where these pickerel came from, but they were in there simply in hundreds, all of about a size, between two and three pounds each, and every one of them anxious to bite at any living or moving thing offered to it. Mr. Jensen said he had caught them until he was tired. No large pickerel were reported, no very great numbers of carp and scarcely any bass.

So much for one arm of the story, so to speak. A few minutes ago I met on the street corner my friend Roll Organ. "Hold on," said he. "I want to tell you a fish story. Just to pass the time, I went down to Water Valley on the Kankakee, a week ago last Saturday. You ought to have seen the pickerel we caught! I was after bass, but the river was about three feet too high, and I caught no bass. I found the stream was full of pickerel and began to fish for them, with small carp minnows, taking out in less than two hours thirty-odd pickerel, all of them about two pounds in weight. I went down with Frank Bissell to his cottage at Water Valley. There was a big picnic on there, and the bridge was lined with fishermen, and every one of them was catching pickerel as fast as he could throw in. There seemed to be schools of these fish moving up the river. We have had the highest water on the Kankakee known for years, and dams and fishways have been overflowed so that the fish could run up stream with ease. I imagine that this big run of pickerel is the result of this state of affairs. I think also that in about a week or two, when the water gets down within the banks, we will have the best bass fishing on the Kankakee we have ever had."

Here was unsought confirmation of the other side of the pickerel story. It is curious to note the changes in the history of this ancient waterway. At first it abounded in wall-eyed pike, with a few bass, and some giant pike, which at times reached weights of 20 to 30 pounds. Then about eight years ago it was taken over by the bass, large-mouths and small-mouths, and was one of the best bass streams in the country. Then came the visitation of the carp. Now comes this invasion of pickerel. In connection with Mr. Organ's story of catching pickerel on carp bait, there arises the joyful hope that these pickerel will do at least something toward thinning out the carp. Indeed, I am disposed to believe that the best cure for the carp nuisance would be a general planting of pickerel. By this term is meant the great northern pike, which attains very heavy weights when conditions of food are favorable. Given a stream full of little carp, our friend *Esox* could make a living with perfect ease, and if he did make a living at the expense of many thousands of these disgusting foreign fish, the carp, methinks that Mr. Esox himself would rise high in the estimation of Western anglers, even were it for philanthropic reasons alone. Therefore there is occasion for rejoicing in the story of pickerel in the Kankakee.

Bound for Fifield.

Within the week a very pleasant party will leave Chicago for a trip to the Fifield chain on the Wisconsin Central line, among these Messrs. Charles A. Comiskey, Ban Johnson and J. P. Agnew, accompanied by Messrs. James C. Pond, general passenger agent of the Wisconsin Central Railroad, and Mr. D. K. Thompson, Chicago agent of the same line. This visit to the Fifield chain will be made the occasion of the presentation to Mr. Comiskey by his friends of an elaborate leather tackle box, perfectly stocked, together with a handsome rod case properly filled with rods. The intention is to convert Mr. Comiskey from a baseball man into an angler. There is no question of the desirability of this change, and if the party with whom he is to travel shall have any kind of luck, there will be a new face in anglerdom hereafter.

E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

Take inventory of the good things in this issue of FOREST AND STREAM. *Recall what a fund was given last week. Count on what is to come next week. Was there ever in all the world a more abundant weekly store of sportsmen's reading?*

Maine Waters.

BOSTON, Sept. 22.—The fall fishing season on Maine waters is rapidly drawing to a close. Oct. 1 is the legal close time, and the law is well obeyed. The commissioners and game protectors might congratulate themselves were the game laws half as much respected. The late fishermen are many of them at the best pools, and taking some good trout. L. O. Crane, of Boston, is out from the Upper Dam. There he landed a trout of four pounds. At the Middle Dam he also took a trout of 4 pounds, one of 3½ pounds and 3 pounds. It is a curious fact that only trout are to be seen or taken at either the Upper or Middle dams at this time. Trout, and trout only, are seen rising in the pools, with no salmon. After all, the theory that the putting of smelt into the Rangeley waters has given the trout such abundant food that they will not bite in the spring and summer, may be true. The presence of a great many trout and no salmon in the pools now, when the spawning season is drawing near, would seem to add evidence to the theory. Still, these big trout at the Upper Dam and Middle Dam just now are very hard to get. They will rarely rise to any sort of a fly, and pay no attention whatever to bait. But now and then one is taken; enough to keep up the enthusiasm. Mr. John T. Way took at the Upper Dam Wednesday a trout weighing 4 pounds, one of 6 pounds and one of 5 pounds. L. A. Reese, of Philadelphia, has secured a trout of 6½ and one of 7 pounds. Mr. Whitney, of Lowell, Mass., has taken several good trout at Pond-in-the-River, Middle Dam. Sept. 14 he caught one of 4½ pounds, one of 3 pounds, and a day or two after trout of 4½ pounds, 3 pounds and 3½ pounds; total catch, 18½ pounds. T. B. Stewart, the veteran angler, who has spent so many seasons at the Upper Dam, has taken a trout of 4½ pounds, his largest this season. R. N. Parish has taken several of 3, 4¼ and 3½ pounds. Mr. Roland Jackson, of Swampscott, Mass., has recently landed a trout of 7 pounds at Haine's Landing. Some other catches of good fish are also reported there.

Two Boston fishermen were arrested last week for illegal fishing in Rapid River, between Richardson and Umbagog Lakes, which is closed to all fishing and has been closed for several years. They were taken before Trial Justice Herrick, at Rangeley. The men said that they should not have been fishing there, but their landlord at Upton told them that it was a good place to fish, and that nobody would be likely to see them. They were each fined $25 and costs for illegal fishing. They were also charged with taking three salmon, and fined $3 for each fish. They paid, and concluded to get back to Boston at once.

There are some beaver left in northern Maine, and those who have watched them claim that they are increasing. This has set a lot of Canadian trappers after them, especially near the border line. Not long ago Game Warden Frank Durgin and an assistant started to examine Stoddard Stream. Separating, one was to go up the stream, the other down, and meet at a certain point. The assistant reached the place for meeting first, and not finding Mr. Durgin, he kept on to meet him. Soon he heard some one shout, and immediately saw the warden with one man handcuffed, and another running away. The poachers had five beaver pelts with them. They took the handcuffed man to Flagstaff, and went on a search for the other. The second man they did not find, and while they were absent the captured man escaped. Some of the people interested in timberlands are now claiming that the protection of beaver is proving a damage to the State. They dam up the streams, and flow large tracts of timber, killing it utterly, where it must be left to rot. Great is the pity that anything should be allowed to be that interferes in the least with the great timber interests. The forests of New England are all in the hands of moneyed interests which have got control of them for almost nothing. Must every other interest bow, till such time as the timber land owners see fit to cut the forests away?

Later.—News from Upper Dam says that Thomas B. Stewart, of New York, formerly of Boston, died at that place Friday, at the age of seventy-three years. Mr. Stewart was a great lover of angling, and particularly of fishing at the Pool, Upper Dam. He has fished there regularly every season for at least twenty-five years. Usually he has spent three or four months at his much-loved pool. Genial and kindly, he was always a favorite with the many anglers he met. His presence will be greatly missed for many seasons. It was a favorite remark of his, "I love this spot, and should be willing to die here when my time comes." He has been in failing health for two or three years. SPECIAL.

Fish and Fishing.

Enormous Brook Trout.

SPECIMENS of brook trout from the northern lakes and rivers of Quebec have been brought here from time to time, weighing over seven pounds, and even over eight pounds each. Mr. Lefebvre, of the Crown Lands Department, Quebec, took one in 1895 in the Grand Lake Jacques Cartier, which turned the scales at eight pounds and three-quarters. In Lake Batiscan some years ago, Dean Robbins, of Albany, caught, by trolling, an eight-and-a-quarter-pound trout, and another gentleman of his party, one of eight and a half pounds. Twelve of their fish aggregated seventy-two pounds. I believe that these Lake Batiscan trout were the heaviest lot ever brought out of the Canadian woods up to a very few days ago, and very few individual trout of larger size have ever been known to have been taken in this country. On the 15th of the present month of September, however, I saw what I imagine to be the record lot of *Salvelinus fontinalis*, namely nine fish which weighed 65 pounds, or within seven pounds of the weight of the twelve above recorded. The largest of the lot weighed eight and a quarter pounds, but it measured more than the alleged eight-and-a-half-pounder from Lake Batiscan. This latter was 26 inches long and 17 in girth, while the eight-and-a-quarter-pound fish had a length of 27 inches. The nine trout above described were part of a wonderful catch made by four French-Canadian anglers of Quebec city—Messrs. Achille Picher, Alf. Lafrance, Ernest Lafrance and Ernest Dussault. Their total catch, including the fish which they returned to the water, amounted to thirty-six dozen, and in addition to the nine monsters already mentioned, they had a dozen fish which scaled from three to five pounds each.

This really wonderfull take occurred at Grand Lake Jacques Cartier, in the heart of what is now the Laurentides National Park. It was here, as readers of "Locusts and Wild Honey" will remember, that dear old John Burroughs caught that six-pound trout which gave him "the profoundest Ike Walton thrill" he ever experienced, and at the landing of which, "the congratulatory laughter of the loons showed how even the outsiders sympathized."

A Hard Road to Travel

It was a hard enough road to travel—the road from Stoneham to Lake Jacques Cartier—when John Burroughs passed over it, but it is an infinitely worse road to travel now than it was then. Long before the railway was built to Lake St. John, the Provincial Government built a roadway 125 miles long, to enable the settlers living around the lake to drive to market by way of Stoneham, which reaches twenty miles north of Quebec. This old tramway, which is some distance to the east of the railway, is now over thirty years old. When the author of "Locusts and Wild Honey" ascended it, it was young and fresh, and as good as a roadway into the heart of the Laurentian Mountains could reasonably be expected to be. Since the building of the railway, it has fallen into disuse. Now most of the bridges are down, and those who ascend it must ford the streams. Large fallen trees lie at intervals across the road, which is largely overgrown with grass and young trees. The fishing party which has just returned from such a successful visit to Lake Jacques Cartier was absent from Quebec nearly eight days. Yet the journey was so difficult that there was only time for two days' fishing at the big lake. Many obstructions had to be cut out of their way by the party. Some of the hills which they were compelled to climb were of appalling length and steepness. Nevertheless, none of the party regret the hardships of the journey. The flat boat which they employed for the bed of their supply wagon, was supplemented on the lake by rafts manufactured on the spot, for no canoes have yet made their appearance there. The nine giants were all captured in a pool near the outlet of the lake. The boat was carefully moored a little above the pool, and at the first cast of the anglers' flies, two fishermen were fast to seven and eight pound trout, respectively. The larger of the two took twenty-five minutes to land, for he was played and killed upon a light rod, and for the first fifteen minutes kept deep down in the water and could not be seen. When a dozen fish had been killed in this water, the mooring of the boat gave way, allowing the awkward craft to float over the pool. This seemed to alarm the big fish, and no more of them rose that day, though plenty of smaller ones were to be had. They appeared to have no choice of flies, everything offered to them being taken with avidity.

The Laurentides National Park, in the center of which Lake Jacques Cartier is situated, contains over 2,700 square miles, or nearly two million acres of territory, and has been set apart as a huge forest, fish and game preserve, into which sportsmen are only permitted to fish or hunt upon payment of certain license fees. Fortunately, the difficulty of entering the park is such that not many people make the attempt, and so there is every opportunity for both fish and game to increase and multiply within its limits. It has been suggested that the Government would collect a large amount of money for license fees from sportsmen anxious to obtain the best of sport with the least possible amount of inconvenience and hardship, were it to improve the roads leading to the park. This is doubtless true. It is equally true that any such action on the part of the Government will mark the commencement of the end of that abundant supply of fish and game life for which this magnificent preserve is at present so justly noted. E. T. D. CHAMBERS.

Poisonous Fishes and Sea Snakes.

THERE are many fishes possessing poisonous spines in the Indian Ocean of which comparatively little is known, beyond the fact that they are capable of causing a very painful inflamed wound and swelling, which may lead to gangrene, and necessitate excision, or even amputation. Of this character is a sting-ray of the Indian Ocean, *Aetobates narinari*. Sir Emerson Tennent, referring to the long flagelliform tail of this fish, describes it as "armed with a strong serrated spine, which is always broken off by the fishermen immediately on capture, under the impression that wounds inflicted by it are poisoned," adding that "their fears are groundless, as the ray has no gland for secreting any venomous fluid." This, however, is a *non sequitur*, for, as Dr. Günther has shown, although it lacks a special organ secreting poison, or a canal in or on the spine by which the venomous fluid is conducted, the symptoms caused by a wound from the spine of a sting-ray are such as cannot be accounted for merely by the mechanical laceration, the pain being intense, and the subsequent inflammation and swelling of the wounded part terminating not rarely in gangrene. In his opinion the mucus secreted from the surface of the fish and inoculated by the jagged spine evidently possesses venomous properties. In his "Introduction to the Study of Fishes" (1880), he has figured a portion of the tail of this very species to show the nature of the spines. Of the genus *Synanccia*, four species are known from the Indo-Pacific Ocean, of which *Synanceia horrida* and *S. verrucosa* are, according to Dr. Günther, the most generally distributed and the most common. "They are justly feared," he says, "on account of the great danger accompanying wounds which they inflict with their poisoned dorsal spines." Each spine in its terminal half is provided with a deep groove on each side, at the lower end of which lies a pear-shaped bag containing the milky poison; it is prolonged into a membranous duct lying in the groove of the spine, and open at its point. The native fishermen, well acquainted with the dangerous nature of these fishes (which, it is said, do not exceed 18 inches in length), carefully avoid handling them, but it often happens that persons wading with naked feet in the sea step upon the fish, which generally lies hidden in the sand. One or more of the erected spines penetrate the skin, and the poison is injected into the wound by the pressure of the foot on the poison bags. Death has not rarely been the result.

Even on our British coasts poisonous fishes are not unknown. There are two species of weever, for example, both of which can inflict painful wounds, and cause violent inflammation with their dorsal and opercular spines. "No special poison organ," says Dr. Günther, "has been found in these fishes—as remarked by Sir Emerson Tennent in the case of the sting-ray—but there is no doubt that the mucous secretion in the vicinity of the spines has poisonous properties. The dorsal spines, as well as the opercular spine, have a deep double groove in which the poisonous fluid is lodged, and by which it is inoculated in the punctured wound.

As for the sea snakes, loathsome, mottled brown and black creatures, these are common in the Indian Ocean, and are certainly venomous; but owing to the danger attending their capture and the difficulty of keeping them alive when out of the sea, much less is known of them than of most other kinds of snake. In length they vary from two feet to ten feet. Kreft, the author of an important work on the snakes of Australia (1869) states that the largest he ever saw was nine feet long. Dr. Günther says that they sometimes attain a length of twelve feet, and sea snakes of even fourteen feet in length have been occasionally reported, although perhaps not from well authenticated sources.

Dr. Cantor, half a century ago, described more than forty different species, and many additions have since been made to the list. That very many of them are poisonous there can be no doubt, though the fact has been questioned; but the presence of a strong perforated tooth and of a venomous gland sufficiently attest their dangerous powers, even if these had not been demonstrated by the effects of their bite. An old and valued correspondent of the Field, the late Colonel Tickell, some years ago in an instructive articled entitled "Zoology in Travel," thus referred to the sea snakes met with in the Indian Ocean:

"One day when becalmed about the center of the Bay of Bengal, the sea all round the ship as far as we could see, appeared swarming with snakes. They were swimming about like eels. They were about two feet to two feet six inches in length, of a pale green color with broad bands of black for their whole length, and the tail was compressed laterally, so as to form a mere vertical blade, which propelled the body like a sculling oar applied at a boat's stern. One was easily taken by a boat hook and brought on board, where it quickly died. The name of this snake is *Hydrophis nigrocinctus;* there are several in the Indian seas, and all virulently poisonous. An officer of H. M. Frigate Magician in the Madras roads was bitten by one of these snakes and died in a few hours."

Sir Joseph Fayrer, in his "Thanatophidia (or death snakes), of India," has described several cases of bites by sea snakes, some of which yielded to medical treatment, while others proved fatal. In one case an English officer, while bathing in India, was bitten in the foot by a sea snake, and, treating the matter too lightly, took no remedial measures until it was too late to save his life. Two hours after the accident he experienced symptoms of suffocation, enlargement of the tongue, and a rigidity of the muscles; subsequently he was seized with spasms, and died on the third day. In this case, owing to the sound health of the victim, the application of stimulants and remedies, and the fact that he was bitten in a part where absorption would be slow, his death was protracted. Otherwise, according to Sir Joseph Fayrer, death from a similar cause often occurs within twenty-four hours after the infliction of the bite. Indeed, he mentions another case of a man who was bitten in one finger by a sea snake, and, thinking lightly of it, used no means whatever to arrest the poison, and was dead in four hours. In some cases the victim becomes quickly insensible, when, if no aid is near, he never awakes to consciousness. Immediate stimulants will revive him, and if he can be kept awake, these, with local applications, if at once applied, may save his life. J. E. HARTING.

Canine Elegies and Epitaphs.

XXIII.—On the Death of Buffie.

A handsome young hound, with a voice like a silver bugle. He made too much noise o' nights; and there be dull souls who prefer sleep to music. Buffie was poisoned by the very man whom he had serenaded for weeks!

Puir Buffie—After the Lallans of Burns.

Gae tell to a' the hunters roun'
That Geordie's heart is sair cast down;
Wi' hirplin' step he treads the groun',
An' hingin' head.
Buffie, the wale o' youthfu' houn's,
Puir Buffie's dead.

Let ilka tod frae Butler's hill
To Allen's swamp an' Merrick's rill,
For vera joy bark loud an' shrill
Wi' muckle glee.
Puir Buffie's lyin' stark and still
Out owre the lea.

Had he been slain in open day
By hoof or horn o' stag at bay,
I wadna hae the heart to say
It did him wrang:
'Tis murd'rous an' unmanly play
That gies the pang.

Na doubt but he at times might draw
Ae sned o' beef wi' thievin' jaw,
Or, aiblins on fine nights might blaw
About the street,
But if that faut's agin' the law,
He couldna see't.

Perhaps he might in pleasant weather,
Wi' ither tykes sometime foregather
To fyke on grocer's wares. But whether
He did or not,
In spite o' a' their scauldin' blether's
A triflin' faut.

He maks the fourth o' lang eared frien's
Wha followed me o'er hills an' glens
Until they met untimely ends
By murder sair.
Their fauts were something less than men's,
Their virtues mair.

But Buffie dog, a long fareweel!
Nae doubt ye were a roguish chiel;—
But aiblins there's anither field
Where thou an' I
Maun chance to fin' a cantie bield
Ayont the sky.

Nessmuk in "Forest Runes."

Spaniel Breeder's Society.

Editor Forest and Stream:

I take pleasure in announcing the formation of the Spaniel Breeders' Society, an association organized to encourage the breeding of sporting spaniels. The prizes of the club will be offered at all shows conforming to the requirements of the American Spaniel Club. All prizes will be for the best specimens bred by the exhibitor, and will be awarded to those winning them by the greatest number of times in any year. All spaniel breeders are cordially invited to become members of the society. Further particulars may be obtained from the undersigned.

MARCEL A. VITI, Hon. Sec'y-Treas.

Points and Flushes.

We have received the following communication: "Nov. 13, 1902, the thirteenth annual field trials of the National Beagle Club of America. Westbury grounds, Long Island. Club headquarters, Johren's Hotel, Mineola, L. I. Charles R. Stevenson, Sec'y, 106 Market street, Camden, N. J."

New Publications.

ROB AND HIS GUN. By William Alexander Linn. Cloth, 211 pages. Illustrated.

It is a capital book for boys that Mr. Linn has written from his own experiences as a boy. He takes his hero—a city boy who has never been in the country—out to the old farm, and pleasantly teaches him many things about the country and shooting and dogs. When autumn comes he takes him into the field with woodcock, quail and partridges, and later conducts him to Long Island for bay snipe shooting, then to the Adirondacks, to Barnegat Bay, to North Carolina, to Canada for deer, and to Dakota for wild geese.

In a very happy style, and without the least appearance of instruction, he starts the boy on the right track and keeps him there. The hero takes kindly to the instructions given, and following them is fortunate.

It has been said that it is harder to write books for young people than for adults, and it is certain that young people are stern critics. Mr. Linn's book, however, is so good and so interesting and its tone is throughout so wholesome that it is sure of a welcome from all. It is a capital volume to put into the hands of a boy who is beginning to clamor for a gun. Price, $1.

Canoeing.

A Delaware River Cruise.

(*Continued from page 237.*)

Four happy days were passed at this place. The sun came out now and then, and while storms raged at other times, we were on sandy soil, the short daisy-studded white clover dried quickly, and we were comfortable. The little girl slept every morning on a blanket under the butternuts, while we angled for bass with which to "grease the frying pan," and rambled about the hills for berries and flowers. For neighbors there were woodchucks and chipmunks. The latter often sat for hours on a limb of the butternuts over the tent. Crows awoke us every morning. Over on the Sullivan county hills the chestnuts were dense, with here and there patches of popple, as the natives call the trees which are alike or at last similar to the quaking aspen of the Rocky Mountains. The Mate made friends with the little country boys who came to see our wonderful outfit, while I flopped across country to find grub that could not be obtained with the rods or in the miserable stores in Kellam, a mile away. The little Equinunk flows through Kellam with a roar. Canoeists may recognize the village by the white suspension bridge at the foot of Crooked Rift, and by a water tank nearby that is painted in red and white stripes, like a barber pole. Keep away. There is little to be found there. We could obtain only eggs and sugar, while the shopkeepers were so busy telling us of the dangers of the river that it was almost impossible for us to induce them to stop long enough to provide for our needs. One of these shopkeepers reminded us of Charles Henry Lewis' Wolfville characters, while his picture would add interest to Bret Harte's tales of pioneer life in the Rockies. He told me he was deaf as a post, yet he could hear every word his wife uttered through their private telephone. This was simple, yet unique. The house, built on a steep hillside, was of two stories, the dwelling above, the store below. In the center of the shop there was a cannon stove, the pipe leading up through the low ceiling. Approaching this, the old man rapped on the pipe and announced, "Gentleman down here wants some preserves. Will you sell any of yours?" It was not until a sharp "No" rattled down the stovepipe that I realized the man was not a lunatic. So we returned to camp, and had not the bass helped us out by insisting on being taken from the rift, starvation seemed a possibility in a land of plenty.

So far we had met but two canoeing parties. One of these was composed of two boys who were going down the flooded river in a home-made canvas canoe; the others passed us at Crooked Rift in a new canvas-covered canoe. We saw them too late to invite them to stop, but I exposed a plate on them, which is before me as I write. No doubt it is the last one ever made of the elder Benson brother, who was drowned in Westcolang Falls two days later.

Nomad was lighter than usual as she sped down Crooked Rift and into the eddy beyond, where a woodchuck stared at us as we passed. The next rift was deep and rough, but the third one was the worst we had seen so far. In it two canoeists were drowned a short time previously. Looking down from its crest, it seemed the shore line dropped 15ft. in 200yds. To the right were rocks, to the left shoal water, and the center a boiling caldron of water and foam; for the volume of water from the long eddy above rushed in from both sides, forcing us to the center. We avoided the roughest water wherever possible by skirting the rocks, though at times waves broke over both bow and stern at once, holding the canoe as in a vise, while she rocked from side to side and the paddles were twisted this way and that in our efforts to control her. The pace was terrific. And as if these nasty bits of water needed ornamentation, the shores were festooned with ferns and masses of blossoming laurel. Squirrels and chipmunks gazed at us in astonishment from among the pines and rocks. Two miles above Callicoon Station there is an ideal island for camping. It is well shaded and grassy. Take the channel on the Pennsylvania side. It is shoal, but better than the other one, which roared so loudly we fancied it was a fall. At Callicoon Station we purchased supplies, then passed through two rifts and midway of the third made camp on a high bank 400yds. below an old schoolhouse. This was called Camp Heron because two of these great birds roosted every night within 50yds. of the tent, and one night they stopped directly over it in a tall hickory. Squirrels were all about, and one morning one of these little rascals jumped on the peak of the tent from a tree, but lost its hold and tumbled in a heap on the ground. They investigated all the pots and pans, climbed the grub box table, and became quite friendly. A woodchuck lived directly under the tent, in the bank, and kingfishers loafed about all day. Dewberries, black and red raspberries and blackberries served as finishing touches to dinners of black bass or perch.

This was a delightful spot for a camp, and there, as elsewhere, the owner bade us be at home. Canoeists should know that Callicoon is nine miles distant from the river, and mail should be directed to Callicoon Station, which is on the river. Ours went back into the hills. Pity the unfortunate canoeist who must be followed up by mail while on a cruise. But there was sunshine at times, although the inevitable thunderstorms were violent when they did swoop down on us, and we were thankful for the good old pup tent, which we knew would not blow away in any ordinary gale or squall; and the blow beds on which all hands slept warm and dry through the worst of the downpours. One day Callicoon Creek rose until it became a torrent. The river was then clear, but this creek turned half of it a brick red, while the other side was green. The boatmen were idly smoking their pipes at home and the city anglers sat on hotel porches and awaited better conditions. We broke camp and scurried down the swollen rifts, passing our friends, the blue herons en route, flapping lazily along a towhead in search of their morning meal of fish.

The natives had told us we would know Cochecton Falls by the village of that name, and the village by the falls; but like other information they gave us, this was totally in error, as we might have learned too late in the flood that morning. Cochecton village may be known by the three abutments of a missing bridge, immediately below which is a cable ferry. We looked for the falls and passed by this village without knowing its name. An Irish section foreman on the railway told us, three miles below the village, that the falls were at hand, and we stopped immediately above them to ask some workmen on a new steel bridge if this were correct. We had also been told the roar could be heard a long distance away, but at that stage of water this was not the fact, although one standing beside the falls could hear nothing else. At the bridge there is a saw mill on the Pennsylvania side, and there the men told us to follow that shore. Again their advice was worthless, for the New York shore is better in every way, both in carrying duffle round the falls and in letting the canoe down, whereas the Pennsylvania side is a tangle of upheaved rocks, overgrown with rank willows and heaped with wreckage from rafts and boats, sodden underfoot, and at times one can lead the canoe only from a distance of 10 to 15yds. The falls drop about 8ft. Running them in any canoe would be extremely hazardous, as there are reefs, ledges and boulders everywhere, and a straight course is difficult, while the speed of the current would preclude accurate steering. Even in the flood water there were places in the breaks where the depth over reefs was less than 6in., and one rock near the tail of the fall is about 20ft. wide and half as high. We trust canoeists will take the advice of wise guys along the Delaware for what it is worth, then use their own experience and go carefully into tight places.

Then followed a succession of rifts, rapids, shoals and eddies, and noon found us in the great eddy at Narrowsburg. Above and below the village this is wide and deep, but at the narrows through which the volume of water passes one might flip a stone from shore to shore. Here the ice gorges in winter and plays havoc with the valley above while it holds, and below when it breaks. These cliffs are picturesque. We lunched on the island below the gorge, visited the village, then fared along. The third rift below Narrowsburg requires careful handling of the maple blade, for it is strewn with boulders, and should be run near the railroad embankment. And at Tusten bridge, where the Erie Railway crosses to the Pennsylvania side, there is a nasty rift. There are three separate breaks, and low-lying ledges of stone as well as boulders. One may go carefully beneath the center span of the bridge, but keep a sharp lookout for the submerged rocks there. It is also possible to hug the Pennsylvania side until a tiny eddy under the bridge is gained, then swing out through the third break. All one's skill will be needed there.

A mile further one will see a ferry cable, and be warned that Ten-Mile Rift is at hand. Ten-Mile River was pouring into this rift a great volume of flood water, and in the whirlpools it formed we had merry work dodging big stones, then slashed into the chop at the tail of the rift, drifted through the eddy and saw Mast Hope Station dead ahead. Between the railway and the river there is a curious fringe of tall pines whose trunks were scraped by the ice last winter. As these trees stand some distance above the river, and their scars extend fifteen or more feet up the trunks, the scope of the floods may be realized. No one had mentioned Mast Hope Falls, but ere we had entered them a camp site stopped us, and crossing to the New York shore, we crawled out, tired and stiff, and made camp in a sweet open glade beside immense pines. It was near the farmhouse of Mr. Johnson, and he picked out a grassy spot for the tent and passed an hour with us. It was from him that we learned the fate of the elder Benson brother, who passed Butternut Camp July 23 and was drowned in Westcolang Falls on the 25th. We were informed the brothers were from Philadelphia, but had been at school in the West. Their father sent them an open canvas-covered canoe, telling them to finish their trip via the Delaware, thinking it would be a pleasant and healthful one for them. We were told they were good swimmers, but novices at canoeing, but do not know if this is true. The Delaware was not so high as when we passed down, but the falls are ugly at any time, and they went down the New York shore of Westcolang Falls, whereas one should hug the Pennsylvania side as closely as possible. The canoe struck a reef the younger brother did not see, and capsized, but for a time both of the young

men stuck to the canoe and were in a fair way to reaching shore in the eddy below the falls, when the elder brother, who had been steering, called to the other to tow the canoe ashore while he would swim there. The boy did so, and turned the canoe up to free it of water, then looked for his brother, and not seeing him, hurried back along shore, whistling and calling. It was not until a man on shore told him the truth that he could believe his brother was actually lost, and that, too, within a few feet of land. Heartbroken, the boy went home on the next train. The father came to Mast Hope and offered a large reward for the missing body. When he raised the amount to $500 there was a scramble among the natives and a row over who actually found the body, as though it had been that of a dog. That was July 29, four days after the accident.

It was with sad hearts that we listened to this pitiful story of a young life snuffed out so quickly, for we felt that we almost knew these handsome boys who had hailed us so cheerily as they passed by our camp at Crooked Rift. A most peculiar thing happened when I was developing the plates exposed during this cruise. I found the one of the Bensons a fine negative, but in transferring it from the fixing to a formaline bath, it slipped and fell, breaking into but two pieces, the rent leaving the dead brother's image on one part and his head on the other. The pieces were saved and a print made from them, though the emulsion frilled at the rent. It was a strange thing that this should happen as it did.

That day our record was twenty-eight miles, twenty-six rifts and Cochecton Falls. The average speed was over six miles per hour. For the first time the mosquitoes troubled us at that camp; and our friend's cows, which furnished the baby with delicious milk, worried the Mate, who is afraid of cows, while a young bull frightened her still more, as he took a deep interest in the red hippocampus, our club totem, which decorates the front elevation of the pup tent. But he was too young to be brave, and sundry stones fired at him now and then kept him at a distance.

Yachting.

Shelter Island Y. C.

SHELTER ISLAND HEIGHTS.

Season of 1902.

THE Shelter Island Y. C. on Labor Day ended the most successful season since its organization in 1886. There has been more racing than ever before, events have been well contested and much healthy enthusiasm has been aroused. Plans for next year are already under way. Prominent members have signified intentions of offering trophies for the different classes, and with new acquisitions to the racing fleet the campaign of 1903 should be a banner one.

The best racing of the year has been in the one-design class, constructed last winter by the Greenport Basin and Construction Company, from the lines of Mr. Theodore Brigham. Several of these boats were also turned out for the Ardsley Club and the Larchmont Y. C. They fit into class R and have proven speedy, seaworthy and fully up to expectations in every way.

Contests for class R craft were begun on July 4, and continued every Saturday inclusive of the one preceding Labor Day. Eleven races were sailed and honors of the year went to Psi, belonging to Mr. Andrew Bancker, of Brooklyn.

Several trophies were offered class R craft. Com. James Weir, Jr., presented a cup to be won by the class R boat scoring the greatest number of points in eleven races. Mr. C. P. Brigham gave a prize to the one-design boat getting the best percentage of victories, and Rear-Com. J. B. Edson put up first and second prizes to the value of $35 and $15, open to competition on the same basis.

The owner of Psi has a collection of eight cups for the season of 1902. Included in these is a cup for each of her four wins in the class series, one for the class race in the open regatta on Aug. 16, one for the ladies' race on Aug. 23, the Commodore's and Brigham cups. Beside these trophies, Psi carried off the first Edson cash prize. Arrow, a Crowninshield creation, belonging to Mr. J. H. Keim, finished second in the race for the Commodore's cup, open to all class R boats. Arrow was but 2 points behind Psi for the season's competition.

At the close of the races for the Edson and Brigham prizes, Psi and Harp were tied, each having four wins. The tie was sailed off on Sept. 6, Psi getting the victory.

The Regatta Committee of the club, which consisted of Frederick D. Kalley, chairman; William H. Bradley and George F. Little, M. D., formed a sub-class R for boats just too small to fit into the regular class and put up a cup for the season's racing, to be contested for on the point system. Mr. J. L. Hutchison's Eelskin carried off first honors. Races were scheduled on the same dates as for class R. Eelskin, however, got a lead which could not be overcome, and the last three contests were not sailed.

Mr. Otto E. Lohrke, owner of the class N boat, Senta, offered a valuable trophy for boats in his class, to be contested for in five races on the point system. The new Gardner & Cox craft, Kalmia, belonging to George Trowbridge Hollister, won the cup. She had a commanding lead after four contests had been decided, so the fifth was dropped. Flosshilde, Mr. Oscar Weber, and Helen, Mr. Mortimer Fuller, were tied for second place in the series.

The annual open regatta was sailed on Aug. 16. In class L, Effort, Mr. F. M. Smith, won from Mr. Cyrus F. Judson's Syce, on time allowance. Mr. Harry Maxwell's Leda carried off the honors in class M; Flosshilde, Mr. Oscar Weber, won in class N, and Mr. John Maxwell's Indian took first prize in class P. Yawl Scapha, owned by Mr. William Fallert, won in the mixed class and carried off the cup offered by Mr. John W. Weber, for the yawl making the best time over the course. Psi and Eelskin carried off the laurels in class R, and sub-class R, respectively. The cup offered by Mr. Mortimer Fuller, of Scranton, Pa., to the winner in classes K, L, M and N, all racing together in one class on time allowance, was won by Flosshilde.

The annual ladies' race was sailed on Aug. 23. Kalmia, sailed by Mrs. Hollister, won in class N; Psi, with Miss Bancker at the tiller, took the honors in class R, and Winninish, sailed by Miss Helen Roebling, won in sub-class R.

The annual meeting of the organization was held on the evening of Sept. 6 at the club house, Shelter Island Heights, at which the following officers for the ensuing year were unanimously elected: Com., James Weir, Jr.; Vice-Com., Arthur E. Whitney; Rear-Com., John W. Weber; Sec'y, William B. Hill; Treas., William H. Bedford; Meas., Harold Otis; Fleet Surgeon, George F. Little, M. D.; Trustees, the Rev. John A. Aspinall, James Weir, Jr., J. Lester Keep, M. D., Charles H. Otis, Jarvis B. Edson, H. L. Coe, I. M. Bon, Otto E. Lohrke, John Cassidy, William H. Bradley and J. L. Hutchinson.

In the records which follow, where points are considered, each boat is credited with one for starting and one for every craft she defeats.

Pacific Interclub Yacht Association.

SAN FRANCISCO, CAL.

Tuesday, Sept. 9.

THE seventh annual regatta of the Pacific Interclub Yacht Association was sailed on Tuesday, Sept. 9. There was a good list of starters, and sixteen boats finished.

The Crowninshield designed 30-footer Challenger showed her transom to the rest of the boats in her class, beating them on every point of sailing.

The starting line was between two boats moored off the Powell street wharf.

The course for the 21ft. class was from the start, dead to windward, around a stake boat west of Presidio Shoal, thence home to the start and finish range, a total distance of five miles.

The 25ft. and special yawl classes went over this course to windward, thence to leeward around Blossom Rock Buoy, thence around stake boat two miles due north from Blossom Rock, and then home to the finish line, a distance in all of ten nautical miles.

The 30, 36 and 44-footers went over the same course as the 25-footers, but kept on past the finish line out to the Presidio Shoal Buoy and back again, a distance of fourteen nautical miles.

Barring a rather thick haze, which did not materially interfere with the sport, the day was an ideal one for the regatta. The starts, beginning at noon sharp and following at ten-minute intervals, were made in a rattling ten-knot breeze, which freshened as the afternoon wore on, until at the time the different boats finished it was blowing very hard. Most of the boats finished under lower canvas, and then had all the wind they wanted.

In the 21ft. class Kittiwake won handily. Alice got second place, and Loiterer was last. On the run home Loiterer's spinnaker would not break out, and considerable time was lost in lowering and resetting the sail.

Discovery led from the start in the 25ft. class. She worked out to windward well and had a good lead at the weather mark. Her light sails were smartly set for the run home and she crossed a victor by nearly 18m.

Gypsie had no difficulty in beating Arcturus in the special yawl class.

In the 30ft. class Challenger got away from her competitors at the start, and was never headed, beating all the boats in her class easily on every point of sailing.

Harpoon beat Edna and Emma in the 36ft. class. The Queen started, but had trouble with her mainsail and withdrew. Jessie E. and Pactolus also withdrew.

The race in the 44ft. class was between Speedwell and Mischief. The former won by 6m. 30s. Ariel and Neptune failed to finish.

The sloop Clara fouled the steamer Resolute, which was used as a judges' boat.

The Regatta Committee was made up of T. J. Kavanagh, Charles L. Snyder, G. T. S. White and George H. Warford; Timers, W. N. McCarthy and George B. Edgar; Referee, Will Brooks. The summary:

20ft. Special Class—Start, 12:00.

	Finish.	Corrected.
Kittiwake	1 36 20	1 31 30
Alice	1 37 20	1 37 20
Loiterer	1 39 02	1 38 42
25ft. Class—Start, 12:10.		
Discovery	2 41 19	2 30 30
Merope	2 58 57	2 48 57
Special Yawl Class—Start, 12:20.		
Gypsie	2 48 52	2 28 52
Arcturus	3 01 54	2 40 19
30ft. Class—Start, 12:30.		
Challenger	3 25 01	2 54 51
Presto	3 34 29	3 03 39
Helen	3 38 32	3 04 52
Truant	3 48 59	3 17 38
36ft. Class—Start, 12:40.		
Harpoon	3 38 29	2 54 36
Edna	3 45 40	3 02 58
Emma	3 48 54	3 03 36
44ft. Class—Start, 12:50.		
Speedwell	3 53 24	3 01 04
Mischief	4 00 05	3 08 38

The winners were Kittiwake, Discovery, Gypsie, Challenger, Harpoon and Speedwell.

Calumet.

Fifty-foot Waterline Steam Launch.

IN this issue there appears the lines and cabin plans of the steam launch Calumet, designed by Mr. B. B. Crowninshield for Bishop Codman, of Maine.

The yacht was designed for comfort and not for speed, nevertheless she makes eleven miles in ordinary running. After a season's constant use the boat has proven satisfactory in every way.

Calumet was built by Rice Bros., of East Boothbay, Me. She is equipped with an Orr & Jennings engine of 70 horse-power.

Her dimensions follow:

Length—		
Over all	60ft. 0	in.
L.W.L.	50ft. 0	in.
Overhang—		
Forward	1ft. 6	in.
Aft	8ft. 6	in.
Breadth—		
Extreme	11ft. 0	in.
L.W.L.	10ft. 7	in.
Freeboard—		
Bow	4ft. 4	in.
Taffrail	3ft. 1	in.
Least	2ft. 4	in.
Draft—		
Extreme	4ft. 0	in.
To rabbet	2ft. 4½	in.
Displacement	30,250	lbs.

The accommodations below decks are well laid out and quite roomy. The forward house is 12ft. long and 7ft. wide at the after end, and has 6ft. 4in. headroom. Extending across the after end is a transom 2ft. wide. A door from this cabin gives access to the galley, which is just aft. The galley is 4ft. long and runs the full width of the boat. It is equipped with all the latest appliances and there is ample locker room for the storage of dishes and supplies. On the forward side of the galley directly under the transom in the deck house is a berth for the steward. Aft of the galley is the engine and boiler room, which is 12ft. 6in. long. In the after end of the boat is the owner's cabin. On each side of the cabin is a berth 2ft. wide. Behind the berths are lockers for general stowage. Connecting with the cabin is the toilet room, which is 2ft. 6in. wide, and extends the full width of the boat. In the after cabin there is 6ft. 2in. headroom. There are 11ft. of deck forward of the pilot house. Under this deck is the forecastle, where there is accommodation for two men. There is an 18in. waterway all around the cabin house which gives plenty of room to move forward and aft. The after deck is 11ft. long and 8ft. wide.

Yacht Racing Association of Gravesend Bay.

SEA GATE, NEW YORK BAY.

Saturday, Sept. 20.

THE last regatta of the season in the Yacht Racing Association of Gravesend Bay was held on the afternoon of Saturday, Sept. 20, off the Atlantic Y. C. It was the ninth race given by the organization this year. The contest was under the immediate auspices of the Association itself for special prizes. The winners and the value of the trophies captured follow: Sunol, $30; Squaw, $20, Cockatoo, $20; Bronco, $15; Pebble, $15; Jig-a-Jig, $15; Boozie, $15.

Second prizes, two-thirds the value of firsts, were awarded in classes where three or more started. The winners of second prizes were Bonito, Vagabond, Flying Fish, Kelpie and Rascal.

Twenty-six yachts started and finished the race. There were no protests or accidents. All of the contestants conceded the contest the best ever given by the Association in its two years of racing.

It was a fitting end to the season, a struggle in which consistent plugging away was rewarded by victory in at least three instances, where craft which had not come out out the series racing with flying colors defeated old rivals in finished fashion.

The special class N boat, Squaw, took Caribou into camp, and the Marine and Field craft, Jig-a-Jig, was first in the one-design class. The East Bay catboat, Boozie, won from Rascal and Martha M., in much the same conditions as when she made her victorious entry into the Association campaign at the Marine and Field Club race of July 12. In each case winners of first honors for the year were defeated.

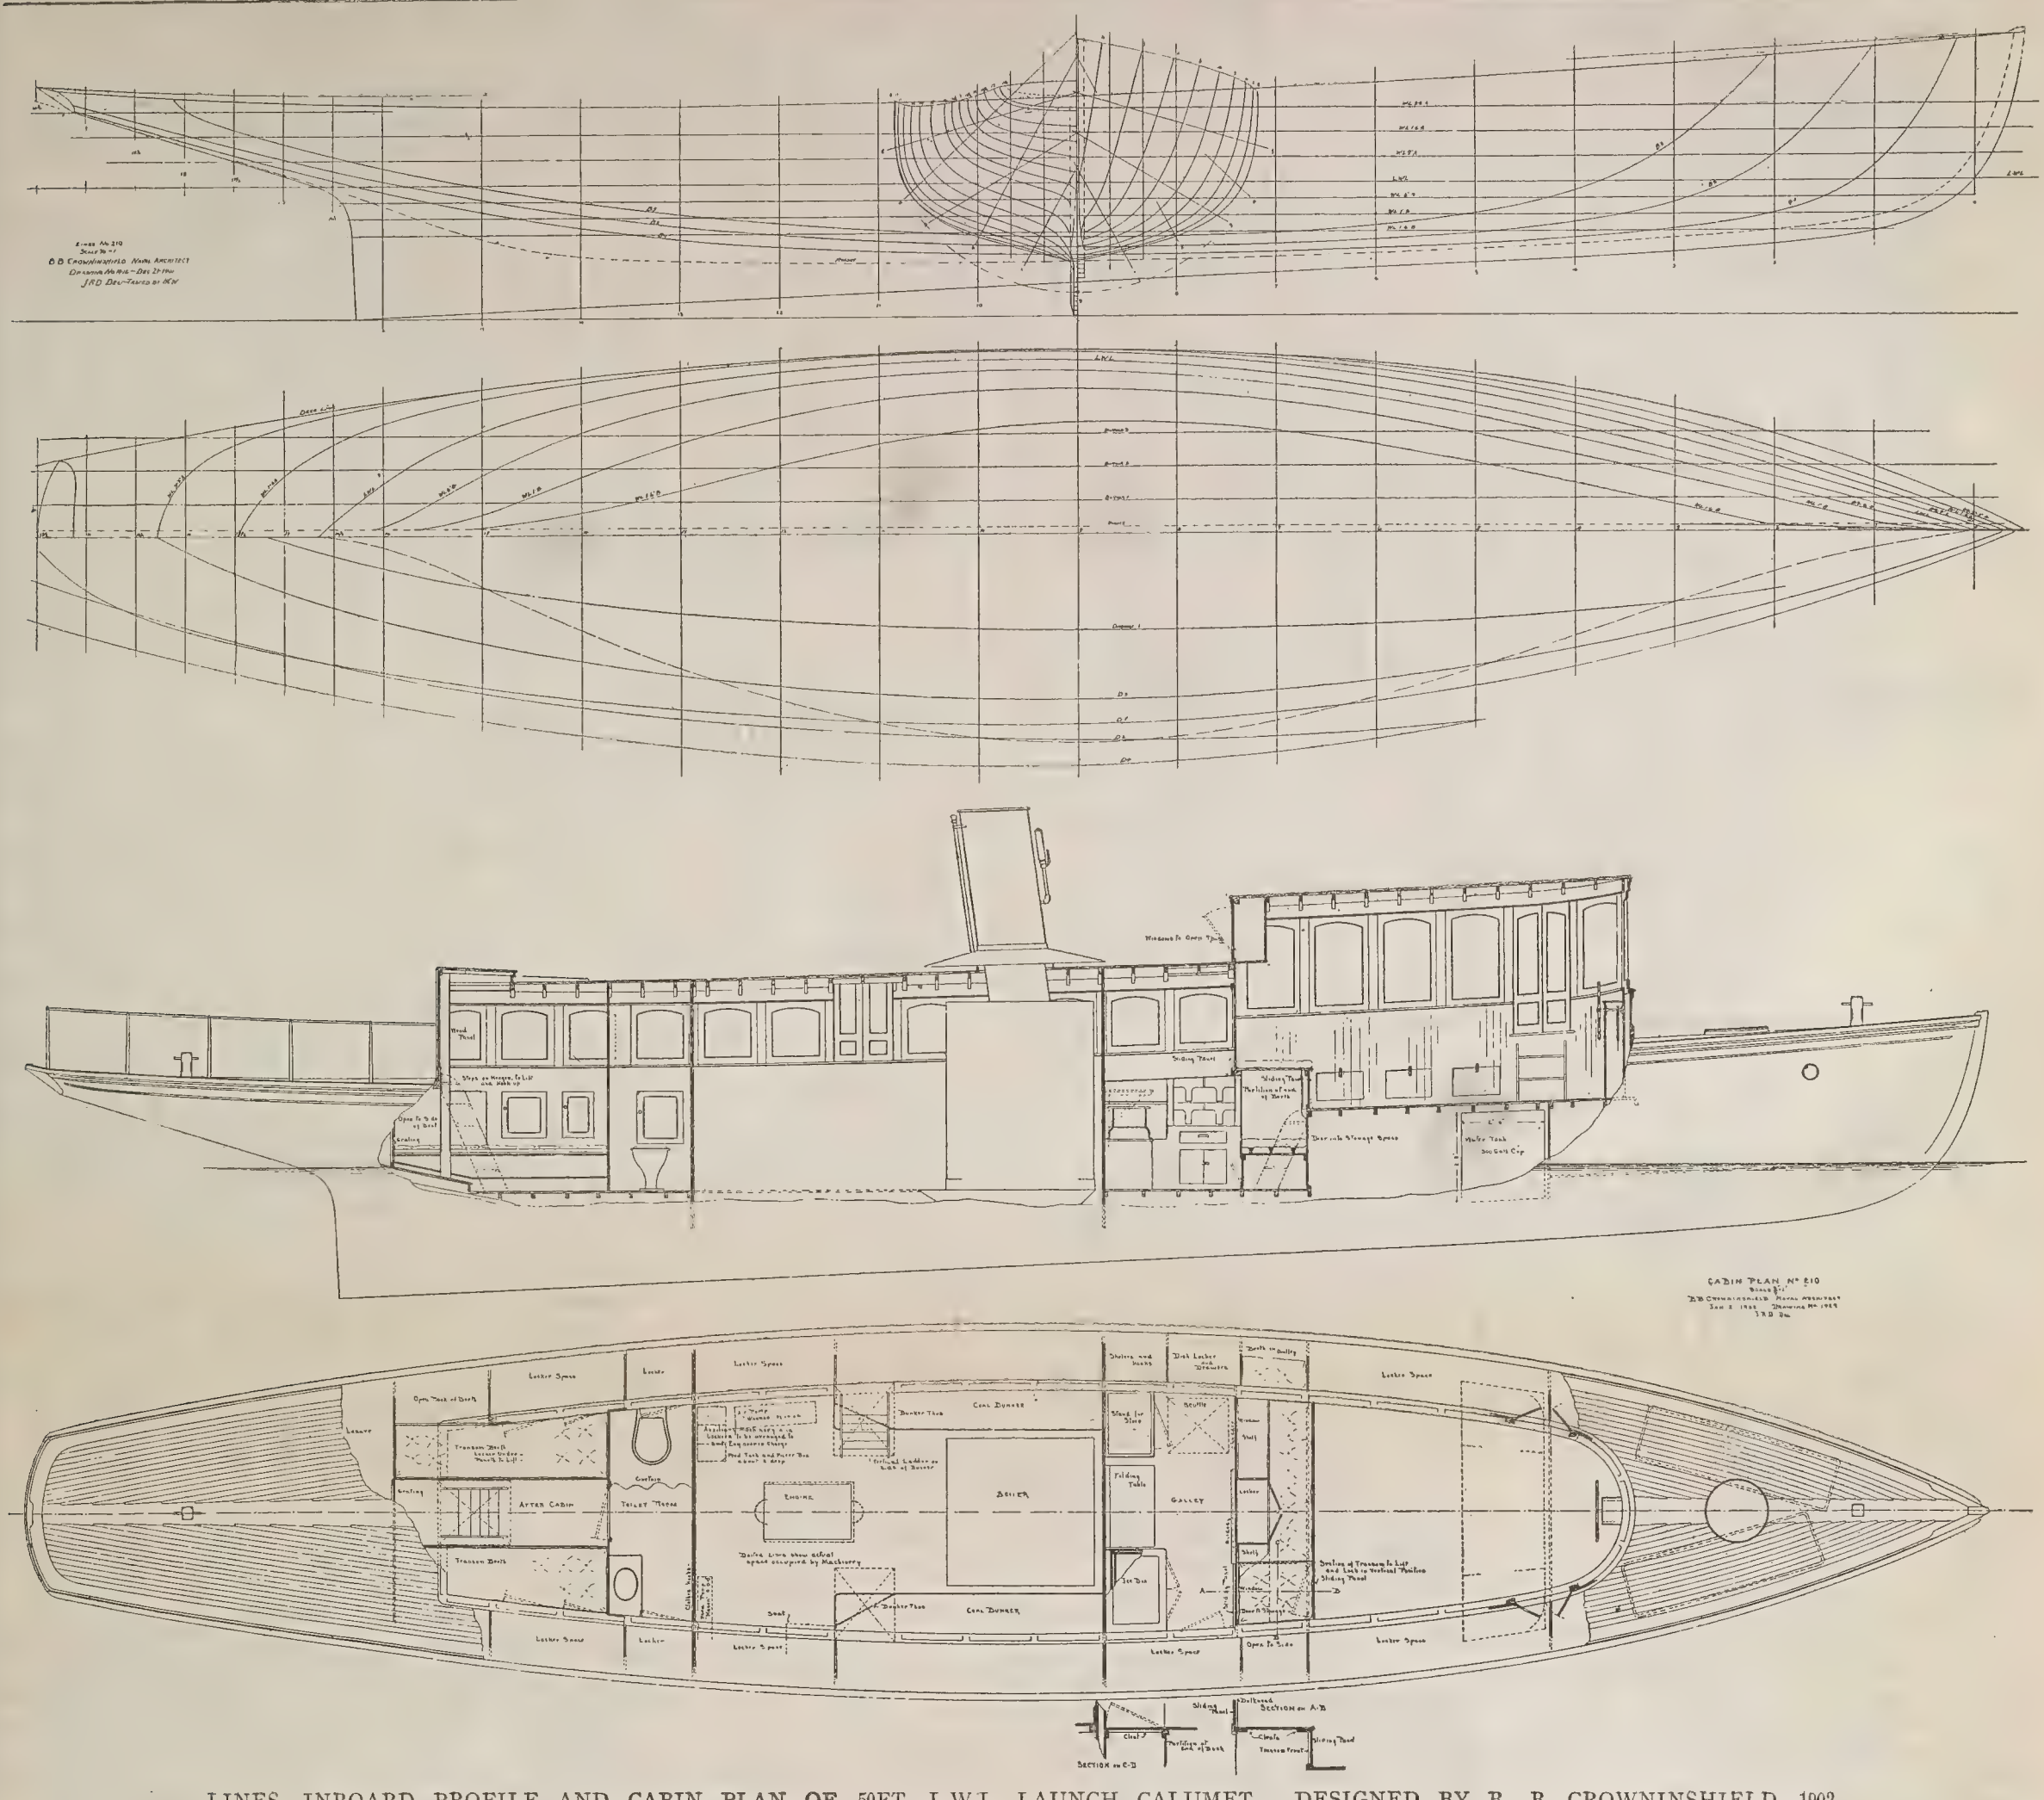
The feature of the day was the clean-cut victory of Cockatoo, a winner in class P, and the first of the fleet sailing the inside courses to end the race. There was no sign of a fluke, the speedy raceabout making every leg a winning one. There was windward work aplenty, conditions to the liking of her Herreshoff model. The class P Crowninshield craft, Vagabond, second of the boats to end the journey, was beaten 2m. 12s. elapsed time.

The 21-footer, Bronco, scored first honors in class Q, and was third boat of the fleet on elapsed time. Flying Fish, which has of late improved, was only 25s. away, while Trouble crossed the finish exactly 1m. after Bronco.

The wind at the start was E. by N. This gave the craft which journeyed out to West Bank Light and return, a reach out and a close fetch home. In special class M, Bess, belonging to Mr. Sydney Grant, of the Brooklyn Y. C., made her first Association start. Coming to the line with a good record, she was conceded by many a sure winner. Sunol, however, sailed an able race and won out from Bonito by 2m. 22s. Bess was defeated 4m. 35s.

Craft covering the inside courses had a broad reach with booms to port to the Government buoy off Fort Hamilton. From there long and short windward hitches brought them to the stake boat off the Marine and Field Club. Then a close fetch to the spar buoy off Brooklyn Y. C., and a reach with booms to starboard led them home. The breeze was fresh and a number of the starters tied in reefs, some of which were shaken out ere the contest was ended.

In special class N, Squaw gave Caribou her first de-



LINES, INBOARD PROFILE AND CABIN PLAN OF 50FT. L.W.L. LAUNCH CALUMET.—DESIGNED BY B. B. CROWNINSHIELD, 1902.

feat of the year by 1m. 17s. In class R, Pebble beat Peanut 8m. 4s. In the Marine and Field class, Jig-a-Jig scored her first Association win of 1902. She led Kelpie by 37s. and Quinque by 1m. 17s. In the catboat class Boozie beat Rascal 11s. and Martha M. 1m. 18s. A resume of the season's work will appear as soon as the complete official records are given out. The summaries:

	Finish.	Elapsed.
Special Class M—Start, 3:03.		
Sunol, John Abbey	4 54 38	1 51 38
Bonito, Haviland Bros.	4 57 00	1 54 00
Bass, Sydney Grant	4 59 13	1 56 13
Special Class N—Start, 3:06.		
Squaw, H. J. Heath	5 01 51	1 55 51
Caribou, J. E. Nicholson	5 03 08	1 57 08
Sloops—Class P—Start, 3:09.		
Cockatoo, Hendon Chubb	4 17 36	1 08 36
Vagabond, T. A. Vernon	4 19 48	1 10 48
Song and Dance, E. F. Luckenbach	4 24 22	1 15 22
Kate, J. S. Negus (yawl)	4 25 16	1 16 16
Karma, J. C. Erskine	4 26 55	1 17 55
Elsie, C. P. Rosemon	4 31 18	1 22 18
Sloops—Class Q—Start, 3:12.		
Bronco, F. C. Moore	4 26 29	1 14 29
Flying Fish, I. M. Dean	4 26 54	1 14 54
Trouble, W. H. Childs	4 27 29	1 15 29
Wraith, Calvin Tomkins	4 28 16	1 16 16
Wink, W. A. Barstow	4 31 46	1 19 46
Sloops—Class R—Start, 3:15.		
Pebble, R. W. Spier	4 42 08	1 27 08
Peanut, D. O. Davenport	4 50 12	1 35 12
Marine and Field Class—Start, 3:18.		
Jig-a-Jig, W. A. Hutcheson	4 38 24	1 20 24
Kelpie, W. K. Brown	4 39 01	1 21 01
Quinque, L. H. Smith	4 39 41	1 21 41
Flying Fox, F. B. Anderson	4 42 56	1 24 56
Stinger, A. P. Clapp	4 45 03	1 27 03
Catboats—Class V—Start, 3:21.		
Boozie, C. D. Durkee	4 42 48	1 21 48
Rascal, D. G. Whitlock	4 42 59	1 21 59
Martha M., Richard Moore	4 44 06	1 23 06

On Sept. 15 there was organized at North Long Branch, N. J., the Monmouth Y. C. The organization starts its career with fifteen charter members. The following officers were elected to serve for the first year: Commodore, Arthur Byron; Vice-Commodore, Reginald Pelz; Secretary and Treasurer, Philip Nash. The members will build a one-design class 16ft. waterline boat, jib and mainsail rig. Eight of these craft will be constructed by Jerolamon, a yacht builder, at Galilee. Next season weekly regattas will be held.

Manhasset Bay Y. C.

PORT WASHINGTON, LONG ISLAND SOUND.

Saturday, Sept. 20.

THE fall regatta of the Manhasset Bay Y. C. was sailed on Saturday, Sept. 20. Although it was rather late in the season, the race was an unqualified success in every way. The weather conditions were of the kind that makes yacht racing interesting and exciting, and there was a good number of entries, some thirty-four boats starting.

The boats were started off the club house, which is located well up in the bay, and the finish line was off Plum Beach. Boats in the 30ft. class covered a nineteen-mile course. The raceabouts and the Larchmont 21-footers sailed an eleven nautical mile course, and the boats in the 18ft. class and the New Rochelle and Manhasset Bay one-design boats covered a nine and one-half mile triangle. The Port Washington oyster boats sailed over a four-mile course.

The wind was from the N.E. and had been blowing from this quarter for several days, and in consequence there was quite a sea running. The Regatta Committee, of which Mr. Edward M. MacLellan was chairman, was on board Com. Stephen W. Roche's steam yacht Emeline.

The boats in the 30ft. class were started at 1:05, and Mimosa was just on the line at gun fire. Marguerite was well behind, and was handicapped. On board Mimosa was a professional, who was born and brought up in Cow Bay, and it was thought that his knowledge of the waters would alone enable him to beat Marguerite, which boat was sailed by Mr. Oliver Jennings, a man who was quite unacquainted with the surroundings. Marguerite passed Mimosa when the boats were close hauled, going out to Gangway Buoy, and kept in the lead up to the finish, and won out by nearly two minutes.

Five boats started in the raceabout class. Mavis got the start, but Hobo worked into the lead on the broad reach coming home, and finished 39s. ahead of Mavis. Jolly Roger was third in this class.

Dorothy got the start in the Larchmont 21ft. class and led Houri all over the course. Dorothy won by nearly 6m.

In the New Rochelle one-design class there were five starters, and Knave won again as usual.

Pup got the start in the Manhasset Bay one-design class, and led to Old Hen Buoy, where she dropped behind. The boat was sailed by "Teddy" Lapthorne, of the firm of Messrs. Lapthorne & Ratsey, the sailmakers. Mr. Lapthorne made a very good showing with Pup, considering his unfamiliarity with the boat and the locality where the race was sailed.

Nora was first away in the 18ft. sloop class. Eleanor got tangled up with the launch that towed her over from City Island just before the start, and she was handicapped 1m. 45s. Nora led all over the course, but Eleanor pushed her hard for first place.

The surprise of the day was in the Manhasset Bay cabin catboat class. Hobo, a cruising catboat, was entered against Thisbe to fill the class. Hobo was sailed by one of her owners, Charlie Lincoln. She got the start, and was giving Thisbe a good trimming on the windward work, when the latter lowered away her sail and withdrew. It was stated afterward that she sprung her mast. Hobo finished the race, covering the course in remarkably fast time.

In the class for Port Washington oyster boats, flat bottom, Emily Shug, Mr. Strickland, finished first; Elm, I. L. Smith, was second, and Myra, A. M. Strickland, was third. There were two other starters in this class.

There was another class for Port Washington oyster boats, with half-round bottoms. In this class Kanawha, Arthur Cocks, won, with Hazel May, C. H. Cocks, second. There were two other starters. The summary:

	Finish.	Elapsed.
Sloops—Class N—25 to 30ft.—Start, 1:05.		
Marguerite, J. F. Dingee	4 23 17	3 18 17
Mimosa, T. L. Park	4 25 10	3 20 10
Raceabout Class—Start, 1:10.		
Jolly Roger, T. B. Bleecker	3 09 20	1 59 20
Mavis, G. L. Pirie	3 08 16	1 58 16
Snapper, A. B. Alley	3 12 06	2 02 06
Hobo, T. L. Park	3 07 37	1 57 37
Cricket, H. Willett	3 10 12	2 00 12
Larchmont 21ft. One-Design Class—Start, 1:15.		
Dorothy, L. G. Spence	3 10 28	1 55 28
Houri, J. H. Esser	3 16 10	2 01 10
New Rochelle One-Design Class.		
Caper, P. L. Howard	3 20 23	1 55 23
Knave, R. N. Bavier	3 13 34	1 48 34
Deuce, L. D. Huntington, Jr	3 20 45	1 55 45
Ace, W. N. Bavier, Jr	3 16 43	1 51 43
Olga, Alfred Mestra	3 17 13	1 52 13
Manhasset Bay One-Design Class—Start, 1:25.		
Firefly, Guy Standing	3 20 45	1 55 45
Mist, J. W. Alker	3 25 30	2 00 30
Arizona, G. A. Corry	3 20 09	1 55 09
Bab, J. R. Hoyt	3 16 46	1 51 46
Pup, T. W. Ratsey	3 20 52	1 55 52
Sloops—Class R—18ft. and Under—Start, 1:35.		
Nora, Lewis Iselin	3 29 18	1 54 18
Eleanor, Robert Jacob	3 31 45	1 56 45
Cricket, H. C. Pryor	3 33 37	1 58 37

Manhasset Bay Special Knockabouts—Start, 1:35.

Peg, A. Roesler	3 22 54	1 47 54

Manhasset Bay Cabin Catboats—Start, 1:35.

Hobo, C. J. & R. M. Lincoln	3 38 45	2 03 45
Thisbe, W. D. Reed	Withdrew.	

The winners were Marguerite, Hobo (raceabout), Dorothy, Knave, Bab, Nora, Peg (sailover), Hobo (catboat), Emily Shug and Kanawha.

Columbia Y. C.

CHICAGO, LAKE MICHIGAN.

Tuesday, Sept. 16.

THE third race for the Webb cup was sailed off Chicago on Lake Michigan on Tuesday, Sept. 16. La Rita got first place, with Arab IV. second. The wind was fresh from the S.W. The judges were: Messrs. A. J. Rohan, W. S. Burrows and J. R. Brunnick. The summary follows, start 3:10:

	Finish.	Elapsed.
La Rita	4 57 40	1 47 40
Arab IV.	5 01 05	1 51 05
Margaret	5 13 31	2 03 31
Colleen	5 08 44	1 58 44
Privateer	5 10 05	2 00 05

Wednesday, Sept. 17.

On Wednesday, Sept. 17, the fourth race for the Webb cup was sailed. The same boats came to the line that started in Tuesday's race. The wind was moderate from the S.W., and La Rita again won out, with Arab IV. in second place. The judges were: Messrs. W. S. Burrows, W. S. Bougher and L. G. Benwick. The summary, start 3:10:

	Finish.	Elapsed.
La Rita	4 43 15	1 33 15
Privateer	4 55 25	1 45 25
Colleen	5 02 26	1 52 26
Arab IV.	4 47 12	1 37 12
Margaret	4 58 27	1 48 27

Thursday, Sept. 18.

Four boats started in the fifth race for the Webb cup that was sailed on Thursday, Sept. 18. The wind was from the N.E., blowing thirty-six miles an hour during the race, and there was a very heavy sea running. Privateer did not finish. Colleen beat La Rita and got first place, La Rita taking second honors. The judges were: Messrs. E. T. Balcom, W. S. Burrows and W. N. Perll. The summary:

	Start.	Finish.	Elapsed.
Colleen	3 44 00	5 32 30	1 48 30
La Rita	4 04 00	5 53 00	1 49 00
Arab IV.	3 30 00	6 03 15	2 33 15
Privateer	4 00 00	Withdrew.	

Friday, Sept. 19.

Yesterday's gale left a heavy swell from the N.E., and the five boats that sailed in the sixth race for the Webb cup on Friday, Sept. 19, had a very uncomfortable trip. The wind was moderate from the N. La Rita won by nearly 3m. Privateer took second place. The judges were: Messrs. E. T. Balcom, W. S. Burrows and W. N. Perll. The summary, start 3:00:

	Finish.	Elapsed.
La Rita	4 58 45	1 58 45
Privateer	5 01 35	2 01 35
Colleen	5 02 18	2 02 18
Margaret	5 08 10	2 08 10
Arab IV.	5 08 25	2 08 25

Saturday, Sept. 20.

The seventh race for the Webb cup was sailed on Saturday, Sept. 20. The wind was light from the E., and La Rita won with ease; Arab IV. finished second. The summary, start 2:40:

	Finish.	Elapsed.
La Rita, Geo. R. Peare	4 40 08	2 00 08
Arab IV., Oscar Daniels	4 44 55	2 04 55
Colleen, Wm. Baum	4 48 35	2 08 35
Privateer, F. D. Porter	4 51 10	2 11 10
Margaret, Wm. Cothroll	5 03 44	2 23 44

The boats' standing on points up to date of this race follows: La Rita, 675; Arab IV., 450; Colleen, 380; Privateer, 280, and Margaret, 160.

Beverly Y. C.

DELAWARE RIVER.

Saturday, Sept. 13.

FOURTEEN boats competed in the regatta of the Beverly Y. C., held on Saturday, Sept. 13. The wind was from the W. and was very light and fluky, which made the racing rather unsatisfactory. The summary:

First Class Catboats—Start, 3:20.

	Finish.
Titania, J. Hamer	5 32 40
Leila, B. Ferguson	5 32 59
Priscilla, T. Bonfield	5 34 50
Peerless, Clarkson	5 38 18
Froud, J. Perkins	5 24 03

Second Class Catboats—Start, 3: 25.

Doris, F. Perkins	5 29 08
Vampire, Crispin	5 37 38

Jib and Mainsail Boats—Start, 3:35.

Kaloola, E. Waters	5 54 01
Feather, Lavinne	6 18 30

Larks—Start, 3:30.

H. Taylor	5 12 08
Cartright	5 15 08
W. Hall	5 16 12
W. Pettit	5 20 05
T. Bonfield	5 20 14

The winners were Titania, Doris, Kaloola and H. Taylor's lark.

Seawanhaka-Corinthian Y. C.

OYSTER BAY, LONG ISLAND SOUND.

Saturday, Sept. 20.

THE annual ladies' race of the Seawanhaka Corinthian Y. C. was sailed on Saturday, Sept. 20. The wind was from the S., and the boats covered knockabout course No. 3. Lucille got the start, but was beaten out by two boats. On the last leg Bobs got into the weather berth and won out by over a minute. Wyntje was disqualified for fouling a mark boat. The summary, start 3:40:

	Finish.	Elapsed.
Bobs, Mrs. W. A. W. Stewart	5 34 33	2 04 33
Gowan, Mrs. F. G. Stewart	5 35 38	2 05 38
Lucille, Miss Landon	5 36 39	2 06 39
Wyntje, Miss Willis	Disqualified.	

Bobs was the winner, and Gowan second.

English Letter.

THE racing season with us is now over, the last regattas having taken place at Plymouth, where a King's cup was sailed for at the regatta of the Royal Western Y. C. A channel match was sailed down the day before from Dartmouth, a large fleet taking part in it. The wind was very light, but there was a long swell from a breeze of the day before. Bona came in first, but the first prize went to Gwyneth, a boat built last year, and hitherto rather unsuccessful. Bona won the King's cup on the following day. She seems to be sailing better now than on the Clyde. The new 52-footers did not race again after Dartmouth regatta (which was a very poor affair this year). Magdalen, Baron de Forest's crack in the class last year, came to Dartmouth, but did not race. She fitted out before the Cowes week, and lay in the Roads until the eve of the regattas, when she sailed for France, and has remained ever since. Much comment has been excited by her apparently studied avoidance of the class this year. Of the two boats this year Lucida is undoubtedly the faster, though there is generally so very little between the two that it is remarkable that the prizes have not been more evenly divided. It is a case in which the one wins only by being a little more weatherly than the other—just enough to turn the scale in almost every race, allowing no room at any time for mistakes.

Of the Clyde 36-footers, Alfred Mylne's design, Barabel, has come out champion in her class; Ensay, one of the Fife boats, showing a good string of flags also. The class will probably grow stronger on the Clyde, though the boats are not quite the type that the Northern yachtsmen admire. They have all got very long snouts, and this makes them uncomfortable in a sea. That they find any admirers at all seems to me only to be a strong condemnation of the last two rules, which worked themselves to death up North.

Down South—which means the Solent—there is considerable discussion over Lord Albemarle's proposed new one-design class. The boats are, I hear, of no better type than the 36-footers (only larger), and it is no secret that they are intended solely as a refuge for owners who want to race what they call smart boats, but do not care to build a new boat every year—small blame to them! Last year four new 36-footers were built for the Solent, and the owner of one, which did not turn out well, had another built before the season was half over. This seems to have paralyzed the class, for no new boat has been built since. The curious thing is that these small Y. R. A. classes on the Solent are mainly kept up by wealthy owners, and these have now entered this emphatic protest, which shows very unmistakably that open racing will not go on for ever if it is conducted regardless of the owner's pocket. Now, hitherto this has been the case in England, and it is a startling thing to find a nobleman of Lord Albemarle's standing in yachting, as well as social circles, taking the lead in such a revolt. Nobody can say a word against the desirability of the class on the score of sound sport, and it is certain to be strong, but one-design classes are only good for sound sport, and it is possible to obtain as much of that in other ways, without entirely closing the door against the yacht designer. A handicap class would answer all purposes provided there was a maximum time allowance, say, of only five minutes. Given restrictions to insure a decent type of boat, so small a maximum of allowance would be certain to produce hot competition, and no real duffer could stay in the class. It would necessitate the employment of the best designers, while it would avoid the possibility of a Camellia playing second fiddle to a Lucida all through the season, simply because she might be a minute slower in three hours' sailing.

Mr. Willie Jameson's new motor schooner, Scarlet Rambler, is not yet ready for sea. In her last trial she burst her silencing drum and is waiting for a new one. The engine is 75 horse-power, and as this is quite a novelty to British marine motor makers, delays are unavoidable in the pioneer vessel. She will eventually give great satisfaction, I have no doubt, but it is a pity she was not ordered sooner. The weather this year has been disgusting for yachting generally, and the marine motor has not had a fair chance. All the same, there is no doubt that business is going to be very brisk in this line during the winter.

Sir Thomas Lipton will say nothing as to a challenge for the America's Cup, but it is pretty certain he means business. He visited Fairlie last week and had a long conference with Mr. Fife. I see by our telegrams that a rumor prevails in America that he will build a schooner. That is not very likely, because in that case the two Shamrocks would be of little use as trial horses. With the facilities now at his disposal in having a good trial boat both here and in New York, I think that Mr. Fife will do the trick this time, and you will have to hand over the cup gracefully, and, I am certain, very thankfully.

It has been stated that the King has ordered a new first-class racing cutter for next season. No confirmation of this report is forthcoming, but His Majesty is generally believed to have had such a vessel designed for him just before the fatal illness of Queen Victoria, and it is quite possible that the work may now be proceeding. If this is the case, the maintenance of secrecy is to be deplored, for if it were known that the King had such an intention, it would would probably lead to orders for other first-class yachts. E. H. HAMILTON.

The Steam Yacht Arrow.

THE remarkable speed made by Arrow, the steam yacht owned by Mr. C. R. Flint, on her test made on the Hudson River off Ardsley, a short time ago, has caused considerable comment. Arrow covered a nautical mile in 1m. 32s., or at the rate of 39.13 knots an hour.

The yacht was designed by Mr. Charles D. Mosher last year. Mr. Mosher's name has been associated with fast steam craft for some years past. Ellide, one of his older boats, covered the same course as Arrow did at the rate of 34.73 knots per hour.

Arrow is a twin screw yacht built of steel. She is 130ft. 4in. over all, 12ft. 6in. breadth, and 3ft. 6in. draft. Her displacement is 66 tons, and has engines of 4,000 horsepower.

The yacht was designed for a 40-knot boat, and had her steam not been allowed to run down at the latter part of her recent test, she very likely might have reached that remarkable speed.

YACHT CLUB NOTES.

At the annual meeting of the Ocean City (N. J.) Y. C., the following officers were elected: Commodore, Dr. Charles E. Edwards; Vice-Commodore, C. W. Masland; Secretary, Charles L. Hofmann; Treasurer, L. M. Cresse; Trustees, R. R. May, G. D. Adams, W. S. Graham; Executive Committee, C. F. Wall, John M. Zurn, W. K. Williamson, C. Howard Schermerhorn, L. M. Cresse, T. B. Hammer, J. Wesley Masland.

The annual meeting of the Riverton (N. J.) Y. C. was held a short time ago and the following officers were elected: Commodore, William R. Ellison; Vice-Commodore, E. R. Showell; Treasurer, Charles M. Biddle, Jr.; Secretary, T. Harry Walnut; Measurer, J. H. Reese; Finance and Elective Committee; John C. S. Davis (Chairman), Charles C. Rianhard, H. J. Mitchell, Charles W. Davis, S. C. Woolman; Regatta Committee, A. G. Cook, W. K. Woolman, John H. Reese.

At the annual meeting of the Island Heights Y. C., held at the club house at Island Heights, N. J., the following officers were elected to serve during the coming year: Commodore, J. Harvey Gillingham; Vice-Commodore, Frederick Downs; Treasurer, Alexander Bennick; Secretary, Herbert M. Harlan; Executive Committee, Robert Shoemaker, Arthur Litchwarth and Charles J. Beck; Trustees, S. Edwin Megargee, Charles Beck and M. F. Middleton, Jr.; Fleet Captain, C. S. Street, and Fleet Surgeon, H. N. Davis, M. D.

YACHTING NEWS NOTES.

Irving Lovett, present owner of the yacht Hermes, formerly owned by A. W. Chesterton, of the Winthrop Y. C., and present owner of Calypso, has sailed from Halifax, N. S., bearing the much coveted Prince of Wales cup which was presented to him by the Royal Nova Scotia Yacht Squadron. Last year this beautiful trophy was won from Hermes by the freak Cibo, owned by a Sydney, N. S., syndicate.

Mr. Lovett sailed for Yarmouth under $1,000 bonds to secure the safety of the cup, which is raced for every year, and which is the prize for which one of the most interesting races of the year is sailed.

In this year's race for the cup Hermes came in 23m. ahead of the nearest boat in the second race. The first of the series was won by a lead of 20m. at the finish.

The yacht was built in 1898 and was designed by C. C. Hanley, at Quincy, Mass. She is a 25-footer, sloop rigged, and never was beaten in the 25ft. class in Massachusetts.

In 1901 she won three straight out of five races in the contest for the Yarmouth, N. S., cup, defeating in every point of sailing Sabot, Savitar and Tapon. The same year she won the Chester Club cup and the club cup at Yarmouth.

This year her showing has fully equalled all the expectations of her owner. She won the first two races in the series of three for the Yarmouth cup, and the third will be sailed later. Following these races, Hermes was taken to Shelburne, N. S., where she won the Coronation cup, defeating Marion in the third heat by 10m. over a twelve-mile course.

In the race later sailed to defend the Chelsea Club cup, Hermes finished first, but lost the race on time allowance. Again, in sailing for the Vice-Commodore's cup, she finished far in the lead, but lost on time allowance to Maple Leaf.

Mr. Lovett will defend the Prince of Wales cup against all comers, and he thinks that he can successfully do so for some time to come with the little Massachusetts boat which has sailed so well this year.—Boston Post.

The Lozier Launch Co. has acquired a piece of property at College Point, L. I., which adjoins the Knickerbocker Y. C. This firm will erect buildings on the land and will build and equip launches.

The yawl Egret that was launched on Sept. 4 at Shooters' Island, from the yard of the Townsend & Downey Shipbuilding Co., has been completed and is now in commission. Egret was designed by Messrs. Cary Smith & Barbey, for Mr. Lenox Smith. She is 53ft. over all, 33ft. waterline, 12ft. 2in. breadth and 7ft. draft.

Mr. W. J. Pirrie, of Belfast, Ireland, has chartered, through the agency of Messrs. Cary Smith & Barbey, the schooner Ramona. The yacht is owned by Gen. B. M. Whitlock.

Mr. J. Roger Maxwell's 70-footer Yankee has been laid up at Jacob's yard, City Island.

Rifle Range and Gallery.

Cincinnati Rifle Association.

CINCINNATI, O.—At the regular meeting of this Association on Sept. 14, the following scores were made, giving the annual 100-shot competition race of several of the members. Conditions, 200yds., at the German ring target:

Hasenzahl	231	223	210	214	196	205	212	218	201	226
Payne	228	206	218	212	210	201	209	208	195	219

Union target: Hasenzahl 63, Payne 71, Strickmeier 59, Nestler 65, Gindele 56, Odell 55, Hofman 63, Roberts 62, Bruns 59, Lux 59, Hofer 59, Drube 66, Jonscher 55, Weinheimer 53, Freitag 55, Topf 53.

The annual prize shoot of this Association will take place Sept. 28.

Trapshooting.

Fixtures.

Sept. 24.—Brooklyn, L. I.—Tournament of the Brooklyn Gun Club, commencing at 1 o'clock; $17.50 in gold for high averages; Enfield street, near Liberty avenue. John S. Wright, Mgr.

Sept. 24-25.—Taylorville, Ill.—Taylorville Gun Club's tournament.

Sept. 25-26.—Streator, Ill.—Streator Gun Club's target tournament.

Sept. 26-27.—Matthews, Ind.—Second annual target and live-bird tournament.

Sept. 27.—Middletown, N. Y.—Open shoot of the Middletown Gun Club. Russell M. Vernon, Sec'y-Treas.

Sept. 29-30.—Lewistown, Ill.—The Interstate Association's tournament, under the auspices of the Lewistown Gun Club. H. H. McComber, Sec'y.

Oct. 1-2.—Fostoria, O.—Fostoria Gun Club's target tournament; $100 added; first day open to all; second day, merchandise handicap. W. R. Alspach, Ass't Sec'y.

Oct. 1-2.—Allegheny City, Pa.—Fall tournament of the North Side Gun Club; $140 added. I. W. Morrow, Sec'y.

Oct. 1-2.—Austerlitz, Ky.—Hill Top Gun Club's tournament.

Oct. 1-2.—Union City, Ind.—Fall tournament of the Parent Grove Gun Club. O. E. Fouts, Sec'y.

Oct. 1-2.—Austerlitz, Ky.—Hill Top Gun Club's live-bird tournament. Alfred Clay, Sec'y.

Oct. 1-2.—Union City, Ind.—Parent Grove Gun Club's fall tournament. O. E. Fouts, Sec'y.

Oct. 1-2.—Allegheny, Pa.—Two-day target tournament of the Northside Gun Club; $100 added money. I. W. Morrow, Sec'y.

Oct. 2.—Rittersville, Pa.—Target tournament of the Lehigh Rod and Gun Club of the Bethlehems.

Oct. 6.—New Paris, O.—One-day tournament of the Peters Gun Club. G. L. Lyne, Sec'y.

Oct. 3-4.—Louisville, Ky.—Jefferson County Gun Club's tournament.

Oct. 7-8.—Greenville, O.—Handicap tournament of the Greenville Gun Club. H. A. McCaughey, Sec'y.

Oct. 9-10.—Irwin, Pa.—Irwin Game and Gun Club's tournament.

Oct. 9-10.—Fort Wayne, Ind.—Annual target tournament of the East End Gun Club. F. W. Leidelf, Sec'y.

Oct. 15-16.—Baltimore, Md.—Tenth annual fall tournament of the Baltimore Shooting Association; targets and live birds; $100 added money. Open to all. J. R. Malone, 2671 Pennsylvania avenue, Manager.

Oct. 15-16.—New London, Ia.—Sixth annual tournament of the New London Gun Club. Dr. C. E. Cook, Sec'y.

Oct. 15-16.—Springfield, O.—Springfield Gun Club's tournament. B. F. Downs, Capt.

Oct. 21-22.—Kenton, O.—Second annual fall tournament of the Kenton Gun Club; $75 or more added money. K. P. Johnson, Sec'y-Treas.

Oct. 21-22.—Sistersville, W. Va.—Sistersville Gun Club's target tournament.

Oct. 24-26.—Bisbee, Ariz.—Tenth annual tournament of the Arizona State Sportsmen's Association. M. J. Cunningham, Sec'y.

Newark, N. J.—South Side Gun Club target shoot, every Saturday afternoon.

Chicago, Ill.—Garfield Gun Club's target shoot, every Saturday afternoon until October. Grounds, West Monroe street and Fifty-second avenue. Dr. J. W. Meek, Sec'y.

First Saturday of each month for a year, Burnside.—Contest for the Troisdorf live-bird and target medals; 10 live birds; 25 targets; open to all. First contest, March 1.

DRIVERS AND TWISTERS.

Col. Charles Emory Felton, of Chicago, arrived in New York last week for a brief visit in that city. Notwithstanding his seventy-one summers, he is as alert and sprightly as a race horse. He has been one of the leaders in Western trapshooting for many years past. The Sportsmen's Review gives a synopsis of Col. Felton's business and public career as follows: "Charles Emory Felton was born at Barre, Mass., Sept. 18, 1831. His father's name was Benjamine Felton, and a lineal descendant of Nathaniel Felton, Puritan, who settled at Salem, Mass., in 1633; and married Mary, a daughter of Rev. Samuel Skelton, the first pastor of the Puritan church at Salem. Charles E., was apprenticed as printer boy at Barre, in 1844; left Massachusetts in 1849, for New York city; thence to Cincinnati, where, although not yet of age, he was assistant foreman in the Chronicle and Atlas for a while. Thence as printer he went to Indianapolis, Ind., and to Columbus, O.; thence to Buffalo, N. Y., where he was employed as foreman in the book and job department of the Commercial Advertiser, at Buffalo, N. Y., several years; then was proprietor of a small printing and stereotype house until 1863. He was Alderman of Buffalo, 1861-1862; was appointed as a member of the Federal Defense Committee at Buffalo during the War of the Rebellion—the only Democrat on the Committee—was superintendent of the penitentiary at Buffalo, 1863-1872; general superintendent of the House of Correction, Chicago, 1872-1890; a private citizen thereafter save that he was a member of the board of managers of the Illinois State Reformatory four years; a member of the board of trustees of St. Luke's Hospital, Chicago, 1892-1902 (or longer); a member of Washington Driving Park Association and Chicago Athletic Association, and of several local sportsmen's clubs, Chicago; president of the Illinois State Sportsmen's Association three years, being its first president when that Association was reorganized; a prominent member and official of the National Prison Association, whose president was the late Rutherford B. Hayes, ex-President of the United States."

The Peters Gun Club, of New Paris, O., has issued the programme of its first annual tournament, fixed to be held on Oct. 9. Three expert traps will be used. Competition commences at 10 o'clock. Practice may begin at 8 o'clock. The programme presents eight events at 15 targets, and one event at 25 targets, entrance based on 10 cents per target. Three extra 15-target events will be given for the benefit of the 60 and 70 per cent. shooters. Purses divided 40, 30, 20 and 10. Manufacturers' agents and 90 per cent. shooters will be handicapped from 17 to 20yds. The Peters trophy will be shot for in the ninth event by members of the club. Guns and ammunition shipped care of J. E. Reid, New Paris, will be delivered on the grounds free. The secretary, Mr. G. L. Lyne, will furnish all pertinent information.

The Hazard powder trophy, 25 live birds, $25 entrance, was begun at Blue River Park, Kansas City, Sept. 17, and carried over to the next day. It was won by Mr. W. R. Crosby from the back mark, 33yds. There were seven in the tie of 25 straight, namely, Messrs. C. Cockrell, J. W. Bramhall, H. Spencer, H. Thiele, W. S. Allen, J. J. Gorman and W. R. Crosby. They dropped out as follows in the shoot-off: Cockrell in the fifth round; Allen lost his first bird, but continued to the fifth; Gorman in the twenty-seventh; Spencer in the seventh; Bramhall in the thirty-sixth; Thiele in the fourteenth. Crosby killed his thirty-sixth in the finish with Bramhall, and won the trophy. This made 61 successive kills from the 33yd. mark—said to be the greatest run made from that distance.

The programme of the third annual shoot given by Mr. Wm. E. Marshall, at Prospect Park, Baltimore, Md., Sept. 24 and 25, provides both target and live-bird competition, which is open to all. There are three programme live-bird events on the second day, commencing at 1 o'clock; 5 birds, $3; 7 birds, $5; and 15 birds, $10, birds included in entrance. Each event is a handicap. There are seven high average moneys. Handicaps in target events, 12 to 20yds. Shooting commences at 9:30 A. M.

The fall tournament of the North Side Gun Club, of Allegheny City, Pa., has a programme to which $140 is added. There are ten events each day, alternately 15 and 20 targets, $1.50 and $2 entrance, $2.50 added to each event. Lunch served each day free to shooters. Shells can be obtained on the grounds. Targets, 2 cents. No amateur will be permitted to shoot for targets only. Events 3 to 8, Oct. 2 will be a contest for the championship of western Pennsylvania, between W. L. Harper and L. B. Fleming, holder. The Rose system will govern the division of the moneys. To each of the four high and four low guns shooting through the programme each day, $5. Manufacturers' agents may shoot for targets only, and $5 will be given to the first, and second high gun of them each day. Shooting commences at 9:30 each day. Ship shells to J. A. Johnson, Smithfield street, Pittsburg, Pa., charges prepaid, and they will be delivered on the shooting grounds. Mr. L. B. Fleming will manage the tournament. The secretary is Mr. I. W. Morrow, Richardson avenue, Allegheny, Pa.

Concerning the Middlesex Gun Club, of England, the Shooting Times has the following: "Practice at the three usual ways of game shooting is now carried out at this club each Saturday. The invisible trench provides practice for walking up game, as neither traps nor trappers can be seen, and the birds when released appear to rise from the grass. The 60ft. tower here gives excellent practice for tall or overhead pheasant shooting, while partridge driving practice is obtained by the arrangement of traps behind a long screen. The shooter stands some 20yds. from this, and the birds come over in a most natural way and with great speed." The foregoing would indicate that there are more varieties of shooting at the traps in England than in America. Still, if the object was to sell as many targets as possible to shoot at, the tower, etc., would make a poor showing against the rapid-fire system.

Mr. W. E. Templeton, of Excelsior Springs, Mo., under date of Sept. 16, writes us as follows: "Kindly add to your list of coming events announcement of our shoot on Oct. 9, 10 and 11. This shoot will be one of the largest in the Mississippi Valley this fall. There will be $100 a day added, with average money for three days. In addition to this, the Excelsior Springs Gun Club intend putting up a handsome challenge trophy. The two days' shoot held here during the middle of August was largely attended, and all shooters expressed themselves as much pleased with Excelsior Springs as a shooting resort. Come and rest up and drink the waters of Excelsior Springs."

Mr. Geo. Smith, Jr., secretary of the East Side Gun Club, of Newark, writes us as follows: "There will be a twelve months' live-bird handicap shoot (10 birds each shoot) on Smith Brothers' grounds, beginning Thursday, Sept. 25, and on the fourth Thursday of each month following, for the New Troisdorf trophy; open to members of the East Side Gun Club and residents of New Jersey. All winning trophy once or more will be eligible for the final, or thirteenth, shoot. The winner of final to be permanent owner. Entrance, price of birds only."

Secretaries of trapshooting clubs should bear in mind that a programme, at the latest, should be sent in time for publication the week before the tournament, to which it refers, takes place. On this point, secretaries seem to have divided opinions. A few seem to think that, if the programme is sent in at any time, they have done praiseworthy service, hence some secretaries send the programme for review when their tournament begins.

The seventh and last shoot of the Garfield Gun Club's third series of trophy shoots took place on the club's grounds, Chicago, on Saturday of last week. A. Dorman won Class A with 24, T. Jones won Class B with 19, and M. G. Eldred won Class C with 20. The cup shoot, 25 targets—15 singles and 5 pairs—was also won by Dorman; Drs. Shaw and Meek were second, with tie on 20 from the 18yd. mark.

The shoot of the Emerald Gun Club at Guttenburg, N. J., on Friday of last week was unfortunate in regard to weather, the day being rainy, foggy and dark. The birds took wing poorly. The attendance was much lighter than usual. Sixteen contestants participated in the club event, of which Mr. C. Meyerdierck won Class A with a straight score after a shoot-off at 1 bird with Mr. C. Meyer.

At the annual meeting of the Missouri State Game and Fish Protective Association, Kansas City, Mo., Sept. 17, the list of officers elected were: President, J. H. Phelps; Vice-President, F. J. Smith; Secretary, F. B. Cunningham; Treasurer, Frank Brenton. St. Joseph, Mo., was fixed upon for the next annual meeting. The date was left in abeyance.

"Please claim the dates for our tenth annual fall tournament, Oct. 15 and 16, 1902. Targets and live birds. Added money $100. Open to all." So writes to us Mr. J. R. Malone, 2671 Pennsylvania avenue, Baltimore, Md., to whom communications may be sent concerning the matter.

Uncle Ben Catchpole will need to look to his honors, in so far as the daily press reports credit Mr. Wm. Caufman, a mere kid of seventy-eight springtimes, with breaking 25 targets straight in a target event at Carlisle, Pa., at the annual shoot of the Carlisle Gun Club.

In the regular club shoot of the Nonpareil Gun Club, at Watson's Park, Chicago, on Sept. 20, Mr. L. C. Willard broke 47 targets out of 50, and was high man in that event. He was closely pressed by Messrs. Geo. Roll and J. B. Barto, who scored 46 each.

In the four-man team race at Blue River Park, Kansas City, Sept. 17, the Students' Gun Club, of St. Louis, won, with a score of 59 out of a possible 60. This was an event of the Missouri State shoot. The bad weather was unfavorable for the birds as flyers.

The match between eight-man teams of the North River Gun Club, Edgewater, N. J., and the Westwood Gun Club, Sept. 20, was won by the former, score 118 to 111, a victory which was on a narrow margin of 7 targets.

Mr. James B. Voorhees, of Sheepshead Bay, L. I., died on Wednesday of last week. He was famous as a pigeon shot of excellent skill. He was of an old family, whose ancestors settled at Gravesend 200 years ago.

The next regular shoot of the Colt Gun Club, Hartford, Conn., will be held on Oct. 4, after which there may be an interim of inaction in honor of the hunting season.

BERNARD WATERS.

Mt. Kisco Gun Club.

MT. KISCO, N. Y., Sept. 20.—To the shoot of the Mt. Kisco Gun Club the Wanderers had a special invitation several days prior. Following are the scores:

Events:	1	2	3	4	5	6	7
Targets:	15	15	20	15	50	15	25
*Banks, 19	10	13	17	12	32	8	20

Handicaps apply in event 5 only.
* Wanderers.

WESTERN TRAPS.

Nonpareil Gun Club.

Chicago, Ill., Sept. 20.—The Nonpareil Gun Club's shoot, held to-day at Watson's Park, Burnside Crossing, Ill., resulted as follows:

Regular club shoot, 50 targets each: L. C. Willard 47, Geo. Roll 46, J. B. Barto 46, Busch 40, R. B. Mack 37.

Sweeps:

Targets:	15	20	15	Targets:	15	20	15
Willard	15	13	12	Amberg	6	..	5
Roll	13	18	11	Mack	12	..	10
Barto	12	14	10	Busch	13	17	11

Practice: Amberg broke 8 out of 10; Busch 18 out of 20; Parker 50 out of 100.

GEO. WATSON.

Marion Gun Club.

MARION, Ind., Sept. 19.—Find herewith scores of the Marion Gun Club, made at our regular Friday shoot to-day. There was a fine, misty rain all day, and the scores were good, considering the bad weather. Chambers won high honors, as usual:

Events:	1	2	3	4		Events:	1	2	3	4	
Targets:	10	10	10	15	Broke.	Targets:	10	10	10	15	Broke.
Gordon	7	4	3	4	18	Sheldon	8	5	4	..	17
Chambers	8	9	10	15	42	Shultz	5	7	5	..	17
Stobe	6	4	2	8	20	*Kinsley	5	7	3	..	15
Jones	7	7	7	13	34	Whistler	7	8	6	..	21
Greveston	6	4	8	7	25	Atkinson	7	5	6	..	18
*Hiatt	5	6	10	12	33	Bockins	6	7	5	9	27
Hayes	7	6	3	8	24	Dr McK	6	5	5	8	24

* Visitors.

H. S.

Sept. 16.—Our Friday shoot was shot out in an all-day rain; but good scores were made by those who were game enough to face the traps in the downpour.

The boys went out to take the medal away from Chambers, but failed to beat him in a 50-bird match. Following are the four best scores: Kiley 39, Atkinson 38, Whistler 40, Chambers 44.

Chambers keeps the medal, after winning it four times straight out of four regular weekly shoots.

CAP.

Garfield Gun Club.

Chicago, Sept. 20.—The appended scores were made to-day on our grounds on the occasion of the seventh and last trophy shoot of the third series. Dorman won Class A trophy on 24, Tom Jones won Class B on 19, and Eldred won Class C on 20.

The trophy shoot was immediately followed by the cup shoot, distance handicap. Dorman, Dr. Shaw and Dr. Meek, all shooting from the 18yd. mark, tied on 20 out of 25, thrown as 15 singles and 5 pairs. Dorman won the cup on shoot-off, going 10 straight to the others' 9 each.

The day was a good one for target shooting, being just comfortably cool and but little wind. A heavy smoke bank from the city hung just in front of us, however, making the targets rather hard to see.

Attendance good, considering game season on.

Seventh cup shoot, 15 singles and 5 pairs:

M F Wilson	111101011001001	01 10 11 11 00—15
C H Kehl	101001101011111	01 00 01 00 00—12

Team race, Luzerne Club against Dallas Club:

Luzerne Club—Haight 9, Weida 6, Marvin 10, Stroh 9, Helme 8, Lewis 5, Thompson 7, Battenbender 9, Hart 6, Hudson 6; total 75.

Dallas Club—Raub 8, Wall 8, Hunter 4, Harter 8, Davis 5, Norris 8, Leavenworth 10, Mason 8, Harris 8, Colbaugh 8; total 75.

Richmond Gun Club.

SILVER LAKE, Staten Island, Sept. 20.—The Richmond Gun Club's shoot, held at this place to-day, had an event of special interest, the prize being a five dollar gold piece. This was event 10, at 25 targets, and the useful prize was won by Mr. F. G. Crystal with a score of 29, he having a handicap allowance of 12. Following are the scores:

Events:	1	2	3	4	5	6	7	8	9
Targets:	10	15	10	10	10	10	10	10	10
A Hawes	5	8	6	7	7	7	7	8	9
E W Reynolds	5	10	6	7	6	7	5	7	8

A Smith	5	10	5	4	6	6	7	8	5
G Osterhout	8	11	7	9	8	7	8	7	8

Event 10, handicap allowance added; prize, five dollar gold piece: Hawes 17 (7) 24; Reynolds 16 (5) 21, Reiersen 11 (12) 23, Williams 12 (12) 24, Crystal 17 (12) 29, Albrecht 11 (12) 23, Schoverling 21 (0) 21, Smith 9 (10) 19, Osterhout 14 (5) 19.

A. A. SCHOVERLING, Sec'y.

Missouri State Tournament.

KANSAS CITY, Mo., Sept. 17.—The twenty-fifth annual tournament of the Missouri State Game and Fish Protective Association opened this morning at Elliott's Blue River Shooting Park. A nasty drizzling rain continued throughout the day, and it was 10 o'clock before the four-man team shoot commenced. Each man shot at 15 live birds, or 60 in all to the team. The Students' Gun Club, of St. Louis, won the medal with the fine score of 59 out of a possible 60 birds. The Michigan Park Club, of Kansas City, won second, $100 cash. The St. Louis Shooting Association, of St. Louis, and the Richmond Gun Club, of Richmond, divided third with 56 kills. The St. Joe Gun Club took fourth with a score of 54, and fifth went to the Belt Line Club, of Kansas City, while the O. K. and Kansas City Clubs, of Kansas City, tied for sixth place with 51 kills.

Had the weather been good, the birds would have been a good lot, but owing to the rain they were slow to take wing, and did not trouble the shooters in making high scores.

The next on programme was the Interstate event, 25 birds, entrance $12.50, divided Rose System. A medal to go to the high man. After 15 birds had been shot, it was growing dark, and the shoot was postponed until to-morrow morning at 9 o'clock. Eight men had killed 15 straight, and as they are quite evenly matched an interesting finish is looked for to-morrow.

At the annual meeting of the Association to-night, J. H. Phelps, of St. Joseph, was elected President; F. J. Smith, Vice-President; F. B. Cunningham, Secretary; Frank Brenson, Treasurer.

The next annual meeting will be held at St. Joseph, Mo., date to be set later. A circular inviting all the gun clubs in the State to become members of the Association was ordered sent to each club. After some remarks by a number of sportsmen regarding the better protection of game and fish, the meeting adjourned.

First Day, Sept. 17.

Team match between Westwood Gun Club and North River Gun Club, on the latter's ground at Edgewater, N. J.:

North River Gun Club.		Westwood Gun Club.	
Eickhoff	13	Van Buskirk	8
Allison	15	Bahr	8
Dudley	18	Speth	17
Morrison	17	Grumann	19
Greiff	19	Post	15
Annett	13	B Grumann	15
Truax	12	L Post	16
Richter	11—118	G Speth	13—111

Resulting in a victory for the home club by 7 birds.

JAMES R. MERRILL, Sec'y.

Emerald Gun Club.

Newark, N. J., Sept. 16.—The weather was fine and the birds were good to-day at the Emerald Gun Club's shoot, Smith Brothers' grounds. Mr. C. Voehringer, a new member, was present. Mr. T. W. Morfey, a guest, was the only one to kill 10 straight in the club event. Four tied on 9, Messrs. F. Kall, A. A. Schoverling, S. M. Van Allen and W. Caton. Four of the contestants were visitors, Messrs. Morfey, Loeble, Cowe and Voss. The scores:

Jeannette Gun Club.

Guttenburg, N. J., Sept. 19.—The monthly shoot of the Jeannette Gun Club, held to-day at Guttenburg, had a wet day, poor birds and a small attendance. In the club event, at 10 live birds, C. Meyerdiercks won Class A in the first round of the shoot-off with C. Meyer, each of whom killed 10 straight in the club event. A. Schumacher won Class B with a score of 8 out of 10. The challenge medal, a 15-bird event, was won by Mr. Steffens with a score of 14, this being his fourth win with the same score.

Club event:

ON LONG ISLAND.

Fulton Gun Club.

Brooklyn, L. I., Sept. 22.—The deer horns presented by Mr. H. W. Bissing to the club, to be shot for at 50 birds, members only, were won by Mr. Pat May, after a lively shoot-off with Kaiser. The canvas hunting coat donated by Mr. A. Woods for non-members was tied for by Mr. C. Dudley and Harry Welles, 41 out of 50. They did not shoot off, as Dudley had to leave.

Answers to Correspondents.

No notice taken of anonymous communications.

G. L. O., Canton, O.—Can you define for me succinctly the word duck? Of course, the dictionary is accessible to me, and also the enclycopedia, but both volumes in characterizing this bird employ technical terms, some of which I do not understand. I want something that is plain and simple—couched in every day language, comprehensible to common people. Ans. Your trouble is one which is common. We recommend to you the opening chapter of a series of articles published in FOREST AND STREAM two years ago, entitled "American Wild Fowl and How to Take Them." The special reference which you need is FOREST AND STREAM, Vol. LV., page 186, Sept. 8, 1900. The same material, somewhat revised, is found in Grinnell's "American Duck Shooting, page 19. This volume contains also descriptions of all the North American geese, ducks and swans, with full accounts of all the methods of shooting them, and descriptions and plans of batteries, boats, decoys, etc. Price $3.50.

PUBLISHERS' DEPARTMENT.

At Du Bois, Pa., Sept. 11, Mr. L. B. Fleming was high gun, with a score of 191 out of 200; he used Infallible. In the competition for the Dibner cup, the four-man team of the North Side Gun Club won, and three of the four used Infallible. Mr. Jack Williams won the Custer medal, emblematic of the championship of the Du Bois Rod and Gun Club; he used Infallible. Mr. L. H. Higgins writes the Laflin & Rand Powder Co.: "I have shotgun shells loaded with your shotgun smokeless that have been loaded three years now, and are as good as when first loaded. These shells have been on board ship all this time."

"Dewar's Scotch" is characterized as the king of whiskies and the whisky of kings. Its several brands, advertised by Frederick Glassup, of New York, are welcome additions alike to the table at home, and to the camp abroad. Those who in these days drink Scotch with their dinners—and they are many—are familiar with the reputation of this high class whisky.

Messrs. Schoverling, Daly & Gales, 302-304 Broadway, New York, have issued a catalogue of special excellence in the way of artistic quality, and of special completeness in the way of prices, descriptive detail and fine illustrations. It treats of shotguns, rifles, pistols, powders, ammunition and fishing rods. It may be obtained on application to Messrs. Schoverling, Daly & Gales.

The Lefever Arms Co., of Syracuse, N. Y., calls attention to their new gun, "I grade—Durston Special." The barrels are of Dura-Nitro steel (black), 28, 30 and 32 inch barrels, 12 gauge only, bored for trap, field and brush shooting. The price is $39; with ejector, $52. This gun is illustrated and described in our business columns.

The U. M. C. Co., Bridgeport, Conn., is now supplying .22-short smokeless cartridges with inside, as well as the regular outside, lubrication. This new system of lubrication makes the cartridges clean in handling. They will not lead the barrel, and will be found accurate, sure fire and smokeless.

It is often very convenient to know of a practical gunsmith who can attend to the various repairs that we constantly need for our guns. The advertisement of Frank Nowicki will undoubtedly interest many of our readers.

In his contest for the Hazard trophy at Blue River Park, Kansas City, last week, scoring 61 kills from the 33yd. mark, and winning, W. R. Crosby shot E. C. powder, Smith gun and Winchester shells.

Mr. Ed. O'Brien, of Kansas City, won the Interstate live-bird event of the Missouri State shoot last week with 25 straight kills. He used E. C. powder in Peters shells.

Genuine Imported

SWEDISH LEATHER JACKETS

Our Specialty—Finest Quality—Soft as a Glove.

Soft and pliable as kid. A complete protection to sportsmen or any exposed to cold or wet. Worn under the overcoat, they are a handsome garment and much used. A capital jacket for bicycle use, skating and sleighing.

☞ We take the entire product of the manufacturers of above Finest Jackets, and this make cannot be obtained elsewhere in the United States.

A Quality, of the very finest skin - - $18.00
B Quality, 2d grade, - - - - $15.00

Send measurement around chest outside vest. If money is sent with order we will forward free by mail, and if not satisfactory on receipt, we will return money on return of Jacket. Entirely different from any other make.

☞ As there are many different makes of Leather Jackets in the market advertised as finest, etc., mostly made here of common skins, we invite those desiring such to send for one of ours, and if not found superior on examination to any other, it can be returned at our expense, and we will refund money.

WM. READ & SONS, 107 Washington St., Boston, Mass.

ESTABLISHED 1826. THE OLD GUN HOUSE.

FIELD GUNS.

When, 15 years ago, we introduced the light weight, short barrel 12 gauge **Featherweight Francotte Guns,** most hard practical field shooters who were lugging their 8 or 9 pound guns when following their bird-dogs, shook their heads and very much doubted that anything like the same bag could be made with these "grasshopper" or "mosquito" guns as with their heavy old-fashioned guns.

When, however, one of these full-choked little guns made highest percentage of pattern and penetration in gun trial where most of the leading guns competed and when others were winning highest honors at the trap—then, public opinion began to change. Since then thousands of our Francotte and Knockabout Guns have gone into the hands of leading sportsmen.

FRANCOTTE AND KNOCKABOUT GUNS have always kept well ahead of all competition as regards shape and model, strength coupled with light weight, shooting and wearing quality, fit and finish, and the ownership of either make of gun is a testimonial as to a sportsman's standing.

FRANCOTTE GUNS, all gauges, weights, length of barrels and shape of stocks from $80.00 to $450.00 net.

KNOCKABOUT GUNS, all gauges, weights, lenght of barrels and shape of stocks, $60.00 net.

We are willing to take your second-hand guns as part-payment for new ones.

MAUSER SPORTING RIFLES, $45.00 to $50.00.

A New English Gun.

"Great Value for Little Money."

THE REGENT. PRICE $65 NET

We have just received the first few cases of a new English gun which we have named "The Regent". They are made for us by the best gunmaker in England and bored on the same principle that has won world wide honors for English guns. The barrels are best Siemens Martin steel, and the shooting is unexcelled. The stocks are selected English walnut, half pistol grip, latest model Anson & Deeley action, nicely engraved, and the finish and workmanship throughout are up to the English standard. English guns have long been the standard of the world, and this new product will mark a new era in price as well as quality. We have never before been able to offer so fine and good a gun for so little money. They can be supplied in weights from 6¼ lbs. to 8 lbs., in 12 bores, and from full choke to true cylinder.

We carry a large line of guns and rifles from $6.00 to $600.00, and are sole U. S. Agents for the celebrated guns of W. W GREENER.

U. M. C. AT SEA GIRT.

The following matches were won at the great annual military tournament just concluded, by shooters who used U. M. C. ammunition:

The Leach Cup Match.
The Spencer Cup Match.
The All Comers Match.
Revolver Team Match.
Military Revolver Championship.

Inspector's Match was won by the new U. M. C. bullets, and in President's Match the high score was tied by U. M. C. cartridges. In fact, at the rifle ranges nearly every shooter used the new U. M. C. .30 Government cartridge, except where the Government make was specified, and the scores made were the best in many years.

26 Consecutive Bullseyes At 1,000 Yards.

A Record That Is A Record Made With

WINCHESTER CARTRIDGES.

At Plattsburg Barracks, N. Y., August 19th, Sergeant Leonard Deitz, Co. M, 23d U. S. Infantry, shooting Winchester .30 U. S. Army Cartridges in a U. S. Military Rifle equipped with open sights, made the unprecedented record of 26 consecutive bullseyes at 1,000 yards. In 10 preliminary shots his score was 0 4 5 3 5 5 5 5 5 5—42; and in his 20 shots for a record, he made 20 consecutive bullseyes. Sergeant Deitz's score is on record, being officially endorsed by Capt. Allaire, 23d U. S. Infantry, and he will receive a sharpshooter's certificate signed by Gen. McArthur. This is the first time in the history of rifle shooting that such a score has been made at 1,000 yards. Such phenomenal shooting is a conclusive demonstration of Sergeant Deitz's wonderful marksmanship, and also of the unerring accuracy of Winchester Cartridges. When buying Ammunition bear this in mind and ask for Winchester make.

CANOE CRUISING AND CAMPING.

By Perry D. Frazer. Illustrated. 95 pages, cloth. Price $1.

This interesting little volume is a practical guide for the cruising canoeist, the man who wishes to start away from the city and for a short time to make his canoe his home. With this in view, Mr. Frazer, who regards canoeing as a healthful and economical method of passing away leisure hours, has written briefly but attractively of canoes, camping outfits, clothing, firearms and ammunition; fishing tackle, photography, and in general of cruising, camping and all that pertains to this phase of outdoor life. While the volume has been written chiefly for the younger men, it is yet full of practical information and suggestion that appeals to those who have had a wider experience.

Such a book as this should be in the library of every man who is interested in outdoor life or the things which pertain to it. It is one of the manuals which should stand on the shelf alongside of "Woodcraft," of which, in fact, it is a part.

ROWLAND E. ROBINSON'S
Danvis Books.

These books have taken their place as classics in the literature of New England village and woods life. Mr. Robinson's characters are peculiar, quaint and lovable; one reads of them now with smiles and now with tears (and need not be ashamed to own to the tears). Mr. Robinson writes of nature with marvelous insight; his is the ready word, the phrase, to make a bit of landscape, a scene of outdoors, stand out clear and vivid, like a startling flashing out from the reader's own memory.

YACHT ARCHITECTURE.

By DIXON KEMP, Associate of the Institute of Naval Architects, and Member of Council. Second edition. Super-royal 8vo. Price, $16.80.

This work enters into the whole subject of the laws which govern the resistance of bodies moving in water, and the influence a wave form of body and wave lines have upon such resistance. It also deals comprehensively with the subject of steam propulsion as applied to yachts. An easy system for designing is provided, and every necessary calculation is explained in detail. The latter part of the work is devoted to yacht building, and engravings are given of every detail of construction and fitting, including laying-off, taking bevels, etc. The list of plates (exclusive of over thirty devoted to the elucidation of the text, and nearly 200 wood cuts) exceeds fifty, and comprises the lines of some of the most celebrated yachts afloat by the most successful builders and designers.

FOREST AND STREAM PUBLISHING COMPANY, NEW YORK.

Hints and Points for Sportsmen

Compiled by "Seneca." Cloth, illustrated, 224 pp. Price $1.50.

This compilation comprises six hundred and odd hints, helps kinks, wrinkles points and suggestions for the shooter, the fisherman, the dog owner, the yachtsman, the canoeist, the camper, the outer; in short, for the field sportsman in all the varied phases of his activity. The scope of the information it contains embraces a wild field, and "Hints and Points" has proved one of the most practically useful works of reference in the sportsman's library.

"Send the Name with the Money."

WILL the Tarpon Springs, Fla., correspondent who last week sent us an envelope containing thirty cents and nothing more, kindly now send his name and tell us what should be sent back in exchange for the money?

THE COAL STRIKE AND THE WOODLANDS.

THE great economic struggle now going on is causing much inconvenience to millions of people and actual suffering to a less number, but beside this it threatens agricultural interests in the East with damage which years cannot repair.

For many months now the coal miners of the anthracite districts in Pennsylvania and West Virginia have been on strike, refusing to work themselves, and refusing also to permit other men to take their places. During all this time, therefore, the output of anthracite coal—practically the sole fuel used in the cities of the northeastern United States—has been nothing. The supply on hand has grown less and less, and as it diminished prices have risen, until now coal is a commodity out of the reach of all except the well-to-do, and even for these is extremely hard to obtain, because there is so little in the market that dealers are afraid to sell it except in very small quantities. This scarcity, while affording material for much jocularity in the comic papers, is already a very serious thing to a large portion of our urban population, and promises as time goes on and the season advances to cause much suffering and even death.

With the merits of the strike, the FOREST AND STREAM has nothing to do, nor has it any opinions to pass on it. But it is quite within its province to call attention to one of the results of this scarcity.

Since coal is no longer to be had for fuel, people are endeavoring to find a substitute for coal. It is said that, in certain parts of New York State, peat is being cut and dried to burn, but a more accessible and more popular—because familiar—substitute is wood, the fuel of our forefathers.

Within the last few months the price of coal has risen to three times its former value; wood is now worth twice what it used to be, and is still rising. Wood that formerly sold on the ground for $1.75 per cord, now readily brings $4. The result of this is that in some localities the farmers are cutting the wood from their land by wholesale, being tempted by prices such as they never before heard of. In localities within easy reach of a market the destruction of the forest is going on at a rate that is extraordinary and most lamentable. Oak and pitch pine are being cut down and made into cord wood as fast as possible. The farmers whose harvesting is now over are quite generally hiring laborers—Italians and others—to get wood on the ground and chopped into lengths in time to take advantage of the present high prices. This destruction is especially noticeable in Suffolk county, Long Island, where the oak and the pine of all sizes is being cut down. At many of the stations throughout this county piles of cordwood 200 or 300 feet long may be seen awaiting transportation to the cities, or to the wharves where it is being shipped by water.

Nor is this a very new thing. All through the summer wood has been quite generally burned on Long Island by those who used to burn coal: The proprietor of the Long Beach Hotel this summer contracted for 2,000 cords of wood, which it may be presumed has all been used. Land holders who for years have taken pride in the noble trees which ornament their farms, have in some cases cut these down to burn, reasoning that they must keep warm and cook their food, and since coal is not to be had, it will not do to let a sentiment interfere with comfort.

How general this destruction is in the Eastern States will not be known for some time, but it is certainly a serious matter, and one which in the future is likely to bear evil fruit. It is quite conceivable that if general, the wholesale cutting of the timber may prove a blessing in disguise, calling renewed attention to the importance of our woodlands, showing the necessity of planting new forests and renewing old ones, and hinting also at possible profits to be derived from the forests of the future.

What with the sweeping away of vast areas of green timber land along the Rocky Mountain range and in Washington and Oregon, and the still further paring down of the slight forest covering of the Atlantic seaboard, the United States of America seem more than ever to be in a bad way so far as its woodlands are concerned.

JOHN WESLEY POWELL.

MAJOR J. W. POWELL, long one of America's most eminent workers in science, died Sept. 23 at his summer home, at Haven, Me.

Major Powell had been engaged in scientific work in the service of the U. S. Government for nearly forty years, or almost since the close of the Civil War, through which he had served, and during which he had received wounds resulting in the loss of an arm. He is perhaps best known to the public by his extraordinary and daring exploration of the Grand Cañon of the Colorado River in 1868, but workers in science knew him also as an eminent geologist and one of the first anthropologists of the world.

About the time of his exploration of the Colorado Cañon, Major Powell spent much time in studying the Utes of western Colorado and to the southward, and he was perhaps the first authority in the world on the customs and the language of these people.

About 1879 Major Powell succeeded in securing the establishment by Congress of the Bureau of American Ethnology, which has since, under his able direction, proved so great a force in stimulating the study of the native Americans and in gathering and publishing material about them. In 1880 he became the Director of the Geological Survey, and retained that position for more than ten years.

The value of Major Powell's work in science was everywhere recognized. His advice and counsel were constantly sought in scientific matters. He had been the President of the American Association for the Advancement of Science, and was a member of many scientific societies at home and abroad.

During the last years of his life he had been a constant invalid, suffering from his old wounds received in the war, yet to the last he worked earnestly at the sciences to which he had devoted his whole life.

SOUTHERN BIRDS AND SOUTHERN CROPS.

IT is gratifying to see indications that the subject of bird protection may take a place in politics in the South. A campaign of education on this subject is being undertaken by at least one great corporation, and is attracting very considerable attention. At last it seems as if the farmer was beginning to learn that success in agriculture depends largely on the birds, and that an absence of birds means presence of insects, which in turn means injury to crops.

Prof. H. P. Attwater, of the Southern Pacific Industrial Department, recently delivered an address on the relation of birds to the farmer at the annual session of the Texas Farmers' Congress, and the Southern Pacific Railroad has printed the address for distribution. The paper is an admirable one for circulation among farmers, and it should have a wide currency. Of it the Meridian (Miss.) State says:

"Bird protection is going to be made an economic issue in every Southern State before many days, and the army of sentimental advocates will be reinforced by the utilitarians, who, while caring nothing for the beauty of the feathered songster or the music he makes, are very much alive to his usefulness in exterminating insects that kill crops, and are determined to stay the hand of the snarer and wanton bird killer before it is too late and the insects have taken possesion of the land.

"Here is a great railway company, through its representative, joining hands with the sentimentalists to protect the feathered tribe, and no one who knows anything about the potency of that kind of influence will doubt that the birds have found a strong friend and ally before the lawmakers in Texas. Wherever common sense prevails, this cause will find advocates and the State would like to see bird protection made an issue in Mississippi politics next year."

In the matter of bird protection simply as a question of economics—for the protection of crops, and for no other purpose—the South has lagged wofully behind the rest of the country. Florida, perhaps, has the worst record of all in this respect, because once so wonderfully rich in bird life, and so easy of access that it attracted the plume hunters first of all. But Texas and Louisiana must also share the shame, and it is most gratifying to be told that a change in sentiment is taking place in the Gulf States, the winter homes of so many of our useful and beautiful birds.

SNAP SHOTS.

More or less fanciful distinctions have been drawn between the "sportsman" and the "sport." We venture a new one. In the woods the visiting angler or shooter is commonly called a "sport," and his guide speaks of him as "my sport." Now a good working distinction between a "sport" and a "sportsman" is this: A "sport" is one who goes into the woods in charge of a guide to show him the way, find the game and tell him when to shoot. A "sportsman" is one who goes into the woods by himself, or with a cook, finds his way and his own game and shoots his game when he knows that it is game and not a man. The "true sportsman" is one who goes into the woods with a guide at $3.50 a day, and shows the guide the way around and leads him back to the trail when he gets lost. And the "true sportsman" of this type is not unknown in the Maine woods.

The next best thing is to read about it and to write about it, whether in anticipation or recollection. There are two "next-best" papers in our shooting columns this week. Mr. Cristadoro writes one; he is doomed, he tells us, not to shoot a shell on game this fall, and so "gets what he can out of it by proxy." The other paper is by Mr. Vossiler, who, denied the privilege of joining friends on the fall hunt, has nevertheless this pleasure of living over again an outing of past experience. And in thus doing the next best thing by writing, these two contributors to the entertainment of FOREST AND STREAM'S readers will have helped many another one to do the next best thing in reading.

Of what other recreations may it be said that the anticipation of them is so alluring a pleasure, the remembrance of them so abiding a satisfaction? It has been said before, and is worth repeating often and again, that he who in early years follows the pursuit of rod and gun is laying up for himself pleasant memories for the years to come. Mr. Chapman tells this anew, in his boyhood sketch today, as it has been told in FOREST AND STREAM a thousand times, and will be again.

The country boy may safely be left to his own proclivities and his own devices to discover and make test of the delights of field sports. The city boy has much less of opportunity; but he should be given the chance to be a sportsman if he has it in him. That father who teaches his son to shoot and to fish is equipping the boy with resources which may last all through his life, and for which, it is very certain, the filial gratitude will be as enduring. The field and camp companionship of father and son is an experience of present joy and of blessed memories for both, and more than all blessed for one when the other has passed beyond.

Why is it that a clergyman who preaches the law and the gospel, a judge who sentences to prison those who break the laws, a lawyer whose profession it is to secure conformity to law in business and social life, a teacher whose life work it is to instil principles of morality into the tender mind of the young, will, when in the fields or on the pool, forget the law or defy it impudently? This phase of human nature is worth studying. How is it to be accounted for?

The concluding paper of the series "A Summer on the Labrador" is unavoidably deferred to our next issue.

The Sportsman Tourist.

The Changing Year.

The following notes from the diary of Rowland E. Robinson have peculiar interest because they illustrate so well the keen interest Mr. Robinson, though deprived of sight, took in the outdoor world through the changes of the seasons.

March 15 (1898).—Colors of aurora borealis reported green, purple and light red. A slight thunder shower and hail at night.

March 18.—The girls saw robins and song sparrows at the mountain. They found one hepatica, the earliest in our records. Rowland saw bitterns and frogs in the marshes.

March 20.—Split Rock Lighthouse lighted up; the earliest since 1894. Started out of the silence, a thin, small voice. Nathan Morrison going to Quaker meeting and fox hunting at same time.

"Farewell, farewell, two, t'ree hairy hol' daughter!
Dust wobble hol' Perry, so da'ks he can' see:
No pail ever slip under hwomans, in water,
An' pour it an' spill it all over on me.
All 'round it was glistle some lovelies' hamber,
As ever was sorry for see de bird swep',
Wid many a shelf in de hole of de chamber,
Where Perry hev motion in moonlight fer slep'."

March 29.—Suckers are caught on the Falls; 200, they say. It is not pleasant to think of ourselves as becoming at last nothing but a heap of bones and dust, so we comfort ourselves with the idea of immortality. How much more wonderful were the intelligent men, our remote ancestors, the cave dwellers, than the beaver or certain birds, or even the cat?

March 30.—Hear meadow lark.

March 31.—Snowing. R. Beers says the first one-horse pleasure wagon that appeared in town had a square paneled box with railing, without springs under it, nor the seat, and had no dashboard. Altogether, a queer looking thing, and no easier to ride in than a lumber wagon.

Last December Rowland and some boys skating on Little Otter, near the main road bridge, found a tame goose alive, frozen to the ice by cakes which her wings had frozen fast to. Got her loose, a good deal damaged. How the rabbit's ears and hind legs came to be so long. The porcupine pulling at the first to get the rabbit from the wild cat, who had caught her by the hind legs. Fable of a mink that was not satisfied with what he found near home, going to a great lake, was swallowed by a big pike. R. Beers said to-day, "As coarse as all tow." A half-breed Chippewa, with R. R. Minturn in northern Michigan, found water by digging at the root of what he called a water pine. It had branches growing low on the trunk though standing in thick woods. Shards or junk bottles are plowed up on the old camp ground, 10 or 15 acres in extent, east of Watch Point. Rodsy D., surveyor, tells of old military road from Mt. Independence to Hubbardton. Its general course was south 15 degrees east, winding between the lake and East Creek, crossing East Creek a mile from B. and passed Sunset Lake and across a cranberry marsh, where it is still in use as a wood road, then near Beebe Lake. where it crossed streams, the old abutments can still be seen and parts of the road can be traveled, then ran to east part of Hubbardton and battleground. One of Warner's men on the retreat was burdened with bullets, a portion of which he buried and afterward recovered.

April 2.—French troops of the line wore white uniforms faced with blue, red, yellow or violet, a three-cornered hat and gaiters, generally black, from feet to knee. This in Montcalm's army. The troops of British colonies, common, their coat and breeches of red or blue, carried musket, powder horn, bullet pouch, blanket and knapsack and wooden canteen. Si Parkman says: At Ransom Burr's, he says, two Barnes' brothers kept a store at Young's corners, east of the forge, sawmill and carding machine on the Monkton road (old Boston Iron Co.'s works). They drew a prize in a lottery and one brother felt so rich that he laid a three-dollar bill on a piece of bread and butter and eat it. A man named Pond, a speculator, was sick and gave himself up to die. Dr. Maxfield told him he'd done all he could for him, but to give him a certain pill and unless that helped him he was a dead man. He took the pill, and the next day was about his business. Two runs of one kind and a run and a half of the other kind of yarn a day's work, R. B. says. Two runs of warp he thinks and less of filling; wages of spinners were 75 cents a week. "40 threads in a knot, 10 knots in a skein, 2 skeins in a run," so M. S. P. says.

April 3.—Morning blossomed in the sky. Canoe going over a fall strikes and holds on a rock at the brink; a mid-channel island with a cave in it, which gives passage to the shore.

Man who prepared for a hunting trip to the west by stealing an ax and a turkey.

Man who slipped and spilled pails of syrup on snow where it cooled so that he rolled up the sheets, and so carried it home.

April 23.—As many as a dozen cock pheasants were crowing, most of them in neighborhood of the East Slang. This morning heard a flicker cackle. Like Benvenuto Cellini, some of our modern saints see their aureoles more clearly than do others. A neighbor's boy came across lots to borrow some thread of my grandmother "to finish mammy's long gown." This was in the days when the "short gown" was universally worn by working women, and the advent of a long gown was important. After some inquiry grandmother started the boy home with a skein of cotton thread of a suitable color. He soon came stumbling back, his bare feet picking their way over the ledge, and a rod from the open south door called out in breathless haste, "Fur enough f'm mammy's long gown. It's punkin seeds!"

May 14.—This evening heard many frogs or toads on Lewis Creek intervale, their cry less like a whistle than the common "peepers" or hylas. It is like very small, resonant bells, quite continuous, and a very pleasing chorus. To-day I have lived sixty-five years and never before noticed this peculiar cry. Not flattering to my observation of nature. Coming home we heard the telegraph wires humming.

May 17.—Our catbird announces his arrival this morning,

"Our Yankee tars and men-of-war
Carry our glorious flag afar."

May 20.—Shrike's nest in east orchard, five eggs.

May 26.—A wood duck in an elm sapling eating the leaves, drawing them to his mouth with his pinion, came down head first.

May 27.—Cuckoo comes.

May 29.—Wood pewee comes.

An old pike tells his story.

June 1.—Trolling with Sedgwick Preston, who came for me and led me through pleasant pastures and meadows and beside the still waters where I heard many old familiar voices of always unseen water fowl, guessed to be coots and rail, also a bittern driving his submerged stake just as he did more than fifty years ago when I first heard him when I went fishing with Merigo. From the shores the bleating of sheep and lambs, the lowing of cows, shouting of plowmen, clang of iron roller on the rail and chink of a hammer breaking stone on Slang bridge crossing. Lily and wild oats above water. The air full of the strong odor of the marsh. All our fishing brought us but one medium-sized pike-perch. Innumerable hauls of weeds. Phantom minnow took the one fish. Marsh full of brown moths.

I hear two crows signalling to each other, four caws repeated several times, then three, then the four again. Some one says crows can only count four, not ever objects above that number.

June 9.—9 P. M. Bullfrogs' thin, reedy bass comes from creek; the electric bells of toads, the sharp clatter of one tree toad, the soughing of the north wind and the sweet note of a wood pewee singing in the old garden bidding the world good-night—"adieu, adieu."

Manly Hardy writes: "Beaver oil is not the castor, but a fluid of strong scent which attracts all fur bearers. Beaver skin is split on belly. Skin is stretched on hoop of spruce, two sticks spliced, the skin sewed to it at the edges. Bear skin on frame like quilt. Otter has strong but not unpleasant scent. Fisher scent like weasel. Skin of otter legs drawn off whole, not split.

June 10.—This year we realize the force of the old likening of evil things to "a cuss of worms."

June 13.—Worms still with us. A Canuck shouted so loud in a long-range fight that he scared his opponent and was himself frightened by the echo of his own voice.

A panther fight described by an eye witness: Two old he ones meet in the woods, one kills the other and is shot by narrator.

June 26.—A pair of vireos made a nest in one of our lilac trees and hatched a brood. Yesterday were much troubled, one bird fussing about the nest, then appearing to trample in it. To-day they have deserted it, and two unfledged birds were found lying dead under the tree. We cannot reach the nest without a ladder and wonder the cause of it all. I mistrust an intruding cowbird, but there were screech owls near the place the night before.

June 27.—Upon examination a cowbird's egg was found in the nest. Our people of the lower classes are very particular to speak of each other as "mister" and "missis," and of elderly people of that sort as "old gentlemen" and "old ladies," and to introduce each other as Mr. and Mrs. So-and-So. Joseph Borden was captured by British during Revolution, was taken across a river in a boat. Fired on by Americans. Borden lay in the bottom of the boat. The British set him on a thwart and sat on either side. Next volley killed both and left Borden unharmed.

June 30.—Went to Shoreham. Both sides of the railroad red with clover as I never before felt it. Thunderstorm at night. A near flash, followed by a sharp but light report, like the snap of a tree in winter. The noise was all that I knew of the storm.

July 3.—Three red-headed woodpeckers came this morning, quite noisy, with their "Creek, creek," and a short chatter of their two-toned notes, "Kruk, crrruk." Dr. Seymour tells about a man who told abominable lies of his belongings and adventures. A common colored print was an oil portrait of some potentate who gave it to him. He presented it to Dr. Seymour, rolling it on a bit of an Alpenstock that he carried in climbing the Alps with Prof. Tyndall. A hand grenade, found at Ft. Ticonderoga and once owned by Ebenezer Bowman, is two and one-half inches in diameter, the fuse hole half an inch diameter, the shell about an eighth-inch through. Old woman finds toggery of her youth; tries it on; trots around in it till she tumbles down stairs against the door, where she is found in a heap by her old husband. He tumbles head first into meat barrel he is packing pork in. Old wife helps him out only on condition that he won't tell of her late plight. Woodpeckers drum call like a rapid dribble of water. A dazed spirit just parted from its clay, still wondering at the mystery of separation.

July 16.—Yesterday a warm north wind all day. We rarely have had so fair a hay season nor so much good hay, though not of the marketable kind. Day before yesterday, the 14th, the Abram Rogers home burned, a landmark of old Quaker times and the days of simple lives. The great chimney and fireplace fell last and buried the hospitable hearthstone in a smoldering heap. All gone like Abram, Bethiah, his wife, and their unmarried children, Joseph, Stephen and Marah, the last of their race. The clear pine woodwork of the stairway and chambers was a wonder to modern eyes, some boards almost three feet wide.

July 17.—

O sleep, my honey, go to sleep!
Do'n' you see how de shadders creep?
O hear de hummin' ob de bees—
M-m-m-m-m;
De win' a-sighin' in de trees,
Sh-sh-sh-sh-sh.
O hain't yo' eyelids weighin' down,
Yo' sleepy head a-swimmin' 'roun',
To hear de slow hum ob de bees—
M-m-m-m-m;
De win' a-sighin' in de trees,
Sh-sh-sh-sh-sh.

I wish yo' mammy had yo' chance;
She wouldn't watch de sunshine dance,
But hark de hummin' bees.
Now you' eyelids grow lak' lead,
Now a dream shapes in yo' head,
An' low an' slow go hummin' bees—
M-m-m-m-m;
De breeze sing low in leaves an' trees,
Sh-sh-sh-sh-sh.

July 18.—R. Beers says if cloudy at time moon changes it is a sign of rain. A woman in the poorhouse at Williston who was jilted by her lover vowed that no one should ever see her face again. For twenty years she has kept it covered with a cloth. Thunderstorms growled and threatened afar off all the afternoon, and at 4 it began raining gently. Now, at 5:30, the sounds are, the purr of rain on the leaves, the dripping of the eaves, the tinkling gurgle of a conduit, a robin's rain song, a song sparrow's musical warble, the cluck of a small flock of blackbirds, the sharp trill of a tree toad, and now and then a patter of rain drops spilled from topmost boughs. I hear the chuckle of a grass plover, early for migration.

July 26.—We heard an August piper.

Aug. 2.—A good many indoors. Our little screech owl has a note I have not heard before, like the wail of a small child. He is a fellow of infinite variety.

Tales of the Frontier.

IV.—The Rescue.

In the strenuous life of the frontier, character was quickly developed. Characteristics which marked the individual for good or evil came quickly into notice. And while it is very probable that "Brave men were living before Agamemnon," and while fortitude and manly courage are just as surely the heritage of the American to-day as at any other time in our history—witness Hobson calling for half a score of men to peril their lives in an almost hopeless venture for their country's honor, overwhelmed by the instant offer of a multitude of volunteers, while all the rest of the men of the fleet stood ready if needed—yet the fact remains that self-reliance and the sense of responsibility came earlier in life to the boy or girl of the frontier.

In the peaceful life of to-day, when everything moves smoothly and silently in well-oiled grooves, it is difficult indeed for the average citizen to realize what the hard conditions of frontier life made of the men of that day and time.

"We all forget
The still endurance of the rude
Unpolished sons of solitude."
"What strong, uncommon men were these,
These settlers hewing to the seas!
Great horny-handed men and tan;
Men blown from many a barren land
Beyond the sea; men red of hand,
And men in love, and men in debt,
Like David's men in battle set;
And men whose very hearts had died,
Who only sought these woods to hide
Their wretchedness, held in the van,
Yet every man among them stood
Alone, along that sounding wood,
And every man somehow a man!"

Little Merton Eastlick—a mere child—creeping out in the darkness of night from the tall grass of the prairie slough, where nearly all his father's family during the day had found a bloody death at the hands of savage foes; finding his baby brother wandering around in the darkness and taking him upon his back and carrying him for fifty miles—from Lake Shetek to Dutch Charlie's (it is almost beyond belief, but absolutely true), is "A hero descended from heroes!"

And I would go further to-day to shake hands with him—if he be still living—than to witness the crowning of all the kings England ever produced. The taking possession of any new portion of the earth's surface—the abode of only wild beasts and savage men—has always called for men of marked individuality and self-reliance.

And while on the Minnesota frontier the danger from savage Indians passed away in a few brief years, there was one enemy—the winter blizzard—which made the southwestern part of Minnesota a veritable battle ground for a part of each and every one of the earlier years.

Not until the prairie portion of the State was won for civilization inch by inch did the buildings, fences and other improvements of the settlers transform this part of the country into a region at all safe for any traveler to attempt to pass in the winter season.

Once caught in the teeth of the winter gale, beyond the shelter of the timber, the pioneer could only drift with it. Neither man nor beast could face it.

During the five winters in which the writer trapped furred animals in that region, not one winter passed but men froze to death, or lost limbs from frost bites among the sparse population of that early time.

As the peril could not be eluded, men learned to make light of it; and it was often a source of amusement to the pioneers when a group of them related in turn their odd and absurd adventures with the common foe.

For the oddest things were continually happening. In a country where men quickly learned to untie the rope from the old-fashioned bedstead, and to tie one end around the door knob and the other around their bodies when they ventured out to feed their stock, anything was possible.

One settler who made his home on the edge of the prairie having just time to inclose his house and move into it before all of the upper floor was laid, before the

coming of the first blizzard, put in the daylight hours of three successive days cramming the stove with all the wood he had prepared, and with 400 feet of seasoned pine flooring, on hand to finish the upper floor, and which barely sufficed to save the shivering family until peace again ruled in the atmosphere; and as in his hurried preparation for winter he had only been able to build a shed with pole and hay roof for his horses, and the fight with the blizzard being so terribly earnest that he had not dared to venture out once to look at his horses, but had abandoned them to their fate, told the writer that when it became for the first time possible to see the stable that he never laughed so in all his life, for the snow having been blown into every crevice of the stable had filled it almost to the roof, and the horses, fortunately having been tied with plenty of rope room, had trampled the snow until it raised them to the roof, and in their hunger having eaten the hay roof, now stood on their snowy floor with their necks outstretched above the top of the stable, some twelve feet above the ground, and their bodies being completely hidden by the high wall of the stable, he had to rub his eyes and look twice to assure himself that they were not a pair of giraffes.

This much of preface is here given in the hope that the reader may gain somewhat of an understanding of the conditions which confronted the pioneer when, as was not seldom the case, he was called upon to peril his life for the saving of others.

And seldom—if ever—was he thus weighed in the balances and found wanting.

Immediately after the great Indian massacre of 1862 the Government constructed a line of stockades across from Mankato, Minnesota, toward Sioux City, Iowa, and for a few years maintained a cavalry force which patrolled this frontier line until the Sioux were defeated and driven back by the soldiers and the Pawnee scouts under Major Frank North, when they were sent for duty elsewhere, and the abandoned line of the old stockades stood for years as mementoes of more turbulent days.

Fifteen miles east of Jackson, Minn., stood one of these abandoned fortifications, the lee side of its palisaded wall being often used as a windbreak by travelers obliged to camp on the open prairie.

Early in the winter of 1866-7, if I recollect aright, an officer of the United States Regular Army despatched an ambulance in the care of two trusty soldiers to bring his wife and two small children across the country from Mankato, Minn., to the winter quarters where he was stationed at Sioux City, Ia. It was a long, tedious drive across the country, entirely too late in the season for such a venture, and the cold came on quickly.

Before their return began snow fell to the depth of nearly a foot, and while striving to reach the timber on the Des Moines River for a night camp, the ambulance with its five passengers was so delayed by the snow that night overtook them at the old stockade just as the first great blizzard of the season came down from the northwest "like a wolf on the fold."

Under the lee of the old fortification they camped as best they could. The brave soldiers, realizing that it had now quickly become a matter of life and death for the lady and the two little innocents committed to their charge, spread a buffalo robe in the bottom of the vehicle upon which the woman and children lay down, when they wrapped them in the remaining robes and blankets—knowing that there were not robes enough to protect them all—and endeavored to battle through the long winter night under the lee of the old palisade.

When the awful night had dragged slowly away and the welcome light of morning dawned upon the unfortunate wayfarers, one man was found to be too badly frozen to move. The other managed to untie the horses, and turning the weaker one loose to shift for itself, finally succeeded in crawling upon the back of the other, when, the blizzard having slackened in its fury enough to enable him to see his way, he guided the horse slowly along the road, and along toward noon appeared at the little settlement at Jackson at the house of a man named Thomas, where, through his stiffened lips he slowly articulated his pitiful tale.

In his stable Mr. Thomas had a pair of fiery young bays which were not to be matched upon the frontier, and which were to the old man almost as the apple of his eye. If the lull in the blizzard continued, the people could be rescued. The outlook in the northwest was very threatening, and later it came on to blow with terrific power.

But would the fury of the storm be delayed?

In this question hung the lives of all who were exposed. Turning to his eldest son, a quiet young man of unflinching courage, he said: "Lant, throw the harness on the bays, take the two-seated cutter and go for those people. And look here, my boy, never mind the horses; you send them along for all that is in them! Bring those people in just as quick as you know how to do it!"

Not ten minutes elapsed until the little group of bystanders, including the boy's mother and the rest of her children, saw the brave young fellow's head droop low down over his left shoulder as he swung out from under the lee of the protecting cover into the full force of the blast, on the line of his northeast flight across the plain; and then to their anxious gaze the flying ship of mercy grew rapidly less and less in apparent size, and then vanished beyond a distant swell of the prairie.

Nothing now for the anxious mother but to watch the old family clock; and how slowly the long minute hand crawled around!

Breathing upon the frosted window panes to keep a space clear, through which to watch for the return of the absent brother, the children kept vigil, while to their impatient hearts the very seconds crept and crawled! The condition of the boy's road across the prairie was good. Save for the grassy patches which had escaped the autumnal prairie fire, the snowy surface was hard enough to support the team, and the beautiful horses were in the very pink of prime condition.

All too soon for their expectations, and almost too soon for the hungry eyes of the watchers to credit the apparition, a dark speck rose above the northeast horizon, and growing rapidly larger in their gratified sight, swept down the long slope toward the timber with the speed of the wind.

One minute short of the exact measure of two hours that recorded the boy's absence, the racing bays—wild-eyed and straining still to go—were reined up at the door, when strong arms lifted the sufferers from the sleigh and bore them into the house.

Although chilled almost to death, the woman and children were found to be not frozen. The soldier who remained with them lost both feet and one hand, while the brave messenger lost a hand and a foot.

Such were the battles fought in the changing of this wild land from savagery to civilization; and such were the men who made the change possible.

ORIN BELKNAP.

"In Boyhood Days."

IN the series of excellent picture supplements that FOREST AND STREAM has recently given to its readers, the one that appeals most strongly to my mind is the one entitled "In Boyhood Days."

"That's me" in the foreground in the picture. I was a boy of exactly that size and age once; I wore just such a cloth cap made by my mother, just such a "roundabout" and just such long pants. In those days in a country village there were no clothing or hat stores; and the handsome sailor suits, knickerbockers, etc., of these days were unknown. Everything in the way of a boy's clothing was home-made; the only variety depended on the mother's taste and skill in needle work and the father's means to buy the materials. I remember my usual summer uniform consisted of a pair of blue drilling trousers—we did not call them "pants"—a white cotton shirt with a collar wide enough to have pleased my Lord Byron, and a chip hat that cost a "levy." That was my summer outfit. It was the very thing. It was the work of but a moment to cast off my clothes, and a part of them was doffed on the run, as I broke for the river to take one of my dozen-a-day baths in the cooling wave; and if after a few weeks' service the crown of the hat departed to unknown regions, 'twas

"ne'er deemed an ill—
It only let the sunshine still
Repose upon my head."

That is Tip just before me there in the picture; his tail twisted up so tight from blissful expectation that he can hardly get his hind feet down to the ground. Poor Tip! He has been awaiting me in the happy hunting ground for many a year.

I had just such a light, little, old shotgun as that in the picture, but a dreadful kicker she was. I remember one summer evening just at the edge of Strong's thicket, as I was coming along, I saw a robin hopping over the ground a few yards away. Just there lay the trunk of a tree that had been blown over, and the upturned roots with a mass of earth still clinging to them formed a complete screen. I stepped behind this screen. It was a little too high, but by standing on my tiptoes I was able to sight along the barrel. The butt of the gun was against my chin. I did not think of its recalcitrating propensities, and when I pulled the trigger and the gun went off, it knocked me backward clear off my feet. The robin, with a complacent grin on his face, flew away unharmed.

I have got just such a shotgun now. Some years ago when I was in very poor health I thought if I had a light shotgun like the one I had when I was a boy, it would be pleasant and would do me good to walk out into the woods and "hunt." I went to Bown, the veteran gun dealer on Smithfield street, Pittsburg, and told him I wanted a light shotgun to shoot at birds with, but one that would not hit the birds. The old man laughed; he said he had sold a good many guns in his life, but had never been asked for one like that before, but he believed he had the gun. And so he had. I bought it. I have it yet. So long as you stand anywhere in front of it, you are safe enough; but woe to the man behind the gun when "she goes off."

I don't know that the artist meant it, but that stone fence is the one that used to stand near the corner of Captain Peters' farm, down by the river, and I remember that Isaac Wynn and I had hard thoughts of the farmer one cold morning because he objected to our tearing down a rod or two of it to get a rabbit, which, fleeing across the field in advance of Tip and Pomp and old Major, followed by Isaac and me, had taken refuge in the crevices. This was the era before the shotgun spoken of, when the only firearms we had was a Mattock; but between old Major and the Mattock we brought to light and captured many a rabbit and opossum.

Very pleasant to the old man are the memories of the past, just as the dreams of the future are pleasing to the growing boy. The latter feels that the world is his oyster. He expects to be able to do anything "when he is a man"; and though afterward he realizes that he has done nothing, life is not insupportable on that account. If he has not achieved greatness he has perhaps found happiness, and that is better; and thus viewing it I have constructed the following lines to fit the case:

Dreams.

I dreamed of Fame; her chaplet fair
Seemed ever just before me;
Tumultuous voices filled the air
With loud hosannas o'er me.

Of Fortune, too, I dreamed; a slight
And easy thing to make it;
Whene'er I would I surely might
Reach forth my hand and take it.

But youthful dreams end oft in dreams;
Time came and went so lightly,
That naught remained but backward gleams
Of what I held so slightly.

Yet life has been a precious thing;
'Twas trebly worth the living,
And now at day's decline I sing
A song of glad thanksgiving.

For Love her arms around me cast,
And Joy, the bright-eyed, kissed me,
Though Fame and Fortune both have passed,
And somehow they have missed me.

T. J. CHAPMAN.

Natural History.

A Study of the Rattlesnake.

Editor Forest and Stream:

I am going to write about rattlesnakes, but will devote a passing word to Mr. Jos. W. Shurter. I agree with that gentleman in assuming that FOREST AND STREAM readers are probably no longer interested in our little controversy, and we might continue to multiply words indefinitely to no purpose. It grieves me, however, that Mr. Shurter is still worrying over my inadvertent use of the name "Uncle Daniel" instead of "Uncle Noah," and to put a final mollifying touch to his wounded sensibilities I hereby formally withdraw the name Daniel and substitute Noah in its place. It may amuse Mr. Shurter to know that I was myself amused at the simpleness of my error when pointed out by him.

In general, it appears to me that Mr. Shurter has taken a too narrow and superficial view of the subject of our controversy, seeing only existing conditions and their apparent proximate causes, without apprehending the broader relations which the "sporting" propensity in man bears to his racial history.

If Mr. Shurter considers that I have gone out of the bounds of FOREST AND STREAM courtesy in my manner of writing, I wish here to express my regrets and offer apologies, and so take leave of that gentleman with assurances of my distinguished consideration.

Rattlesnakes.

I suppose there are many persons who know a great deal about *Crotalus horridus*, and many others who have a good deal of information about him "that ain't so." I have been trying lately to acquire some exact knowledge on the subject with indifferent success. I have two large rattlesnakes confined in a large box with a wire screen for the top. I have been watching them as closely as official duties would permit in order to find out something about them, but have not found out very much.

These snakes were captured by my son while surveying in the canebrakes in this vicinity. The first one, Jonah by name, was caught in June; the other, named Joseph, early in August.

Jonah is about five and a half feet long, and has eight rattles. Joseph is about six feet long and has also eight rattles. They have both evidently lost some, as the rattles have blunt terminals. Various kinds of live food have been offered them, as chickens, rats, guinea pigs, and garter snakes, toward all of which they have shown a total lack of interest, and their intended victims exhibited as little concern about the rattlers. These various articles of diet were permitted to remain in the box for days, and even weeks, all dwelling together in apparent harmony. On one occasion, while observing them, I saw Joseph approach a chicken with apparently murderous intent, and when close to his victim drew back his head for a strike. The chicken gazed earnestly into the snake's eyes and gravely pecked him in the center of his nose, whereupon the snake withdrew.

On another occasion Joseph was observed to watch intently a rat that was climbing about the sides of the box, very much in the semblance of a squirrel, which is the rattler's natural food. I waited, expecting a tragedy shortly; but the rat presently ran up to a bowl of water near the snake's head, and after taking a drink he got on the snake's neck and trotted down his back to his tail without attracting any notice.

Jonah is supposed to have eaten four young rats and two garter snakes, about two months ago. The only evidence of this performance, however, was the disappearance of those creatures from the box. The garter snakes may possibly have gotten out, but it cannot be supposed that the rats went otherwhere than down the rattler's throat. Notwithstanding that supposed reflection, Jonah has become emaciated to a marked degree, and Joseph, who has certainly eaten nothing for nearly two months, has also appreciably lost flesh. They are both observed to drink water not infrequently, sucking it up slowly after the manner of a cow when drinking.

The box is on a back porch, and is somewhat exposed to the weather. When a rainstorm approaches both snakes become very uneasy, raising their heads up to the screen and seeking a way to get out. This action is invariable with one or both when a storm is threatening.

Jonah shed his skin in August, during my absence, and the operation was not observed by me. My office clerk says he was a good while getting it all off, in fragments, having a difficulty in utilizing a small box that he had access to, against which the old skin was rubbed off. Joseph changed his suit last Friday, Sept. 19. For several weeks he had been growing very dark and dingy in color, the markings on his skin being scarcely discernible.

About a week before he shed his old skin his eyes became opaque and of a light blue or skim-milk color; but they cleared up before the shedding process began, which surprised me. A branch of a bush had been placed in the box to aid him in getting off his old clothes, and he accomplished that business between 2:30 and 4 P. M., when no one was looking on.

He is now rejoicing in a glorious new suit, the markings rich and vivid, with the tail a deep velvety black. Neither of these snakes added a new rattle in the process of shedding, a feature which the snake authorities had led me to expect; and I suppose we must fall back on the old idea that a new rattle process is grown each year instead of appearing with each new shedding.

My observation of these snakes, as well as my general experience, and that of others, has impressed me with their disinclination to strike, under ordinary circumstances. The fangs and venom are provided primarily as a means of capturing their prey, not for purposes of defense, as they never save the snake's life when attacked by an enemy.

When a rattler is first captured, what with rough handling and novel surroundings, he is kept in a state of excitement and alarm, and is then ready to strike when disturbed. But after becoming accustomed to the situation and learning that no harm threatens him, he is no longer disposed to strike.

The larger of these snakes has never struck at anything

since his capture; and neither of them ever sounds his rattle, except occasionally, when ladies come to see them and they appear to be excited by the unfamiliar apparel of the visitors.

I occasionally lift them up with a long stick, or poke them to make them display themselves to visitors, without exciting their resentment. I once put my hand in the box and stroked the large one on the back, but on another occasion my white shirt sleeve seemed to excite him and he gave a slight admonition with his rattle, whereupon I withdrew my arm.

Since Joseph has shed his skin, I observe two orifices near the medial facial line,half-way between the end of nose and base of head. They are open holes, about the size of darning needles, and about three-sixteenths of an inch apart. In the other snake they appear as dull specks, and are not open.

I have not yet had an opportunity to note at what temperature these snakes become torpid. The minimum thermometer reading so far has been 46 degrees on the night of Sept. 13, but at the time of observation, in the morning, was 51 degrees.

There is probably an individuality of character among rattlesnakes as well as among men and other creatures. As before stated, the larger of these snakes has never offered to strike at all, and when he was being captured made strenuous efforts to escape, bounding over the bushes instead of running on the ground. The other one showed great pugnacity at first whenever disturbed, which he kept up for several weeks; but he had very rough handling at the time of his capture.

Joseph opened his countenance with two deliberate yawns one day, and his fangs were a very conspicuous feature, projecting at right angles from the palate about half an inch, but enveloped in loose skin nearly to the point. They are probably with their curvature, three-quarters of an inch long.

These two pets will be put into "cold storage" for the winter, when the weather gets cold enough to render them torpid.

COAHOMA.

Intelligence of Wild Things.

BY HERMIT.

(*Continued from Vol. LVIII., page 445.*)

Intercommunication of Birds and Bird Intelligence.

ON Sunday, May 30, 1897, while the church bells were calling saint and sinner to worship in the city of Gloucester, and a catbird's blithe music, supplemented by the silvery bells of a veery, was calling me to worship in my cabin dooryard, I turned to the path that leads to Magnolia Swamp.

Two years before, on the west side of the swamp, I had discovered a woodpecker's sap orchard. For two seasons I had carefully noted the work of the woodpeckers in their curious method of tapping trees, and I desired now to add to my knowledge by a few hours of observation.

It was a glorious morning, bright with sunshine, tempered by a crisp air. It was one of the few sunshiny days rescued from a cold rainy spring month. The trees were forward and for the most part covered with full-grown leaves. The white oaks were late as usual, their leaves were tiny and at a distance looked to be a silvery gray in the sunshine. The hillsides west of Magnolia Swamp were lighted up by this immature gray foliage, while here and there the dark green of the pines afforded a pleasing contrast.

I found the sap orchard deserted. The trees, red maples and canoe birches, were dead or dying. The sapsuckers and their self-invited guests, the hummingbirds, had drained the life-blood of their helpless victims. All of the maples were still standing, but many of the gray birches had been broken off by the wind just below the belt of punctures.

While I was searching for another sap orchard, I saw a barred owl, with something in his bill, fly to a grove of small hemlocks. I followed on my hands and knees and found his owlship on a low limb. Evidently this was his breakfast hour. The thing in his bill proved to be a leopard frog. He was preparing to swallow the frog by crushing the bones of the legs and joints. He did not see me, or if he did, he ignored my presence and continued leisurely to prepare and swallow his breakfast. Afterward he spent several minutes preening his feathers before settling down for a Sunday nap. A pair of saucy chickadees, scouring the woods for a Sunday breakfast, discovered the owl and gave the alarm. Inside of two minutes I counted thirty-six birds, all called together by the cries of the chickadees. These birds included cuckoos, warblers, bluejays, thrushes, vireos, flycatchers and buntings. How they did jeer and abuse the owl, but all were careful to keep at a safe distance. The bluejays seemed to be filled with fury, and if birds can swear, doubtless that owl listened to some very emphatic language.

For twenty minutes that patch of young hemlocks contained noise and life enough to stock a first-class aviary. The owl seemed bored, but was apparently fearless.

Thirty-two minutes after the first alarm all the birds had disappeared, excepting two red-eyed vireos. The vireos continued to scold vigorously. The owl had intruded on their nesting ground. Not twenty feet away a vireo's nest swung lightly from the horizontal limb of a red beech. It seemed to me that the owl suspected the presence of the nest, for he thrust out his head and swung it from side to side as if searching for something. After a while he discovered the nest and flew to the beech limb. When he had commenced to approach the nest by short hitches along the limb, the vireos changed their scolding to cries of alarm. Immediately all the birds returned. Again the owl was told that he was a robber and a great rascal by every bird in the grove. As he continued to approach the nest, I thought it time to interfere. "Hold there!" I shouted, and the effect on the owl was instantaneous. He stopped short, crouched on the limb, then twisted his impish face directly into the back of his neck and glared at me with a frightened look in his wide-open eyes. After a brief inspection he tumbled forward off the limb, caught himself on his wings and floated as noiseless as a feather into the dark shadows of Magnolia Swamp. I examined the vireo nest and found it empty—in fact, it was not yet completed.

It was evident, from what took place, that birds of different species can communicate with each other.

First, the chickadees call other birds to the spot by cries that certainly are understood to mean danger.

Afterward, the vireos did the same thing. While the latter were scolding the owl, other birds paid no attention, but responded at once to their cries for help.

After the owl had disappeared, the birds scattered as before. The bluejays and two thrushes stopped back to interview me and find out if my intentions were friendly.

When all the birds had disappeared except the vireos, I went in search of a new sap orchard. I soon found a clump of red maples containing two trees that had been tapped by woodpeckers. The belt of punctures on both trees was nearly a foot in width, but the woodpeckers did not show up during my three hours' tarry.

This woodpecker, the yellow-bellied (*Sphyropicus varius*) does not nest on the Cape, so had doubtless departed in migration, but three hummingbirds were fighting for the sap buckets, and a red squirrel settled matters by driving the hummers from one tree to the other.

The red squirrel was a new feature in a woodpecker's sap orchard. He did not cling to one spot as squirrels do when tapping for themselves, but instead moved rapidly around the tree, thrusting his tongue into the drills for the sweet sap. I suppose the squirrel owned the territory where the maple trees grew, and was more than willing that the woodpeckers should tap the trees for his benefit.

The drills made by the woodpecker extended through the outside bark and into the cambium layer. From my observation with a good glass, during several seasons, I found that the woodpeckers were after the elaborated sap that descends from the leaves, through the inner bark, and did not extend the drills into the wood where they would reach the crude sap flowing up from the roots. The wisdom of this procedure was evident. The elaborated sap is far richer in nutriment than the crude sap, and the woodpeckers knew more about the growth of trees than many human beings, so worked understandingly.

Each drill is made deep enough to hold about two drops of sap. The upper drills are the only ones to afford sap, which proves that it is certainly the elaborated sap flowing down from the leaves that the birds get.

I had read in works on ornithology that the woodpeckers tapped trees so that the sap would attract insects upon which they could feed. Also that the birds were after the soft bark or cambium layer for food.

While the woodpeckers do catch a fly now and then, it is evident, even to a careless observer, that it is the sap that is sought. I have seen them eat small pieces of the cambium layer, but I think they did so because the soft bark was soaked with sweet sap.

The three hummingbirds made that little sunny glade in the forest as lively as a Mexican fandango. The two males were jealous of each other, and both birds seemed desperately in love with the demure maid. She attended strictly to business by drinking from the sap buckets left unguarded by the red squirrel. The male hummers spent most of the time dancing in the air. They took turns in madly pursuing each other; the pursued never turned tail, but flew backward with a swiftness that was marvelous. The buzzing of their wings and their shrill cries furnished the music for the wild dance.

The hummingbirds drink from the drills while poised in the air, but often alight and cling to the bark while drinking, the wings closed and silent.

Flies and hornets were in evidence, crawling on the bark of the maples or flying around the drills. A hornet stung the squirrel on the ear. When I left the latter was shaking his head and telling the hornets what he thought of them.

When I returned to the cabin, I found a pair of catbirds in trouble. They nested in a dense mass of shrubbery about eighty feet from the door yard. The male catbird met me some distance from the nest, and by his excited cries I knew that some bird enemy was near at hand. When I came in sight of the nest I discovered the trouble. A black snake was making his way through the bushes toward the nest, and the mother bird was waging a fierce but fruitless battle.

I killed the snake, which was over five feet in length. The nest contained four eggs. For the time being they were safe.

In due time the nest contained four baby catbirds. One moonlight night, about 10 o'clock, there was a great outcry from the old catbirds. I had gone to bed, in my hammock, in the open air with but a roof over me to keep off the rain, so I could hear the birds and knew that they were fighting to save their little ones. Before I could go to the rescue one of the catbirds flew to the bushes within three feet of my head, and frantically called to me for help. When I came in sight of the nest I saw a snake drop to the ground. One of the young catbirds was missing. A hurried search beneath the bushes in the dim light was unsuccessful. The snake had silently and swiftly disappeared with his victim.

The old catbirds were pets of mine of several years' standing, and the tragic fate of the baby bird caused me to try to save the other three. I removed the nest and placed it in a covered box in the cabin. The catbirds followed me to the cabin door, but made no protest. The next morning before sunrise the birds awoke me by their cries. While I was dressing they spent the time flying to and fro, from cabin to hammock, calling to me to hurry up and bring out their babies. Both birds had insects in their bills. I did not take the nest to the old spot, but instead placed it in a clump of bushes near the cabin. When I had secured the nest the old birds gave the three babies their breakfast. This programme was followed day after day, until the young birds were old enough to fly.

About two hundred visitors one Sunday inspected the nest and the old birds did not make a protest or show fear. They knew that I would protect their little ones. A clear case of bird intelligence.

The Aurora Borealis.

Pale, pyrrhic pyres prismatic purple pour—
Quiescent, quivering, quickly, quaintly, queer,
Rich, rosy, regal rays resplendent rear;
Strange shooting streamers, streaking starry skies
Trail their triumphant tresses—trembling ties.

As to Bluebirds.

To begin with, I have a garden. True; it is only a little one, a pocket edition, so to speak. Thirty feet by 30 feet isn't a Western wheat ranch, exactly, so I have no room to spare for weeds. Nevertheless, as a suburbanite, two hours' work per diem before 7 A. M. and good feeding makes that plot produce all my vegetables except potatoes and corn; and you should just see the long rows of canned tomatoes and Bartlett pears in their jars in our storeroom! But that's madame's affair, not mine.

To keep out various neighborly dogs, cats and the baby, a two-foot wire netting surrounds the place on three sides, the fourth (the rear) being a raspberry hedge, which, by the way, gives me a couple of quarts for breakfast each day during the season. N. B.—I don't eat them all myself!

Well, it occurred to me that a residential family of bug-catchers would be a desideratum, two other small gardens backing up on mine; so I looked over the woodpile and took thought. Presently an empty starch box with a sliding cover shot itself into view, as inanimate things will do sometimes. The very thing! A square hole sawn for a door, now, the box turned upside down and the slide drawn half-way out for a piazza, and the hole thus left covered with a bottom board fitted in—what more could a bug-catcher ask for, save bugs? Then for the mount, here's a nine-foot piece of gaspipe with a union on the end and screw holes in it all ready to screw on that bottom board. So said, so done. Then, for housewarming, a handful of loose, soft string and another of oats is dropped inside, and the pole erected in the raspberry hedge, a cat-proof sanctuary high in air. In eight hours the advertisement was answered!

The way that pair of bluebirds carried straw was a caution. Perhaps they were late in their work, but now they were at it they certainly lost no time, and in an astonishingly short time they evidently had completed the hatching business. Meantime, the winds of heaven fell upon that house, the sun likewise, and rain tried its hand as well—a nice, wet hand without gloves; and the wood of the box swelled with indignation and then shrank away, leaving the nailheads sticking out in the air like the bankswallows' holes after the flood came down (I'm not responsible for the scientific accuracy of that statement!). Then, half the bottom of that house, the newer half, fell off!

Out I went in the rain and finding that the aperture seemed bridged over with the straw of the nest, I mounted a stepladder and laced on a piece of zinc, with wire, as an extemporized bottom. By this time, with straws bursting out of every crack and corner and an ancient, weatherbeaten color, it would pass muster as the veriest antique in the county. No fat old barn could hold a candle to it, and it jarred on Madame's nerves artistic. But the bluebirds kept on birding just the same, till, instead of two there were five. Then it was curious to note the different ways the parent birds approached the nest. The male came bluffly from one side and lit boldly on the piazza. The female invariably made a circuit behind the pear tree till in a direct line with the door, then made a miraculous dive through the branches and was in the doorway like a shot. As a home market bird neither came up to contract. They sought their worms from a distance, and it was not till the young ones were able to fly down did one of them pay more than casual attention to the storeroom at their threshold.

Vacation came, and we went away about that business. Two weeks later, on returning, that weatherbeaten box was found to have slipped off backward and hung with its nose pointed to the zenith most desertedly, and I took it down and partly dismantled it; when, lo! there were two fat young bluebirds in it, half fledged. Back I hustled the pieces into shape, and once more set it up in horizontal fashion, more disreputable, if anything, than ever as to looks, and noted that the old birds meanwhile had returned from foraging and sat, each with a worm in beak, in absolute silence, on neighboring treetops. In a minute or two they made for the nest and resumed business at the old stand, as though nothing had happened. Once again, later, I started to take down that box, and going out found seven bluebirds having an "old home week" in and around it; and now I want to know if I've got to keep it up there all winter! It isn't a credit to my architecture.

J. P. T.

4 PARK STREET, Boston.

Habits of the Red Squirrel.

RICHMOND, Va.—*Editor Forest and Stream:* In this week's issue, that of Sept. 27, I notice an article on the red squirrel by S. C. S. T., of Toronto, Canada, in which he inquires whether or not squirrels drink.

Squirrels do drink. They lap the water up very much as does a cat, assuming very much the same position if the water is on a level with the body. As your readers are doubtless aware, there are a large number of tame gray squirrels in the parks of this city, protected and fed by the city. They are very tame and will take nuts out of the hand, and I have had them go into my pockets after them. Last Sunday my wife and I walked through Capitol Square after a rain, and one big fellow came down the walk with us till he came to an iron cover of some kind. The upper surface was divided into squares and these were full of rain water. He stopped there and drank. We were within four feet of him, and I could distinctly see his little tongue lapping the water up and the muscular contractions of his throat as he swallowed.

I have tried several times to get photos of them, but failed each time except one. The noise of the shutter startles them and the plate only shows a whirl of something. In one case I got a good picture, but the squirrel was shedding his coat and the tail was very ragged. I had one sit in my lap one day and eat peanuts out of a bag. Another came along and started to climb up my leg, when the first one gave as fine an illustration of concentrated rage as could be wished for. I could feel him tremble all over.

One thing I have noticed, they never bark. Is the bark a note of alarm or what is it intended for?

ROBT. BURGESS.

The Eastern Hemlock.

A PAPER of very great interest and value to students of estry and lumbermen has just been issued by the reau of Forestry of the U. S. Department of Agricul-e. In it Mr. Edw. T. Allen, Field Assistant of the reau of Forestry, takes up the western hemlock and s the results of two seasons' study among the for- of this tree. His purpose is to show that the west- hemlock is far superior to the eastern tree, that un- favorable conditions the tree produces abundantly grows rapidly, and that the prejudice which exists nst this wood is based upon the knowledge of the ern tree alone.

ecause of its lack of marketability, the western hem- is almost neglected among the woods of the North- t. Mr. Allen points out that this is a great mistake, e the cutting of trees that are more desired exposes hemlocks to destruction by fire, wind and insects, so they are a complete loss to the owner and to the munity. In many respects, the wood of this tree is ul. It has been adapted to many purposes, of which aps the most important is the manufacture of boxes, it is also used in building and finishing houses, and ther ways.

r. Allen takes up the distribution, habit and enemies he trees; its wood, various manufacturing problems, ering, the yields of various growths and the utiliza- of the bark. The pamphlet, which contains many trations, is beautifully gotten up.

Woods Springs.

Sullivan county, New York, not long ago, an old w told me something in relation to springs which I never heard before, although it may be as old as the It was along a pretty trout brook that he told me e to find a certain spring of fine water, but he added it might not be in very good condition, as he had visited it to clean it out since last spring. He cau- d me to take the water just as it was, however, as ning a spring in dog days always spoils it." Now, it d seem that this is a mistaken fancy, and that clear- way all the natural refuse that collects in a spring d purify the water and rid it of any microbes that in it. At any rate, this is something I have always on taking water from a neglected spring in the ls. Nothing could seem purer than the clear water forms in the little cavity one has cleared of all sticks decayed vegetable matter, which suggests malaria s, to say the least.

every scrap of woods lore is treasured up fondly by ny information that readers can give on this subject e greatly appreciated by PERRY D. FRAZER.

The Muskrat in an Unique Role.

ANK BERRY, an old-time angler of Bohemian pro- ies, states that he was at one time acting the "genial ace" over a hostelry in a western New York village. ain from the cellar under the hotel connected with niature lake some 200 yards distance. About 500 ds of winter squashes were stored in the cellar, and the winter was yet young the thrifty cook con- d the idea of making a squash pie, but upon sampling ucculent vegetables it was found that each member e collection had been punctured from its neither ce and the contents as cleanly removed as meat a shin bone in care of the family dog.

s disclosure served as the incentive to setting a trap e mysterious burglars, with the result that several rats were caught during the next few days, and a ecord of gastronomic achievements established for t-tailed family of fur growers.

M. CHILL.

n many a succulent herb here and there you will little accumulations of white froth, and, if you away the froth, you will find a humble greenish in- nside. On that spot where you find it, it has spent days, seeing nothing but dimly through a foggy of its own creation, and never unhappy until now, you have let in the clear light of day upon it. ng type of the mental state of some people!"

Death of Rufus C. Allen.

Rufus C. Allen, of Brooklyn, to whose veteran f forest sport and successful pursuit of it, allusion nade during the summer, passed over the river, 9, at his summer home in the Adirondacks, aged rs. Mr. Allen was a native of Vermont, where ed till about twenty years ago, filling many un- t offices in church and State, because the people "We want a man whom we can trust."

city life of later years only widened the circle of iends and influence. He maintained his zest of d interest in church and public affairs constantly, in private life—as was said by one who knew him "to know him was to love him." A memorial e was held at his late residence in Brooklyn on lay last and was very largely attended by friends Jersey City, Newark, Elizabeth, Montclair, New and Brooklyn.

Death of Charles H. Bates.

NAW, Mich., Sept. 22.—Yesterday I attended the l of Charles H. Bates, who has been steward of re Marquette Fishing Club at Wingleton since its zation. All the members of the club will miss ery much. His death occurred here in Saginaw at ry's Hospital last week, and his remains were taken Morris, his old home, by special train yesterday, . The members of the club acted as pallbearers.

W. B. MERSHON.

Game Bag and Gun.

Proprietors of shooting resorts will find it profitable to advertise them in FOREST AND STREAM.

Pacific Coast Items.

No other State affords more continuous seasons of sport than one has in California, where he may begin trout on April 1, to follow through the summer with the doves or the more ambitious deer, then continue through fall and winter with the quail or duck till Feb. 1. As band-tail pigeons are protected by law, and many of them remain in the valley till late March, the interval between quail and trout can be agreeably spent. Very young cotton-tails—did you ever eat them?—may be shot in great numbers through the month of June, and while the hunter with his friends devours dainty stews made of rabbit meat, he may feel that taking such game is doing the rancher a favor. Many a sunrise or sunset of early summer discovered your scribe in the sage brush with sack filled. Often he saw jackrabbits, which have become a pest in the Ojai, ambling up corn rows or near other green forage, but always at too long a range for small shot, and to his eyes they were as large as mules. Their ears had peculiar immensity.

The season for trout proved to be unusually productive. Even the nearest streams for awhile gave fair returns. About every local enthusiast tried his luck. Four boys who crossed the first mountain and fished the Sespe early in the campaign, brought home ninety fish, at least a third of them large ones. Despite the hundreds of summer campers, the mountain brooks held out well. While on a trip only for scenery early in the summer, your correspondent saw quite a number of trout in a well-fished stream, and as he is seldom without fish hooks of some description, a few of these beauties were taken with rude tackle. As late as September, from a stream that had been fished scores of times, if not hundreds, he took from a single pool twelve ten-inch trout, which is nearly the limit for size. In such crystal water the action of every catch was observable..

Shortly after arriving in the Ojai Valley three years ago, persuaded by the glowing descriptions of their famous gorge by residents, we visited this Matilija Cañon, down which the stream flows, and though the rough rock work up there proved sublime, yet the grimness of slope or cliff due to years of fire, oppressed with a sense of extreme desolation. The ranger service had just taken the reserve in charge then. You should see that gorge now. A wagon road leads up it for miles. At times this follows the creek bed, at others it assumes dizzy heights along the mountain wall. Extreme elevations give fine views up or down the cañon. As one drives along, coquetting with stream and hill, he obtains a fine view of nature clothed now everywhere with luxuriant chaparrel. It is a pretty ride. The broiling trout course shouts up to heights only of a grand improvement in all things.

Forest Supervisor Willis M. Slosson, of the Pine Mountain and Zaca Lake Reserve, our reserve, has been kept busy since deer season opened with issuing rifle permits, and up to date has made out between three and four hundred of these privileges. Each holder becomes a deputy for the reserve, and must not only take every precaution in regard to his own camp-fire, but he must extinguish camp-fires abandoned by others or must fight large fires. All of his conduct while he is in the mountain must be exemplary. As this is the close season for all small game to be found in the mountain, the shotgun, which all rangers look upon as pestiferous, has been entirely excluded. Even the intelligent, just as with the game law in regard to does, may be educated into better observances through the new ordinance.

Any of the drives up mountain cañons these days will likely bring one into contact with returning hunters, their wagons heavily freighted with venison, horns in the velvet conspicuously placed about every load, and, just as is always the case when large game has been secured, the members of such parties gracious or exceedingly supercilious. Deer have been plentiful. A Spaniard familiar with the mountain told me that just before the season opened he saw twenty in one herd. Fifteen-year-old hunters on more than one occasion have returned to town from brief trips with several deer to their credit. A rancher shot a large buck in his orchard three-quarters of a mile from town, probably one of the large patriarchs that have been budding on fruit every spring near the first foothill, and leaving interesting trails for me to decipher. Neighbor is watching for another pot-shot in his back yard.

Deer have been chiefly for the strong who could rough it in the mountains; doves have been the solace for those to whom either extreme youth or age permitted but short step and the valleys. Anchises and grandson Ascanius, however, had a nimble trigger hand that first day, and though they had but diminutive game, the volume of sound was excellent, while the air just reeked with the fumes of burnt powder. Though the majority of this unambitious coterie depended upon the ground or tree tops and a sneak for sport, there were those abroad who considered themselves good wing shots, and yet who found it difficult to stop flying birds that had served as target for many accelerating loads of ammunition.

There are a few varieties of game common elsewhere in the State that are seldom met with this far south. While trout fishing the other day, your correspondent saw in the creek timber his first California tree squirrel, a large dark-furred creature, and during the same trip he discovered wood duck feathers on the margin of a pool. Hearsay has it that there are grouse on Pine Mountain, and at other near points where pine growth affords suitable habitat. Years ago an unsatisfactory attempt was made to introduce English pheasants into the valley as game birds. The Chihuahua or Mexican pheasant, which does well in a dry country and roosts in trees, might thrive in the local covers. But the swift flying valley quail are already here, one of the finest game varieties that ever flushed, and intelligent care would increase their number greatly, why experiment with uncertain creatures?

This class of game has had such dense growth to conceal in the present season that even close observation cannot estimate how large the coveys are in number. Weather and forage have been excellent for propagation. Many full-grown youngsters were noticed as early as the first week in July, and many old birds still mated near the end of August. Surrounding counties report the coveys as being too abundant. Ranchers in the northern part of Santa Barbara county threaten to begin shooting that they may save crops still in the field.

The salt-water fishing along the southern coast and near Catalina, ever since the purse-netters withdrew from such waters, has been phenomenal even for the summer season, and nearly every day catches are made of large fish, especially of yellowtail and jewfish, infrequently of large tuna.

During a recent contest in the waters near Catalina Island, the participants caught with hook and line more than 400 albicore, at least 10,000 pounds of fish, but as the meat is worthless, Justice Allen afterward characterized the tournament as wanton slaughter which should be prohibited by law. Fishermen and boatmen contended that albicore were useless except as food for other fish, and that they served this purpose after being caught. The ethics of sport have been observed here as elsewhere only in a vague manner. Perhaps a goat hunt taken next day by fourteen boys of the Naval Reserve, who accomplished twenty-eight kills, was not accurately in line with the ideal conception upheld by a large number of other hunters, though all the meat was afterward consumed in camp. A fair judgment would demand exact knowledge of local conditions.

Though Catalina, the seaside resorts, mountains, indeed all the attractive spots to recuperate at, have been well patronized this summer, and the season in the mountains has been delightfully cool for hunting, the fishing in salt water extremely fine, yet there has been a lack of items come to hand worthy of noting. One hears of it with regret whenever any of our delightful old pioneers assumes the lost trail into eternity. The latest addition to the above number has been L. P. Redwine, who died in the early part of the summer, the man to whom Jefferson Davis, as Secretary of State under Pierce, consigned a herd of camels, to be used for packing across the Colorado desert from Los Angeles to army posts in Arizona. These creatures, though they served their purpose admirably, because of their uncouth appearance stampeded army stock, and were shot by soldiers at every opportunity, until only a small remnant of the original herd was left, which, after being turned loose on the deserts of Arizona by our Government, existed near the Mexican border until within a few years, despite pursuit by hunters. The old pioneer died at Imperial, which is built on an oasis of the Colorado desert.

Your correspondent has just heard that the Banning Company, which owns Catalina Island, will allow no more goat hunting there, as unscrupulous hunters have been destroying sheep also, a tour of the back cañons a short while ago revealing many of the latter shot in mere wantonness. To insure against future loss of this kind, the company will exterminate the goats and adopt other means that will discourage pursuit of game with the rifle. Sheep over there, from being stampeded often, have become so wild that fences do not restrain them, and shearing has become nearly impossible. The unprincipled hunter, here as in the East, by his conduct robs the truer sportsman of many a privilege. H. R. STEIGER.

Across New Brunswick on Snowshoes.—III.

In the Game Country.

IT is nearly always the case in New Brunswick that a very heavy snowfall is followed by still and cold weather. We found the thermometer hovering around the zero point on Saturday, Dec. 7, and a cutting wind rendered a walk across the lake rather an unpleasant experience. The snowshoe straps needed to be carefully watched lest the toes should become too cold, and even with this danger present in mind, Adam on this day managed to freeze three of his toes, which later gave him considerable trouble.

Adam and I made a hunt back into the rough country where we had jumped the cow and calf on the day before, taking up their trail with the intention of following it until, perchance, it led us to something better. Of course any moose hunter knows that it is useless to follow a moose on the same day that it is jumped. I had plenty of proof of this as we worked along back into the hill country, following the trail which old mother moose had made the day before. In three different places we saw where she had stopped with her offspring and looked back down the trail to see if anything was following. In each case this pause was made behind a screen or clump of thick trees, which would have prevented us from seeing the moose, but which would enable the moose to look back over a long stretch of open country. This little stratagem was repeated with such nicety that we received a very good impression of the moose's ability to take care of itself.

After following this trail about three miles, we found it crossed by another trail of two moose. As we had sent John out this same morning to see if he could locate some moose for us, we felt pretty sure that, from the direction which this trail took, John had also put up game. We did not, however, discover any horn sign in connection with this trail, and reasoned out, as was later verified, that John himself had put up a couple of cows. We were having all kinds of bad luck in jumping cows. When we returned to camp that night John told us that he had been within easy shooting distance of these moose when he jumped them, but that they were both cows.

We did something like fifteen miles on this day, and as we came back over our former snowshoe trail, we found, as we had on the day before, that the caribou had again cut our trail all to pieces. They had been out on the lake again also, and indeed had all the country around the lake shore tramped up. Charlie saw several caribou on this day, although none of these had horns. We had now seen sign of something like fifty or sixty caribou at least, probably two or three times that number, but the heavy country and the dense snowfall which covered the

forest with a heavy cloak of white rendered it impossible for us to come face to face with any of these ghost-like wanderers of the woods. Jack the Silent proved himself able to get one when needed for meat, however, since when sent out after a caribou he came back before evening with the quiet remark that he had killed one about three or four miles out from camp.

Moving Camp.

Sunday, Dec. 8, we made a day of rest. It is contrary to the law to hunt on Sunday in New Brunswick, even had we cared to do so. We fixed up our frozen feet, mended a sled or two, got in some meat from Jack's caribou, and in general made ready for an early start over to the Bathurst camp. Adam was thoroughly angered at this conduct of the moose, which he declared were behaving in a most unprincipled manner. He figured out that the bulls must be further back in the hill country, which was hard to reach if we had to return to camp on the same day. "We'll try it over at Bathurst camp," said he, "and see what we can do over in there."

The Bathurst camp is the second in importance of the Moore camps, of which there are six or eight in all. It is situated just across the height of land which separates the Tobique waters from the Nipisiguit waters, the latter flowing toward the eastward, whereas the Tobique waters flow westward.

On Monday Adam and I made a short caribou hunt in snowshoeing, which was simply awful, but did not get up with anything, as the big herds seemed to have moved up into the hill country further by this time.

On Tuesday morning, when we started for our move, we packed up three toboggans with our belongings, which included some supplies which we needed for our stay at the other camp. I started out ahead of the party and crossed the "carry," or three-mile portage between the Nictor and Bathurst chains, an easy trail which involves only two or three short and easy climbs. I found again that the caribou were on the war path. John had reported them all over this trail when he went out after his caribou meat, and I found many fresh trails. They had crossed the snowshoe trail in seven different places in a space of less than a mile. Possibly there were twenty or thirty head of them in all, which were enjoying this promenade along the snowshoe trail. I learned then that so far from being afraid of human sign, the caribou simply exults in a snowshoe trail. He is a very good snowshoer himself, but not in the least averse to falling into the beaten track made by his bitterest enemy, man.

When we came out upon the pretty little expanse of the Bathurst Lake, we found that the caribou had been here also, and their tracks were visible in many places on the wide white expanse.

The snow was again wet and very heavy, so that toboggan traveling was a serious matter. I tried my hand at pulling one of these innocent looking sleds, and found it required about four times the muscular exertion I had supposed it would from seeing the ease with which my companions snaked them along.

Bathurst camp I found to be a double house, rather smaller than Nictor camp, but very comfortable. There was a stove in each of the houses, but we lived in the smaller camp, and did not take the trouble to warm up the larger room excepting at meal times, or when we wanted better elbow room while mending toboggans or the like. The camp itself was admirably located and comfortable to a degree. This is a favorite trout fishing locality, and I presume that there is no better trout fishing stream in New Brunswick than the Nipisiguit River, which heads within a gunshot of this Bathurst camp. The Nipisiguit trout fishing is leased by George Armstrong, who pays $50 a year for it. Moore and Cremin take over half this lease, thus arranging for the fishing of all their friends and customers who come in with them.

Bad Weather.

It could not be said that the weather had thus far been very propitious, for we had had hardly one decent day's hunting when the going was in the least practicable. Sleet fell all day Tuesday, followed by a pouring rain at night. The shoeing was very bad, and although we hoped for a freeze, we knew that a freeze meant crust, that a crust meant noise, and that noise meant no moose. I found this country one of great humidity, with much precipitation and a great deal of fog. The view about us was wild and bleak, the tops of the forbidding ridges lost much of the time in fog. I was told that this sort of weather is most unusual, and that ordinarily a quiet and fairly dry cold may be anticipated. Later we were told that this December never had its like in all the history of the Province for wretched weather.

On the morning of the 11th we found that the sleet had been covered by deep wet snow, and the crust, though damp, was still noisy. The snowshoeing was simply awful, ice forming under the feet continually. None the less, Adam and I went out on a sort of forlorn hope that we might get my caribou. We found a fresh trail at the edge of the lake, and followed it into the thickets. We were never more than an hour behind our game, and this time we thought we were going to get our shot, for the caribou were evidently feeding and the weather conditions were not absolutely impossible after all. Indeed, we got within fifty or sixty yards of our game, but a beastly little calf which happened to be nearest to us gave the alarm to the rest of the bunch, and all we saw was a distant white tail at which no sportsman would have risked a shot.

After that we went on up into a little barren where the caribou sometimes feed, but drew a blank. Bethinking ourselves of our snowshoe trail of the day before, we went back over the "carry" trail. The rascally beasts had been all over it, subsequent to our crossing there on the previous day. We walked over half-way to the Nictor Lake. When we came back, we found four more fresh tracks directly in the snowshoe trail, and made since we had passed. This time again we came very near to getting a shot, for we had jumped these caribou through an unlucky shift in the wind when we were within less than 100 yards of them. As it happened, they were just out of view, and, of course, when they had once reached the thick cover it was all over. So we went back home again, having been once more with game all around us, and no chance of getting a shot.

By this time Adam was getting a bit discouraged with the way luck was running against us. I pointed out to him that we would probably have no luck at all, since I had been so unfortunate as to lose my mascot, the quart tin cup which I wore through the Yellowstone Park in the winter time many years ago, and which I purchased of Uncle Sam at Fort Yellowstone. We searched for this latter, but could never find it, and I presume that some generations hence some scientist will pick it up and figure out how long it was that the Yankees invaded Blue Nose Land. The cup had a big "U. S." stamped on the handle, and had been fastened to my belt on many a hunt by means of a homely and ultimately treacherous piece of knotted coffee sack.

"You stay at the camp for a day or so now," said Adam to me, "and I'll take Jack and we'll go up into the hills toward Silver Brook, and see if we can't locate a moose. If we see anything worth while, we'll be that much ahead, and if we don't, why then it will be only Jack and me who will have the tired feeling."

This plan was carried out, and it was agreed that Jack and Adam should sleep out that night in one of their outlying camps, which they called the Klondike camp, situated far up in one of the roughest portions of the Province, near the east branch of what is known as the Silver Brook. They took one blanket and some supplies with them in their packs, and got an early start.

More Caribou.

Meantime Charlie and I made another effort to secure that caribou. Again we found fresh tracks all over our yesterday's trail, but nothing showed on the ice for some time. At last we saw a cow and calf which were feeding rapidly along the edge of the lake about three-quarters of a mile away. These we followed, much of the time in plain sight, but always taking the precaution to move when they moved. We could no doubt have killed this cow had we cared to do so, but the cow had no horns, and although it is not against the law to kill a cow caribou, cow moose only being protected, I did not care to kill a female. Therefore, we did not hurry much in our stalking of this game, and at last saw the animals disappear at the edge of the lake. Then all at once we got bloodthirsty. We concluded that cow caribou would be pretty good meat, so we took a shot at the disappearing animals, at a range of about 475 yards, and we made very close practice of it. Charlie went down to step off the distance just for curiosity, and meantime I sat down on a log and enjoyed the beautiful winter morning, which was ideal in every respect. All at once I heard Charlie's gun behind me, and looking around saw the identical cow and calf which had lately disappeared, and which had now, for some fool caribou reason or other, taken the notion to come out on the ice again. The two started straight across the middle of the lake, a distance of perhaps a mile. They did not gallop, but struck the caribou trot, which is the most comical and absurd looking gait any man ever did witness. Their great hind legs, sticking up at an impossible angle, at the hock joint, came trailing along behind them, so that at one time I thought we had broken a leg of the calf. For, be it known, we again became inconsistently bloodthirsty, and we smoked them up a few shots just for luck, the range about 900 to 1,000 yards. The absurd gait of the creatures set us to laughing, so we did not try to shoot any more, and the animals skirted the far edge of the lake, and presently took to the woods beyond. Charlie and I then went back to our snowshoe trail on the "carry." Here we found two fresh trails, and afterward as we came back we discovered the trail of a cow and calf caribou, both apparently trotting. We thought these were our friends of the morning, which had simply made a circle and come back across the "carry" trail, heading toward the country where we found them at first. Charlie and I went clear across the Nictor Lake, but saw nothing on Nictor, and believed that the caribou of that vicinity had moved back into the hills.

Friday fell on the 13th, and oddly enough, on that day our luck was broken to just a little extent, although not in my favor. I went out for a solitary caribou hunt. Nothing showed on the lake this morning, although there were two fresh trails again on the carry. The crust was very noisy, and I went along very slowly and carefully on the old trail, hoping that the crust might have driven some caribou in to the easier going. Presently as I stopped to listen, I heard a faint noise on my left and saw a small caribou, without any horns, just disappearing beyond the edge of the hills. From the noise made by a man in walking on this crust, I should have expected a caribou to make ten times as much noise as this one did. I did not shoot at it, as it was a poor specimen, and the mark was a bit uncertain. Yet, just a little further along the trail, as I glanced up I saw two caribou, slipping along far more silently than I would have believed possible, and making directly across my trail.

"I've got you this time, my boy," thought I, for I determined to kill one, even although no horns were visible. I held low and fine and got the lead just right as I pulled, although at that time I was obliged to fire directly through a small evergreen tree which screened my view. A black mass apparently went down in front of me, and I was entirely satisfied that I had killed him, but to my intense surprise I found no caribou when I got to the spot, but saw two white tails bobbing off a couple of hundred yards away down the snow-covered trail! Whether I was more angry or surprised I hardly know even yet. I found my bullet mark about eighteen inches above the snow line, and a couple of feet to the side of the trail, but instead of leaping on across the trail, both caribou had ducked and dodged into it, after its better footing. I learned how much they dreaded the crust, for these caribou kept to the trail for 500 yards. I saw where, moose fashion, they had twice turned to look around to spy out their pursuer.

There was nothing on Nictor Lake when I went over to it, and later when I met Charlie on the back track, he had not seen any caribou, although we picked up four fresh trails going back. The creatures were like ghosts, slipping in and out everywhere except where we ourselves chanced to be.

That night, however, there was a different story to tell. Adam and Jack came in staggering under heavy loads. I saw horns sticking out from the corner of one of the sacks.

The Hoodoo Broken.

"We've killed the hoodoo," said Adam, gleefully. "I thought that this gang could get a moose when we really had to have a moose." (Neither Adam nor Charlie had yet killed his moose for this season.)

It seemed that the moose was a fine young bull, a three-year-old, and Adam had killed it that morning at about half-past eight, a very little time after he had left camp. He trailed it for some distance, and at last saw it in a little brook, high up toward the top of the ridge, and about 100 yards away. "I knew when I saw it that it was my moose," said Adam, "and I concluded to kill it just to break the hoodoo. It is not a very big head, but it's a whole lot better than no moose at all. I just took a good fair sight, and I only had to shoot once with the .30-40." The moose was shot through the lungs, the ball breaking one of the spinal processes. Adam said that it sank down at once and only moved its head two or three times, being quite dead when he got to it. He found then that he had left his knife back at the Klondike camp, and had to walk back to get it. Then he skinned the moose, hung up the hide in the camp, and he and Jack later came on down with the head and part of the meat. They had passed a very wretched night with their one blanket at the Klondike camp, for the weather had come off quite cold, and it was necessary for a fire to be kept up all night.

Adam had seen any amount of moose sign on his hunt of to-day and yesterday, and in the same neighborhood where he killed his moose he saw three small bulls, all of which had been lying down in the open water.

Jack had hunted in a different direction from that taken by his father, and it was a very satisfactory report indeed which he brought back with him. He had located a moose yard and had seen unmistakable sign of one or more bulls. He said that when he got into the edge of the yard he came back, and did not believe that any of the game had scented him, so that there would be a fair chance of finding a moose, and a bull moose, too, in that neighborhood on the following day. All of which raised our spirits very much indeed, for time was slipping away very rapidly now, and since we had started out to kill my moose, we rather wanted to do it.

Moose Shank Moccasins.

Adam and Jack brought in a splendid fox skin, it appearing that this fox had gotten into an old bear trap which had been left set at the Klondike camp the fall previous. The fur was beautiful. We were now getting quite a bunch of fur in camp, to say nothing of our caribou trophies and these recent spoils of the little bull moose. Adam brought down the shanks of the moose, and although he thought they would be a little small for his own feet, advised me to make a pair of shank moccasins out of them. Charlie, ever ready, sewed up the small ends of the shanks with stout thread, made a mixture of saltpetre, alum and water, filled up the shanks with the liquid and hung them up to tan for twenty-four hours. As a result, I got a very practical pair of rough-and-ready moccasins, such as are very highly prized by the genuine woodsmen of the snowshoe country. A moose shank well tanned can hardly be worn out. The snow does not stick to it at all, and it is very warm and absolutely water proof. It seems devised by nature for the natural foot covering of man, even for the bump which comes right where a man's ankle bone strikes the side of the shoe. This bump on the hock joint is biggest in the deer, next in size on the caribou and smallest on the moose. Charlie pointed out also that the deer had the longest tail, the caribou the next longest and the moose the shortest.

"It's funny how these things run, sort of in grades, in all kinds of animals," said he. "Now, here you have the weasel, and next to that comes the sable, and then the fisher, and then the wolverine, and next the bear. If you learn the habits of all these you will find that each one has habits something like the one just above him and just below him in the scale. Ain't that funny?"

More Caribou.

As to caribou, Jack saw four caribou within ten yards of him this morning, and he says he could have caught one had they not taken their back track. The crust was now bothering the caribou very much, and we could have made a very successful crust hunt on that day if we had cared to do so. The caribou had made a regular road on the ridge up to the Klondike country from which Adam and Jack had just come. There were literally scores of them all about, and how we kept from blundering upon them was hard to understand. I certainly was never in any country in all my life where there was so great a number of game animals so close about. Had this been in the Rocky Mountain country, our hunt would have been over before the end of the second day, for in the open ridges which mark most parts of the Rocky Mountain hunting region there are always chances to see game once in a while. The thick forests of New Brunswick are a great protective agency. We talked moose that night and Adam pointed out dozens of places close about, each of which had some moose story connected with it.

A Diving Moose.

"I suppose you do not believe that a moose will actually dive?" said he to me. "That proposition is sometimes disputed by the authorities, but the authorities don't always know. Now, I saw a moose dive on Upsilquitch Lake last year, and it not only went altogether under the water, but it stayed under the water for fully a minute at a time. It would stay down underneath the surface until the water was very still, so that you would not know that anything was under it at all. I saw something shining white in the sun above the surface of the water, and at last we saw it was a moose feeding, and then we saw close at hand this moose, which was diving for its feed. A moose is a great creature to get into the water. They wade all over little Nictor Lake, which is fully four feet deep in places. Of course it is not unusual for a moose to stick its head under water, but this is the first time I ever saw one go completely under and entirely out of sight."

We felt pretty good this night, Friday, the 13th, in spite of the bad weather we had been having, and which

threatened to continue. We believed that we had the hoodoo broken. Our next hunt was to be near the yard which Jack had located about four miles up in the rough mountain region, the roughest country which we had yet encountered, and the roughest section of all the Province of New Brunswick.

"We'll get that bull to-morrow," said Adam, "or if we don't, we'll sure set him a-running."

E. Hough.

Hartford Building, Chicago, Ill.

Oklahoma's Energetic Warden.

Cottonwood Falls, Kan., Sept. 20.—*Editor Forest and Stream:* This report, taken from the Wichita Beacon, may give you an idea of the way the new countries of the Southwest protect their game.

W. F. Rightmire.

El Reno, O. T., Sept 13.—The appointment by Governor Ferguson of J. A. Gould, of El Reno, to be territorial game warden is of interest to every person familiar with Gould's record as deputy warden in Canadian County, and desirous that the wholesale slaughter and extermination of game in Oklahoma should be brought to an end. No State has more proscriptive game laws than Oklahoma, and a game warden who will do his duty has every recourse in law to sustain him. Gould is a lover of sport, and was recommended for appointment by the El Reno Gun Club and other persons who deplore the destruction of game by pot hunters. Last fall and winter Gould did excellent work at El Reno in the seizure of game and the prosecution of the game law. No man's social or official position has terrors for Gould. He entered the private car of one of the most prominent officials of the Rock Island Railroad Company and confiscated dozens of quail and prairie chickens that had been killed in souhtwestern Oklahoma and were being carried to Kansas. The pot hunters who raided the prairie chicken country in Roger Mills, Greer, Custer and Day counties lost thousands of pounds of game in seizures at El Reno.

Several counties, notably Noble, Kingfisher, Blaine, Canadian and Oklahoma, have deputy wardens as zealous as Gould, and they will be of great assistance to him in protecting Oklahoma game. El Reno is a desirable place for the home of the territorial game warden, as most of the game killed in southwestern Oklahoma for outside markets is shipped by way of El Reno. It is reported that large numbers of deer are being killed in the new country and offered for sale at meat markets in the local towns. It is unlawful at any time to kill deer in Oklahoma.

The open season for game is as follows: Prairie chickens and wild turkeys, Sept. 1 to Jan. 1; quail, Oct. 15 to Feb. 1; plover and doves, Aug. 1 to Dec. 31. Possession of game out of season is sufficient evidence for prosecution, regardless of who killed it. To escape punishment it must be shown by the person who actually killed the game that it was killed outside of the territory and that the laws of the State in which it was killed were not violated. Game may be sold in season for local consumption. To ship game to outside markets is strictly forbidden at all times, and is punishable by confiscation of the game and a fine of not less than $25 nor more than $100 and costs of suit and jail punishment until the fine and costs are paid.

Railroad or express companies, or their agents for transporting game to points outside of Oklahoma, may be fined in the sum of $200, together with all costs of the suit, to be recovered in a civil action and collected upon execution as in civil cases. For shipping live birds, other than a single pair at one time for scientific purposes, common carriers or their agents are subject to a fine of from $50 to $500, with costs of suit. The game warden or his deputies, should they suspect that game is being shipped unlawfully, are authorized to enter express cars at any place in Oklahoma and break open and inspect packages which they believe contain contraband game. The game law is equally severe for the protection of fish.

A Dakota Chicken Shoot.

East Wareham, Mass., Sept. 26.—*Editor Forest and Stream:* Twelve years ago I was one of a party of duck hunters on the Squally River in Washington. We were sitting about the stove in the cabin of our cruising yacht McLaren, when one of our party told us a laughable story about a chicken shoot he and three friends had in Dakota. As nearly as I can recall it, he said:

We started out two days before the opening, intending to drive about forty miles. Our rig consisted of a strong, light, double-seated wagon, drawn by two of the highest and fleetest-footed broncos in town. We carried no duffle other than guns and cartridges, it being our intention to put up at a farmer's house.

Our road was the prairie, and our course as straight as the nature of the ground would permit. The going was good and we could trot the horses most of the time, but drove slowly when our two dogs were out, as we did not wish them to become footsore.

After driving about twenty-five miles we put up for the night. The next day we continued on our way, and, as we had but fifteen miles to go, noon found us near our destination. We began to look around for birds and a place to put up. The farms were large and houses far apart. We drove along toward some buildings and let the dogs range; here is where we made our mistake. The dogs struck a trail and worked toward a cornfield. We stopped the team and Ed took a gun, got out and followed them. It so happened that this farm belonged to a man who had a strong prejudice against gunners, especially those from towns.

As Ed with the dogs worked up nearer the buildings, Frank, who knew the owner's peculiar aversion to shooting, said, "That is Anderson's place. I hope Ed won't shoot. We'll see trouble if the old man is about and us fellows one day ahead of time."

The dogs were in wheat stubble near some standing corn. Here they came to a point. Ed raised his gun, and before we could warn him not to fire, the birds rose and he dropped one. At the same instant we heard a yell from the corn and saw a boy running toward the house, all the while screaming as though Indians were after him. Out from the barn rushed a man in shirt sleeves. Frank, who was driving us slowly after Ed, now shouted "Get those dogs, quick," and suiting his actions to his words, collared one and bundled him into the wagon, Ed following with the other. We divined that something was about to happen, as a look toward the barn showed us a man saddling a horse, which he mounted just as we got turned about. If we did not know what was coming we soon gathered knowledge on the run. Fortunately for us, a wire fence separated the fields so that the farmer had to make quite a detour before he was on our track.

We knew that recognition would be followed by a complaint and prosecution for shooting before the chicken (sharp-tailed grouse) season opened, and that a hot chase was behind, and a hard ride before us. We waited on nothing and soon left the trail to put as much of the wire fence in our pursuer's way as possible. This course took us near another house, whose inmates, attracted by our shouts and the racket we made, rushed out to see the fun. We heard a horn, saw the farmer and his family gazing in astonishment, his boys climbing on to a wheat stack for a better view. We had an advantage in that our horses were light, wiry runners, while Anderson's was a heavy worker, but the unevenness of the prairie kept our wagon on the jump and bounce as though two wheels only touched the ground at a time.

Our pursuer came on about a half-mile behind; where it was fairly smooth he could not gain a foot; when we struck gulches and rough places he pulled on us, as we had to slack up. What, with dogs and guns, we were too busy to watch out much, our guns well wrapped up in the horse blankets, our shell boxes burst and their contents were rolling about underfoot when suddenly we came upon a coulée, too late to stop or avoid, and over we went, "hell bent for election," as Ed afterward said. Luckily nothing broke but the strap that held the tail board, which dropped down and let most of our cartridges escape. The shock left us breathless, and two hats remained with the shells to cheer the enemy. After this one of us stood up, braced by the others, and looked out for bad places. We soon came to one where all had to get out. Frank led the horses, Ed took the back end, Bill and I a forewheel each, and we got over. Our follower made time here, and in our haste to board, our seat was pulled off and left behind. The excitement ran high, and Ed, who was growing belligerent, wanted to stop and fight. We could not hear to that, as prosecution would follow in any event. The pace seemed to tell on our pursuer, who, abandoning the attempt to overhaul us, now contented himself with keeping us in view. Taking advantage of this, we slowed up to a trot, hoping to kill time enough to bring our arrival in town after dark. We also bore off considerably from a direct course, well knowing he would strike straight for town once he knew for a certainty where we were heading. We were careful to avoid buildings, knowing that witnesses would be easy to procure.

Four heads were an advantage, too, for we could watch all directions, and, seeing the enemy turn off toward a farm, we headed the opposite way, for it dawned on us that he might change horses; and, in fact, that is just what he did do, but we were so nearly out of sight when he resumed our trail that the maneuver availed him little. Three hours had now passed, and we were more than thirty miles from where our troubles began; ten miles more and we should be in town. We had ridden between forty and fifty miles already, and our team was pretty well played. About this time we struck a slough, which we took on foot. We got through after a fashion, though nothing but desperation would attempt it. Here our pursuer brought up, and guessing our destination left us and rode directly for town. We watched him off with relief, and began to devise means to outwit him and the officers he might employ. It happened that the horses belonged to one man and the wagon to another, these parties being unknown to each other.

We jogged along slowly as the sun declined, and at dark were on the opposite side of town from where we should have entered. As we approached we deployed in skirmish line; at the outermost houses we unharnessed, stowed everything in the wagon, ran that into a shed, two mounted the broncos and took separate ways; the other two took each a dog and footed it quietly for home, where we all arrived without detection. In the morning we learned that Anderson had got a constable and both were on the watch. There was some suspicion and talk, but nothing ever came of it. A few days later we drove out and recovered the lost seat and a quantity of shells, but never saw the hats; we got some birds, too, but did not go near Anderson's.

Walter B. Savary.

Living it Over Again.

Almost every man has his own idea of the best test of another man's worth. The old adage runs that to truly know people one must live with them. Some hold the view that to read the ins and outs of human character one must travel with it. Your yachtsman tells you that you do not know your friends in their true light until you have sailed with them under adverse weather conditions; and all of these deductions doubtlessly carry much weight, but verily the man who holds your love and respect through the vicissitudes of repeated hunting trips must ring true, for in the sharp pursuit of the elusive pheasant, day in, day out, through bog, swamp and underbrush; through the tangle of mountain laurels, bull briers, scrub oaks and fallen trees, the best tempered of men will be mightily tried, especially after missing a difficult right quarterer, which sails merrily away over the distant line of treetops to be shot at again some other day. It is because of the trial of repeated years that I feel so keenly the loss entailed by my not being able to join the Doctor, Ross and Willie on their annual gunning trip. This is a treat that I have missed but once before in many years, and as I ruminate the scenes come back in all their vividness that made the charm in the days that have gone.

The open season is now at hand. For the past month there has been considerable activity in quarters quiet at all other times. The guns have been cleaned and polished until they shine like a new pan; each morning Ross has glanced at the falling leaves with great silent satisfaction; each evening the Doctor informs me that the sunset has a decided look of fall, and Willie, who never shoots any game because of his near-sightedness and tender heart, has asked me at least fifty times whether I could not in some way manage to reach Maple Ridge for a day with Jess, our constant hunting chum, than whom no better gunner ever tramped the woods in search of game.

A few nights back, after a mysterious disappearance of forty-eight hours, which it transpired had been spent on a Long Island game preserve testing the merits of one Gordon setter, Duke by name, the Doctor announced confidentially that he had at last become possessed of a prize in the hunting dog line, and while he wouldn't care to spread the news too quickly, he firmly believed Ross's Irish setter Mac and Jess's premier Kyd, would be beaten to a standstill by Duke. Together we journeyed to Ross' home with Duke, who was introduced to Mac with all solemnity. What passed between the two in the mysterious dog tongue we do not know, but we do know their behavior was such that Mrs. Ross' sense of hospitality was outraged at once, and Mac was banished to the stable, his accustomed domicile, while Duke, the guest, was allowed full swing, and when he steadily pointed an inoffensive kitten Ross pronounced him of good stock, at least, explaining that a good bird dog would always point a cat. I wondered whether this was because cats liked birds, but asked no questions. After much speculation as to whether Duke and Mac would work together in the woods, we rose to go, Ross generously praising Duke, while feeling positive deep down in his soul that the dog who could rival Mac in field work had not yet been born, and thus are good men loyal to their dogs.

To-day they bade me good-by, the Doctor assuring me that I would be with them. Ross, busy with the dogs, cheerily announced he could see me in the cosy library, and Willie, ever considerate of the welfare of us all, smiled knowingly and told of his anxiety to meet me at the station, no matter when I arrived. All this in the face of my absolute inability to join them, and still it was the finest way in the world to drive away my blues, I actually got to feel that I was going later, and my spirits rose within me to such a height that I resolved to chronicle briefly their doings of a previous year, and in the quiet of my den get all the enjoyment possible out of this mental hunting trip.

As I gaze into the cloud of smoke I see again Jess meeting us at the station with his two colts, Ben and Lucy, and as we ride back into the mountains he tells of the twelve pheasants he has flushed in Bog Meadow on a recent morning; of the nine pheasants he put up over in the cat hole; surely the worst place to reach in that part of the country; of the reports Lynn's boys have brought in from Sugar Camp; of the rare luck he has had over at the Hermit's cabin, a landmark with a local romance, and last but not least, of the numerous coveys of quail to be found around the base of Mt. Jager, very appropriately named the Hunter's Mountain, from the German, not forgetting the tame coveys he always has in the home buckwheat fields that his city friends may not be forced to return from the day's hunt empty handed. We have heard these stories before and know Jess so well, that while we lay no stress on the tame bird part, we are sure of good shooting in the other well-known spots. After a rousing greeting from Ed and the rest of the family, we adjourn to the library, sample of Mr. K.'s new apple crop, pass on the merits of the cider, smoke a last pipe in a heated discussion over the dogs and go to bed, wondering how sore to-morrow night will find us. The Doctor, ever first to rise, rouses us all at daybreak by pounding on our doors with his hunting boots and then firing a salute under our windows.

A hearty breakfast, with the lightest of wheat cakes and honey, forming a part of the menu, because of good Mrs. K.'s kindly remembering our weakness, and we start for Bog Meadow to begin our ten days' hunt. Verily, this is the bird hunters' paradise, not more than two miles square, always rich in running water, and never failing to furnish pheasant, quail and woodcock, with an odd wood duck now and then to add variety, and we have come to feel that as Bog Meadow is rich or poor in game, so is the season going to be in hunting. On this trip, which looms so vividly before me, the other three gunners have brought their wives, in consequence of the deep interest the latter folks have taken in our stories, and each man knows this first day's hunt will have much influence on his future privilege of telling hunting stories to a believing and appreciative audience by his home fireside, therefore do they hunt hard and shoot carefully, each jealous of the other, while I, an amused spectator, finally feel the necessity of shooting something to establish in the minds of these good women friends my powers as a hunter, for I, too, have sometimes told them stories. Sundown sees us comparing bags. Ross has three pheasants and a quail, Jess three pheasants and two quail, I have one pheasant and three quail, and horror of all horrors, the Doctor whom we have bantered year in and year out, because of his path-finding ability and ammunition-wasting propensity, displays to our envious gaze nine pheasants and eight good-sized quail, and shortly after our homeward march is started we miss him altogether.

At the first sight of the farmhouse lights, far over on a knoll in the lee of Maple Ridge, we three remaining pause to rest and wonder at his disappearance. Somewhat alarmed I suggest that he may have met with a mishap, but Jess at once dispels my fears by his theory that the Doctor has taken a short cut over the old trail to get home first and overcome the ladies as well as humiliate us by his splendid bag of game, and that by now the birds are probably neatly swinging from the rafters of the kitchen shed, with the ladies dividing their admiring gazes and loud praises between the complacent, beaming Doctor, as he stands by trying to wear an everyday, unconscious expression, and his splendid array of game. "A vision, Jess!" I cried; "Willie has taken the ladies to Bean Creek for a drive, and we'll get home first." The faraway look in Ross' eyes gives way to a twinkle of concentrated mischief, as he unfolds a nefarious plot to rob the Doctor of his well-earned laurels. With smiles of expectation we stalked along toward home, scattering at the farmhouse gate, so that one of us might find the Doctor and remain sufficiently near to

prevent his having any chance to talk gunning to the ladies until we were all assembled at dinner. It was my luck to find him in the library reading at ease, his six feet one stretched out on the couch clothed in a boiled shirt and standing collar. Never before had he worn a standing collar at the farmhouse or a dress shirt, either, so I smiled with greater joy than ever when I realized how far his pride would shortly tumble and how that shirt and collar would go with it. He and I discussed the ladies and their drive until Ross appeared with the announcement that we were to gather for dinner at once, the driving party had returned and Mrs. K. wished to serve the famished hunters. Hardly were we seated before Willie's wife, ever anxious to have credit given where credit was due, addressed the company with: "Who got the most game to-day?" The Doctor's face assumed a blandly modest expression with a dash of heavenly innocence around the rim, as expectantly he waited for one of us to sound his praises. Ross, Jess and I glanced smilingly at one another and then smiled commiseratingly across the table at the Doctor, who, in the flash of a second, divined our scheme, realized the joke was all on him and he must stand it.

The sudden rush of knowledge that he was beaten, and to be robbed of his triumph caused him to blush furiously, which prompted Willie's wife, in the goodness of her soul, to add: "Never mind, Doctor, you'll have better luck next time; maybe you'll shoot something tomorrow!"

And we three chorused that we really hoped he would. The Doctor's wife then rose in her might and demanded to know who had really scored the biggest bag, only to have Ross heap on the last straw by saying: "Modesty forbids me to tell who shot the most game. The fact is, we three over here might well crow if we would; but that would only be heaping humiliation on our old chum the Doctor, so for the sake of peace and permanent joy we have resolved to remain silent, so you ladies must be content to guess." Mrs. Ross made a final effort to solve the problem of how little game the Doctor did get, but failed, because we had hermetically sealed his lips by our trick, and he was too good a sportsman not to know when he was worsted. Thus it went down in the minds of the ladies and household that one of the foremost amateur wing shots of America, later the winner of the celebrated Dewar Trophy, tramped the woods for a whole day without bagging one bird. Many other incidents crowd my mind, and as I picture the game dinner they will have two nights hence, I seem to see myself in my old accustomed place, a state of affairs made possible by some ingenious machination of the ever resourceful Doctor, whose generous spirit will cause him to lose much sleep unless he gathers around him the old complement of guns.

THEO. L. VOSSILER.

Diversified Shooting.

I NEVER look upon a side hill in Connecticut sparsely grown with young white birches, with an intermingling of sprouting hemlocks, but I am reminded of days with the woodcock, partridge, quail and snipe. Along the placid Housatonic there are such shooting grounds where the very best of cover can be found. Side hills where the plump fall woodcock love to lie during the day to feed and rest; gullies through which trout brooks run hedged in with alders and hemlocks, ideal partridge ground; buckwheat and stubble fields along the cleared ground close by to scrub oak and brier patches, where the quail abound, and now and then a boggy meadow, where, if it is not too late in the year, you can count on finding a corkscrewing long-bill cousin of the side-hill dweller.

What a varying story at the end of the day does a generous mixed bag of quail, partridge, woodcock and snipe tell! When you start out with your dog and gun it is impossible to prophecy the nature of your bag, you take what comes, and let the preponderance of numbers in the favor of any one bird be what it will. We leave the main road along the river wherein the brook loses itself and decide to work the gully for partridge. R. S. takes the dog Dick, and is to follow up the brook, while Bob to the right and myself to the left work fifty yards ahead along the gully's sides just outside the fringe of hemlocks, and in this order on we trudge, only to be aroused to alertness by a cry from R. S., "Mark! Right!" Instantly Bob's gun cracks, followed by a thud upon the dry leaves and a momentary fluttering of wings. Crack! goes R. S.'s gun, and the wind carries by me a few floating feathers. "Go fetch; that's a good dog!" tells of another bird down. Partridge have a way of getting up out of gunshot that sometimes is exasperating. To stand still and hear a whirr, whirr, whirr, as bird after bird flushes out of range, is, to say the least, nerve-trying and temper-destroying. However, by working in a triangle, making the man and dog the apex, we get several birds that otherwise would have escaped man and dog. Upon the ground we notice a small built-up hedge of hemlock twigs, and following it a few yards we find hanging to a sapling by a horsehair noose a strangled partridge. We appropriate the partridge and destroy the snare.

We now have emerged from the gully and are in the open, cultivated field. Ahead of us are some patches of wheat and oat stubble, and good cover along a snake fence. The dog is working cautiously and finally comes to a point near a clump of weeds on the margin of the stubble. The birds are here. The dog makes the slightest movement forward when the birds flush, and those escaping the fusilade pitch along the snake fence. We know that we must now kick the birds out one at a time and commence on a point beyond where the outside bird went down. We range ourselves on each side of the fence and the dog begins his work. One at a time, no more. How closely they lie. We are at the end of the fence and all the birds are present or accounted for in a big weed lot well down to our right a hundred yards or more. We will work the side hill and try to pick up a woodcock and perhaps a partridge or two that we scared out of the gully.

The birches are plentifully scattered over the hillside, but not so thickly as to make the shooting difficult. The hemlocks are small, but yet large enough for the flushing partridge to use for cover between the gun and itself as it whirls away.

It is a beautiful day! The warm morning October sun brings out into bold relief the woods and fields, gilding the yellow stubble and making the yellow goldenrod even more yellow. We call the dog to heel, and lighting our pipes stretch ourselves upon the warm bed of grass and forest leaves and bask in the rays of the sun. The whole day is in front of us, the birds are plentiful, we have ample ground to work as we circle again toward the farm, so we laze in the sun and smoke and look over the bag already to our credit.

We have yet to score on woodcock and snipe to make our variety good, and knocking out the ashes from our pipes we spread out and start the dog. With a faint whistle up whirls a brown, long-billed beauty, but the way he twists and turns through those birches is too much for us, and we mark him down fifty yards along the hill. Every foot of ground is carefully gone over, and every hemlock is scrutinized by the dog. We get one partridge and finally work toward our woodcock. The dog has found him. Stiff and staunch he stands as we move around for a clear space when the bird gets up. Then he goes zig-zagging to the right, and R. S. neatly stops him before he has gotten fifteen yards away. It is the only bird we have seen, and where they can be we are at a loss to figure out.

R. S. makes the following suggestion, that we work toward the house, covering some quail ground, skirting the sunken meadow for a snipe or two, and getting an early lunch at the farmhouse, hitch up and drive to Ben Johnson's, where he is sure of some woodcock.

We find no quail on the stubble, and do not go into the scrub oak after them, where they no doubt are, but we do pick up half a dozen plump snipe as we cross the meadows. We circle the mill pond and send in the dog at the head of the pond, and out from among the bushes flies a pair of wood duck, which fall to the gun of Bob and R. S. The showing made at the house for the morning's shoot as the birds are hung up in the cool cellar is not bad, but it is lacking in woodcock, and that must be our afternoon's quest. By 2 o'clock we are at Ben Johnson's, and nothing must do but that he leave his corn shucking in the barn and come with us.

He takes us across a weedy field and we get up a covey of quail. We mark them down for future use in case we fall down on the woodcock, and keep on our way to the white birches on the side hill. And we are hardly upon its slope before the dog begins to work. The birds are here! They are not wild, lying well to the dog, and when flushed and missed pitching only a short distance along the hill.

Now and then an old cock partridge flushes from under a hemlock and as he goes darting between the trees is not always stopped in his course. But we are getting what we are after, and as we complete the range of the hill we circle around toward the house through the weeds and wheat stubble and interview the feeding quail.

We have well rounded out the day, both as to numbers and variety, and R. S. made good his promise to show us some woodcock up at old Ben Johnson's farm.

CHARLES CRISTADORO.

CHICAGO AND THE WEST.

First Jacksnipe.

CHICAGO, Ill., Sept. 27.—The first jacksnipe flight is in on this part of the line of migration. A party of three guns bagged thirty-three jacksnipe, some rail, etc., on the Fox River below McHenry, a few days ago. Mr. Oswald von Lengerke, of this city, killed twenty-one jacksnipe on that day, and states that he needed only twenty-two shots to do it. He was using a new cylinder bore gun, which he had had made for a quail gun. I think that after a while there will be more shooters coming to my own personal notion that the cylinder bore gun will kill more game in the field than it is generally accredited with being able to do. There is many a quail shooter, and snipe shooter, too, for that matter, who outguns himself.

Other parties will start out in search of jacksnipe this evening. We have been having a few days' rain, which has softened up the ground, and the weather now promises to be warmer. Sporting attention to-day is divided between the snipe marshes and the golf links. As the grass is well softened up, this is a good time for jacksnipe and divots. The flight of the latter is reported to be unusually abundant in the neighborhood of Exmoor and other North Shore golf clubs.

There are some snipe on the Tolleston marsh, and the unusually good flight of ducks continues in that vicinity. Both snipe and ducks have appeared along Fox Lake Chain, and that will be the most popular locality for Chicago shooters during this week end.

Senachwine Lake No Longer Open.

Among all the many marshes of this country which were at one time famous, and which still are popular, none exceeds in popular interest the big marsh adjoining Lake Senachwine, near which is located the famous Swan Lake Club. These two big marshes lie along the Illinois River, which furnishes the best of the duck shooting left to us. Swan Lake has been preserved for a long time, but Senachwine has been the pleasure ground of large numbers of duck and snipe shooters. It is only justice to these latter to make public the fact that Lake Senachwine is no longer an open shooting ground. The formation of the Undercliff Sportsmen's Association, which was reported in these columns last year, has gone forward, until now the club numbers thirty-two members, with the expectation that the membership list of sixty will soon be filled. The dues of this club are only $20 a year, and the share is $100. This club has leased some 4,000 acres of the best Senachwine marsh and preserved it, and it is, moreover, adding all the time to its leased tracts. It would be poor comfort to an outside shooter to make the long trip to Lake Senachwine and to the once hospitable Undercliff Hotel, only to find that the country is now air tight to the public. This is the way the most of our good duck marshes are going in these times.

Around Goose Lake.

The little Goose Lake Club, whose grounds are located between the Desplaines and Kankakee rivers, near the junction, does not make very much noise in the world, bu has a good time none the less. Mr. C. C. Hess, prominen in that club, advises me to-day that he had very fai chicken shooting in that country, although nearly every body else who hunted around Morris, Coal City, an other nearby points reported no luck. Mr. Hess helpe kill twenty-one birds on opening day, killed nine one da the week following, and nine on last Monday, a very satis factory showing in these days. Mr. Hempstead Wash burne and some friends who hunted in the adjoinin country, found no birds at all on opening day. The latte gentleman and his son, however, picked up nine duck at the preserve of Mr. Washburne's little club, which not far from Goose Lake.

Unjust Charges Against Minnesota Wardens.

A recent editorial in a local paper here made some what sweeping and very startling charges against th game wardens of the State of Minnesota, alleging amon other things that the game wardens of the Twin Citie winked at the shipping of contraband game and counte nanced a wholesale violation of the game laws. The in justice and inaccuracy of this statement need hardly b pointed out to any one who knows the facts connecte with the work of the Minnesota wardens. If the admini tration of the warden's office were as good in other Wes ern States as it is in Minnesota, we should have a gre deal more game for the benefit of all our sportsmen. Th Minnesota law and the Minnesota methods of enofrcemen of the law have long been held up as models in their wa To see so vicious and unjust an attack as this by sporting paper causes surprise in the minds of sportsme and something a trifle more serious than surprise in th minds of those subjected to these charges. It need hardl be said that prompt denial has been made by the Sta Game and Fish Commission of Minnesota in communica tions to the local paper mentioned. The latter will fin it is in rather an unpleasant situation. Indeed, th course of this publication is at times a trifle inexplicabl It was the first to cry out for non-resident game license and now begins to hedge in the matter by suggesting tha these licenses are too high. It requires no very shrew guess to suppose that some one may have been pinche by the practical working of the Minnesota license la and may have put up a wail which received a too willin support in print. I presume that there come times in mo human lives when it is desirable to be on both sides of th fence at the same time, but that attitude is always mo or less undignified and unbecoming. Any newspape which believes in the enforcement of the game laws, an which knows anything about the actual situation, woul hardly be apt to go out of its way to publicly defam the very men whose hands it ought to seek to hold u The reasons for this are not wholly obvious, but may b made public later. Coming from the journal which sup ported the notorious Illinois warden, Charles Blow, th sort of thing seems just a trifle strange.

Knocked-Down Boats.

A gentleman in Cincinnati writes as below: "I am in formed that there is a company in St. Louis manufactu ing all the parts necessary to make a canoe—that is, all cu out, but not put up, simply in shape to be set up. I thin you could perhaps give me some information or tell m of some one making boats in this manner."

I do not recall any firm making this sort of boat. they are making them and their address is not found the advertising columns of FOREST AND STREAM, they ar probably not in the business very far.

Chicago Fly-Casting Club.

The records made by the Chicago Fly-Casting Club o Sept. 20 and 21 follow below. Hasty reference woul seem to indicate that the distance and accuracy fly recor was broken by Mr. Peet, and the accuracy bait-castin record by Mr. Smith. The occasion was a very pleasan one, the Grand Rapids men, Messrs. Waddell, Kelsey, Ric and Bain being warmly welcomed by the Chicago con tingent. The entire day of Sept. 21 was put in at th lagoon in Garfield Park, and the active work of the sea son closed in a very fitting and appropriate fashion. Th scores:

	Long Distance Fly, Feet.	Dist. & Acc. Fly, Per Cent.	Acc'y & Delicacy, Per Cent.	Bait Casting, Per Cent.	Distan Feet
H. H. Ainsworth	109	94 1-3	84 1-6	94 14-15	91

N. C. Heston	91	93 2-3
H. W. Perce	95	96

Winning scores: Long-distance fly, Waddell, Gran Rapids; distance and accuracy fly, Peet, Chicago; acc racy and delicacy fly, Peet, Chicago; bait-casting, A. Smith, Chicago; delicacy bait, Hascall, Chicago.

Death of A. M. Hofmann.

Mr. A. M. Hofmann, of this city, at different time prominent here in sportsmen's affairs, died at his res dence in this city on Sept. 24, at the age of fifty-one year Mr. Hofmann has been president of the Illinois Sta Sportsmen's Association, was president at different time of the Cumberland Gun Club, the Prairie Gun Club, th Audubon Gun Club and of the Eagle River Hunting an Fishing Club, whose grounds are located in Wisconsi He was also a member of the Sharpshooters' Associatio and prominent in secret societies and other organization

The Preserve Idea.

It does not make one especially cheerful to look back over the changes which have taken place in the last ten years or so in sporting conditions in the West. One of the most striking of these changes is the rapid growth of the preserve idea. We slowly go ahead in game law matters, undoubtedly enforce the law better than we did in the past, and undoubtedly gain yearly in respect for honest game laws. Yet, after all is said and done, the American system of game laws does not seem to be one which is destined to save the American game for the American people. It ought to work, but it does not. It works in places, accomplishes results spasmodically, and is, of course, a tremendous force for the betterment of conditions, but it does not stop the passing away of our game. Upon the other hand, steadily and strongly, without very much fuss about it, the preserve idea has been gaining ground and gaining it efficiently in the West, as in all other parts of the country. There is no use denying the fact that the best of our Western sporting country is passing into the hands of clubs and individuals who close them to the general public. A good duck marsh in the State of Illinois would be worth immensely more than a good farm. A good trout stream in Michigan or Wisconsin at once suggests the notion of a preserve. A remarkable fishing lake in Minnesota is at once built in with club houses. One cannot tell whether or not the American public realizes this, yet the truth is that it is happening and happening all the time.

There are only two things to be said in regard to the preserve system. It works, and we cannot help its working. Moreover, the only man who kicks against the game preserves is the fellow who has not one of his own. When he gets able to preserve a bit of marsh or river he is just as quick to do it as anybody else, and just as loud in his protests at invasions of his rights. The preserve idea has come to stay, and although the outcome of these matters is something beyond earthly wisdom to predict, there is more likelihood that in this preserve idea, hated as it is, there lies the greatest hope for the future of our American fish and game.

Some of these reflections are called up by reading the following words in the English angling journal, the Fishing Gazette. I continually read of good takes of fish made on the streams of that ancient and much harried country. Here is what one angler says:

"The miller, although admitting it brought money into the glen, had a woeful yet sensible tale to tell. Between over-fishing and poaching the valley was being practically ruined. From early May (Easter) till late on in September, English anglers were coming in dozens weekly, and only a few were getting anything like sport. The fishing is practically free for miles, and the loafers and poachers from the distant villages were doing for every trout above half a pound, while the fish were frightened out of their lairs, or lies, at all other times by the infinite and incessant number of baits and flies with which they were continually bombarded. He said he counted as many as twenty rods pass his mill door in a single day, and that soon the once prosperous valley would be a howling wilderness—to the trout angler.

"Such is the miller's tale, which was fully corroborated on the spot. And this is only a sample of what is going on all over the north. The Rev. Mr. Macintosh, Aberdeen, has just finished an angling tour in Sutherland and Ross. At every hotel advertising fishing he found a crowd of anglers, but no fish. Unless the loch is actually all the bigger it gets fished out. The fish may be there, but they are scared to death and need a rest, which they never get in the season. Sport on private waters the reverend gentleman found in abundance, and as he had a few invitations for such, he found it his best policy to stick to them. We need not give more instances."

That's what the thing has come to in England, and that's what it's coming to in this country. Whether you like it or not, that's what it will come to, unless we wake up and take a greater interest in the system of game laws which we have devised for this country. A sober conclusion, after judging the working of these game laws for nearly two decades, leads one to believe that the American people don't want their game, and don't deserve it.

From Dakota.

Mr. Maximillian Foster, formerly of New York, but now of Pittsburg, Pa., with his friend, Mr. Ellsworth, visited in this city yesterday on their return home from a two weeks' trip in Dakota. They went out to Buford and traveled thence up the Yellowstone Valley to Mr. Nohle's ranch house. They had grand sport at prairie chickens, or rather sharp-tailed grouse, of which they could have killed any number. They found the shooting a bit tame after a few days, and did not kill very many after that. They got into some very fine mallard shooting and had all around a very enjoyable time. Mr. Ellsworth got tangled up with a bucking bronco in a corral and is limping a little bit yet, though he "staid with him." Mr. Foster is well known as a magazine writer on different topics, largely those of the outdoor air.

The Saginaw Crowd.

The Saginaw Crowd will put their private car in commission for the fall shooting on Oct. 5, reaching this city on their way to North Dakota on the evening of that day. The personnel of the Dakota party this year is not yet determined, but there will probably be about a half-dozen guns. It goes without saying that "among those present" there will be no one who is not a gentleman and a shooter. This party of sportsmen always seems to me to have more fun to the square inch than anybody else. They are all business men, and they go at their vacations in the serious and thorough-going fashion of practical men resolved not to let anything good get away. The captain, as usual, will this fall be Col. Bill Mershon, of Saginaw.

New England Game Grounds.

Boston, Sept. 27.—The gunners are getting ready for the opening of the Maine big-game season, Oct. 1. Some are planning to be on the ground; others will go later. The Fish and Game Commissioners have appointed twenty-nine agents to sell tags, which amount to licenses, to transport game out of that State. Section 26 of the code of game laws provides that whoever has lawfully killed a moose or deer, or who has in his possession one trout, togue or landlocked salmon, one white perch, or ten pounds of either kind of these fish, or one pair of game birds, may send the same to his home or any hospital, without accompanying the same, by purchasing of the duly constituted agent a tag, at the rate of $5 for a moose, $2 for a deer, $1 for a fish, $1 for ten pounds of the same, and 50 cents for a pair of game birds. This is a most peculiar law, and amounts to tons of game coming straight to Boston and other markets. Once the game is out of the State, it goes unmolested to Boston. There one has simply to order the express where to take it, and there it goes; nine-tenths of it to the markets, or to individuals other than owners or hospitals. This statement is susceptible of proof, if the Maine Commissioners desire proof. Twenty-nine agents, more or less honest, scattered around the different game outlets, with tags to sell, will make it perfectly easy for licensed guides, or anybody else, to get game out of the State of Maine this fall.

An Arlington, Mass., party of five will start for the Maine woods Oct. 5. The company includes Messrs. N. J. Hardy, Omer W. Whittemore, Stewart Allen, Dr. L. L. Pierce and J. Ronco. They go to the Monotony Club camps, above Moosehead. All are hunters, and some big game will be brought out, under reasonably favorable conditions. There are some good reports of shore bird shooting from Provincetown, and other gunning resorts on the Cape. But along the shore nearer to Boston the shooting has continued very poor. Down the North Shore far enough, say at Small Point, and near the mouth of the Kennebec, there is good shore bird shooting, with accounts of good bags. I saw a letter yesterday giving an account of several bags of yellowlegs and grass birds shot on the marshes near the mouth of that river. Some Boston gunners are making up for that way next week. There are very few accounts of partridge shooting in Maine, though the open season begun Sept. 15.

Still the bird shooting is poor at Chatham, and at nearly every point along the Cape shore. A number of sportsmen are at Chatham Beach, though about discouraged with the small flights of birds thus far. They reason that so small have been the flights in September that October and cooler weather must make up for the deficiency. Ex-President Cleveland recently visited the blinds at Wellfleet, but got only six birds in two days' shooting. Dudley Hall, of Boston, an old-time gunner at the Cape, is among the waiting. He is daily at the blinds, and manages to pick up a few birds. A portion of the grounds at Harding's Beach has been leased by Boston sportsmen, and they look for good results later. A large acreage of new salt meadow has been made at Chatham this season, by changing tides and winds, and this should make a great feeding ground for black ducks later. Quail and partridges are reported abundant on the Cape this fall, and the opening day, Oct. 1, will find the gunners in readiness. Great preparations are being made by the gunners for this opening all over the State. Dogs are in training, and coveys are located. The desire is that Oct. 1 may not be stormy.

Dr. Heber Bishop and D. J. Flanders, of Boston, and C. K. Fox, of Haverhill, are in the woods of New Brunswick after bull moose. Dr. Bishop is after his twenty-second bull, twenty-one already standing to his credit, making him champion moose slayer of the country. Mr. Flanders is after his second or third, and Mr. Fox has also slain his bull. They are in the woods some distance beyond Havelock Station, the end of the rails on the Elgin and Havelock Railway, in the Canaan and Salmon River country. They were in the same region last year and saw 52 moose; each getting one bull; all the law allows. They are to be absent till about the middle of October. Mr. W. T. Farley, of Boston, with a Worcester friend, has started for the moose grounds of Nova Scotia. The trip was planned by that genial hunter, Dr. McAlear, but he has been kept at home by illness in his family. They go to Halifax, and further up the country. The hunting grounds are well known to Dr. McAlear, and the hunters are pretty sure of each his bull moose.

Partridge shooting has continued poor in most sections in Maine since the beginning of the season, Sept. 15. Hunters returning from bird shooting trips into New Hampshire have had rather poor sport. The law protecting snipe, quail, partridge and woodcock has been off since Sept. 15, the same as in Maine, but the shooting has been poor. The Hon. L. T. Carleton is now declaiming on the great illegal slaughter of big game this year in his State; through lack of warden service, he says. From his reports from wardens and guides, he is convinced that there is not as much game in the woods as last year. To a daily press reporter he makes this statement: "I find a growing sentiment in favor of the enactment of a hunters' license law. It has been recently suggested that out of such a fund the farmers should be reimbursed for damage done to crops by deer, the remainder to be used for increased warden service."

Yes. Pat the farmers and other malcontents and enemies of the game laws on the back. That will help to secure the license law. When the law is passed it will be mighty easy to spend the money, and the game will be no better protected than before. Special.

The Vanishing Woodcock.

Sayre, Pa.—Diligent inquiry among shooting men who have ample opportunities to know discloses the fact that in southern New York covers woodcock are very rare.

It is the consensus of opinion that the only remedy for saving the long bills from total extinction is absolute prohibition of all shooting on these birds for some time to come. So winsome and delightful a migrant should not be permitted to pass into oblivion without a struggle for its salvation. M. Chill.

In the Nova Scotia Moose Country.

South Brookfield, Queens County, Nova Scotia, Sept. 22.—*Editor Forest and Stream:* Knowing you like to have something interesting in regard to our big game, I am happy to tell you that our old sportsman and guide, Mr. W. T. Crooker (seventy-two years of age) went out last week, and only gone four days from home when he returned with a fine bull moose, weighing over 700 pounds, with a beautiful head and a fine pair of horns. He was accompanied by his two boys. He used a Winchester .45-70, and brought his moose down with the first shot fired.

Moose are very plenty here this season, and quite a number have been shot. Mr. Crooker says he could have got another moose at the same time, but thought he would let him go until later on, as he thought the one he had, with canoe, etc., was quite load enough to bring home. He will try it again in a few weeks.

George Seaman.

The Rail Tides.

Essex, Conn., Sept. 25.—*Editor Forest and Stream:* I have read with great interest the editorial entitled "The Rail Tides" in the last issue of Forest and Stream. Evidently the writer has spent several mornings in the haunts of the festive rail, for his descriptions are accurate and true to nature. The editorial calls back to my mind the good old days, long past, when, as a boy, on the rail grounds, I first acquired the art of handling a gun.

The season for shooting rail is now practically over in this locality. Although a few birds are killed daily by different sportsmen, the shooting is nothing compared to what it was two weeks ago, when it was no trouble at all for even an amateur to get all the birds he wanted at a tide.

Altogether, the season has been an exceptionally good one, as will doubtless be testified by any one who has had occasion to shoot on the marshes in this section.

G. W. C.

The Coal Strike and the Woodlands

Editor Forest and Stream:

Permit me to call your attention to the wholesale destruction of forest trees in the Eastern States in consequence of the scarcity and high price of anthracite coal. In Suffolk county, Long Island, for example, farmers have even neglected growing crops in order to cut cordwood and market it at the unprecedented high prices which now prevail, and contracts are being made and plans perfected for the cutting over of thousands of acres of forest lands as soon as other farm work slacks up and the cold weather makes woodchopping a more congenial occupation. In several cases which have come under my personal observation, beautiful patches of large oak trees are being cut down for fuel. In a short time, probably before next spring, all of the larger forest growth on Long Island will be cut down, and the coming generation will have nothing but so-called "sprouts" to look at or hunt in. The effect on the climate and farming lands will be important, but the chief losers will be those who can appreciate forests and fine landscape effects, and sportsmen who enjoy forests rather than "sprouts and brush" land.

The effect upon game is not likely to be serious, as rabbits and game birds, and possibly deer, thrive as well in the young growth of woodlands as they do in the older forests. Squirrels are the chief sufferers when the large trees are cut down, but they usually migrate into the pines or the swamps, where the trees are permitted to grow indefinitely, and they have a way of multiplying under seemingly the most adverse conditions.

A redeeming feature of the coal strike is the increased value and appreciation of the woodland. It will be better cared for and more intelligently cultivated than it has been, and the fact that it pays a good interest on its value will tend to encourage investment in forest lands by a class of investors who will co-operate with true sportsmen in preserving game birds and animals.

J. H. Griffith.

Lynbrook, L. I., N. Y.

The Western Forest Fires.

Editor Forest and Stream:

It is with much regret and a feeling akin to that of losing old friends that I hear, through various channels, of the destruction of the forests of Wyoming and Colorado. While the forest fires are raging everywhere and destroying vast bodies of timber, it seems not enough, but to complete the destruction, the timber company of Carbon county, Wyo., has bought out the outfit of Teller, the noted tie man of Wyoming, and have put three hundred men into one of the finest bodies of green timber now standing in that section of country, along the south branch of the Grand Encampment Creek, and what they will do to it is sad to contemplate, from the standpoint of one who knows almost every foot of the woods as it was when not a sign of human habitation existed there.

How I used to look over this vast area of wooded country, from some mountain peak, and think of all the wild animal life that existed within its friendly shelter, and think, in my blissful ignorance that it would surely be ages before this part of God's country would be despoiled of its virgin beauty, not realizing that anything existed there to bring the march of progress. But the mining towns of Grand Encampment and Pearl have wrought changes such as could scarcely have been dreamed of a few years ago, and it leads one to think that no place, however remote and inaccessible it may appear to be, will be saved from the destruction.

Emerson Carney.

Take inventory of the good things in this issue of Forest and Stream. *Recall what a fund was given last week. Count on what is to come next week. Was there ever in all the world a more abundant weekly store of sportsmen's reading?*

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in FOREST AND STREAM.

Fish and Fishing.

An Interesting Trout Story.

ONE day last week Mr. George Hart, of Waterbury, was trolling for trout with a long line in the deep water portion of Lake des Passes, where the big fish lie deep and do not take the fly. Feeling a strike and knowing by his sense of touch that only a small fish was at his lure, he took no trouble to hook it, being after larger quarry. Peter Curtness, his Indian, was slowly paddling out of a bay at the time, and Mr. Hart purposely avoided taking any trouble to prevent the slackening of his line. When it finally straightened out again, however, there was quite a different feel at the butt end of the rod, and Mr. Hart told Peter that the little fish which he had hooked in the bay had certainly grown considerably while the line was slack. After the customary struggle which a big trout puts up, the fish was finally brought up close enough to the canoe for Peter to take into the net. There were two fishes, in fact, a big one and a little one. The little one was fast to the hook, and the big one, when Peter reached down to net them, had hold of the other in its mouth. He released the hold at sight of the net, but was taken in with the other, just the same; and the remarkable circumstance was explained by the fact that the line above the hook, during the period that it remained slack, had become firmly caught around the root of one of his pectoral fins. The small trout was not far short of a pound in weight, yet it was not considered too large a mouthful by the other, which was a little over three pounds. It was not until the net was being placed under him that the big hungry fish released his grip of the little cousin upon whom he had resolved to make his dinner—a grip which he had strenuously maintained during the whole of the time that the angler had been forcibly urging him toward the canoe.

The Voracity of Small Trout.

A splendid camping trip was that of which four Americans formed part, a few days ago. It was headed by Mr. Gaspard LeMoine, of Quebec, who has lately returned from a tour of the world, with Mrs. LeMoine. The latter, accompanied by her sister, Miss Revell, of Philadelphia, and by Miss Chamberlain, from the same place, took part in the recent adventure, and so did Mr. J. Lockwood, a banker of San Antonio, Texas. From Lake St. John they drove southward over many miles of villainous roads, until Lac de la Belle Riviere was reached. This they crossed in canoes, and then took again to vehicles and drove to the River aux Ecorces, which they ascended for many miles in canoes, making, on foot, no less than fourteen portages, in order to avoid the heavy falls and rapids of this turbulent stream. Finally Lake aux Ecorces was reached, and here the party enjoyed the finest trout fishing of their lives. The lake and part of the river are well within the boundaries of the Laurentides National Park, and like the grand lake, Jacques Cartier, have seldom been fished by white men. In the clear waters in which they did a part of their fishing, they had excellent opportunities of observing the habits of the fish which were attracted by their lures. It is not surprising that they should have found them particularly wild and untutored. One of the party relates that some of the smaller fish which they caught and returned to the water, came back immediately to the same fly, at which they had but so recently risen, and went through the performance of being caught and returned to the water, two, and even three times in rapid succession. To me the story is not at all surprising, for several years ago, when fishing some almost virgin trout waters north of Lake St. John, with Colonel Haggard, we distinctly saw many of the fish which we took from our hooks and placed uninjured in the water, return to the fly which concealed the barbed steel upon which they had, but just before, impaled themselves.

Rapid Growth of Salmon.

Reference has already been made in these columns to the rapid growth of salmon in the sea, but a few very recent instances which have come under my notice in the reports of some of the fishery authorities on the other side of the Atlantic, are more remarkable than anything I had previously found on the subject. Kelts, which were marked and liberated in the Avon, on the 3d of February last, were found to have completely recuperated in eight and a half weeks, and to have returned as fine, fresh run salmon, by April 2. Still more wonderful is the record of a male kelt caught at Castle Connell on the 24th of February last by S. C. Vansittart. It was forty inches long and weighed 19 pounds. It was marked with one of the labels specially prepared by the Agricultural Department of Ireland, bearing the number D. 1502, and returned to the water. On the 26th of the month of March following, the same fish was netted at O'Brien's Bridge, five miles above Castle Connell, and was then a clean fish, its weight having increased in the intervening month and two days from 19 to 33 pounds. The story would seem to be almost incredible, but the weight of the fish is declared to have been verified by the bill of sale, while there can scarcely be any doubt as to its identity, and the label is described as having been almost buried in the fat at the base of the fin to which it was attached.

Crass Stupidity.

Picking up a French-Canadian newspaper printed in Quebec, I read to-day a most absurd attack upon the Restigouche Salmon Club. The writer laments the fact that there is no room for the village of Metapedia to grow, since almost all the property in the place belongs to wealthy Americans, who enjoy such a monopoly there, that placards all over the place announce that fishing for salmon is prohibited in their waters. There is no exaggeration in saying that the score or two of members of the Restigouche Salmon Club and their guests, who annually visit their club house and salmon pools, expend ten times more money at Metapedia than could be made out of their lands and waters combined, if they were in the hands of farmers or others, and employed for agricultural and commercial fishery purposes. Five dollars per pound would be a very low estimate of the price which their salmon cost to the members of the Restigouche Salmon Club, and much of this money is spent among the people of the place, to whom the fish would not be worth, for commercial purposes, more than about five, or at the most, ten cents per pound.

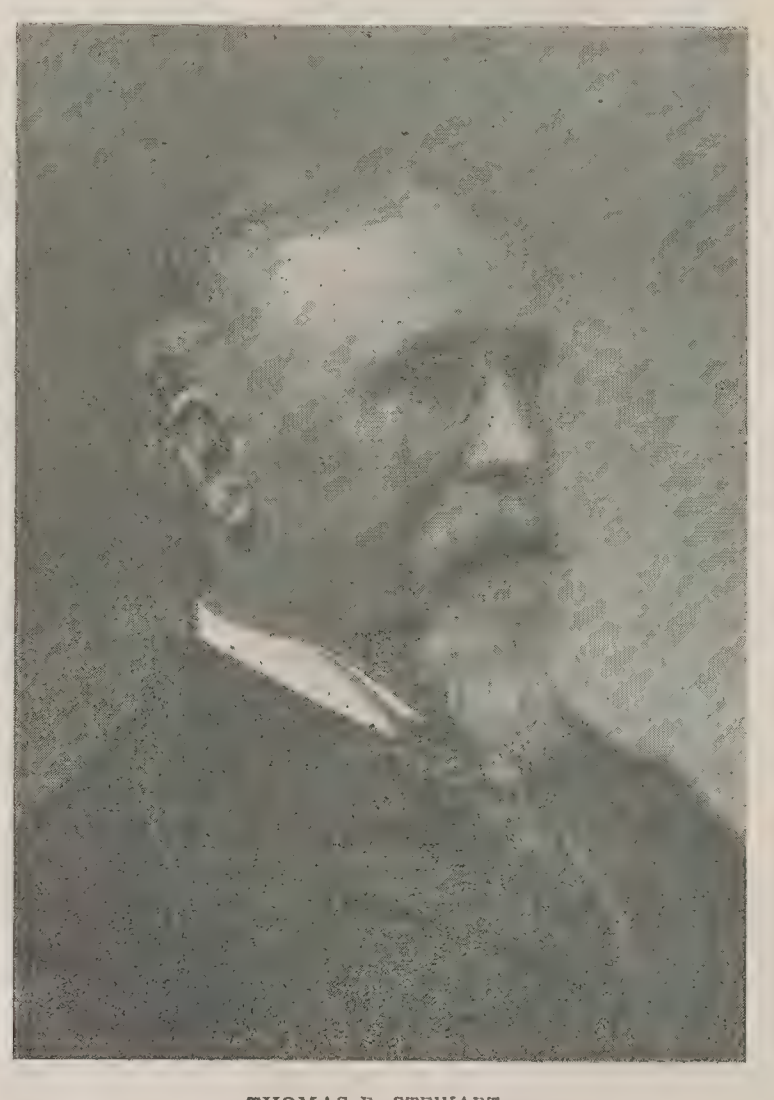
Riparian Owners' Association.

Much of the good sport enjoyed during the past summer on the Restigouche and its tributaries is undoubtedly due to the good work accomplished by the Riparian Owners' Association, which employs and looks after the men who guard the pools and assesses the various clubs and private individuals fishing the rivers and forming part of the association, for their share of the cost. It was well known that many of the net fishermen in the mouth of the river failed to observe the law requiring them to raise their nets from Saturday evening till Monday morning, in order to permit a reasonable number of fish to enter the river. It was impossible for the officers to keep track of all the nets over such an immense expanse of water as the estuary of the Restigouche, ten to twelve miles in extent, and the fishermen well knew this, and were in the habit of watching the movements of the officers, raising the nets before they made their appearance, and lowering them as soon as their backs were turned. The association, this year, very wisely increased the representation on the committee of mangement, of Canadians having influence with the Department of Fisheries, and, in consequence, were successful in securing the loan of a steam launch for the use of the officers at the mouth of the river, who were thus enabled to enforce the law. The committee was also fortunte enough to have the size of the government hatchery net, in the estuary of the river, reduced. If the same conditions can be made to prevail for a few more years, there is no doubt that the angling in the Restigouche and its tributaries, excellent as it now is, will be still further improved.

E. T. D. CHAMBERS.

Thomas B. Stewart.

BOSTON, Sept. 29.—Thomas B. Stewart, who died at the Upper Dam Friday, Sept. 26, was an angler by gift of nature. Genial and kind of heart, he met other anglers with the spirit of love and gentleness. Not only was he a lover of fishing, but of its surroundings. For more than twenty seasons he had fished the Pool at Upper Dam, his chosen spot. To die there was his choice; to die in touch with his angling friends, where he could see their faces, and with his last glance behold the glint of the Pool, with anglers covered. In his last moments he was casting the fly. His arm made the motions as he lay breathing his last. "I've got a good one!" he gently whispered. "Now, I must be careful," and his arm tightened as it held the imaginary rod. "I'll give him line; not try to land him too soon. Oh, he's gone!"



THOMAS B. STEWART.

He sunk back on his pillows, and soon life had departed. He died as he lived; an angler to the last. Every rod was put up on Saturday. Not a boat was on the pool. A clergyman was present and simple funeral services were held, close by the roar of the everlasting waters. Volunteer pallbearers took his body to Bemis. All the old-time anglers who happened to be at the Dam went down with the funeral party: Messrs. Parish, Reese, Morgan, Way, Osgood, Bearse, Howe, Nicholson, and others. At Bemis they bid their last farewell to all that was mortal of their long-time angling friend, Thomas B. Stewart. Sadly they went back to the Upper Dam.

Mr. Freelan Howe, of Norway, Me., recently landed a salmon at the Middle Dam that was 29 inches long, with a girth of 18 inches, and weighed 10¼ pounds. He was caught on a No. 6 hook, fitted with a coachman fly.

SPECIAL.

Looking Back.

YONKERS, N. Y., Sept. 25.—*Editor Forest and Stream:* You kindly sent us all an invitation to give an account of our experience in our outings of both fishing and shooting. Now, as the trout fishing is over for year 1902, we can take a little pleasure in relating and talking about the good time we have had. In the trout season of 1901 I caught in the streams in and near the city of Yonkers 150 trout. In the season of '02 I took but 68 in about the same amount of time spent on the streams. The greatest number taken in one day in '01 was 16 fish; the greatest number taken in one day in '02 was 11 fish, one of them 11 inches long, and none less than 7 inches. I think the reason of the falling off in the past season may safely be blamed to the low water in the streams. During the months of July and August there was very little water in the brooks; in fact, in some places in the streams there was none at all. In one stream known as Sunny Brook, last year I took quite a number of fish. This season I fished it three times and only took four fish. The brook at the head of the Yonkers reservoir has afforded the best fishing to me this season; this is the smallest in this part of the county, but I have taken some good fish from it this summer. Another stream known as the Front Sprain, near St. Andrews' golf grounds, I took from it Aug. 29, in about two hours' fishing, one fish 10 inches long, one 9 inches, one 8½ and one 7, which, I think, was doing fairly well for this part of the country. You cannot fish any of these streams with the fly, as they are small and grown up with brush and briers to that extent that in some places you have some trouble to get your hook into the water, but the fish are there. Now, I think I hear some of you expert fly-fishermen say that is no way to fish, but, gentlemen, it's good enough for me, and it don't cost a week's salary to get there, and the fish like the worm and I like the fish as well as the fishing.

TONE.

Fishing at Toms River.

NEW YORK, Sept. 29.—*Editor Forest and Stream:* Knowing as I do the difficulty many people experience in knowing just where and when to go to catch certain kinds of fish at this season of the year without utilizing considerable purse and more time in reaching a positive uncertainty, I think that a bit of reliable information on the subject may prove very good news to many who haven't a "fish" ticker in their office.

At Toms River, on Friday, I met the enthusiastic game warden of Monmouth County, who had dropped off there to catch some fish between trains, and I would like to say right here that the word enthusiastic is a trifle weak when applied to this natural born "fish jerker," for though it was raining "cats and dogs," he didn't hesitate a moment getting into "hip rubbers" and rain coat and pushed off right by the Riverside Hotel and began to cast for pickerel. I left for Forked River at the same time (4:10), confessing a warm admiration for this man of business and fish. Two and a quarters hours later I passed through Toms River on my return to New York, and to my surprise the wet and smiling Mr. Ackerman boarded the train with twenty to thirty fine pickerel, all caught within a quarter of a mile of the bridge.

While in Toms River I learned that just before this storm they had been taking striped bass down below there of unusual weight, and that as soon as the tides became normal they will be in the channel again, and are caught all through October. Your friends can be advised correctly as to all these conditions by Mr. Geo. C. Van Hise, as to the pickerel fishing there. I would say, I have seen, I have tasted and I know.

T. E. B.

Washington Anglers.

WASHINGTON, D. C., Sept. 22.—Major H. A. Hall, recently returned from Lake George, New York, reports excellent bass fishing in the lake during the season just closed. His best fish, and probably the largest taken in the lake this past summer, was caught Sept. 6, still-fishing, fine line, single gut leader, large helgramite for bait. The reel was on the hum for half an hour. Result: Female, small-mouthed black bass, 23 inches long, 18 inches girth, weight 6 pounds, 5 ounces. The Major says it was one of the liveliest and exciting pieces of sport he has ever had.

Mr. J. E. Watkins has just returned from Eastport, Me., where he had most excellent fishing for pollock and haddock, using rod and reel, squid or herring heads for bait. He says the pollock are as game as bluefish and furnished very good sport. At one time two fish of 8 and 10 pounds each took his son's line and gave him all the fight he could handle.

BON.

Susquehanna Bass.

SAYRE, Pa.—Bass fishing at Wyalusing on the Susquehanna River is at present, to use the phrase of the market reporter, in "prime condition."

Some very large-sized black bass have been taken from these waters during the past fortnight, and, barring heavy rains, the excellence of the sport should continue for some time to come.

Bass are biting freely at various points on Cayuga Lake at this writing. At Esty's, a short distance from Ithaca, the fishing is said to be exceptionally good. At Canoga and Cayuga village, bass and muscallonge and pickerel are being taken in plenty.

M. CHILL.

Maine Fish and Game.

SOUTH WATERFORD, Me., Sept. 22.—I have had good sport in the lakes around here the past two months, catching a large number of black bass and a few salmon. Deer are quite plenty this year, also ruffed grouse.

Smuggling and First Bite.

An amusing case of an attempt at dog smuggling was brought to light at Calais on Wednesday morning. A "lady" attired as a nurse, and to all appearances carrying a baby in her arms, boarded the mail boat for Dover, and immediately entered the saloon. However, the stewardess had her suspicions aroused, and on speaking to the "lady" noticed two dog's feet protruding from the clothes which were supposed to cover her little child. The officials were communicated with, and, being fairly found out in her attempt to evade the quarantine orders, the "lady" confessed her misdeed, had her dog taken from her and left behind, probably to whine over the absence of a far too indulgent mistress. Such an attempt as this to break the law is very wrong, and will no doubt be the means of causing considerable unpleasantness to real nurses with real babies who may be crossing from the French to the English coast. No greater insult can be offered to a nurse when the bonafides of the child she may be carrying is called in question, and this recent instance only proves that a woman with her pet dog does not care what risks she may run or what inconvenience she may cause to other people so long as she can gain her own ends.

There is a story told of a foxhound bitch of the late Colonel Thornton's, which, notwithstanding the fact that the whip lashed out its eye when she was full cry, stuck to the line of her fox and was fairly in at the finish. This case of gameness and determination has never been surpassed, but it was pretty well equalled one day last week. A field of grain was being cut on the farm of Mr. Bucknell, near Aldermaston, when a big rough-coated sheepdog, in the company of the harvesters, put up and chased a rabbit. As they were passing near him, a youth seized a sickle and threw it at the rabbit. Unfortunately, missing its mark, the sharp blade hit the dog on the tail, cutting it completely off within about four inches of the body. This notwithstanding, the dog continued the chase and eventually killed the rabbit. The wound is rapidly healing, and it is said that the unfortunate dog looks all the better for being docked, bearing a greater resemblance to the old English bob-tailed sheepdog than it did previously.

The dog which bites will always be with us; still, it seems strange that when once it has shown undue use of its teeth on the person its owner should run the risk of keeping the animal, or, at any rate, of allowing it to be at large. A somewhat interesting case bearing on this was heard at Edmonton County Court on Friday the 12th inst. It appeared that the plaintiff's little boy of 9 years old was out walking when he was attacked by a collie dog, knocked down, and severely bitten in the thigh. The dog was at the time in the care of the defendant's daughter. Damages to the amount of £5 was claimed, and it was proved that the dog, when in charge of the same young lady, had previously bitten another child. So far the case was simple, but an attempt was made to prove that the dog had been irritated by the defendant and his brother throwing stones at it, and knowledge of the dog's previous biting was denied. His Honor Judge Tindal Atkinson, in giving judgment, said he did not think that the defendant had personal knowledge that his dog had bitten anyone on a former occasion, but he was in the habit of allowing his daughter to take charge of the dog. It had been admitted that the plaintiff had been bitten, and it had been proved that the dog had, in the presence of Miss Collins, bitten, or attempted to bite, other children. It had been urged that her knowledge could not make her father liable, but, in his opinion, if an owner intrusted a dog to another person, and if it bit anyone in the presence of that person, the owner must be taken to have knowledge of the fact. He considered scienter had been proved, and he awarded plaintiff £3 12s. As a fact, the amount is small in comparison with the injury which might have ensued from the bite of the dog, but the decision of the judge is not only good law, but common sense. In these days of rabies scares and dog regulations the ordinary biting dog is one of the problems which has to be taken into consideration, and if an owner persists in keeping a dog when it is known to have already had that "first bite" to which under ordinary circumstances it is entitled, he has only himself to blame if he is cast in heavy damages when it repeats the offence, which it is pretty well certain to do sooner or later. A dog which bites should either be strictly confined and kept under control, or, failing this, be destroyed.—Field (London).

Pointer Club of America Field Trials.

The Pointer Club has issued the following circular:

Derby, All-Age and Championship Stakes.—Entries close Oct. 15. Members' Stake before starting. Your attention is directed to the date, Oct. 15, of the closing of entries of the Derby, All-Age and Championship Stakes of our annual field trials, which will commence on Nov. 6 at Eastport, Long Island. The entry fee for each stake is $5, to accompany each nomination, the balance $5, $10 and $20 respectively, is payable before starting. We have control of 6,000 acres for the trials and reliable information obtained assures us of plenty of birds. Entries to Members' Stake will close before starting, the fee being $10. It is earnestly hoped that the members of our club will come forward with their entries promptly, thereby insuring a successful trial. I am pleased to state that nominations are now coming in, and the outlook for a good list of starters is most flattering. Trains will leave Long Island City via Thirty-fourth street ferry, New York, at 8:30 A. M. and 3:30 P. M. Excursion tickets, $3.60. Distance, seventy miles.

C. F. Lewis, Secretary and Treasurer.

48 Wall Street, New York.

National Beagle Club of America.

Mr. Bradford S. Turpin, of Roxbury, Mass., and Mr. George B. Appleby, of Oxford, Mass., have accepted the invitation to act as judges in the thirteenth annual trials of the National Beagle Club of America, which will commence on Nov. 3, 1902, at Mineola, Long Island.

Yachting.

For Cruising Yachtsmen.

With the purpose of stimulating the interest in cruising, and the keeping of a detailed log by cruising yachtsmen during the season of 1902, the publishers of Forest and Stream offer prizes for the best stories of cruises submitted to be published in Forest and Stream. It is believed that these will form not only entertaining records of pleasant summer days spent afloat along our coasts and waterways, but will furnish information of practical value to other yachtsmen making subsequent cruises on the same waters.

Prizes will be awarded to the three best stories as follows:

First prize, $50.00.
Second prize, $30.00.
Third prize, $20.00.

Contributions are invited under the following conditions:

1. The cruise must be made in waters of the United States or Canada in the season of 1902.

2. The cruise must be made in a sailing yacht, power to be used only as an auxiliary, if at all.

3. The story must be prefaced by a description of the boat. Cruises should be treated in as interesting and readable a way as possible, but should be practical and contain all possible information and data that would be of value to men going over the same route. A description of the handling of the ship in all weathers will be regarded very favorably in making awards, and it is suggested to writers that an accurate account be kept of all incidents happening while under way.

4. An outline chart suitable for reproduction, showing the course taken, must accompany each article. When possible, articles should be accompanied by amateur photographs taken on the cruise, including one of the boat. Good photographs will be considered in making the awards.

5. The story should contain about seven thousand words, written on one side of the paper only, and must be received at the office of the Forest and Stream Publishing Company, 346 Broadway, New York city, on or before Nov. 15, 1902.

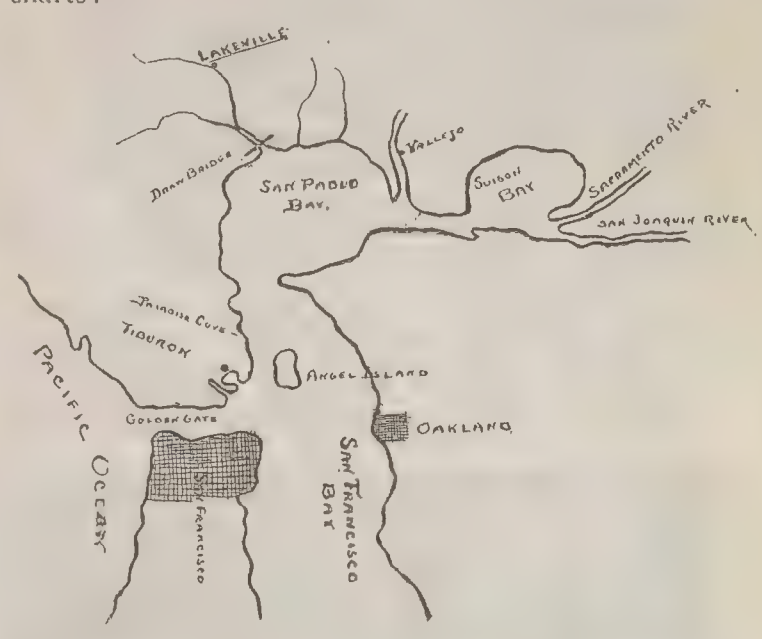
Mr. T. C. Zerega has very kindly consented to act as judge and to make the awards.

Cruise to Lakeville.

The Corinthian Y. C., of San Francisco, is, if anything, a live little club. Its members believe in yachting and do it. They sail for pleasure and get it. Forty sailing yachts, big and little, comprise its fleet, and there are no idlers. The management at the beginning of each season issues a schedule of cruises, and each event brings out a good fleet. Labor Day falling on Monday this year, afforded three successive off days, and in consequence the following announcement formed a part of the schedule of events:

	High Water.	Low Water.
Aug. 30, Cruise to Lakeville.....	21.10.54	14.51.26
Aug. 31, Cruise to Lakeville.....	10.40.51	15.45.23
Sept. 1, Cruise to Lakeville.....	11.20.54	16.35.20

Now Lakeville, be it known, is not a yachting center, or, as to that, any other kind of a center; but it is on the map, and all good Corinthian yachtsmen are supposed to be able to find any old place that is duly charted. The following rough draft is approximately accurate, and shows the way from Tiburon (Corinthian Y. C. anchorage) to Lakeville less plainly than does the Government charts:



It looked easy, on paper, and no one for a moment doubted the ability of the fleet to assemble at Lakeville in due schedule time. It was to be a run to the drawbridge Saturday afternoon—free wind and tide. Then to Lakeville and back to the draw bridge on Sunday. That left Monday for the windward beat home.

Here in San Francisco we schedule the wind with the same confidence as the tide. We count on a never-failing twenty to thirty-five miles an hour wind coming in through the Golden Gate and passing up the bay. Our yachts have evolved a type which seems best suited to the local conditions of heavy wind and sea, and are uniformly deep bodied, beamy, heavily ballasted and powerfully constructed. Six thousand pounds of fixed ballast for 25ft. waterline is not unusual, and is found useful and convenient when bucking one of our regular summer breezes.

MAY.

For the cruise to Lakeville, the writer took passage on the May at the invitation of her owner, the Commodore.

May is essentially a "big-little boat." Waterline 22.04ft.; sail area, 675.49ft.; draft (board up), 4ft. Fair sized cockpit and cabin big enough for a 35-footer. Our cargo comprised the Commodore, the Artist (a title which he disclaims), and the writer; and provisions apparently ample for a week's cruise. Two Primo oil stoves manipulated by the combined genius of the Commodore and Artist demonstrated the powers of mind over matter below decks.

At about 3 P. M. the fleet broke anchors and headed up the bay. A nice breeze soon carried us by Angel Island, and the prospects of a fine run with the wind and tide were never brighter. The larger yachts gradually took the lead and looked proud and beautiful. We shortly noticed, however, that as tail-enders we were manifestly closing up the gap which separated us from the leaders, and we began to think that, after all, size was not always equivalent to speed; and the Commodore, in consequence soon began to show unmistakable signs of haughtiness—a condition no one has ever seen him assume on any account other than his boat. His pride was shortly banished. The leading yachts had run into a dead calm and we were soon with them on equally painful terms. But we would soon have wind. Calms, in summer, on San Francisco Bay, are so thoroughly out of place that no one could believe this one would last long. But the tide—a good long flood—was under us, and we were in no hurry, and so why should we care. That tide, too, proved a delusion. Whether the fault of the tide table or of the tide, no one has yet discovered; but our fleet, like the Irish Dragoon, was plainly advancing backward. Our pennants drooped with the sadness of wilted flowers. The dinghys mixed, side on, with dangling sheets. Not a ripple. Not a sound. Everything sun. The quiet could almost be heard. But for the chaffing of the crews there

seemed no life. Thus we drifted, some one way, some another, until approaching darkness shaded all prospects of the drawbridge and began to cloud the situation with a somewhat serious aspect. Listless smoking, lounging and waiting ended. Something had to be done. Two courses were open—light lamps, wait for the wind and try a night run, or "jay-hawk" for Paradise Cove on our port beam. The "jay-hawk" proposition prevailed. The Commodore produced the sweeps; the Artist and the writer produced the muscle. We had the better of the big yachts—they couldn't be rowed; but the better was none too good. Heavy ballast in a boat is admirable when needed. It is not needed for rowing purposes. However, we made Paradise Cove and were soon snug above decks and deep in the mysteries of the larder below. And, oh, what a dinner!

Sometime about 9 or 10 o'clock, while we were digesting our dinner with the Commodore's cigars, a good breeze sprung up somewhere out of the darkness, and we ventured the hope that the other yachts were making good use of it; but we did not even so much as counsel together

MORNING VISITORS.

over the propriety of a night run. They had to do so; we did not.

The morrow as clear and likewise as calm as had been the preceding evening. We found two of our yachts in the Cove with us. A visit from them disclosed that they were as ignorant of the whereabouts of the rest of the fleet as we.

Breakfast over, dishes washed, cigars smoked, and still no wind. About the middle of the forenoon a steam launch offered us a line, and so we towed back to Angel Island and there caught a good breeze coming in the Golden Gate; but as the entire bay north of us was still calm, we determined that Lakeville was not for us, and headed for the main channel, and there enjoyed a long sail in the smacking breeze of the Golden Gate, and returned to our club moorings in the evening. As it would be manifestly impossible to reach Lakeville and return next day, we cut Lakeville out and repaired to a commodious house-boat, owned by the Commodore, for the night, and determined to devote the next day to near-by sailing.

By the middle of the afternoon of Monday the yachts began to return. It was indeed amusing to hear their experiences. The night run up the bay had been too much for the bump of navigation of the most of them. One captain had anchored in all confidence in front of the drawbridge. Daylight, next morning, disclosed no bridge, and he still declares that the bridge has been stolen. Another captain anchored in the channel in front of the bridge with so much confidence that soundings were not deemed necessary. Next morning neither bridge nor water were in sight. He had anchored on top of a mud flat. One yacht fetched up at Vallejo. Of the entire fleet, but two yachts reached Lakeville. Thus ended the cruise; and the good people of Lakeville are still ignorant of the honor that has been paid them.

Atlantic Y. C.

CAPE MAY OCEAN RACE.

Sept. 20 to 21.

Schooner Iroquois, belonging to Mr. J. G. N. Whittaker, carried off the honors in the Atlantic Y. C. ocean race from Sea Gate to and around the Northeast End Lightship off Cape May and return, a distance of 210 nautical miles. The distance was sailed in 27h. and 55m., an average speed of seven and a half knots an hour, with nearly half the distance a beat in a nasty sea.

On corrected time, figured according to the rule in general use for allowances, Iroquois beat Mr. Louis Bossert's Coronet 2h. 2m. 19s.; Mr. George Lauder's Endymion, 2h. 41m. 23s., and Com. Tod's Thistle 9h. 11s. Flagship Sachem, belonging to Com. Fred F. Adams, of the Larchmont Y. C., withdrew during the early part of the contest.

Coronet was the first craft to finish, having covered the 210 knots in 27h. 49m. 30s. Because of her size, however, she lost the contest to Iroquois on time allowance. The time of Coronet is close to the record for the course. In a New York Y. C. contest over the same journey, held in 1872, between Dreadnaught and Palmer, it is said that the former, as winner, did the distance in 25h. 5m. 40s.

Iroquois won the Northeast End Light Vessel cup, a new trophy donated by Com. Robert E. Tod. Coronet captured second prize, and Endymion third, the latter two offered by the Atlantic Y. C. Beside these prizes, Corinthian crew pins or bars were given to Corinthians on winning yachts.

The contest was scheduled to start on the afternoon of Friday, Sept. 19. The weather was rather inauspicious. All were anxious for the long struggle to begin, however, and Chairman George Hill, of the Regatta Committee, decided to send the yachts away as near schedule time as possible. The preparatory signal was set at 1:15 P. M., and 15m. later the starting gun was fired. In addition to the craft which ultimately completed the contest, Mr. Charles Smithers' Muriel started in the initial attempt to begin the race, and in a light wind walked away from the rest of the fleet.

There was a great deal of regret expressed that Mr. George W. Putnam's auxiliary schooner, Ariadne, which did so well in the race to Fire Island Lightship, did not compete, and also surprise that Mr. Edward R. Coleman's Hildegarde and Mr. Henry S. Parmelle's Alert were not at the line.

Shortly after the first start the N.E. wind blowing began to lighten and the weather grow thick. At 4 P. M., when the boats had reached a point about a mile southeast of Roamer Shoal Light, Com. Tod signaled from the flagship that he thought it best to call the race off for the day. The other starters consented, and the fleet returned to anchorage at Sea Gate as best they could.

It was decided to start as early Saturday morning as weather conditions would permit, but not until 9 o'clock A. M. did the times look at all propitious. Ex-Rear Com. Henry J. Robert set the preparatory signal from his sloop Ondawa at 9:30 o'clock, and 15m. later the starting signal was given. Muriel had withdrawn, leaving six seaworthy schooners to essay the contest, two of which carried with them enviable records for racing in like conditions.

In a memorable struggle in 1887 Coronet beat Dauntless from Bay Ridge to Queenstown for a pure of $10,000 a side, while in the summer of 1900 Endymion made the fastest time ever credited a sailing vessel from Sandy Hook to the Needles, doing the distance in thirteen days and twenty hours.

The wind at the start was E. by S. and fresh. Sachem led the fleet away. The crossing times were: Sachem, 9:46:00; Iroquois, 9:46:30; Thistle, 9:46:50; Endymion, 9:46:55; Coronet, 9:49:07. The yachts had a reach to West Bank Light, where sheets were trimmed in to shape a course through Swash Channel to the westward of the bell buoy at the entrance.

Shortly after 1 o'clock Endymion drew by Iroquois. At the same time Coronet was slowly closing up the distance which separated her from the leaders, she having passed Thistle. The fleet, with the breeze on the port quarter, had a reach down the Jersey coast. When Sandy Hook was passed Endymion had forged ahead of Sachem, which was followed by Iroquois, Coronet and Thistle in the order named.

Reaching in a freshening breeze the craft gradually heeled until lee rails were well under. At 11 o'clock Iroquois passed Sachem, and a bit later, when off Long Branch, the latter wore around and stood for Sea Gate. At Barnegat, which was passed at 2:40, Endymion had drawn out a two-mile lead on the rest of the fleet. Iroquois was second, a mile and a half ahead of Coronet. Thistle was last, and in the light breeze was gradually picking up on Coronet. Atlantic City was passed at sundown. Endymion was still leading and Thistle had gotten abreast of Coronet.

Endymion was the first yacht to round the Northeast End Lightship. Each boat had to take her own time. Endymion turned at 9:16:00; Irequois, at 9:24:00; Coronet, 9:55:00, and Thistle at 10:07:00. Endymion had covered the 105 nautical miles in 11h. 31m.

The homeward journey was different from that going out. The breeze was blowing E. by N. For three hours or more it continued soft, and then began to pipe hard, making it advisable to reef on all of the craft. Endymion stood in shore on the starboard tack. Coronet and Iroquois held seaward, and when they came about were able to make the whistling buoy off Atlantic City. The breeze continued to freshen and picked up ugly seas. Conditions just suited Coronet, and she moved through the water at a fast clip.

Iroquois in the meantime was doing remarkably well. She drew ahead of Endymion at about 7 o'clock on the Sabbath morning, the latter still being well inshore. Iroquois and Coronet laid their courses for Scotland Lightship. Just before that vessel was reached Coronet took the lead, which she maintained until the end crossing the finish line at 1:34:30. Iroquois finished at 1:40:00, and Endymion at 3:04:00.

Thistle had a hard time of it toward the latter part of the journey, but by shortening sail worked homeward and finished at 8:47:40. As a result of the ocean race this year, Com. Tod has decided to take the square sails off his craft, and substitute a modern schooner rig. Alterations toward that end are now going on. Working sails and a square sail on the foremast of the schooners was the only canvas allowed in the ocean race.

On board Iroquois were the owner, Mr. J. G. N. Whittaker, and Horace Bullock. Coronet carried Mr. Louis Bossert, the owner; Dr. L. Bowman, Messrs. F. Hewlett, F. Flug and W. D. Hoxie. On board Thistle, beside Com. Tod, were Messrs. J. Fred Ackerman, C. L. Schuyler, Ernesto Simondetti and George W. Royan. Com. Tod is enthusiastic over ocean racing, and this branch of yachting will be well provided for in the Atlantic Y. C. schedule of 1903. The summaries:

Cape May Ocean Race—Start, 9:45 A. M. Sept. 21, P. M.

	Finish.	Elapsed.	Corrected.
Iroquois, J. G. N. Whittaker	1 40 00	27 55 00	25 47 11

LA RITA.

Coronet, Louis Bossert	1 34 30	27 49 30	27 49 30
Endymion, G. Lauder, Jr.	3 04 00	29 19 00	28 28 34
Thistle, Robert Tod	8 47 40	35 02 40	34 47 22
Sachem, F. T. Adams	Withdrew.		

SEA GATE, L. I.

Saturday, Sept. 27.

The Atlantic Y. C. closed its racing season on the afternoon of Saturday, Sept. 27, with a regatta for the regular classes in the Y. R. A. of Gravesend Bay. The different boats competed for a trophy offered by Mr. R. L. Cuthbert, all sailing in one class on a handicap basis. Com. Robert E. Tod presented first prizes to winners in each class on elapsed time, while the club offered seconds and thirds where conditions demanded. Corinthian crew pins or bars went to Corinthians in winning boats, yachtswomen included.

It was a poor day for racing. Little or no wind greeted the boats at the start, which was made in a strong head tide. Although the struggle was no test for the handicap system, Sea Gate Corinthians feel that in recognizing this feature of yachting, the club has taken a step in decidedly the right direction.

The raceabout Cockatoo, of the Atlantic Y. C., led the fleet from start to finish. She carried off the honors in class P and won the Cuthbert trophy on corrected time. In this competition Vagabond was second, Martha M third and Karma fourth.

Winners in the different classes were Sunol, Vivian, Cockatoo, Spots, Pickaninny and Jig-a-Jig. Martha M. scored a sailover. Those securing second prizes were Kangaroo, Gwendolen, Vagabond, Wraith and Quinque. Karma won a third.

Handicaps for the Cuthbert trophy were figured by Chairman George Hill of the Regatta Committee, on past performances of the craft. The corrected time of each yacht was the percentage of her elapsed time given in the following list:

Vivian	Scratch	Kangaroo	85
Gwendolen	96	Karma	85
Caribou	93	Spots	84
Bonito	92	Wraith	84
Sunol	91	Jig-a-Jig	84
Cockatoo	87	Flying Fox	84
Vagabond	87	Elsie	80
Song and Dance	86	Quinque	77
Martha M.	86	Pickaninny	76

Twenty-one craft started the race. Cruiser, of the Brooklyn Y. C., and Peanut, of the Atlantic Y. C., did not finish. Bronco fouled the outer mark and was disqualified.

It was the original intention to start the contest at 2 o'clock. The course was to be one aggregating sixteen nautical miles, with the marks at West Bank Light, Old Orchard Shoal Light, Southwest Spit and Roamer Shoal light, with the start and finish off Sea Gate.

At the time for starting there was no wind stirring. After waiting an hour the craft were sent away, the preparatory signal being fired at 3 o'clock. The different classes were started at three-minute intervals. Class M boats were first away, and included Sunol, Kangaroo and Bonito. In class N were Vivian, Gwendolen, Caribou and Cruiser.

Five boats came to the line in class P. They were Cockatoo, Vagabond, Karma, Song and Dance and Elsie. Spots, Bronco and Wraith constituted class Q. Pickaninny, recently purchased by Edwin H. Low, of the Atlantic Y. C., and Peanut, started in class R. Three Marine and Field craft essayed the journey. They were Jig-a-Jig, Quinque and Flying Fox. Martha M. was the only starter in the catboat class.

The wind was so light there was hardly steerage way on, and the craft had a strenuous time trying to work around Norton's Point in face of the strong flood tide. They drifted about aimlessly until about half an hour after the start, when a slight zephyr came in from the southwest.

Nearly all of the craft had kept close to the Sea Gate shore to avoid the tide as much as possible. But the land, however, was enough to shut off the light air. Cockatoo and a few other boats which had stood over to the westward were in a much better position when the breeze came. The Chubb craft took the lead and was never headed.

The breeze was so light that Mr. Hill, of the Regatta Committee, ordered the boats to turn the bell buoy at the entrance to Swash Channel as the outer mark. This made a journey of four miles, or eight miles for the entire course. The wind hauled to the southward and strengthened perceptibly at about 4:30.

Most of the craft made the buoy on two close-hauled legs, while a good spinnaker run was in order on the journey home. Cockatoo was first to round the outer mark. Then came Vagabond, Vivian and Karma in the order named.

The run home was rather slow, and it was long after dark before the last boat had finished. Mr. George Hill followed the racers over the course in his ducking launch, Akista, and the tug Agnes H. White was at hand in case of need. C. L. Schuyler, of the Regatta Committee, took the finish times. The last craft ended the race at 6:40 P. M.

Sunol beat Kangaroo 8m. and 45s.; Vivian beat Gwendolen 21m. and 50s.; Cockatoo headed Vagabond by 4m. and 30s.; Spots beat Wraith 45s., and Jig-a-Jig beat Quinque 12m. and 5s. For the Cuthbert trophy, Cockatoo beat Vagabond 3m. and 35s., Martha M. 6m. and 34s., and Karma 7m. and 18s. The summaries follow:

Sloops—Class M—Start, 3:03.

	Finish.	Elapsed.	Corrected.
Sunol, John Abbey	6 58 20	2 55 20	2 39 33
Kangaroo, C. H. Humphreys	6 07 05	3 04 05	2 36 28
Bonito, Haviland Brothers	6 09 05	3 06 05	2 51 12

Sloops—Class N—Start, 3:06.

Little Haste and La Rita Matches.

CHICAGO, LAKE MICHIGAN.

Sept. 26 and 27.

Mr. T. K. Lothrop's 21-footer Little Haste, which earlier in the week arrived at Chicago from Boston to sail a series with La Rita, champion of the Columbia Y. C., of Chicago, took the measure of the Chicago boat without any difficulty whatever, and with plenty of leisure to spare in the first of the series, which was sailed on Friday, Sept. 26. The result was not wholly decisive, as the wind was very light, and the match much a drifting one, sailed in light airs from the S.E. La Rita has been a surprisingly stiff and handy little craft in heavy going, pointing especially well, and having no difficulty in defeating the best of the local rivals, Colleen having given her the closest rubs so far. It was, therefore, not exactly the sort of weather which La Rita wants; though it is hardly good form to complain much about the weather when one has received so clever a beating as the Boston boat administered yesterday.

The course was over the twelve-mile triangle of the Columbia Y. C., and the preliminary gun was fired at 1:50. Little Haste was first over the starting line, crossing at 2:00:10, La Rita 10s. later. The first leg was a broad reach, and both boats at once broke out balloon jibs, the Boston boat shifting into the weather berth promptly. It was a fox chase thereafter, the time at the first buoy being: Little Haste, 2:27:07; La Rita, 2:29:34.

At the crib the faint breeze became still fainter, and the second leg, involving a beat to windward, was a tame affair, La Rita having no chance at what was considered her best point of sailing. On this leg Little Haste doused the balloon jib and broke out spinnaker, La Rita using the same canvas. It seemed as though the Chicago boat were anchored at this stage, the Boston craft going on as if pulled by an invisible wire. The latter continued to better its lead, the time at the second stake being: Little Haste, 3:45:02; La Rita, 4:18:12.

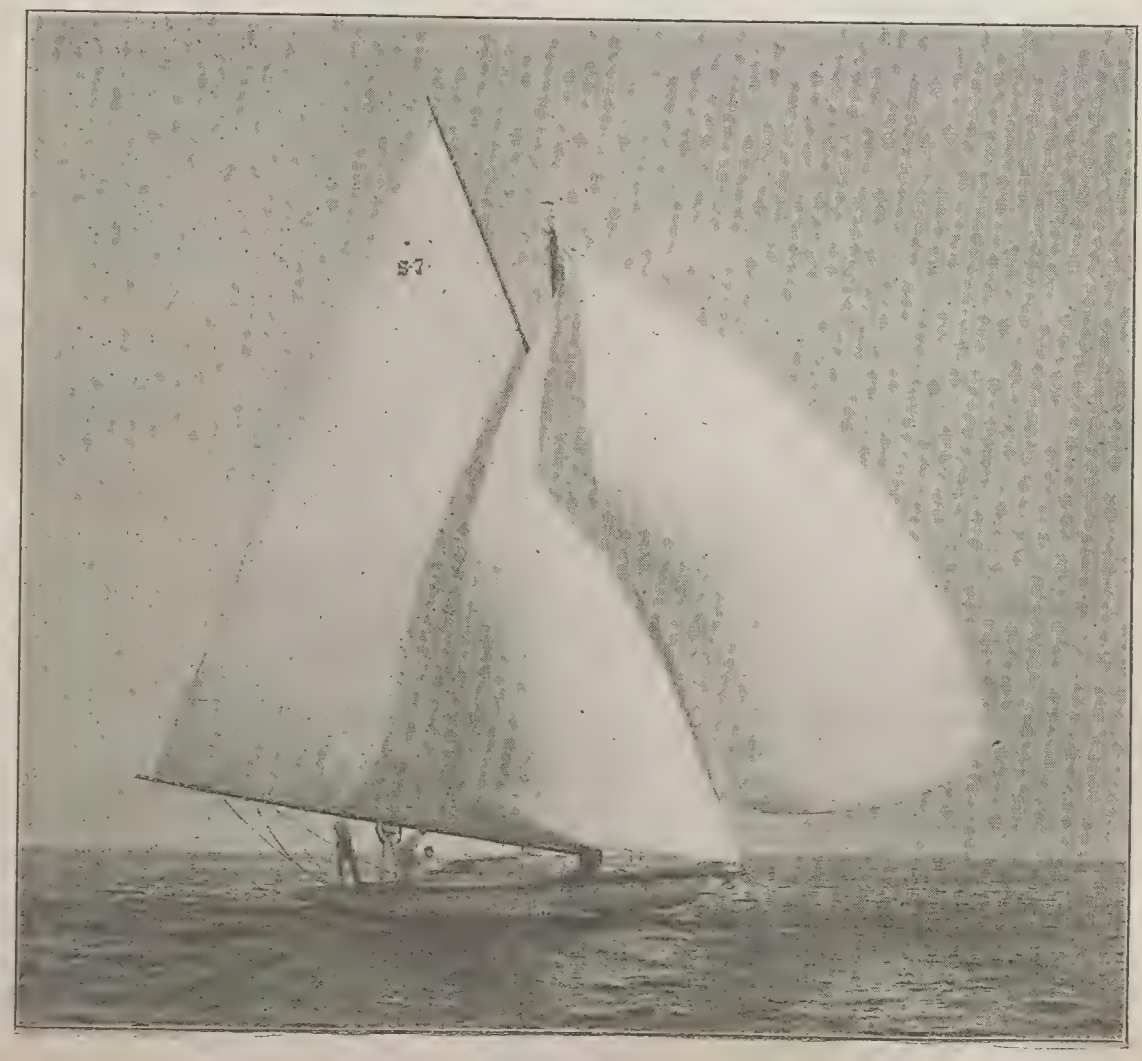
Running home, Little Haste kept up the spinnaker and also a working jib, La Rita resorting to the balloon jib again. La Rita caught a slight cat's paw, which enabled her to close up the gap slightly, but the Easterner had the race wholly in hand long before this time. The summary, start 2:00:

	Finish.	Elapsed.
Little Haste, T. K. Lothrop, Jr., Boston	5 22 55	3 22 55
La Rita, George R. Pearl, Chicago	5 35 05	3 35 05

The judges were Messrs. Henry L. Hertz, Charles E. Scales and Charles E. Kiemer. Official timer, Mr. Joseph Ruff.

Saturday, Sept. 27.

The second of the series race between La Rita and Little Haste was sailed on Saturday, Sept. 27. The course was six knots to leeward and return, and the wind was strong from the S.W. Little Haste beat La Rita on the run to leeward stake boat about 1m. On jibing around



LITTLE HASTE.
Photo by Willard B. Jackson, Marblehead.

the stake boat she split her mainsail from leach to hoist. As the mainsail was close reefed at the time, she was totally disabled, and La Rita finished the course alone. Up to time Little Haste was disabled, La Rita was carrying full sail; after this accident her crew close reefed her and took it easy on the beat home.

This gives each yacht one race, and the deciding race will be sailed Monday if the mainsail of Little Haste can be repaired in time. If not, the race will be postponed until repairs are completed. The summary, start 2:00:

	Finish.
La Rita, Geo. R. Pearl	4 43 20
Little Haste, T. K. Lothrop, Jr.	Disabled.

The judges were Henry L. Hertz, President of the Inland Lakes Yachting Association; Charles E. Scales, Chairman of the Regatta Committee of the Macatawa Bay Y. C., and Charles E. Kiemer, of Chicago Y. C. Official timer, Joseph Ruff.

The third race was sailed on Monday, Sept. 29, and won by Little Haste by over 14m.

Penataquit-Corinthian Y. C.

BAY SHORE, L. I.

Season of 1902.

The racing season of 1902 will go down in history as one of the best ever experienced by the Penataquit-Corinthian Y. C. of Bay Shore, L. I. Interest of the year was centered in the competition for the Lighthouse cup donated in 1901 by J. Campbell Smith for a series of special races in class N.

In accordance with the conditions of the trophy, six contests were sailed, in which seven crack yachts entered. Mr. H. O. Havemeyer's new Herreshoff creation, Electra, carried off the honors of the year with a total of 71 points. Amy Foster, owned by J. Campbell Smith, finished second with 44 points.

By winning the series of this year, Electra scores a leg on the trophy, and the privilege of having her name and that of her owner engraved upon it. The cup becomes the personal property of the member who succeeds in winning the yearly series three times, not necessarily consecutive.

With the advent of the modern boats some of the older class N craft in the club were forced out of any chance of winning, so the Regatta Committee formed a special class X, and offered a silver tankard to be won by the yacht scoring the greatest number of points in a series of three races. Mr. Josiah Low's Alpheus emerged victorious, with 36 points; Mr. C. H. Covell's Treasure was second, with 31 points.

From the start competition for the Lighthouse cup has created a great deal of interest in the Bay Shore organization. Amy Foster, belonging to the donor of the trophy, carried off the series of 1901. The other craft finished in the following order: Wanda, Mr. John R. Suydam; Pinkie, Mr. Allan Pinkerton; Gayety, Mr. Richard Hyde; Viking, Mr. F. F. Shortland; Treasure, Mr. C. H. Covell; Grotona, Mr. H. H. Hollister; Selnada, Mr. J. Fred Ackerman.

Two new craft were built for the races of this year—Electra, the winner, and Arrow, belonging to Mr. John R. Suydam, of New York city. The latter entered only the first two contests, but in the second defeated Electra, an honor which has come to no other boat in the series. Arrow was designed by Mr. Clinton H. Crane, of Messrs. Tams, Lemoine & Crane, and built by Frank Wood, of City Island. She is 43ft. 9in. over all and 25f. 9in. on the waterline.

Electra was launched from the Herreshoff shops early in the season, and, it will be remembered, showed her heels to Quakeress II., one of the Buzzard's Bay thirties, in an impromptu scrap in Bristol Harbor. Electra is 42ft. 5in. over all, 27ft. 5in. on the waterline, 12ft. 3in. beam and draws 2ft. 11½in.

Fifty prizes have been awarded by the club during the season. Silver mugs were given for firsts and cups of pewter for seconds. Every race scheduled was run off with a gratifying number of entries. Twelve craft started in the spring regatta on June 28, nine in the summer event on July 19, twenty-seven in the open regatta of Aug. 7 and twenty-two in the fall race on Labor Day.

In the system in use at the Penataquit-Corinthian Y. C. the first boat in each race receives ten points, the second six points, the third three points, and the fourth one point. In addition to the above a yacht receives two points each time she starts, and an additional three points for completing the course.

The Regatta Committee for 1902 consisted of Harry M. Brewster, chairman; Bryce Metcalf, secretary; Samuel T. Cushing, Robert W. Haff and Regis H. Post. The records of the Lighthouse cup and special class X series follow:

Class N—Lighthouse Cup.

	June 28	July 5	July 19	Aug. 23	Sept. 1	Sept. 6	Total Points.

Kennebec Y. C.

BATH, KENNEBEC RIVER, ME.

Saturday, Sept. 20.

The second special club race of the Kennebec Y. C. was held on Saturday, Sept. 20. The boats covered short course No. 4, starting off the club house, thence N. to and around lower Winslow's Ledge Buoy, thence S. to and around buoy off Reed's Wharf, and then back to the finish line. The wind was fresh from the S.E. and the weather clear.

The starting gun was given at 2:24, and 40s. later Joker crossed, followed by Kittie, Aspenet, Agnes, Swift, Hecla and Dorinda, in the order named. Dewey broke her tiller and withdrew. Joker led at the upper mark, but Kittie took the lead on the beat down the river and was well ahead at the lower mark. At this point she had trouble with her light sails, and was passed by Agnes, which boat won by nearly a minute. Joker was second, with Kittie third. The summary:

15 to 25ft.

	Start.	Finish.	Elapsed.	Corrected.
Agnes, Thos. Jones	2 25 09	3 30 15	1 05 06	1 04 23
Joker, R. H. Gardiner, Jr.	2 24 40	3 31 25	1 06 45	1 05 27
Kittie, H. L. Lewis	2 24 49	3 34 26	1 09 37	1 07 34
Dorinda, P. R. Blaisdell	2 27 03	3 35 45	1 08 42	1 08 42
Swift, O. J. Ledyard	2 25 35	3 37 07	1 11 32	1 08 53
Aspenet, ex-Com. F. Cook	2 25 00	3 34 57	1 09 57	1 08 54
Hecla, G. A. Ward	2 25 36	4 02 41	1 37 05	1 30 29
Dewey, Bonney & Farrar	Disabled.			

Boston Letter.

Boston, Sept. 28.—When the racing season of 1902 was first opened, considerable comment was made upon the extreme overhangs which were being produced in the restricted classes, especially in the 21ft. class. It was pointed out at that time that this feature was one which the Yacht Racing Association of Massachusetts had no intention of allowing under its restrictions. Such yachts were built, however, and the result is general dissatisfaction among many of the yachtsmen who have built yachts for this class. As a matter of fact the winner of the championship owes much of her success to the fact that she was simply the largest boat in the class. In order to get the extreme overhangs, it was necessary to build a flat boat, and the result was a perfect scow, with great beam and sail area, and light displacement. But all this is to be changed, either by the rule of the Yacht Racing Association or by the establishment of a proposed new 22ft. cabin yacht class.

Last week a meeting of interested yachtsmen met in the office of Mr. Sumner H. Foster and voted to adopt a set of rules governing this new class, and also to organize an association. The Yacht Racing Association will be asked to adopt the new class, as it did the class of the Eighteen-foot Knockabout Association. What the framers of the new class are trying to get is a large boat on a short waterline, which will have good speed and will also be a comfortable cruising yacht—in short, they are trying to get what would be a rational 25-footer, so far as dimensions go, on a 22ft. waterline. There are some features about the new boat which are commendable. There are others which some of the yachtsmen are not so sure about. However, the class has been formed, and it is stated that there are several yachtsmen who will build for it. Some of these men are on the North Shore and some at Duxbury. The organization of the class was rushed, as it was thought that any delay would be likely to prevent new yachts being turned out in time for next season's racing. While this would be a very good reason, if there were assurance that every detail of the new class is an improvement over existing yachts, and that the new boats would be permanent fixtures, there are some people who think that it would have been well to have studied the matter out more carefully before asking yachtsmen to invest their money in new boats.

The Executive Committee of the Yacht Racing Association, realizing that something should be done in the matter of rating yachts on the lengths they actually use, has been at work on different systems for some time. The committee has as yet made no announcement, although it is likely to very soon. The 22ft. Association has put a limit on the over-all length of their boats, a feature which is not deemed very good by the majority of yachtsmen, and it is known that those on the Y. R. A. Executive Committee are opposed to a direct limit. There is much talk of adopting the measurement rule which Herreshoff has proposed for the New York Y. C., which would leave the matter of overhangs one that would govern itself. If this is done and a rating is made for 21-footers, there is likely to be conflict of the new 22ft. class with the Association. This is undesirable and will not do any good, as there are at present four 21ft. classes.

There will be an informal dinner at the town house of the Hull-Massachusetts Y. C. on Saturday evening, at which the club championship cups and those offered for the mid-summer series will be presented to the winners. The racing season of the club was most successful. The club has been very generous in offering cups and cash prizes, and as a result the races have been very well attended. Light airs generally prevailed for the club events, and as a result the champions, with one exception, are different from those of the Y. R. A. of M. In the 25-footers, Sally VI. won out by a good margin. In connection with this class it may be of interest to tell that at one time Chewink II. had control of the championship in this class, and, had she stopped racing, she would have won it. Mr. Macomber, however, preferred to continue racing, and, although he lost the championship by doing so, he is deserving of great praise for the sportsmanlike spirit he showed, and has set forth a grand example for racing yachtsmen. In the 21-footers Chloris and Rooster II. were very close for the championship, so close that it was necessary to resail an unfinished race to decide it. Rooster was ahead before this race was sailed, and she did not show up for a final test with Chloris, which took a walkover. This pulled Chloris' percentage up, and she got the championship. In the 18ft. knockabouts, Malillian won the championship by a good margin. The following is the table of percentages:

Class D—25-footers.

	Starts.	Per Cent.
Sally VI., L. F. Percival	6	85.56
Chewink II., F. G. Macomber, Jr.	9	78.14
Calypso, A. W. Chesterton	8	58.75
L'Aiglon, E. W. Hodgson	5	43.32
Early Dawn, J. E. Doherty	3	20.66
Little Peter, G. B. Doane	3	15.34
Class S—21-footers.		
Chloris, Cheney & Lanning	7	80.24
Rooster II., Adams Bros.	4	77.50
Mildred II., S. P. Moses	4	60.00
Little Haste, T. K. Lothrop, Jr.	3	50.00
Micmac, Richard Hutchinson	4	30.00
Class I—18ft. Knockabouts.		
Malillian, B. S. Permar	8	87.50
Biza, Alfred Douglas	8	79.77
Gertrude, H. E. Lynch	5	75.00
Domino, C. C. Clapp	4	59.37
Ayaya, W. P. Keyes	6	44.86
Nethla, Cole & Bacon	8	39.78
Stroller, L. B. Goodspeed	3	21.87

John B. Killeen.

Boston, Mass.—We have had a great many inquiries for yacht fittings through your paper, and are pleased with the result of the advertisement. A. S. Morss & Co.

Columbia Y. C.

CHICAGO, LAKE MICHIGAN.

Saturday, Sept. 20.

The eleventh fall annual regatta of the Columbia Y. C. was sailed on Saturday, Sept. 20. Nineteen boats started. The boats covered the club's ten-mile course. Neva did splendid work and beat every boat in the fleet over the course. Neva won the George K. Spoor cup as time prize. Alice, first among the schooners, won the cup put up by Vice-Com. McGuire, and Vixen, first among the class B yachts, won the ship's clock, put up by Rear-Com. Vernon C. Seaver. The summary:

Class B—Start, 2:30.

Vixen	4 41 00	2 11 00
Martha II.	4 47 05	2 17 05
Pen	4 46 20	2 16 20
Mawaja	5 53 33	2 33 33
America	5 24 06	2 54 06
Marion H.	6 00 00	3 30 00
Schooners and Yawls—Start, 2:35.		
Alice	4 49 32	2 14 32
Nomad	5 20 20	2 45 20
Glad Tidings	5 42 00	3 07 00
Tartar	5 54 00	3 19 33
Mercury	Withdrew.	
Class A—Start, 2:40.		
Neva	4 21 30	1 41 20
La Rita	4 40 08	2 00 08
Colleen	4 48 35	2 08 35
Arab IV.	4 44 55	2 04 55
Privateer	4 51 10	2 17 10
Margaret	5 03 44	2 23 44
Vision	5 20 10	2 40 10
Eleanor II.	5 19 50	2 39 50

The winners were Vixen, Alice and Neva.

Monday, Sept. 22.

The eighth race for the Webb cup was sailed on Monday, Sept. 22. The breeze was very light and fluky and the race was a most unsatisfactory one. La Rita was ahead at the second mark, with Privateer second; the rest of the boats were way astern. The wind dropped, leaving the two leading boats becalmed. The rest of the boats caught a little wind and finished before it reached La Rita and Privateer. The judges were Messrs. E. T. Balcom, W. S. Burrows and A. J. Rohan. The summary, start 3:00:

	Finish.	Elapsed.
Colleen, Dr. Wm. Baum	5 20 18	2 20 18
Arab IV., F. D. Porter	5 21 40	2 21 40
Margaret, Wm. Cothroll	5 24 40	2 24 40
Privateer, Oscar Daniels	5 38 25	2 38 25
La Rita, Geo. R. Pearl	5 39 10	2 39 10

Tuesday, Sept. 23.

On Tuesday, Sept. 23, the ninth race for the Webb cup was sailed. A brisk northerly wind held true throughout the contest. The racing between Colleen, La Rita and Arab was very close and interesting. Colleen won by 30s. La Rita took second honors. The judges were Messrs. E. T. Balcom, W. S. Burrows and W. W. Perll. The summary, start 3:00:

	Finish.	Elapsed.
Colleen, Dr. Wm. Baum	4 36 05	1 36 05
La Rita, Geo. R. Pearl	4 36 35	1 36 35
Arab IV., F. D. Porter	4 37 15	1 37 15
Margaret, Wm. Cothroll	4 49 40	1 49 40
Privateer, Oscar Daniels	Broke down.	

Wednesday, Sept. 24.

The tenth and last race for the Webb cup was held on Wednesday, Sept. 27. La Rita did not start, as she was being put in shape for her races with Little Haste. The wind was fresh from the S.W., and Arab IV. won, with Colleen second. The judges were Messrs. W. S. Burrows, W. W. Perll and A. G. Wainwright. The summary, start 2:30:

	Finish.	Elapsed.
Arab IV., F. D. Porter	4 07 20	1 37 20
Colleen, Dr. Wm. Baum	4 08 05	1 38 05
Privateer, Oscar Daniels	4 25 25	1 55 25

This was the last of the Webb cup series, La Rita winning the trophy and 21ft. cabin class championship of the West. Arab IV. and Colleen were practically tied for second place, and the tenth race was necessary to decide winners of second and third places. Privateer and Margaret had a hard battle through entire series for fourth prize. Probably the club will offer a consolation prize for the only yacht sailing in the series that failed to win one of the four prizes.

	Points.
La Rita, first, Columbia Y. C.	775
Arab IV., second, Columbia Y. C.	690
Colleen, third, Chicago Y. C.	646.7
Privateer, fourth, Columbia Y. C.	353.3
Margaret, fifth, Columbia Y. C.	260
Spray, sixth, Columbia Y. C.	60
Sprite, seventh, Chicago Y. C.	

Sprite and Spray were only in one race, and Sprite broke down and Spray finished third in that race.

Beverly Y. C.

RIVERTON, DELAWARE RIVER.

Saturday, Sept. 20.

The Beverly Y. C. held its last regatta of this season on Saturday, Sept. 20. Eight boats started in the ca boat class. Katherine took the lead soon after the start and was ahead, when she met with an accident that put her behind; but she made up the loss later and passed Peerless. Peerless hung close to her heels, and when the wind lightened crawled up on her rival and beat her across the line by 35s. Priscilla finished only 5s. behind Katherine, and with her time allowance took second place. The summary:

First Class Catboats—Start, 3:35.

	Finish.	Elapsed.
Peerless, Craythorne	5 58 20	2 18 10
Priscilla, Clarkson	5 59 00	2 18 50
Katherine, Reese	5 58 55	2 22 50
Titania, Haines	6 05 57	2 30 50
Frona, J. Perkins	Withdrew.	
Vampire, Crispin	Withdrew.	
Gertrude, Holloway	Withdrew.	
Leila, Ferguson	Withdrew.	
Larks—Start, 3:40.		
No. 2, Taylor	5 27 25	
Cortright	5 33 18	
Hall	5 38 00	
Bonfield	Withdrew.	
Petit	Withdrew.	

The 22ft. Cabin Yacht Association.

Object.

To establish the definition and limitations of a 22ft. waterline cabin yacht, and to make such rules as will preserve the type of boat.

To establish a seaworthy type of cabin boat, with substantial construction and good cruising accommodations, and of such dimensions that keel and centerboard boats shall be as nearly as possible on an equality as to speed.

To allow as much latitude in design as is consistent with the construction of a healthy type of boat.

By-Laws.

I. NAME.

The name of this Association shall be the Twenty-two Foot Cabin Yacht Association.

II. OFFICERS.

There shall be a President, Vice-President, Secretary-Treasurer, Inspector and a Board of three Judges. They shall be elected at the annual meeting and shall hold office until the next annual meeting, or until their successors are chosen. Vacancies in any office may be filled by the President.

III. MEETINGS.

The annual meeting shall be held on the third Thursday in September in each year. Special meetings shall be called by the President, or by the Secretary, at the request of any three members. Five members shall constitute a quorum. After July 1, 1903, only owners of Association boats shall be entitled to vote, and each Association boat shall be entitled to one vote. Voting by proxy shall be allowed.

IV. MEMBERSHIP.

A Membership Committee, consisting of the President and Secretary, ex-officio, shall act upon all applications for membership. Any person shall be eligible to membership. Each candidate for membership must be proposed and seconded in writing to the Secretary.

V. MEMBERSHIP FEE.

An annual fee of $1 shall be charged each member to defray the current expenses of the Association, which fee shall be due immed ately after the annual meeting.

VI. DELINQUENTS.

All members who are delinquent sixty days after the date of the annual meeting may be suspended from membership and deprived of all the privileges of the Association. Members who are still delinquent on the day of the following annual meeting may be dropped for non-payment of dues, and shall only become members again by paying for each year that they have been delinquent.

VII. BOARD OF JUDGES.

The Board of Judges shall decide all questions relating to the observances of the rules of the Association. Their decision shall be final. They shall have the power to disqualify boats from racing which do not comply with the spirit as well as the letter of the rules.

VIII. INSPECTORS.

An Inspector shall be elected at the annual meeting. He shall become satisfied that the boats of the Association are within the restrictions, and shall report to the Secretary. Upon a favorable report from the Inspector the Secretary shall issue to the owner a certificate that his boat complies with the rules of the Association. Any owner dissatisfied with the Inspector's report may appeal to the Board of Judges; and the Inspector may also obtain their decision as to all matters on which he is in doubt. In case any owner of any other boat is dissatisfied with the Inspector's report, he may appeal to the Board of Judges.

IX. MEASURING FEE.

The fee for measuring shall be five dollars, in case of a re-measurement the fee shall be four dollars; if the re-measurement is on protest same shall be paid by the party in the wrong.

X. AMENDMENTS.

These By-Laws and the definition and limitations of any Association boat may be amended at any meeting by a three-fifths vote, provided notice of the proposed amendments is given in the call for the meeting.

Definition and Limitation.

Definition.—A 22ft. cabin yacht is intended to be a seaworthy type of cruising and racing yacht, substantially constructed, properly ballasted, and with moderate sail plan, and cabin trunk, having suitable cabin accommodations below, and conforming to the limitations herein mentioned.

Length L. W. L.—The length of the load waterline, with full equipment, shall not exceed 22ft.

Beam.—The beam at the load waterline shall be at least 6ft. 6in.

Length O. A.—The over all length shall not exceed 38ft. Neither the forward nor the after overhang shall exceed 6ft. 6in.

Bow.—A square or snub-nose bow shall not be allowed and accordingly the beam is limited at a point equi-distant between the waterline forward and the extreme bow to not more than 45 per cent. of the greatest waterline beam. The girth of the hull at the same point shall not exceed the number of inches represented by the sum of the beam plus the depth of hull plus three, measured at the same point. The deck line shall not run at an angle with the center line greater than 30 degrees. Any evasion of the spirit as well as the letter of this rule shall disqualify a yacht from racing in this class and the decision of the Judges of this Association shall be final on that question.

Freeboard.—The freeboard shall be not less than 22in.

Displacement.—All boats shall weigh when rigged and equipped in accordance with these rules, not less than 8,000lbs. It shall be the duty of the measurer to see that nothing is on board when the boat is weighed except what these rules prescribe, and that the boat is in every way in her normal condition.

Ballast.—The outside ballast shall be not less than 3,000lbs., exclusive of any ballast on the centerboard.

Cockpit.—The cockpit floor shall be above the L.W.L., with scuppers, draining outboard.

Cabin Trunk.—The sides shall be not less than 12in. high and the top shall have an area of not less than 60 sq. ft.

Cabin Floor.—Shall be not less than 8ft. long and 2ft. wide.

Headroom.—The minimum headroom, in the clear, under cabin trunk beams and over the cabin floor for the entire space required, shall be not less than 4ft. 8in.

Fixtures.—There shall be a substantial partition at the after end of cabin, three permanent lockers, ice box, and suitable transoms. The top of the transoms shall have a combined area of not less than 50 sq. ft. The sides and tops of the transoms and lockers, and the cabin floor shall be not less than ½in. in thickness.

Fittings.—The cabin shall contain cushions for the transoms, four blankets, stove, dishes and cooking utensils, and receptacle for 2gals. of water. There shall also be on board anchor weighing not less than 35lbs. and not less than thirty fathoms of suitable cable, two life preservers, compass, riding light, lamp, foghorn, bucket, boat hook, and four suits of oil clothes. All fittings and fixtures herein mentioned shall be suitable for cruising purposes, and shall not be removed or substituted by articles smaller or of lighter weight.

Crew.—The crew is limited to four persons, and the helmsman shall be an amateur and a member of some regularly organized yacht club.

An amateur shall be one who has never received money or equivalent compensation for sailing or assisting to sail a yacht.

Sail Area.—The sail area shall not exceed 900 square feet. The actual area of the mainsail and working jibs shall be measured by the measurer. The number of square feet in each sail shall be stamped on each sail by the measurer, in full round black figures, not less than three inches high. This number shall be known as the official number of the sail, and shall always be visible. Any yacht using a sail not bearing the official number shall be disqualified, any rules to the contrary notwithstanding.

The measurer shall be provided with the correct sail plan of any boat to be measured, and shall cause distinguishing marks to be placed on the spars as follows: On the masts at the tack and at the throat of the mainsail, on the boom at the clew of the mainsail. There shall be only one mark at each point. These marks shall be black bands, not less than one inch wide, painted around the spar, which shall be the official marks. The inner edges of the bands shall mark the limits to which the sails may stretch without exceeding the sail area allowed. No part of any sail shall extend beyond these marks, and the marks shall always be kept visible.

In no case shall the area of the mainsail exceed 80 per cent. of the entire area allowed.

No yacht, when close hauled, shall carry any jib other than the working jibs for which she has been measured.

Spinnakers and all headsails, the actual area of which is not measured, shall be triangular. No spinnaker shall extend above the spinnaker halyard block, or beyond the end of the spinnaker boom. No jib shall extend above the highest jib halyard block, or beyond the end of the bowsprit.

The distance from the center of the mast to the outer end of the spinnaker boom, when the latter is at right angle to the fore and aft center line of the yacht, shall not exceed twenty-five feet. The spinnaker halyard block shall be placed not more than thirty-eight feet above the deck.

The distance from the center of the mast to the forward end of the bowsprit, multiplied by the height of the highest jib halyard block above the deck, shall not exceed 300 per cent. of the actual area of the working headsail.

Battens shall not be used in the sails which extend more than three feet from the leech.

Scantlings—Dimensions and Areas.

A.—Stem, oak, sided at head	3½	in.
B.—Keel, oak, minimum thickness (depth)	4	"
Sectional area	48	"
C.—Frames, oak, sectional area	2¼	"
Spacing (maximum)	10	"
D.—Floors, oak, sectional area for the six in center of boat	5½	"
Regular floors, sectional area	3½	"
Spacing (maximum)	19	"
E.—Shelf or clamp hard pine		
Sectional area, middle	5	"
Sectional area, end	3½	"
F.—Bilge stringers, hard pine		
Sectional area, middle	3	"
Sectional area, end	2	"
G.—Deck beams, oak, sectional area,		
Main	4½	"
Auxiliary	2¾	"
Half beams	1¾	"
Spacing (maximum)	10	"
H.—Planking, to finish full	⅞	"
I.—*Deck and cabin trunk top and sides to finish full	⅞	"

*A reduction of ⅛in. allowed if canvas-covered.

General Specification and Explanation of Scantling Tables.

A—The minimum siding measured at the rabbet at stem head. Siding increased to meet width of keel.

B-Keel—"Oak." To run the whole length of boat from stern. Minimum thickness (depth) 4in. The minimum of sectional area including keelson and deadwood (breadth multiplied by depth in the middle of keel) may be made up if desired, by a deeper keel. The breadth of keel may taper from greatest section to 4in. at bow and stern.

C-Frames—"Oak." The size laid down in table shows the minimum sectional area of frames. The sectional area is that of a single frame for a uniform spacing between centers not exceeding that given in table. The required area may be made up of smaller frames spaced closer together if desired. Two adjoining frames abreast each mast and one at each runner plate must be increased in size in proportion as they are cut by the chain plate fastenings.

D-Floors—"Oak." To run the whole length of keel, of sizes as called for in table. There shall be at least six strong floors in center of boat in way of the metal keel and two at each mast step.

E-Shelf or Clamp—"Hard Pine." The minimum sectional area at the middle shall cover a length of at least one-half of shelf or clamp, a taper being allowed to the size given at each end. The ends of deck beams may be jogged into top of clamp a distance not exceeding one-third of their own depth.

F-Bilge Stringers—"Hard Pine." There shall be two bilge stringers on each side, running the whole length of boat. The minimum sectional area at middle shall cover at least one-half the full length of bilge stringer, with taper allowed at the ends.

G-Deck Beams—"Oak." The minimum sectional area of deck beams to cover the whole length of beams. There must be one main beam at the bitts. Two at each mast (partner beams) one at fore-end of cabin trunk, one at after end, two at the hatch, one at the after part of cockpit, and one at transom. The auxiliary beams and the half beams abreast of the house and cockpit may be of the smaller areas given for each in the table. The beams may be spaced at will, provided the maximum distance between centers does not exceed that given in the table. The beams may be jogged into the shelf or clamp a distance equal to one-third of the moulded depth of beams at end.

H-Planking—The dimensions given in the table are the minimum thickness allowed after final planing.

I-Deck—The thickness given for the deck plank applies also to the cabin trunk sides and top, plank-sheer or covering board and partner plank. The sides of cabin trunk shall be of oak.

The rules of the Yacht Racing Association of Massachusetts shall govern on all matters not herein provided for.

Little Haste and La Rita

In this issue we publish photographs of Little Haste and La Rita. Little Haste was designed by Mr. W. Starling Burgess, and built by Fenton at Manchester, Mass. She won the championship in her class in the Massachusetts Y. R. A. She is 39ft. 11in. over all. Her beam is 10ft. 4in. Her forward overhang is 10ft. 8in. and her overhang aft is 8ft. 6in., making a total overhang of 19ft. 2in. and a load water line of 20ft. 9in. As to sail, she carries 187ft. in her jib and 754ft. in her mainsail, making a total of 941 sq. ft. The length of her spinnaker boom is 25ft. 6in. She has 1,280lbs. of ballast under the floor and on her centerboard. She is owned by Mr. T. K. Lothrop, Jr.

La Rita was designed and built by Jensen at Gloucester, Mass. She is 20ft. 10in. on the waterline, 37ft. 6in. over all. Her breadth at deck is 9ft. 6in. and 9ft. 2in. at waterline. She is 20in. deep to rabbet and has 3ft. 10in. of fin, her extreme draft being 5ft. 6in. Her forward overhang is 9ft. 3in. The ballast required under the rule is 1,882lbs. and her sail area is 844 sq. ft., 675ft. being in the mainsail and 169ft. in the jib.

Cherokee.

There appears in our columns this week a photograph of Cherokee. This fine cruiser was designed this year by Messrs. Tams, Lemoine & Crane, and built by the Geo. Lawley & Son Corp. for Mr. H. A. Morss. Her owner has used the boat steadily all summer, and she has turned out satisfactory in every way. A long description and the yacht's plans were published in Forest and Stream of Jan. 18. 1902.

YACHTING NEWS NOTES.

The following transfers have been made through the agency of Mr. B. B. Crowninshield: Duxbury 18-footer Suzanne, owned by Mr. Quincy Bent, of Philadelphia, sold to Mr. Norman Greeley, of Boston; 25-footer Chewink I., owned by Mr. F. G. Macomber, of Boston, sold to Mr. W. E. Scull, of Philadelphia; champion 25-footer Flirt, owned by Messrs. Fabyan and McKee, sold to Mr. F. S. Bond, of Philadelphia; 21ft. knockabout Theresa, owned by Mr. E. L. Davis, of Boston, sold to Mr. S. C. Powell, of Newport; 100ft. steam yacht Cayuga, sold to Mr. Thos. Slocum, of New York; 21ft. raceabout Baccarah, owned by Rice Brothers, sold to Mr. R. C. Robbins, of Boston; raceabout Tunipoo, owned by Mr. J. L. Bremer, of Boston, sold to Mr. C. A. Cooley, of Boston; 21ft. knockabout Opeechee, owned by Mr. E. S. Grew, of Boston, sold to Mr. F. G. Peabody, of Cambridge; the Fife-designed 46ft. schooner Barbara, owned by Mr. C. F. Lyman, sold to Mr. R. T. Paine, 2d, of Boston; the 40 footer Vandal, owned by Mr. C. F. Ayer, of Boston, sold to Mr. J. J. Martin; the steam yacht Helena, owned by Mr. J. H. Appleton, of Springfield, sold to Mr. E. C. Swift, of Chicago; the 35ft. cutter Kiowa, owned by Mr. A. H. Fowler, of New York, sold to Mr. Geo. S. Payson, of Chicago; the 30ft. yawl Wawenoc, owned by Mr. F. S. Hastings, of Boston, sold to Mr. J. W. Farwell, of Boston; the Herreshoff 21ft. raceabout Gadfly, owned by Mr. Fraser Harrison, of Philadelphia, sold to Mr. Gilpin Lovering, of Philadelphia; sold for Mr. R. C. Robbins, 21ft. raceabout Pompil a, to Mr. J. R. Maxwell, of New York; sold for Mr. S. H. Foster, of Boston, 21ft. cabin champion, Opitsah III., to Mr. H. M. Whitney; chartered the 90ft. schooner Ramona to Mr. F. W. Crosby, of Chicago; chartered for Capt. J. R. Caldwell, 40ft. schooner to Mr. H. F. Knight, St. Louis.

Mr. Percy Chubb has sold his yawl Vigilant through the agency of Messrs. Tams, Lemoine & Crane, to Mr. F. Lothrop Ames, of Boston, owner of the 51-footer Shark.

The proposed international yacht race for the Fisher cup between Gooderham's Clorita and Stace's Helene has been declared off. A conditional challenge was awaiting the decision of Mr. Stace to enter his schooner, but, after a long search for the skipper he wanted, he informed the Rochester Y. C. that he could not put Helene in. Helene and Clorita are practically sister yachts, having been designed by A. Cary Smith, of New York, who designed Emperor William's Meteor III. Both flew at one time the pennant of the New York Y. C. In August, Æmilius Jarvis, acting for Mr. Gooderham, asked the Rochester

Club if it would waive its rights to a six months' notice and enter a yacht against Clorita for the Fisher cup, the race to be sailed the last week in September off Charlotte. The Rochester Club said it would consider such a proposition and requested W. A. Stace to put Helene in against Mr. Gooderham's boat. He said that he would if he could get Skipper Hanson, of New York, to sail her for him. After long search Mr. Stace learned that Hanson was off on a long cruise and would not be back for several weeks. Mr. Stace then decided not to enter his yacht. Mr. Gooderham is the owner of Invader, which won the Canada's cup last year.—New York Tribune.

The English-built steam yacht Fauvette arrived at New York on Sept. 26 from Southampton, via Bermuda, where she stopped for coal. The yacht is now in Erie Basin being overhauled. She is owned by Prof. J. Harvard Biles, of Glasgow University. Fauvette is of steel, 171.5ft. between perpendiculars; 160ft. on the waterline, 22.7ft. beam and 15ft. deep. She has four watertight bulkheads and is fitted with electric light. Her engines are of the triple expansion type, with 18in., 30in. and 48in. in diameter by 32in. stroke.

Manning's Yacht Agency has been capitalized for $150,000. The directors are Alfred J. Manning, Annie B. Manning and Christine Ross.

Major Charles F. Ulrich, owner of the schooner Carlotta, died of heart failure in his apartments in New York on Sept. 25.

The last of the regattas on Long Island Sound this season was to have been given by the Riverside Y. C. on Saturday, Sept. 27. Owing to lack of wind the boats were unable to complete the course, and the race was called off.

Henry S. Parmlee died suddenly on board his schooner Alert on Sept. 27. The yacht was lying off Bay Ridge and was about to start for a cruise in the West Indies.

Lamont G. Burnham, owner of the steam yacht Pilgrim and the schooner Ellsmere, died suddenly at his country place at Essex, Mass., on Sept. 25.

Canoeing.

A Delaware River Cruise.

(Concluded from last week.)

THE deepest water, as a rule, is in the center of the rifts in this part of the river. This is true of Mast Hope Falls, but in Westcolang the Pennsylvania shore should be hugged closely. Often there is "wild water ahead," to quote the natives, but at that time the river was too high for the bad places at other stages to be marked and mentioned accurately. Lackawaxen dam is at the town of that name, and below Lackawaxen Creek. One can see the dam from afar, as he approaches it in still, wide water. One need carry duffle but a short distance, letting the canoe run through a break in the dam. Paddling through is not advised. All the river men call this town "Lackawack." It is a good point at which to obtain fresh supplies.

Another night found us in camp on the Pike county shore of Pond Eddy, near the village of that name. This is one of the deepest and longest eddies on the Delaware. There are but two camp sites. We chose one two hundred yards above the road bridge, but even this spot was not wholly desirable, as a road is near by. To reach the other place mentioned, one must climb a high bank to the towpath, cross the old canal and locate under some pines on a sweet grassy spot. There are but few desirable camping spots along the New York shore between Lackawaxen and Mill Rift, because of this one-time canal, more's the pity, as that shore is in many places a beautiful one. Behind the canal a few sites may be found, but this plan has as drawbacks the stagnant pools of water, snakes, mosquitoes, and sonorous bullfrogs. The towpath at Pond Eddy is now used as a road, and nailed to the aqueduct across Carpenter's Brook we read this legend in one of our rambles in search of blackberries: "This towpath is not a thoroughfare. Parties trespassing on it do so at their own risk."

In bumping down the river; in flopping across country; in chasing elusive eggs and murphies, we had seen no legend so curious. We had purchased butter in dry goods stores, and honey in hardware shops, and had queried for mail in railway stations. In one place there was a spring in the middle of a field of wheat, and as the water trickled into the water jug, we looked up and saw, on the summit of a great cliff, nailed to a tree and facing outward, where no one could read it save at a great distance and with the aid of a powerful glass, a no-shooting-allowed notice. But until we gazed on this board on the aqueduct we had never fancied that a trespasser trespassed at the owner's risk. Now, it is a curious thing, but there is a gin mill near this aqueduct, and some of the natives go about loaded in more ways than one, as we had occasion to see, when one of them took offense at a remark of some one on the Pike county side, whereupon he whipped out a revolver and fired at the Piker. Again, the unsteady gait of other trespassers suggested the thought that some of them may have fallen off the towpath and been injured or drowned—but no, the only persons who drown are poor fools of canoeists who insist on descending the river in canoes, despite the threadbare and worn query, "Now don't you think you would be better off in a flat-bottomed boat than in that thing?" And as the canal is inoperative, perhaps the owners do not care to pay damages to persons who are hurt while trespassing on their old towpath.

By this time we had become known to every train crew on the railway. It seemed they looked for us, and when they found us in a new place, they waved their hands and swung their caps. It was a pleasant feature of the trip. The freight trains were most interesting. Some of them were composed of eighty and ninety cars, and we saw one of one hundred and three, nearly all drawn up the grades by single engines. A feature was the dozens of new engines being taken west for the pioneer road of the plains, the Kansas Pacific. These were coupled in here and there, but were not under steam.

The fishing for several days was poor, because of the floods, yet we were compelled to keep in close communication with the outside world, and as there was no other place to go, we remained, though the curiosity of some of those passing by was annoying. But no one gave us any trouble, although the gin mill was just across the bridge, and all roads led to the gin mill. There was a steady current setting over toward the Sullivan county shore on Saturday and Sunday. Some went in boats and returned in zigzag fashion, like unto an angler trolling; others went on horseback and in wagons; but the villagers walked straight and returned in circles. One of these had a "foine Oirish brogue," according to Uncle Joe Decker, who knows everybody. He sidled off the fairway, waved a huge and grimy paw in greeting, and spake thus:

"Now, it's this way wit' me. Human bein's is coomposed of one-foorth solid mather and three-foorths wather—I mane t' say two-thirds solid mather and one-third wather; but ye know what I mane. Now, I haven't taken a drap of annything but wather since the 15th day of July—six long weeks. [It was then Aug. 2.] An' in thim six weeks I have swalleyed enough wather fer t' float a box car. Wather is a good thing for some pur-poses, but it's not alt'gether satisfyin'. But it's all right, friend. If it's wather ye loike, take yer pail, an' up the road, forninst the first house, ye'll foind as foine a spring av the stuuf as ye iver tasted. Ye did find it? All roight. I'll be goin' now. It's no offinse Oi mane t' ye, but Oi'd like t' know where ye came from—I mane t' say Oi don't care where ye came from, but did ye come up the river or did ye come down the river?"

There were no headaches in the sweet spring a hundred yards from camp. It was one of the few redeeming features. Another was the great maple tree that overhung the eddy and shaded the grassy glade; for the sun shone hot the greater portion of the five days we passed at that place, and although we were thankful for this, its rays were hot, and the shade grateful. One day the Mate espied a cow, and as there was a tangle of wire in a drift heap hard by, there was nothing for it but to build a barbed-wire fence round the land side of camp, with the high banks of the eddy to protect the flanks. One strand was enough, for by the time it was up, my cuticle was scraped and gouged in divers places, the result of too much vigor and too little skill. But was it not effective, and did not a gentle old muly cow come along, and seeing the thing, rub her nose along it until she found the barbs, and thereupon turn tail and return to the mud flats whence she came, to be seen no more? And did not other animals, seeing our attempt at privacy, keep to the main road, even with some difficulty, it being a narrow thoroughfare, not intended for feet that insisted on traveling each its own way? And was it not the Mate who ran into it and received as a souvenir a huge rent in the garment she must wear home?

One thing we could not reconcile ourselves to was that the sun seemed to rise in the south and set in the north, for which the cloudy skies and the many curves in the river accounted; but when the stiff west wind drove away the clouds we marveled that a north wind could be so warm, and again, an east wind so dry. When the sun dried the grass east of the tent and the afternoon shadows fell athwart it, it was sweet and warm, and there the little girl played about on a blanket and fell asleep as calmly as in her own crib at home. She grew brown, rugged, and totally unlike the many sickly children of the city, so that in being thankful for this we forgot the fierce storms of the recent weeks.

Again we had squirrels for neighbors. Now and then a kingfisher stopped on a twig to survey the Nomads, and little brown cranes stalked about the low ground hard by. The swallows in the bank beneath the tent feared us not, and an old frog insisted upon perching half-way up the side of the tent at night, and was continually going to sleep and falling down, only to try again and again. Among the hills we found red raspberries, and along the towpath there were luscious blackberries. And somehow the visitors had a way of bringing along with them a pocketful of fine apples, "for the little one," though they knew she was too young for such things. Then large mealy potatoes found their way to camp and no pay would be taken for them. But the stores were sorry specimens. Only four eggs could we obtain in five days' time. The postmaster at the village in Sullivan county sold butter he purchased in New York city, he said, while in another place we saw pressed beef bearing the name of a concern that had canned nothing of the sort in the past four years. And in this wood alcohol region I could obtain none for the vapor stove, but was offered "some pure alcohol at $1 a quart." It was such vile wood alcohol that even the old stove bucked at it. This same stove was a mystery to the Pikers. Sometimes one of them sat near it and knew it not until a wave of heat came his way, whereupon he tried hard to seem unconcerned, while he searched for the cause. An old Irishman who wore side whiskers and carried a pail—Pikers have this habit, just as Bostonians carry green bags—appeared suddenly from goodness knows where. Said he: "Now, Oi don't want t' be askin' questions as don't consarn me, but Oi want t' look at the little boat, an' would ye moind tellin' me phere ye put all that stuuf in such a little thing?" The seemingly bulky and heavy blowbeds stumped him, and even when one of the valves was opened and he felt the rush of air coming out, he could not believe his eyes. It was all very laughable.

This old man was a kindly soul, but it seemed he had an ax to grind with the boss road worker, who, with his men, was raising the level of the road hard by, so that winter floods would not stop traffic. The men drove a three-foot hole into a ledge near camp, then found their five-foot drill would not fit it until altered. When they did put in the shot, the boss told me, we would be safe—if we would move camp "up the road a ways." They fired two shots further down the road, and each time the boss and his men ran down the road yelling like mad, leaving the other approach totally unprotected. There was a small report and a puff of dust; that was all. Well, our friend of the Galways floated along one evening—he did not seem to walk, so gentle was his tread, while he watched the ground suspiciously, as though it were about to fly up and hit him—and whispered that "thot mon is not to be thrusted," as blasting was not his forte, he did not use the right sort of "stuuf," and was fond of showing off. Then he went up on the ledge, gazed sadly into the drill hole and turned homeward. But as we watched him he seemed suddenly to be imbued with life, for he executed a series of movements one would not think him capable of. Then, putting his hand beside his mouth, he said softly, as if the hills would hear him, "Garter snake," and disappeared.

Uncle Joe Decker was a welcome visitor at camp. He is a gentleman of the old school and a justice of the peace in Sullivan county. He entertained us with many reminiscences of a long life among these hills, and made friends with the baby, who, strangely enough, would have nothing to do with his big watch, and dropped it as though it were hot, whereat we marveled, for she is happiest when banging my own watch about, regardless of its one-time delicate mechanism. But Uncle Joe's watch was silver; she had never before seen a silver watch, and this may account for her actions. Uncle Joe looked carefully at Nomad, and pronounced her a safe craft for the Delaware. He was the first person who had admitted as much. Other natives refused to see any difference between it and an open canoe, and would not take into consideration the water-tight compartments, bulkheads and small cockpit. Uncle Joe later on introduced to us his dog Topsy, and all hands made friends with her at once. She, too, was the "best squirrel dog in Sullivan county," and was trained to hunt squirrels and rabbits only, and to turn up her nose at a deer's trail. Only a few days before she brought in a young rabbit and laid it at his daughter's feet, unharmed.

One day the river, which had been clearing, suddenly rose three feet within a half-hour, and covered the lowlands, leaving us near the water's edge. That afternoon a furious storm arose in the northeast and soon a lantern was necessary in the tent, where we took refuge from the downpour. The following night there was an electrical storm, but little thunder or rain. Three days of perfect August weather followed, with only an occasional storm to remind us of the other days. And now that we had weathered the worst of it, we must break camp and return home. The baggage men treated Nomad kindly, so that she received no injury on the train, and at Jersey City the baggage master held her until the following day, and helped me himself in putting her into the slip beside his department. When all was snug I loafed down the slip into the rolling waters of the old North River and turned homeward with the new flood tide. Nomad was in her element again. It was a perfect day, but a busy one with the tugs and ferry boats, and could I have had one wish, that one would have been to put all the Delaware River's pessimists into one of their beloved flat-bottomed scows and turn them loose in that bedlam of river traffic. To see their terror would be ample satisfaction for being compelled to listen to their harangues on the dangers—to canoeists—of the Delaware.

In concluding this yarn, a summary of the experience gained is given, in the hope that it may aid other canoeists who intend to descend the upper Delaware In the first place, in selecting duffle, it should be borne in mind that a canoe will draw much more in fresh than in salt water. Leave the double paddles at home and take only tough hard maple single blades five feet six inches or more in length. The man steering should be an expert at the correct stroke when paddling alone. Many canoeists do not take the trouble to learn this stroke, but it is simple. Keep the paddle in the water constantly in the rifts. There are times when these shoal suddenly, and one has no time to lift the paddle for a stroke. With the underwater stroke one can feel for the depth of water.

Do not try a home-made canvas canoe. Better take a coffin in the first place. The various open canoes—of cedar or cedar covered with canvas—will be serviceable, provided they are partly decked, or covered with aprons fitting tightly. Otherwise a decked canoe will be best, if it has perfectly tight compartments and deck hatches. A rudder is useless. A stern painter is absolutely necessary, should be thirty feet in length and very strong. All the dunnage should be stowed away in waterproof bags. Two or three changes of woolen clothing, as well as shoes and stockings, are necessary, and leave cotton garments behind. Take three heavy blankets. The nights are cold.

If possible, take a generous supply of provisions from home; better still, send these to two or three points along the river, to be called for. The country stores can be depended on for little, and this is poor enough at best. Deposit, Callicoon Station and Lackawaxen shops are better than the average.

As the shoals, or rifts, as they are called, decline sharply and in them the current is very swift, the greatest danger to canoeists seems to be striking amidships on a reef or boulder and being whirled broadside to the tide while still aground, in which event a canoe will often list sufficiently to spill the crew, though it may not capsize. But if it takes in much water, it will swamp at the tail of the rift, where there is either rough or very shoal water. Should the canoe strike in water too deep or too rapid to render getting out—on the up-stream side—safe, she should be held on her course at all hazards until she can be forced aside of or over the obstruction. In the event of a capsize there should be but one thought—hold fast on the canoe, for there is an eddy below every rift, and generally the tide sets toward one shore or the other, where the canoe may be towed in safety. There need be no danger if all hands will stay with the canoe. Skill in swimming counts at zero in a shoal or fall and the water is ice cold. Wading a rift in two feet of water is difficult, often impossible, and one who falls will seldom regain his footing. I have seen heavy cattle try to wade these rifts and lose their footing in three feet of water. More canoeists are taking this cruise than ever before, and scores of them have descended the river safely. It is no water on which to learn canoeing, however, and its shoals and breaks deserve the respect of the oldest hands at the maple blade.

The East Branch of the Delaware, as we saw it, was a

small stream, while the West Branch is a series of shoals with few eddies, and these not deep. Camping spots as a rule are few and not choice. We would advise no one to start above Hancock. Begin in the East Branch at that village. To the junction is less than a mile, whereas via the West Branch one must pass several shoals and rocky breaks, and cover twice the distance. Hancock lies between the two branches.

From Deposit to Pond Eddy the fall of the river is about seven feet to the mile, or nearly 700 feet in 100 miles or thereabout. Thus the frequency of shoals and the scarcity of pools and quiet water may be readily understood.

PERRY D. FRAZER.

NEW YORK CITY

Rifle Range and Gallery.

Rifle in Chicago.

CHICAGO, Ill., Sept. 27.—The following scores were made Friday evening, Sept. 26, by the members of the Willow Rifle and Gun Club.

All shooting off-hand at 75 feet, with .22 caliber rimfire rifles. No palm rests or magnifying sights allowed.

Two strings of ten shots each on ¼-inch ring target; possible in ten shots, 250 points, and 3 shots on ⅛-inch ring target, possible 75 points:

George Springsguth	231	233	71
F M Garden	230	234	61
Alf Rieckhoff	229	234	68
Wm Schwabe	216	224	62
Emil Otto	223	215	48
Albert Ferig	225	199	63
Rud Thielenhaus	204	215	56
Rud Thielenhaus	206	197	54

ALF. RIECKHOFF, Shooting Master.

Trapshooting.

If you want your shoot to be announced here send a notice like the following:

Fixtures.

Oct. 1-2.—Fostoria, O.—Fostoria Gun Club's target tournament; $100 added; first day open to all; second day, merchandise handicap. W. R. Alspach, Ass't Sec'y.

Oct. 1-2.—Allegheny City, Pa.—Fall tournament of the North Side Gun Club; $140 added. I. W. Morrow, Sec'y.

Oct. 1-2.—Austerlitz, Ky.—Hill Top Gun Club's tournament.

Oct. 1-2.—Union City, Ind.—Fall tournament of the Parent Grove Gun Club. O. E. Fouts, Sec'y.

Oct. 1-2.—Austerlitz, Ky.—Hill Top Gun Club's live-bird tournament. Alfred Clay, Sec'y.

Oct. 1-2.—Union City, Ind.—Parent Grove Gun Club's fall tournament. O. E. Fouts, Sec'y.

Oct. 1-2.—Allegheny, Pa.—Two-day target tournament of the Northside Gun Club; $100 added money. I. W. Morrow, Sec'y.

Oct. 2.—Rittersville, Pa.—Target tournament of the Lehigh Rod and Gun Club of the Bethlehems.

Oct. 6.—New Paris, O.—One-day tournament of the Peters Gun Club. G. L. Lyne, Sec'y.

Oct. 3-4.—Louisville, Ky.—Jefferson County Gun Club's tournament.

Oct. 7-8.—Greenville, O.—Handicap tournament of the Greenville Gun Club. H. A. McCaughey, Sec'y.

Oct. 8-9.—Clinton, Ont.—Clinton Gun Club's twelfth annual tournament; live birds and targets:

Oct. 9-11.—Excelsior Springs, Mo.—First annual target tournament of the Excelsior Springs Gun Club. C. H. Coppinger, Corresponding Secretary.

Oct. 9-10.—Irwin, Pa.—Irwin Game and Gun Club's tournament.

Oct. 9-10.—Fort Wayne, Ind.—Annual target tournament of the East End Gun Club. F. W. Leidelf, Sec'y.

Oct. 15.—Mt. Sterling, Ill.—Seventh annual target tournament of the Mt. Sterling Gun Club. J. Breidenbend, Sec'y.

Oct. 15-16.—Baltimore, Md.—Tenth annual fall tournament of the Baltimore Shooting Association; targets and live birds; $100 added money. Open to all. J. R. Malone, 2671 Pennsylvania avenue, Manager.

Oct. 15-16.—New London, Ia.—Sixth annual tournament of the New London Gun Club. Dr. C. E. Cook, Sec'y.

Oct. 15-16.—Springfield, O.—Springfield Gun Club's tournament. B. F. Downs, Capt.

Oct. 21-22.—Kenton, O.—Second annual fall tournament of the Kenton Gun Club; $75 or more added money. K. P. Johnson, Sec'y-Treas.

Oct. 21-22.—Sistersville, W. Va.—Sistersville Gun Club's target tournament.

Oct. 24-26.—Bisbee, Ariz.—Tenth annual tournament of the Arizona State Sportsmen's Association. M. J. Cunningham, Sec'y.

Oct. 29-30.—Raleigh, N. C.—Two days' shoot of the Raleigh Gun Club; $100 added. R. T. Gowan, Sec'y.

Oct. 30-31—Dalton, O.—Annual fall tournament of the Dalton Gun Club. Ernest F. Scott, Captain.

Nov. 27.—Ossining, N. Y.—Thanksgiving Day tournament of the Westchester County Trapshooters' League under the auspices of the Ossining Gun Club.

Newark, N. J.—South Side Gun Club target shoot, every Saturday afternoon.

Chicago, Ill.—Garfield Gun Club's target shoot, every Saturday afternoon until October. Grounds, West Monroe street and Fifty-second avenue. Dr. J. W. Meek, Sec'y.

First Saturday of each month for a year, Burnside.—Contest for the Troisdorf live-bird and target medals; 10 live birds; 25 targets; open to all. First contest, March 1.

CONTESTS AT INTERSTATE PARK.

Interstate Park, Queens, L. I.—Two miles beyond Jamaica, on L. I. R. R. Trains direct to grounds. Completely appointed shooting grounds always ready for matches, club shoots or private practice. Café and hotel accommodations.

DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have published. Mail all such matter to Forest and Stream Publishing Company, 346 Broadway, New York. FOREST AND STREAM *goes to press on* TUESDAY OF EACH WEEK.

The following is taken from the Breeder and Sportsman of San Francisco, issue of Sept. 20, touchin' on an' appertainin' to live-bird shooting:

"There is another view to be taken concerning the newspaper attacks of the big dailies of New York and Chicago. As a matter of fact, there is not a business in the country, wholesale or retail; an occupation, pursuit or sport that has greater newspaper mention and more free advertising in the aggregate than the firearms and ammunition business, wholesale and retail. Representatives of manufacturers in every department, individual shooters, all over the country, are, figuratively speaking, 'breaking their necks' to get into the papers, and often with purely advertising matter under the guise of sporting news. Of course, there are many exceptions to this seemingly harsh statement. Some of the 'boys' are very clever in handing stuff to the papers, particularly country weeklies. Why all this good stuff should go without an equivalent is a problem easily solved by one side and carelessly overlooked by the other. Another phase of the matter is niggardly support of the press by many agents and representatives. Taking it all in all, the big dailies 'are on' and exacting interest on past over drafts. They only got plenty of 'glad hand' and lots of stories, at least their representatives did. The latter gentry being usually on 'space,' always did the right thing for themselves and incidentally for the other fellows. The publishers' pockets were neglected, and now they are out with a club."

We quite agree with our contemporary concerning the big dailies, as they relate to pigeon shooting at the traps, but that representatives and shooters were ever inclined, even remotely, to obtain free advertising, is news indeed in the East. Instead, we have observed a charming modesty and self-effacement in most instances. Still, we can remember a mention, years ago, of clubs asking for and receiving week after week advertising of their tournaments in the reading columns of the sporting journals, and thereafter, as a return courtesy, informing said journals that they could have advertising space in the club programme at so many dollars per page; but all clubs did not and do not do so.

The skill of Capt. A. W. Money and his sons in the use of the shotgun is a matter of national fame. They are of the few who stand on the mountain peaks of meritorious performance. But the fondness for all forms of wholesome sport is not confined to the male members of the family. Capt. Money's daughter, Miss Ethel Money, has achieved the distinction of a most fearless and skillful horsewoman. This fall, at many of the New Jersey fairs, she won many firsts and some seconds, in the high jumping classes with horses of her own schooling. She also has been very successful in the tandem competition. Petite in size, she nevertheless seems to have, by gentleness and firmness, wonderful powers of control over her spirited hunters. She is an enthusiastic huntswoman, and is as skillful in the practical features of cross-country riding to the hounds as she is in actual competition. By the way, there are now two Captain Moneys, the more recent being Capt. Noel Money. He came out of the war in South Africa with that title, and also with a medal for distinguished bravery. Mr. Harold Money, now in the interest of the Winchester Repeating Arms Company, is continually performing in high class manner with the shotgun in the Middle West.

Concerning long runs, the Shooting Times publishes the following: "A wonderful shooting score was made on Friday afternoon last at the grounds of the Scottish Shooting School, Bishopbriggs, by Mr. R. Campbell, ex-champion inanimate bird shooter of Scotland. Mr. Campbell undertook to kill 100 birds with 100 shots, and a large number of gentlemen had gathered to see how near the maximum he would come. A surprise was in store, for after a preliminary attempt with a relay of three guns, Mr. Campbell started with his own gun and brought down 111 birds one after the other. This constitutes a British record. Excellent as was the work, an almost equally meritorious performance was accomplished by Mr. T. Bremner, who, shooting with marked success in the sweepstake competitions, was constrained to complete his 100 shots, and did so with a total of 93 hits. Mr. Bremner used his second barrel four times, while Mr. Campbell used it twice."

The shooting committee of the Crescent Athletic Club, of which Mr. A. W. Higgins is chairman, have adopted a programme for the coming season, which in the main, is like that of the last season. There will be a monthly cup, each contestant's three best scores counting in the competition, therefore, to have any standing concerning it, three scores by each competitor are a necessity. There also will be special weekly trophies to be won outright at the weekly shoots. The holiday shoots will have attractive features above the ordinary. In the latter part of last week the club's grounds at Bay Ridge, L. I., were undergoing the transformation from baseball arrangements to shooting arrangements, and the first shoot of the season, 1902-3, is fixed to take place on Saturday of this week. This season ends in the last week of March.

The programme of the North Branch, N. J., Gun Club's tournament, Oct. 28-30, provides two days at targets and one day, the third, at live birds. There are ten target events on each of the first two days, three at 10, three at 15, two at 20, one at 25 targets, and one at 10 pairs, entrance based on 10 cents per target. Regular programme commences at 10:30 o'clock. All class shooting. Targets, 2 cents, from which 25 per cent. will be deducted for high average money, divided into four parts, 40, 30, 20 and 10, if over $50; 50, 30 and 20 if under $50. For low average, $2. Stages will meet trains at depot. Manufacturers' agents and paid representatives may shoot for targets only. Ammunition sent prepaid to M. H. Rupell will be delivered on the grounds free. Tournament Committee: M. H. Rupell, H. B. Teneyck and Chas. Huff.

In the special events at John Parker's twelfth annual tournament, held recently, the winners in those events were as follows: Peters Cartridge Company's International Handicap trophy, 25 targets, was won by Mr. Thomas W. Lang, of Findlay, O., from the 18yd. mark. The King Powder Co. two-man team International trophy was won by Messrs. Russell Klein, of Spirit Lake, Ia., and C. W. Phellis (Phil), with a score of 24 and 25 respectively, a total of 49 out of 50, each standing at the 18yd. mark. The Gilman and Barnes International trophy at 15 live birds, $20 entrance, was won by Mr. Fred Gilbert, after a prolonged finish, with Mr. H. D. Bates, a former Grand American Handicap winner. In the tie on 15 were Messrs. Gilbert, Bates, Tol, Klein. Gilbert won by killing 95 straight.

Mr. R. T. Gowan, secretary, Raleigh, N. C., under date of Sept. 25, writes us as follows: "The Raleigh Gun Club will give a two days' shoot, Oct. 29 and 30, with $100 added money each day. On the 28th there will be a practice shoot, and on Friday, the 31st our club will give a beautiful silver cup to the champion shot in North Carolina. We hope to have every club in the State contest for this prize, and while here organize a State association. Programmes will be issued in a few days, giving details of shoot, and any other information will be furnished by addressing the secretary. To-day's shoot was very unfavorable for shooting—rain and cloudy. Following scores were made out of 50 targets: Johnson, Sr., 37, Johnson, Jr., 41, Whitaker 42, Walters 38, Gray 42, Parker 37, Stark 43, Ferrall 29."

Mr. Albert A. Schoverling, corresponding secretary of the Fulton Gun Club, of Brooklyn, writes us as follows: "The next shoot will be on Oct. 5, at 1 P. M. Open shoot for members for A. Wood's medal. Also probably a team race. Fulton vs. Westwood Gun Club. How to get there: From New York, Brooklyn Bridge, Kings County Elevated to Crescent street station. From New York, Twenty-third and Forty-second street ferries, Broadway Elevated to Crescent street station. Ten minutes' walk from station on Old Mill road."

In the report of the Ossining, N. Y., Gun Club's shoot this week, Mr. C. G. Blandford, captain of that club, announces that there will be a tournament of the Westchester County Trapshooters' League at Ossining, on Thanksgiving Day. The Ossining Gun Club, in connection therewith, will offer a $40 cup for seven-man county teams, and a 100-target match for a gold medal, emblematic of certain county championships. The conditions are minutely set forth elsewhere in our trap columns.

Mr. T. H. Keller, eastern manager of the Peters Cartridge Company, informs us that on Sept. 21, Mr. Ed. Bohlmer, assistant superintendent of the Peters Cartridge Company's factory at Kings Mills, O., died after a few days' illness. He had been with the Peters Cartridge Company during many years, and was esteemed both for his eminent business ability and his nobility of character.

In the North River Gun Club's contest for the Glaser trophy, Sept. 27, there were seven ties, which will be shot off on Saturday of this week on the club's grounds, Edgewater, N. J. The conditions are 50 targets, handicap. Those who tied were Messrs. Richter, J. Truax, Eickhoff, Morrison, Merrill, Hexamer and C. Truax.

In the two days of the target programme at the recent Missouri State shoot at Kansas City, Mr. W. R. Crosby, at 20yds., and F. Bell, at 16yds., tied on 453 out of 500 targets, for high average, 90.6 per cent. J. A. R. Elliott was second with 451 targets, 90.2 per cent. Mr. F. C. Riehl was fourth with 446 targets, 89.2.

The Interstate Association stockholders will hold a meeting at 99 Cedar Street, New York, on Tuesday of next week, to discuss matters of general interest. The G. A. H., at live birds and targets, will be given consideration. This is the first meeting of the association held in several months.

The Garfield Gun Club, of Chicago, began its first shoot of the fourth trophy series on Saturday of last week. Mr. A. Hellman took the lead with a score of 24 out of 25 in class A; Mr. T. Jones scored a win in Class B with 17, and Mr. M. G. Eldred led in Class C with 20.

Mr. Leroy W. Cannon, president of the Enterprise Gun Club, McKeesport, Pa., won the second series for the championship medal at his club's tournament, Sept. 20, with the fine score of 46 out of 50.

The Dalton, Ohio, Gun Club announces that the dates for their annual fall tournament are Oct. 30 and 31. In added money there will be $50 or more.

Mr. W. R. Crosby won high average in the three-days' target tournament of the Cincinnati Gun Club last week, standing at the 22-yard mark.

The secretary, Mr. J. Breidenbend, informs us that the seventh annual target tournament of the Mt. Sterling, Ill., Gun Club will be held on Oct. 15.

BERNARD WATERS.

Cincinnati Tournament.

THE shoot was a great success, considering that it was managed from the cashier's office. On the first day, Sept. 23, the programme was shot out. On the second day rain delayed the start, and to finish out, the last three events were reduced to 10-target events with the original entrance. The programme on the third day was concluded in good light. The high average money was divided into seven moneys, class shooting, and was won by nine men. Crosby was winner of first.

Sept. 23, First Day.

WESTERN TRAPS.

Garfield Gun Club.

Chicago, Ill.—The appended scores were made to-day on the occasion of first trophy shoot, fourth series. Hellman won class A trophy on 24; Tom Jones, B, on 17, and Eldred, C, on 20. The cup shoot immediately followed, and cup was won by Hellman. The day was very threatening, and, in fact, rained steadily until time for shoot to begin, consequently the attendance was not up to our standard:

Second trophy shoot:

L Thomas	1111110111011010100111101—18
Dr Meek	110111011101111010111011—19

Hellman won.

Dr. J. D. Meek.

Rockville Gun Club.

Rockville, Conn.—The Rockville Gun Club held their first tournament Sept. 18, and as the day was stormy and cold, the scores were not as good as they would have been had they been made on a more pleasant day. The attendance was smaller than expected, but good for the weather.

Griffith won the $5 gold prize offered for the best score out of the first 100 targets. Meaker got second prize—$2.50 in gold. The scores:

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	Shot at.	Broke.

F. H. Burke, Sec'y.

Leatherstocking Gun Club.

Oswego, N. Y., Sept. 24.—The forty-second annual shoot of the Leatherstocking Gun Club was held on the club grounds on the bank of Lake Ontario Sept. 24. A stiff breeze made the birds very difficult.

This is the oldest gun club in the state of New York, having been organized March 17, 1860.

The first prize, a beautiful gold badge, was awarded Max B. Richardson; the second prize, a similar badge in silver, was secured by Walter Jermyn; the third prize, also a silver medal, was secured by Martin Carlton. Much interest was taken in the contest.

M. W. Carlton, Sec'y.

John Parker's Annual.

John Parker's twelfth annual tournament was held on the Rusch House grounds, Detroit, Mich., Sept. 16 to 19. It was open to all. There was $200 cash added. The target programme was alike for each of the first three days, excepting the special event for trophy, of each day. Sept. 19 was devoted to live-bird competition.

Sept. 16, First Day.

In the events of the day, forty shooters participated. The Peters Cartridge Company's International Handicap trophy, event 6 of the programme, was won by Mr. Thomas W. Lang, Findlay, O. He was closely pressed by Mr. Ralph Trimble and C. H. Rich.

Mr. Fred Gilbert, of Spirit Lake, Ia., was high gun for the day with a score of 169 out of 180.

Sept. 17, Second Day.

Mr. Russell Klein, of Spirit Lake, Ia., was high average on this day with a total of 166, and in the King Powder Company two-man team International trophy, he and C. W. Phellis (Phil) won, the former with a score of 24, the latter 25. Each stood at the 18yd. mark. Some live-bird contests were of great excellence. Messrs. Hughes, Bates, Parker, Du Bray, Gilbert, Tolsma, Stanley and Marks killed 57 birds straight, after which the contestants retired rapidly, leaving Hughes and Bates the winners. The scores:

Events:	1	2	3	4	5	6	7	8	9	10	Total

Cady 17, Alban 22; total 39.

Sept. 18, Third Day.

A light rain made unfavorable weather conditions. The six events of the programme were finished early, after which there was much practice at live birds. The special event of the day was the Peters Cartridge Co.'s International expert trophy, competing for which all stood at 22yds. This trophy was won by Mr. P. C. Wood, of Detroit, with a score of 24 out of 25. Gilbert was close up with a score of 23. Hughes was high gun for the day with 168 out of a possible 180. Trimble was second with 165, and McMurchy was third with 159. The scores:

Events:	1	2	3	4	5	6	7	8	9	10	Total

Sept. 19, Fourth Day.

The Gilman & Barnes International trophy was the main event of the live-bird contests, to which the day was devoted. It was long and closely contested. The final of it was between Mr. H. D. Bates, of Ridgetown, Ont., a former G. A. H. winner, and Fred Gilbert, the Iowa shotgun wizard, the latter winning in the 95th round. There were five in the tie, Messrs. Gilbert, Bates, Parker, Tol and Klein. The tie thereafter was miss-and-out. Klein lost his 21st, Tol his 31st, Parker his 48th. The conditions were 15 birds, $20 entrance, $50 added, class shooting, moneys divided 30, 25, 20, 15 and 10 per cent. To be won three times, not necessarily in succession, when it becomes the property of the party so winning it. Handicaps 26 to 31yds. The scores:

	Handicap.	Score.		Handicap.	Score.
Waters	30	14	Bates	32	15
Finletter	29	12	Du Bray	28	14
Tol	28	15	Cox	28	14
Phil	30	14	Wood	30	14
Black	29	12	Heikes	31	14
Parker	31	15	Kline	31	15
Fort	28	13	Marks	29	14
Gilbert	32	15	McMurchy	31	13

Shoot-off, miss-and-out: Tol 16, Parker 33, Gilbert 80, Bates 79, Kline 6. The latter shot through all the other live-bird events of the day without a miss.

Missouri State Tournament.

Kansas City, Mo., Sept. 19.—The target programme commenced this morning and called for ten 15-target events, with $15 added, and five 20-target events, with $20 added for each day. The shooting was from three sets of traps. The handicap was from 16 to 20yds. Purses divided Rose system, 5, 4, 3, 2.

A strong wind made the shooting quite difficult. Owing to the late start in the shooting, the programme was not completed, but twelve events being finished. Seventy entries to-day, and Akord was high with 188 out of 200 shot at. He shot from the 18yd. mark.

Sept. 19, Third Day.

Sept. 20, Fourth Day.

The three events left over from yesterday were finished this morning. Akord finished high man in the fifteen events with 229 out of a possible 250. Reust and J. A. R. Elliott were second with 227. W. R. Crosby was third with 225, shooting from the 20yd. mark.

To-day's programme called for 300 targets, the Schmelzer trophy contest adding 50 targets to the day. Mr. Rob Elliott was kept busy getting squads to the score, and succeeded in finishing the programme at 6:15. Quite a number of shooters did not enter for the trophy, owing to the long programme, which tired out quite a number. Three hundred and fifty targets is too much for one day's programme.

Fourteen men paid $5 each to shoot for the Schmelzer trophy at 50 targets, reverse pull. Mr. W. Heer, of Concordia, Kans., broke 48 and won the trophy without a tie. The win was a popular one, as Mr. Heer has many warm friends among the sportsmen, and he was warmly congratulated on his good shooting. Crosby was second with 46, and Riehl third with 44.

The twenty-fifth annual of the Missouri Game and Fish Protective Association has been a success, and much credit is due Mr. Bob Elliott and his assistants for the manner in which it was handled.

Hawkeye.

ON LONG ISLAND.

Brooklyn Gun Club.

Brooklyn, L. I., Sept. 24.—The bad weather, damp, gloomy, raw, with signs of rain, was unfavorable to a good attendance at the shoot of the Brooklyn Gun Club to-day. Some of the preliminary events were shot before the main events were commenced. Mr. H. S. Welles arrived too late for any preliminary practice, engaging in No. 1 event immediately. He missed his first three straight, then made a run of 82 before missing. Mr. Neaf Apgar also made a long run.

The conditions in No. 1 shoot were 50 targets, $2 entrance, no handicap, three high guns, to which the club donated $10, divided $5, $3 and $2. The scores were as follows: Super 44, N. Apgar 49, S. M. Van Allen 46, S. Glover 45, Capt. Money 47, Keystone 44, C. Von Lengerke 43, B. Waters 48, H. Welles 47, Hutchins 31, C. Bittiner withdrew.

Apgar first, Waters second, Money and Welles third.

No. 2 was at 50 targets, $1 entrance, handicap allowance, $5 donated, divided $3 and $2:

	Hdcp.	Brk.	Total.		Hdcp.	Brk.	Total.
Super	5	45	50	C Von Lengerke	6	43	49
Apgar	1	48	49	Waters	5	41	46
Van Allen	1	47	48	Welles	2	48	50
Glover	0	50	50	Hutchins	13	31	44
Money	5	44	49	Bittiner	15	35	50
Keystone	4	44	48

Enterprise Gun Club.

McKeesport, Pa., Sept. 20.—The fourth tournament of the Enterprise Gun Club was held to-day on the club grounds, Wildwood Place. The out-of-town shooters were Messrs. Swearer and Nelson, of Bellevernon; Fleming, Wilson and Reed, of Pittsburg; Cochran, of Rodville, and Deniker, the old war horse from Ruffsdale.

The first four events after lunch constituted the second series for the championship medal. It was won by Mr. L. W. Cannon with a score of 46. Ticket No. 156 won the phonograph raffled on the grounds. Following are the scores:

Events:	1	2	3	4	5	6	7	8	9	10	Total
Targets:	10	15	10	15	10	15	10	15	10	15	Broke.

Wilson	..	..	..	..	4	12	6	12	6	10	50
Knight	..	..	..	..	..	..	..	14	8	14	36

Extra events. First event, 15 tagets: Fleming 14, Wilson 12, Reed 13, Nelson 15, Swearer 14, Cochran 11, Calhoun 12, Cannon 14 Knight 11, McFarland 10.

Second event, 10 targets: Fleming 8, Wilson 7, Swearer 7, Cannon 9, Reed 10, Nelson 10, Knight 7.

The Excelsior Springs, Mo., Gun Club announces its first annual target tournament, fixed to take place Oct. 9-11. On Oct. 10 and 11 there will be twelve 15-target events, $1.50 entrance, $5 added. Oct. 9 is practice day. The Excelsior Springs' silver trophy will be offered for competition. Handicaps 16 to 22yds. Handicap Committee: Messrs. Louis Erhardt, Atchison, Chas. W. Budd, Des Moines; Harry Davis, Richmond, Mo.; Chris. Gottlieb, Kansas City; L. R. Cunningham, St. Joseph; Frank Hodges, Olathe, Kans. The corresponding secretary is Mr. C. H. Coppinger.

Harrisburg Tournament.

HARRISBURG, Pa.—The two-day tournament of the East Harrisburg Shooting Association opened on Friday, Sept. 19. The attendance was smaller than was expected, caused no doubt by the many shoots held in this vicinity recently.

Friday was devoted to target shooting entirely. Some good scores were made, especially those by Neaf Apgar, who broke 196 out of 205 on this day, or a total of 240 out of 250 for both days. The shooting of A. C. Kreuger, of Lancaster, Pa., was also good. Mr. Kreuger is an amateur, yet scored 188 out of 205.

The trade was represented by Jack Fanning, Frank Butler, Neaf Apgar, A. H. Fox and Jack Hull.

Saturday was live-bird day. A few target events were shot in the morning. The weather was rainy, but cleared away before lunch. The birds were a good lot, and left the traps as soon as sprung. First event was a live-bird match, 30yds. rise. This was followed by a 15, 10, and miss-and-out. The last named one was a very interesting one. Kreuger, of Lancaster, missed his 15th bird, a fast right-quartering driver, which fell dead out of bounds. Wm. Stephens missed his 15th, and Geo. S. Bolton, killing his, decided the race.

First Day, Friday, Sept. 19.

J. B. SINGER.

Ossining Gun Club.

OSSINING, N. Y., Sept. 27.—During the temporary cessation of the rain some of the boys got in a little practice. Blandford got high percentage with 64 out of 70, 91 per cent., while Clark was a close second with 88 per cent. Hans was trying a new gun, which didn't fit him, so his scores suffered accordingly.

Next Saturday there will be a prize offered for a 25-bird handicap, entrance price of birds. A good turnout of shooters is looked for on that day.

A match was shot by Clark and Blandford at 5 birds, holding gun at hip. Each succeeded in breaking 1 target. Event No. 3 was for the 20yd. mark. Washburn came up without his gun, but couldn't stand the temptation to shoot a few strings, the result of which was not up to his regular performance with his "corn sheller."

Events:	1	2	3	4	5	6	7

Thanksgiving Day has been set for the big team shoot. President Geo. Sutton, of the Westchester County Trapshooters' League has decided that Thanksgiving Day is open, so the Ossining Gun Club has grabbed it. Full conditions are as follows: The Ossining Gun Club herewith offers a $40 cup, to be shot for on Thanksgiving Day by teams of seven men of any club in Westchester, Orange, Dutchess and Rockland counties. Members of teams to be residents of the counties in which their club is situated; 25 clay birds each, entrance, price of birds, at 2 cents each, ½ cent deducted from each bird to make a sweep, to be taken by the three individual high scores of shooters, irrespective of club to which they belong, 50, 30 and 20. Club winning cup may take it and hold it for three months, when it must be put up for competition again, notifying secretaries of all clubs previously competing one month ahead of shoot. Any club to retain the cup permanently must win it twice. Club holding cup has the privilege of calling the shoot on their own grounds. No professional will be allowed to shoot on any team.

Club secretaries of gun clubs in the counties named are cordially requested to send the names of the clubs they represent, if they are probable competitors, so that we may send them a programme and half-tone engraving of the cup. For further information address C. G. Blandford, Captain, Ossining Gun Club, Ossining, N. Y. In addition to this, a 100-bird match for a fine gold medal, carrying with it the title of championship of Westchester County Trapshooters' League, will be put up by this club; entrance, price of birds at 2 cents each, ½ cent for each target deducted for a sweep for three high guns. First, medal; second, 50 per cent.; third, 30 per cent.; fourth, 20 per cent. Shooting for medal begins promptly at 11 A. M., at the end of which the team shoot will start. Shoot, rain, snow or shine. Big club house—plenty of room.

This club has recently inaugurated a rifle auxiliary. A fine 50ft. indoor range has been secured for the winter. Scores on either the German ring or American Standard targets will be published weekly. We have some good talent here, and in the spring intend to institute a 100 and 200yd. range.

Editors of papers desiring weekly scores, etc., are requested to communicate with Mr. Edward Ball, Compiler of Scores Ossining Gun Club, Ossining, N. Y.

C. G. B.

Burlington Tournament.

BURLINGTON, Ia.—The shooting fever comes and goes. How strange it is that one or two men generally keep up the shooting interest in every town. Clubs rise and flourish and decay, owing to the leadership of one man. Burlington is no exception.

The present club owes its existence to Frank Smith. He shoots and not content to shoot alone, he associated with him a lot of his friends, who know what a scatter gun is, and they in turn got up a tournament, and while they advertised same well at home, and sent out bills to the adjoining towns, they did not let the shooters from any distance know of it. Yet on Sept. 24 and 25 they had some thirty shooters all smashing targets and having a good social time. Some of the boys were out of practice, and they could not put 'em all in the "game bag," yet they were much pleased with the way they were entertained, and will come again.

Burlington has not had a live club for several years, but from now on keep an eye on the border town, situated not far from Keithsburgh.

First Day, Sept. 24.

JINGO.

Concordia Tournament.

CONCORDIA, Kans., Sept. 26.—The Concordia Gun Club gave its third annual tournament here this week, commencing Sept. 23. The weather was abominable throughout, rain falling nearly all the time. This made the attendance very small, and scores low. Targets were trapped from a strong magautrap, an dmoneys were divided in four and five points. The club added $40 to the purses, and provided every accommodation for guests. W. H. Heer won first honors on a creditable score. The third day 250 live birds were shot in practice sweeps. Of those who shot in all events, Heer, Riehl and O'Brien won the honors. The townspeople showed much interest in the shoot, and there was a daily attendance of more than a hundred visitors. Concordia will have the next State shoot, and arrangements for that occasion will be elaborate.

First Day, Sept. 23.

Events:	1	2	3	4	5	6	7	8	9	10	11	12	Broke.
O'Brien	10	12	18	8	15	17	9	15	17	10	14	17	162

*Birds only.

J. R. MERRILL, Sec'y.

Mr. Floyd Accepts.

NEW YORK, Sept. 25.—*Editor Forest and Stream:* I see in FOREST AND STREAM of Sept. 20, that Mr. I. A. Hudson, of Dagsboro, Del., challenges me to shoot him a race at live birds, offering to wager his farm against mine that he can beat me.

Now, Mr. Editor, I am not looking for matches, and if I was, I surely would hunt up some one that could give some kind of a close run for my money; but Mr. Hudson can't kill 80 per cent. To show him that I have no yellow in me, I will shoot him a 100-bird race, my farm against his, under American Association rules, each to stand at 30yds., and 50yds. boundary; to be shot on Nov. 15, 1902, at Dagsboro, Del. Find inclosed check, and ask him to produce to insure the match, as I have done, or go in his hole.

C. W. FLOYD.

[Check for $50 received. In a personal letter Mr. Floyd requests us to notify Mr. Hudson that this deposit is in our hands, and, as evidence of good faith, that he deposit an equal amount. Mr. Floyd further informs us that by "birds" he means targets or live pigeons, or both.]

PUBLISHERS' DEPARTMENT.

At the Cincinnati Gun Club's tournament, held during the week commencing Sept. 21, W. R. Crosby won first general average for the entire target programme. In a letter to the American E. C. & Schultze Gunpowder Co., Ltd., dated Sept. 25, Mr. Crosby says: "I had the good luck to land high average at this shoot, but I had to stand away back at 22yds. all the time, winning out after a hard struggle. I used 3drs. of 'New E. C.' just for an experiment, and I can fully indorse it, as I believe 'it is mighty near as good as the old stuff.'"

After a long day in cold and wet, or a long tramp after big game or small, there is nothing that heartens one up so much as a little stimulant. The fashionable beverage of this particular age is Scotch whisky, and it may fairly be said that among the most fashionable and best brands of this liquor are the Bonnie Brier Bush and the Souvenir, from the Glenlivet District, advertised by H. B. Kirk & Co., 156 Franklin street, New York. These whiskies are guaranteed to be absolutely pure, and not blended.

Harrisburg, Pa., Sept. 19-20, Neaf Apgar, Peters Cartridge Company's demonstrator, won high average, with 96 per cent.; Brooklyn, Sept. 24, 175 targets, 97 per cent.; Williamsport, Pa., Sept. 16-17, D. S. Daudt won average in amateur class. Atlanta, Ga., Gun Club shoot, J. W. Osborne won live-bird medal contest, and W. O. Conney won target medal contest. All used Peters ammunition.

With Winchester .30 U. S. Army cartridges in a U. S. Military rifle, open sights, at Plattsburg Barracks, N. Y., Sergt. Leonard Deitz, Company M, 23d U. S. Infantry, made 26 consecutive bullseyes at 1,000yds., and in 20 shots for a record he made 20 consecutive bullseyes. This is the first time in the history of rifle shooting that such a score has been made at 1,000yds.

There are few things more essential to one's comfort than what is worn on the feet. Footwear that does not fit is a continual source of discomfort. Messrs. Metz & Scholerbe, of Oshkosh, Wis., claim comfort for the "slipper moccasins" which they make, and declare their Wisconsin cruising shoes to be the best hunting shoes in the country.

For many years Messrs. Acker, Merrall & Condit have stood in the front rank among New York grocers, and Muir's Sparkling Scotch Ale, which they advertise, has had a reputation of its own for many years. People who use ale as a beverage will make no mistake if they patronize this combination.

General Missionary Convention, Methodist Episcopal Church, Cleveland, O., Oct. 21 to 24. Pennsylvania Railroad will sell excursion tickets from all points east of Pittsburg and Erie on Oct. 20 and 21, good to return, leaving Cleveland, until Oct. 27, inclusive, at reduced rates.

Down on the shores of Toms River, close by Barnegat Bay, is a boat building yard whose work is spoken of in high terms. The man who is considering the general subject of having boat or yacht building done would do well to communicate with Mr. Wm. P. Kirk.

The shooting season is at hand and birds and animals are being killed which the gunner desires to have preserved, either as mementoes of his skill or because they are unusual. Baldwin, "the taxidermist," of Newark, N. J., guarantees his work to be well done.

An ingenious card device, for displaying the colors of Dixon's Silica-Graphite Paint in such manner as will permit of an exact idea of each color, is being issued by the Joseph Dixon Crucible Company, Jersey City, N. J. Sent free on request.

Mr. W. Heer, in his contest at Kansas City, Missouri State shoot, won the Schmelzer trophy with a score of 48 out of 50 without a tie. He used a Parker gun and U. M. C. shells.

Guns, Revolvers, Ammunition, etc.

"MY TRAP SCORES"

WILL ENABLE YOU TO

Preserve Your Scores.

A POCKET trap score book containing 50 pages of score sheets and the Interstate Association rules for target andl ive bird shooting, and for shooting under the Sergeant system. The cover bears the title "My Trap Scores," and the pages, in number and form, are arranged to make a complete record of the shooter's doings at the traps. The pages are ruled to make a record of the place, date, weather conditions, number of traps, number of shooters, gun and load used, events, etc. The score sheets are ruled for 25 targets. Bound in leather. Price 50c. postpaid.

FOREST AND STREAM

Trap Score Book.

The only one containing the new (1902 revision) Shooting Rules of the Interstate Association, for targets and live birds; The American Shooting Association Rules; and the revised Hurlingham Rules. And a detailed description of all the shooting systems in practice for the divisions of money.

FOREST AND STREAM'S new Trap Score Book will admirably fill the needs of clubs and contestants in affording a means of keeping a faithful record of contests. Each book contains a generous number of sheets, so ruled as to make all the chief divisions of the shoot plain at a glance. For instance, the horizontal spaces are numbered from 1 to 27, every sixth line being distinctly heavier than its fe lows; hence the squads are distinguishable at a glance. The perpendicular spaces are numbered from 1 to 30, ample space first being left for the contestants' names and their handicap allowance. Heavy dark lines are between each five spaces, and the numerals 5, 10, 15, 20, 25 and 30 are in heavy-faced type, so that the number of targets or birds to be shot at are apparent at a glance. The heavy ruling also is an advantage in bad lights. However dark a nook the scorer may be in, no straining of the eyes or incorrect entering of scores is possible on account of inability to distinguish the lines of the score sheet. At the head are the usual spaces for current data. Each sheet is perforated, so that it can be readily torn out when manifold copies are made, and yet each sheet is strong enough to hold firmly in place if the book is desired for permanent club records. A neat pocket on the inside of the back cover holds carbon sheets for manifolding. The book is neatly and substantially bound in cloth, and contains 150 score sheets. The price is $1

FIELD GUNS.

When, 15 years ago, we introduced the light weight, short barrel 12 gauge **Featherweight Francotte Guns,** most hard practical field shooters who were lugging their 8 or 9 pound guns when following their bird-dogs, shook their heads and very much doubted that anything like the same bag could be made with these "grasshopper" or "mosquito" guns as with their heavy old-fashioned guns.

When, however, one of these full-choked little guns made highest percentage of pattern and penetration in gun trial where most of the leading guns competed and when others were winning highest honors at the trap—then, public opinion began to change. Since then thousands of our Francotte and Knockabout Guns have gone into the hands of leading sportsmen.

FRANCOTTE AND KNOCKABOUT GUNS have always kept well ahead of all competition as regards shape and model, strength coupled with light weight, shooting and wearing quality, fit and finish, and the ownership of either make of gun is a testimonial as to a sportsman's standing.

FRANCOTTE GUNS, all gauges, weights, length of barrels and shape of stocks from $80.00 to $450.00 net.

KNOCKABOUT GUNS, all gauges, weights, lenght of barrels and shape of stocks, $60.00 net.

We are willing to take your second-hand guns as part-payment for new ones.

MAUSER SPORTING RIFLES, $45.00 to $50.00.

MAUSER AUTOMATIC PISTOLS, $22.65 to $25.00.

A New English Gun.

"Great Value for Little Money."

THE REGENT. PRICE $65 NET

We have just received the first few cases of a new English gun which we have named "The Regent". They are made for us by the best gunmaker in England and bored on the same principle that has won world wide honors for English guns. The barrels are best Siemens Martin steel, and the shooting is unexcelled. The stocks are selected English walnut, half pistol grip, latest model Anson & Deeley action, nicely engraved, and the finish and workmanship throughout are up to the English standard. English guns have long been the standard of the world, and this new product will mark a new era in price as well as quality. We have never before been able to offer so fine and good a gun for so little money. They can be supplied in weights from 6¼ lbs. to 8 lbs., in 12 bores, and from full choke to true cylinder.

We carry a large line of guns and rifles from $6.00 to $600.00, and are sole U. S. Agents for the celebrated guns of W. W Greener.

CANOE CRUISING AND CAMPING.

By Perry D. Frazer. Illustrated. 95 pages, cloth. Price $1.

This interesting little volume is a practical guide for the cruising canoeist, the man who wishes to start away from the city and for a short time to make his canoe his home. With this in view, Mr. Frazer, who regards canoeing as a healthful and economical method of passing away leisure hours, has written briefly but attractively of canoes, camping outfits, clothing, firearms and ammunition; fishing tackle, photography, and in general of cruising, camping and all that pertains to this phase of outdoor life. While the volume has been written chiefly for the younger men, it is yet full of practical information and suggestion that appeals to those who have had a wider experience.

Such a book as this should be in the library of every man who is interested in outdoor life or the things which pertain to it. It is one of the manuals which should stand on the shelf alongside of "Woodcraft," of which, in fact, it is a part.

YACHT ARCHITECTURE.

By DIXON KEMP, Associate of the Institute of Naval Architects, and Member of Council. Second edition. Super-royal 8vo. Price, $16.80.

This work enters into the whole subject of the laws which govern the resistance of bodies moving in water, and the influence a wave form of body and wave lines have upon such resistance. It also deals comprehensively with the subject of steam propulsion as applied to yachts. An easy system for designing is provided, and every necessary calculation is explained in detail. The latter part of the work is devoted to yacht building, and engravings are given of every detail of construction and fitting, including laying-off, taking bevels, etc. The list of plates (exclusive of over thirty devoted to the elucidation of the text, and nearly 200 wood cuts) exceeds fifty, and comprises the lines of some of the most celebrated yachts afloat by the most successful builders and designers.

FOREST AND STREAM PUBLISHING COMPANY, NEW YORK.

Hints and Points for Sportsmen

Compiled by "Seneca." Cloth, illustrated, 224 pp. Price $1.50.

This compilation comprises six hundred and odd hints, helps kinks, wrinkles points and suggestions for the shooter, the fisherman, the dog owner, the yachtsman, the canoeist, the camper, the outer; in short, for the field sportsman in all the varied phases of his activity. The scope of the information it contains embraces a wild field, and "Hints and Points" has proved one of the most practically useful works of reference in the sportsman's library.

THE BROWNING LEAF.

FOR some States the shooting season has not yet opened, while in others it has half gone. From different localities come varying reports indicating that in parts of the West and the Northwest the shooting for pinnated and sharptail grouse—commonly called chickens—has been a great disappointment, while in a few localities the birds are reported to have appeared in goodly numbers. In many portions of the East the ruffed grouse are said to be fairly plenty, while in southern New England, Long Island and New Jersey, quail promise greater abundance than for years. Woodcock, on the other hand, are almost unknown, and even from northern New England, where by this time the birds should be stirring about, reports of their numbers are very discouraging.

However, it is as yet too early to express definite opinions as to the prospects for any birds except the prairie grouse. The shooting for these birds is over, for by this time they have become wild and well able to take care of themselves. Those species which are sought for in cover, however, have as yet hardly been pursued. The weather has been too warm to admit of much hard work being done. There have been no frosts to kill the leaves and cut down the weeds and grasses, and as yet shooting is more or less of a labor. Men and dogs alike suffer from the heat, and though, in this autumn of 1902, there will be little complaint of dry weather to prevent the dogs from working on the birds, it is still true that even in the States where the season has already opened there has been little cover shooting.

A month hence the story will be different. By that time crisp frosts will have nipped the ripened vegetation and the trees will be nearly bare. Cold blasts from the north will sweep along the leaves in hurrying clouds, heaping them up in windrows in the corners of the fences or on the borders of the swamps. There will be tang in the air which renders each breath of it exhilarating, and man and dog, feeling the inspiration of the season, work earnestly over fields, along hillsides, and through swamps, enjoying every step taken, keenly alert for scent or sound or sight that may betoken the presence of game.

True, the landscape then will have lost much of its present beauty. No longer shall we see on tree and shrub and vine the gorgeous patches of red and yellow and orange that meet our eyes to-day. The flaming colors will have disappeared, and in their place there will be only the neutral tints of gray twig masses, or the somber brown of the fallen leaf. But then we may see a long way through vistas of swamp or wood now hidden by foliage. The eye may detect the dog far beyond the distance at which his soft tread can be heard rustling among the dry leaves. If a bird gets up never so quietly, he is likely to be seen, though the cedars and pines which grow along the hillside, and often the thick masses of naked twigs of deciduous trees, call for that instant work which brings into play readiness, faith and judgment. But if all these work together for good, the shooter is likely to hear after his shot the light thump followed by the drumming sound among the fallen leaves which tells him that he has wrought well, and that the noble grouse is his.

Then, for most of the land, the wanderings of ruffed grouse and quail are over, and these birds have found their winter quarters and have settled down to them. Then, too, the last flight of the woodcock is likely to take place during some cold November storm, at the end of which the greater portion of the birds disappear for the winter, though sometimes a few stragglers may be found idling about the warm spring spots much later—even up to Christmas time.

Is there anything more delightful than a journey afield during November? To be abroad in the open air, to see the good dogs work, to have the occasional excitement of birds, of which we should all like to kill a few, to eat luncheon stretched out at ease beside some spring or brook—in the shade of a noble oak or chestnut, if the sun is too warm, or in the sun if the air is chill—to stop and gossip with the friendly farmer, to drink the cider or eat the apples which he kindly offers; and then as the sun falls low in the western sky, to turn our faces homeward and trudge across fields, or along the pleasant roads, while we talk over the incidents of the day!

And then when the house is reached and guns are put away and dogs attended to, the wolfish appetite is satisfied and a little time is spent at ease before the blazing logs, with a feeling of contentment hardly to be matched by anything in life.

A day so spent is worth remembering.

GOOD HEALTH AND GOOD TEMPER.

THE advocates of healthful recreation to be derived from the many kinds of approved sports of field and stream, dwell in the main on the personal advantages accruing to the participants. The physical and mental benefits of it are treated as being within personal limitations. Individualism is accepted as compassing the subject in full, and therefore as being distinct from any matter of social significance. The doctrine of individualism is sound so far as it goes, but in relation to a man as a member of society and the duties which appertain to him as such member, it is but a small part of the whole.

Beside the individual obligation to maintain a sound mind in a sound body which a man owes to himself, and further to respect the vested rights of society at large, there are also the moral obligations which he naturally assumes as husband, father, son, brother, friend and citizen. Statute and common law have very little to do with making the individual useful or beloved. And yet the gist of the whole matter is embodied in the Golden Rule. It does justice to one's self and all others.

Any man, irritable and snarly from being out of sorts, is not an exemplar for his children, is not a good companion for his friends, nor is he a just master for his employees. Yet without recreation, the man who carries the burdens of business in the same narrow channel year after year, is sure to have impaired nerves sooner or later. All kinds of petty ills follow as a consequence. Then the sufferer's disposition, though naturally amiable, changes in greater or lesser degree for the worse. He is conscious of his physical ill feeling, while unconscious of his changed social character. He does not see himself as others see him. He may allude to the mental and physical disturbances as a "bad spell," or to a feeling of being "out of sorts." He rarely ever considers that the disturbance of his being is the protest of overtaxed nerves and brain, or the protest of the general organism against physical neglect. If he is one of the few who rightfully considers the matter, it is long odds that he ignores the cause, and takes the chances that at least the effects will be no worse. The bad spells may occur at wide intervals of time at first. Occurring more and more frequently, in time they become constant. Peevishness is then sure to supervene, and it, at first an incident of physical or mental disturbance, by indulgence at length, develops into habitual ill temper. In the latter stage, the victim gives little heed and cares less for the social or domestic amenities. He values his friend chiefly as one who will listen to a minute rehearsal of all his bodily ills, all his infinity of business troubles, and all the vagaries of pessimistic views on matters in general. He is abnormal, but he does not know it. He has not a sound mind in a sound body. All who are associated with him, at home or elsewhere, are unwholesomely affected by the contact. His irritability begets resentment and enmity in his subordinates; it cools or detaches friendships, and if it does not wholly break up his home life, it engenders much unnecessary pain and sorrow in it.

The overworked brain and body, with no hours or days devoted specially to their recuperation, is the source of nearly all the nervous ills, and many of the physical ills of man. If the effects were confined to the individual, the responsibilities would have only an individual scope; but, being so wide-reaching, the moral obligations of the individual as a member of society, cannot be justly ignored.

In no other matter is prevention so superior to cure. Make the days good day by day so that no evil days will follow. Give the mind and body opportunities for relaxation and restoration by nature's own methods, by living according to her methods. The woods, fields and waters contain the preventives and oftentimes the cures for overworked minds and stagnant bodies, free to all who will partake.

NON-EXPORT GAME LAWS.

THE correspondent, whose querulous questionings about the non-resident and non-export laws of Virginia and North Carolina are signed "Non-Resident," lives in New Jersey, and such complaint as he makes come with extremely poor taste from that State. No Jerseyman may expect sympathy for his woes at the hands of the Virginians or the North Carolinians, because he himself treats them in the same way, only "more so." New Jersey demands of the non-resident that he shall pay a $10 license fee for the privilege of shooting a quail, and then he is not allowed to take it home with him. Before New Jersey may with grace, not to say decency, complain of Virginia, it must change its own system, and do as it would be done by.

There are in this country two systems of non-export game laws. One permits the taking out of a limited amount of game, accompanied by the owner. The other prohibits exportation altogether. In the practice of those States where the first system prevails, experience has demonstrated that the modified restriction is quite sufficient to accomplish the purpose of the statute, which is to cut off the marketing of game. This being insured, the game carried home by the visiting sportsman is not in such quantity as to be a factor in the problem of protection. This is only another way of saying that absolute prohibition is not essential. Game may be and is protected without it. The deprivation it imposes upon the non-resident sportsman has no good reason. The law would accomplish the purpose without it. This is the consideration which renders the law so obnoxious. If absolute prohibition of export were essential to game preservation, the sportsman who is deprived of the satisfaction of carrying his birds home to his family could not complain. But the condition is not an essential one; and it is this which provokes a rebellious spirit in the victim of the New Jersey law. He reflects that he might be permitted to take his game home with him, and the New Jersey game fields would be not a whit the poorer; and he is human enough to resent the law as an imposition.

Since this absolute prohibition of export is not necessary, and since it works hardship by the deprivation of privileges which might reasonably be accorded to the visiting sportsman, the New Jersey law should be amended. So should the law of Pennsylvania and those of Virginia and North Carolina and other States which sportsmen visit for shooting. These laws as they stand now are in conflict with the interests not only of the visiting sportsman, but of the transportation companies which get revenue from sportsmen's travel and of hotels and camps which entertain sportsmen. Their repeal would be "good business."

The New Jersey game law was designed to protect the flicker at all times, but the birds are shot by thousands this season just as they were last year; and the shooters go free because of the ambiguity of the statute. No one but a lawyer, or one who has made a special study of the idiosyncracies of legislatures when dealing with game, could reasonably be expected to know what the law really intended with respect to these birds. In one section it is said that no birds other than game birds may ever be killed, and a list is given of the birds which are game, the flicker not being included among them. According to the section then, the flicker is protected at all times. But another section says that the flicker may not be killed "excepting during the months of September and October." This provision is interpreted as permissive of flicker shooting in the months named; but such an implication of a permission to shoot cannot nullify the direct prohibition contained in the other section. Nevertheless, because of the innocent intent of shooters who may honestly be misled by the September and October clause, certain of the New Jersey justices refuse to hold the flicker shooters who are brought before them.

The Sportsman Tourist.

Tales of the Frontier.

V.—Witches.

Strange characters were occasionally met on the frontier.

As the straggling lines of the first settlements crawled further and further into the wilderness—following the streams and lakes in quest of the timber so indispensable to the first comers of the invading race—wide intervals for a time separated the scattered hamlets; and where, in the endeavor to establish comfortable homes, each was dependent upon the other, the most democratic equality prevailed, and individuality was at a premium.

Little of social hypocrisy was evident, and where, as Paddy contended, "one man was just as good as another, and a blanked sight better," education touched elbows with ignorance, and superstitions supposed to have been buried long syne upreared their heads and clamored for recognition.

In the occasional visits of the frontiersman to the friendly fireside of a neighbor he paid tribute in the conversational coin at his command, and most surprising statements often circulated at par, all unquestioned.

My good friend, Jim R. kindly informed us that before his journey across the mountains into Kentucky, Daniel Boone had carved his name in the bark of a big tree near Jim's old home in Virginia, and that he himself had often read the carved legend of long ago, "Dàniel Boone: 1492."

Another philosopher with a wonderful memory for historic incidents explained to us how events occurred in the turbulent old days, "When Old Cromwallis walked into the Diet o' Worms."

But in the life of the sturdy pioneer, legend, history and even politics took a back seat in the presence of the burning question of the proper time of the waxing or waning of the moon in which to kill hogs; or to lay the rails of a worm fence. For, be it known to the benighted readers of Forest and Stream that the pork of a pig killed in "the wrong time of the moon" will shrivel up in the frying pan till Piggy could pass muster as a small porcupine; and the bottom rail of a worm fence laid in the same unfortunate period would sink into the bosom of Mother Earth till something like the diamond drill of the miner was necessary to locate it; while the happy porker, butchered at the right moment in the moon's phases, swelled up in the cooking dish to something near the size of a grizzly bear; and the worm fence, laid at the right time, defied gravitation and towered heavenward, warning to all marauding foes.

A party of frontiersmen, gathered at the house of a neighbor discussed these questions one evening until midnight in the presence of a silent young stranger who on his journey was sharing the hospitality of the settler for the night, and when about to separate for the night some one asked the opinion of the guest. He replied that in regard to the pork question he could not say; but as to the laying of fence rails he was posted. When his family first came into the wilderness, in utter disregard of the kindly warnings of neighbors, his father had begun laying rails for a fence around a field at precisely the wrong time of the moon; and when the fence was half built sickness had delayed the work until the sign in the moon was just right; and when then the fence was promptly finished, all were amazed to note that the rails first laid settled into the ground, and the last half of the fence rose until all around the field yawned a gap between the rails big enough for the exit of a yearling bull.

All these interesting problems of every-day life were occasionally dwarfed, however, by the unseemly pranks of witches.

Only an occasional pioneer was cognizant of their nocturnal doings; but their cantankerous pranks seemed to range from the mischievous "charming" of an old hunter's rifle until its deadly bullet failed to harm any living creature—but which readily yielded to proper incantations—to the hellish performances which even the all-potent horseshoe seemed powerless to prevent.

On the south shore of Spirit Lake, Iowa, stood an old grist mill, owned by a queer character named Peters, who seemed to have more bother and trouble with witches than fell to the lot of most of the pioneers.

The old man owned a singular looking pebble which, he claimed, when placed in a hat, and the hat held close to the face of some gifted seer, sent forth a glow of strange light which enabled the fortunate observer to "read the past, present and future" at a rate which discounted the advertising clairvoyant. He had sense enough to know that he himself could see nothing in the pebble; but he was continually on the hunt for some one who could.

The old miller had his share of human nature, and in occasional quarrels with his neighbors would doubtless have been worsted save for the friendly intervention of a lovely female, unseen to the eyes of the profane, but who, the old man contended, kept watch and ward over him to protect him from the machinations of his foes.

A graceless trapper named Dan Bellows used to play upon the credulity of the old pioneer, peering into his hat at the old man's pebble, while second-hand visions of female loveliness danced before the eyes of the old miller; and, for a time at least, he felt safe from the malice of his enemies.

One day two men brought a bag of corn to the mill to be ground, and while the work was going busily on to the satisfaction of both the miller and his customers, suddenly the wheel began to be checked in its revolutions, and the mill stone to run slow, and more slowly as the startled miller raised the mill stone, shut off the feed and ran to the mill gate to see that it still remained open to its full extent; while in spite of his utmost care the bewitched machinery seemed to be fast in the slowly tightening grip of some unseen and devilish hand.

After exhausting all the resources of his skill, the old man finally, with a tremendous oath, shut down the mill gate, and, in spite of the protestations of his anxious customers, started for the house, declaring that he would do no more that day, as it was of no use whatever to attempt anything more when annoyed by witches in such hellish fashion.

The beautiful female guardian, even, seemed powerless against witches, and, completely discouraged, the old man gave up the job.

Left alone, his customers, whose grist was now neither corn nor meal, crawled down into the pit containing the mill wheel, and through a crack in the circular box or frame inclosing the buckets of the wheels, detected an obstruction at the end of one of the buckets, the nature of which they could not determine.

After long persuasion they finally prevailed upon the old miller to open the wheel box, when, squarely against the end of one of the buckets, and wedging more and more tightly in place as it was being gradually ground away in the slow revolutions of the wheel inside the smooth round box, was found a buffalo fish, estimated to weigh full thirty pounds.

It was the first witch the old miller ever really got his hands on.

Orin Belknap.

A Trip to the High Sierras.

For several years I had felt a strong desire to visit that section of the Sierras that in Tulare county culmintes in the grand crests of Mts. Goddard and Whitney. The many happy days I had spent in the sixties in the more northern sections lingered lovingly in my memory, redolent with the scent of the fir pine and tamarack, and now, though the lapse of time had dimmed my vision and robbed my limbs of their youthful elasticity, I still longed to look upon them once again. Never, however, until the present year had conditions been sufficiently favorable to justify even the hope of its realization; but in June I received a letter from an old boyhood friend, S. Frank Dexter, of Pawtucket, R. I., who was in Los Angeles, suggesting that we make the trip together. Nothing could have pleased me better, and a reply promply brought him to my home in Oakland, where immediately preparations for the trip were made, khaki suits, fishing tackle, ammunition for a .30-40 rifle and a Scott 12-bore shotgun were secured, although we did not expect to do much shooting, and on July 18 we took the morning train for Visalia.

South of Livermore Valley we passed through the great cattle ranges of Lux and Miller. In some portions the fat beeves were standing up to their knees in alfalfa, and in others many acres were flooded from the irrigating ditches, making large ponds, where thousands of ibis, stilts, pelicans, and other aquatic birds found a congenial home. Still further south the country became so extremely barren that reclamation seemed impossible; the overflow was like a street puddle, without a vestige of green along the banks. The sage and grease brush, nowhere more than three or four inches high, was so thickly scattered that it hardly changed the color of the granite-like soil, and an occasional jack rabbit or a soaring buzzard was the only sign of animal life visible from the train.

This dreary section, more barren it seemed to me than even the Mojave desert, extended for at least fifty miles, but as we approached Hanford it rapidly improved, and from that on until we rolled into Visalia at 4 P. M. there was a continuous panorama of broad grain fields and orchards laden with fruits. Here a carriage awaited us, and we were driven to the residence of Mr. John Huntley, a wealthy rancher living about two miles from town, to whom we had letters of introduction.

The house, which was approached by an avenue of fan-palms, was admirably adapted to temper the excessive heat that often prevails there. Broad verandas surrounded each story, grapevines and running roses shaded the windows, and towering above all were the magnificent oaks that almost covered the edifice.

Mr. Huntley received us very cordially, and after a generous dinner, we all adjourned to the upper veranda, where we could view the surrounding country as we sat smoking in our easy chairs. The prospect was certainly a charming one. As far as the eye could reach in every direction was a park-like country, covered with a green carpet of alfalfa and salt grass, studded with immense oaks and cottonwoods, beneath which hundreds of sleek cattle were grazing or dozing in the grateful shade. Only to the east was this view broken, where sixty miles away the great peaks of the sierras thrust their bare granite summits up into the heavy masses of black threatening clouds that, even at this season, enshroud the lofty range and illuminate the night with vivid flashes of lightning.

In the morning we returned to town and purchased our supplies for the trip—a pack saddle, blankets, provisions, cooking utensils, etc.—and returned in the afternoon, where we found Mr. H. had brought in a pack animal for our use, and everything was soon in readiness for our departure the next day.

Daylight found us already stirring, and after dispatching a hearty breakfast, we bade our generous friends good-by, packed our horse, and turned our faces toward the distant mountains. For the first ten miles the country was much like that just described, broken here and there by sluggish streams whose banks were a tangle of willows, alders and cottonwood, woven by wild grapevines into a jungle as impenetrable as the canebrakes of the South. Large orchards of apricots, apples, peaches and plums were passed at intervals, whose trees were breaking down beneath the weight of fruit, while in the swales the cattails, 10 or 12 feet high, all bespoke the rich character of the soil. What a splendid country for elk, deer, antelope and bear this must have been in those halcyon days "before the gringo came!"

The morning air was exhilarating, and we trudged along on foot with a step as elastic as a schoolboy out for a holiday, but alas! this enviable condition was as evanescent as the dew that sparkled upon the foliage about us. Noon found us in the midst of yellow stubble and hog wallow lands, the dust ankle deep, a scorching sun, water, shade and houses so far apart that they seemed like oases in the desert, and the whole outfit completely demoralized. Suffering extremely from thirst and heat, we drew up to a house where the occupants were absent, but who had fortunately left the pump in good working order, and for three hours we lay in the shade waiting for the sun to go down.

Late that night we arrived at Lemon Cove, sixteen miles from Visalia. This little settlement is in what is known as the "thermal belt," where the climate is less variable than at Visalia and frost is hardly known. The soil is rich, well adapted to the citrus fruits, and is rapidly being planted with orange and lemon trees, that mature their fruit at least a month earlier than at Los Angeles. The thermometer at the hotel indicated 100 degrees at 9 o'clock, and the rooms were like ovens, so that, tired as we were, sleep until toward morning was impossible.

We were glad to get out of Lemon Cove. The snow banks that were now visible on the slopes of some of the peaks were far more attractive than the fruit-laden orange and olive orchards of the sweltering foothills, and although we had lost some of the enthusiasm of the previous morning, we plodded along as vigorously as ever for fifteen miles, until we reached Three Rivers, the last settlement before entering the mountains. Here we found the first detachment of troops, that are in charge of the Giant Forest Park, although we had not yet reached the park line. Three Rivers consisted of a general store, a blacksmith shop and two or three dwellings and is located at the junction of three forks of the Kaweah River. The crystal, fast-flowing streams from the range here replaced the sluggish, dirty waterways of the valley, and in one embowered pool, surrounded by rocks, but having a bottom of soft sand sparkling with mica, a haunt fit for a naiad, we enjoyed a most refreshing bath.

A mile above town we found the supply camp of the park cavalry, where we were received and entertained in the most hospitable manner, and from this on, whenever we met the park guards, we experienced nothing but the most courteous treatment from both officers and men.

We were in no hurry to start the next day; our surroundings were quite pleasant, and although the altitude was now nearly 2,000 feet, there was but little shade along the road, and the heat was nearly as oppressive as we found it at Lemon Cove; but as the sun went down we packed our horse late in the afternoon and went on eleven miles to a water trough well within the park limit, where we encamped for the night, spreading our blankets by the roadside. The grade here was quite steep, and as there was no water on either side, this was a favorite camping place for freighters taking supplies to the bridge and road builders, and also to the giant forest. There was no grass for our horse, and he was obliged to content himself with the refuse hay that the freighters had left. Our breakfast was cooked on a rude but ingenious rock furnace built into the bank near the trough.

Early in the forenoon of the next day we came to a small squad of cavalry encamped at the first really cold water we had found on the trip, and being warmly welcomed, we passed most of the day with them. Their tents were pitched by a spring so cold, pure and abundant in its volume that it would have delighted the heart of old Kingfisher. Being within the park, no shooting was allowed, and as we rested nearby in the shade, a mother mountain quail led her brood of little ones, which were about the size of sparrows, down to the edge of the water, within a few feet of us.

Again we started late in the day, and just before dusk arrived at the principal encampment, where Capt. Barton, superintendent of the park, and a splendid specimen of the American soldier, had his headquarters. Here our guns were sealed, and after spending a social half hour, and enjoying a good cigar with the genial captain, we pushed on toward the marble fork of the Kaweah. Heavy forest had now taken place of the brush-covered hills. The elevation of 6,000 feet brought with it an atmosphere of most refreshing coolness, the aroma of the pine, the fir and the sequoia filled our nostrils like the fumes of wine, and the excellent heavily shaded Government road upon which we were now traveling all combined to make this the most enjoyable day we had experienced on the trip.

Crossing the divide that led down to Marble Fork, we found the road for at least two miles had been cut through ledges of very handsome blue-veined marble, much resembling the article formerly brought so extensively from Italy.

It was nearly 10 o'clock, and very dark, when we reached the bridge that had been recently thrown over the Marble Fork, and where a large gang of laborers were still engaged in blasting out the roadway on the further side. We could see their illuminated tents on either side of the road among the trees, and there were several camp-fires burning, around which a number of men were sitting. We endeavored to get some horse feed from the contractor, but he refused to sell hay except by the bale, or less than a sack of grain, and as none of them seemed inclined to interest themselves in our behalf beyond showing us where we could get water, we once more made our bed in the road, and our horse went without food. This was the only instance on the trip where our reception left an unpleasant impression upon us.

We were now fairly into the mountains. The wagon load ended at the bridge, and the next morning found us ascending a steep ridge by a trail that three miles beyond brought us to Camp Sierra at the edge of the Giant Forest. This is the most southerly as well as the most extensive of all the sequoia or big tree groves, fifty miles in length by an extreme breadth of eight miles. Here are found several thousand sequoias, interspersed among sugar pine, red, yellow and silver fir. The largest known tree, the General Sherman, is found here—largest, but not highest, being 42 feet in diameter and 285 feet high. A singular fact about the big trees is that in a wild state they are only found at an altitude of about 6,500 feet, but numerous thrifty specimens can be found in Visalia and other towns that have an elevation of less than 300 feet, where they seem to thrive greatly under cultivation.

There were many prostrate giants scattered through the forest that had apparently been lying there for ages, as this wood under ordinary conditions is almost indestructible, and in one of these whose heart had been burned out, making a room 30 by 10 feet in area, a trapper had passed two winters alone nearly twenty years ago. A shelf and some vestige of his couch were still in evidence. There was another tree still standing, and in a healthy condition, with a hollow in it large enough, had it been prostrate, to have driven a prairie

schooner and six yoke of cattle through it for at least 100 feet. One thing that astonished me was their ability to grow very closely together without detrimental effect. In several instances I saw trees that were at least 15 feet in diameter and perfect twins in appearance, whose trunks 100 feet from the ground were less than two feet apart, although at that point they were not less than 8 feet in diameter. According to John Muir, of glacial fame, who is the best authority that we have upon the sequoias, many of these trees are over 5,000 years old. He counted the annual rings of one until he passed the 4,000 mark, after which the growth was so slow that they could only be distinguished by a microscope.. Shades of our Simian ancestors! what strange feelings we experienced when gazing at a living thing that was a stately tree when Joseph was sold into Egypt and Xerxes spanned the Hellespont with his bridge of boats; a tree that was older than the Pyramids and that antedated the glory of Nineveh and Babylon. All around stood pines, firs and cedars, moss-grown and decayed, giving every indication of extremely old age, and yet the great sequoias that counted their years by thousands to the others' hundreds, looked as fresh and vigorous as a sapling, their beautiful light brown bark free from all fungus and their limbs crowded with foliage.

Sierra Camp, where we passed several very pleasant days, was one of the most charming spots we visited. Although situated within the park, it is private property, under United States patent before the park was set aside for public use. The camp is managed by Messrs. Broder and Hopping, who are not only thorough mountaineers, but also understand perfectly the art of catering to the public. The result is that it is the most popular resort in that section, largely patronized by the Sierra Club, and while we were there we had the pleasure of meeting men of world-wide reputation, including John Muir, Prof. C. Hart Merriam, of Washington, D. C.; Wm. Keith, the best scenic painter of California; Historian Hittell, and two or three others almost as well known.

There were no houses at Sierra Camp, but quite a number of tents, one large one where meals were furnished at 35 cents each to all who desired them, and smaller tents for the use of those wishing to stay there, and for which a small rental was charged. Close by and belonging to the camp was one of the meadows, a characteristic feature of the Sierras, containing eight or ten acres, with plenty of water and grass knee high, where the stock was pastured.

We made one side excursion from here to the Marble Fork, which abounds with rainbow trout, and enjoyed our first taste of these delicious trout fresh from their native waters. Here we passed two nights, camping in a meadow half a mile from the river and returning on the third day to Sierra Camp, where we found a party of over fifty members of the Sierra Club, including all the celebrities above mentioned; several professors and many students of the two California colleges, had arrived during our absence from King's River Canyon. They were well supplied with pack and saddle animals, and had been in the mountains for four or five weeks. That evening an immense camp-fire was lighted, around which we all sat until after 10 o'clock, listening to vocal and instrumental music by the club and short addresses from John Muir, and Dr. Merriam, Mr. Muir giving us some facts about the sequoias, and the Doctor dwelling upon the difficulties that were attending the utilization of Mr. Carnegie's munificent gift to the Smithsonian Institution.

The next morning D. and I went to Moro Rock, three miles distant, over a trail heavily shaded by pines and firs, mingled with the great sequoias. The rock resembles the Great South Dome of Yosemite, but is only about half its size, and commands one of the finest views for the altitude that can be found in the Sierras! forest, peak, cañon and stream stretch away before the vision to the west until they culminate in the San Joaquin Plains. We did not attempt to reach the top, leaving that for those in whose younger blood the "Excelsior" ambition still exists in a state of abnormal activity; but halted just below the summit, where the view must have been nearly as fine. As we descended we heard a crash and snort in the brush, and D. caught a glimpse of a brown moving body crossing the trail at the foot of the rock. "There goes a deer," he shouted, but a moment later the thicket parted, and a brown bear went lumbering along the timbered slope not 100 yards away. He was considerably agitated, and had evidently struck our scent, as he crossed the trail. Our guns were sealed and at camp, and as no shooting is allowed in the park, his great haste was entirely unnecessary. On our return trip we gathered a large bouquet of rather small but beautiful tiger lilies, with a perfume like a rose, and also several of the exquisite snow flowers. At the camp we found Mr. O'Neill, Professor of Chemistry at the California University, who gave us dried specimens of the rare golden trout from Whitney Creek still retaining much of the brilliant coloring that distinguishes them as the most beautiful of their race.

The next morning we departed for Alta, eleven miles distant, and 3,000 feet higher. It was with regret that we left Sierra Camp. Its attractive surroundings, admirable management and its waters the purest and coldest we had yet found, endeared it to all who found their way into this gem of the mountains.

The grade of the trail soon became very steep, and in less than four miles we passed out of the sequoia belt. The higher we got the more numerous became the meadows, and at each of these we invariably found one or more flocks of mountain quail, many of which were still very young, and in one instance I carefully removed two of the fluffy little innocents from the trail to prevent their being trodden upon, as they could have been only a few hours old.

Early in the afternoon we made camp in a grove of firs at the edge of the Alta meadows, where we were joined later by the Sierra Club party from Sierra Camp. Directly in front was Mt. Kaweah, the highest peak in this section, whose scarred and riven outlines gave striking evidence of the destructive power of glacial action. Dr. Merriam had with him a very fine camera, of which he was so careful that although traveling on horseback with plenty of pack animals, he always carried it strapped to his shoulders, and as the sun went down, throwing the base of this noble peak into the shadow, he took several pictures of it for himself and for artist Keith. With the party were three ladies, who, having done the Kings River country dressed in a kind of bloomer costume and riding men's saddles, were now on their way with brave old historian-Hittell to attempt the ascent of Mt. Whitney. Seventy-two years old, but hardier than most men who are a quarter of a century younger, Mr. Hittell finds the fascinations of the Sierras as irresistible as ever, and almost every year finds him exploring some new district.

There were no fish to be had here, and our meal for that night was one of bacon, friend onions, flapjacks and black coffee, while the small boughs of the silver fir furnished a couch that in our tired condition wooed us to the sweetest of slumbers.

Not until we reached Alta did we find the meadows clothed in their full floral beauty, a picture which once seen can never be forgotten. Flowers in untold thousands, red, yellow, purple, blue, white, with almost every intermediate shade, lupins, columbines, shooting stars, the tawny tiger, and the creamy Mariposa lilies, with a host of others whose names we know not, were spread before us in a lavish display that I have never seen surpassed. These meadows, of which we saw at least a score during our subsequent wanderings, varied in size from one to ten acres, all the finer ones being at an altitude of at least 9,000 feet. Most of them had some charm peculiarly their own, but all seemed equally beautiful. In some there were acres solid with a single color, and other acres nearby where another color only could be found; next perhaps a meadow where all shades could be found on almost every square rod. Hummingbirds were always in sight, in numbers only surpassed by the bees and butterflies that everywhere flitted from flower to flower.

It was in the clear brawling streams that came tumbling down through some of these meadows that we saw many of the wonderful little water ousels, whose aquatic antics we were never tired of watching. Although apparently no better fitted for the water than a sparrow, they seemed to delight to plunge into the swiftest rapids and cascades, often disappearing beneath a seething cauldron of foam, where no web-footed fowl would have dared to venture, and from which it seemed impossible that they could emerge alive, clinging to submerged rocks where even a lizard could not have retained a foothold for a moment. The water, and not the air, seemed their natural element. We saw none of these below an elevation of 8,000 feet.

FORKED DEER.

[TO BE CONTINUED.]

In the Faroe Islands.

Third Paper.

We have thirty species of birds nesting on Myggenoes, but in numbers the "lundy" or puffin takes an easy first. Sixty thousand are sometimes caught in a single season, but this year's catch will probably not exceed ten thousand. The birds are not as plentiful as usual, and north winds blowing steadily during the snaring time have kept them out at sea. I have stayed long enough at Myggenoes to see two of the methods of capturing the puffins—the taking of the females from the burrows before the eggs are hatched, and the "fleining" or snaring of the non-breeding birds with a net attached to a long pole as they fly to and from the crags. A few weeks later will come the "fygling," when a man descends from the summit of the cliffs, fastened to a line held by five men, and snares the birds as they pass him in mid-air, or creeps along the ledges to the places where the birds are most numerous.

One morning the schoolmaster and I went to "lundilandet" or puffin land, he warning me not to look seaward. Our foothold was secure enough, but it is not well to give one's thoughts rein, and wonder how far below the sea is and how steep the cliffs. The schoolmaster is wise in birds. The authorities of the Natural History Museum in Copenhagen have appointed him an official observer, and every day he notes down all the species seen by himself and reported by trustworthy persons. Myggenoes is the most western island of the Faroe group; and on Naalsöe, the most eastern one, a man is also taking daily notes. In this way much valuable material has already been accumulated, for the Faroes make a favorite resting place for birds migrating to and from Iceland and the Polar lands.

Puffins are not particular about the location of their nests. All they ask is to be near the sea, and to have enough earth in which to dig a burrow. They live in the filled-up chinks of crags, in the débris at the base, in steep grassy slopes, or among the rugged hillsides. When the wind is in a favorable direction, thousands fill the air like a snowstorm of brown and white flakes. A puffin is a delightful bird; he seems always to be enjoying some private joke, and chuckling over it to himself with a jolly "U-r-r-r-r! Ur-r-r-r-r!" The schoolmaster and I sat down by their burrows in a sunny hollow, where pink and white catch-fly, spotted orchis, buttercups, sea pinks and white bed-straw grew in profusion, and soon the birds collected all around us. No shooting is permitted in puffin land, and they are very tame. In double rows they sat on every stone and boulder, their round, white breasts shining like strings of pearls, their glossy backs and wings reflecting the blues and violets of the sky. They chortled and chuckled, watched us with their heads on one side, and trotted about exchanging gossip about us. I found them most diverting and declared that I was coming to puffin land every day. But I never returned. The schoolmaster had neglected to tell me that puffins are afflicted with two kinds of ticks—one like the larger wood tick found in June in our American forests, and the other a little spidery creature that is very poisonous. We had rested long close to their burrows, and during the next twenty-four hours I thought hard thoughts of the schoolmaster, and how a puffin can seem so happy is a mystery.

Several men were at work near us taking the birds from the burrows. A bright little dog was giving valuable assistance. If a hole was occupied, he scratched and dug at the entrance, and a man then inserted a short stick with a hook at the end, dragged out the puffin and wrung its neck. A painful bite can be given with the strong sharp beak, and without the "lundy-krog" a man's hands would be in bad condition after dragging out several hundred birds. I am told that when the ravens and hooded crows enter the burrows, the poor little mother shrinks back in helpless fright, allowing her eggs or young to be stolen without trying to defend them.

On a steep slope above the sea were two men, fastened together by a rope about thirty feet in length. One had seated himself on a secure bit of ground, bracing his fjeld staff in the rocks or earth below him, while the other climbed about exploring the lower burrows. The grass was slippery with a recent shower, and they were near the verge of cliffs two hundred feet in height. It seemed very dangerous to me. "But surely," I said to the schoolmaster, "one man could not hold up the other if he fell. At least four men would be needed to support his weight." "Oh, he will not fall, really," replied the schoolmaster. "If he slips, he can save himself in time with the aid of the rope." "But," I persisted, "if he should fall?" I was given to understand, however, that this could not be taken into consideration. The business of a good fjeld man is to make no blunders.

On these slopes, and in this way, the young Myggenoeser tries his 'prentice hand with a stout strong father or uncle at the other end of the rope. He begins when he is thirteen or fourteen, and later learns to wield the snaring net and pole, first from the crags and afterward suspended in mid-air by the line. He graduates, if he is brave and skillful, at eighteen or twenty, on the most dangerous of all bird catching, that of the "sula" or gannet, at night, on the treacherous cliffs of Myggenoes Holm, an island close to the main island of Myggenoes.

A few days ago I was shown the puffin snaring by a Myggenoeser called "Johannes of the Albatross" (and by that name hangs a tale). I climbed with the assistance of Johannes to the edge of a precipice, where I sat, in much trepidation, though firmly wedged in between two rocks. Johannes was perched on a ledge close by me, and seemed quite fearless and at ease, though I could not see why he did not fall off every time he swooped at a puffin. He had need of a quick eye to enable him to take only bachelor and spinster puffins. If a bird held a little shining fish in its beak, that indicated that babies were at home waiting to be fed, and it must not be killed. When a puffin was brought in snarling and gurgling in the net, I looked the other way, and Johannes wrung its neck. In one morning he caught seventy-five, but had the wind been east or west, that is, a 'long-shore breeze, several hundred might have been snared.

Myggenoes ranks perhaps first of all the Faroe bird islands, with puffins as her specialty. Store Deinun, a guillemot island, comes next. All the edible sea fowl, except the gannet, are found in varying numbers on all the islands. A few years ago, the annual catch was estimated at 235,000, but it must fall short of that at the present time.

Thirteen out of the thirty species of birds nesting on Myggenoes remain all the year—eider ducks, marsh snipe, black-backed gull, black guillemot, cormorant, rock dove, hooded crow, raven, starling, northern wren, two kinds of titlarks and common gull. The migratory breeding birds are the curlew, whimbrel, guillemots, oyster catcher, kittiwake, golden plover, razorbill auks, stormy petrel, puffins, gannets, stonechat, white wagtail, jacksnipe, scoter, Arctic skuas and several species of gulls and terns. About forty other species are seen in the spring and autumn migrations, swans, geese, ducks, thrushes and other small birds, hawks, loons and sea fowl. This year a pair of corncrackers have favored Myggenoes with their presence. We are sure they must have a nest here, otherwise why should they spend June and July on the island? We can hear their "crake-crake" all night long, but the schoolmaster, in spite of his untiring watchings, has not caught a glimpse of him. The other Myggenoesers, many of them keen observers, do not aid him in his vigils, for do they not know that whoever sees a corncrake will die within the year?

I notice that many of the birds go to rest about 10:30 or 11 o'clock, and wake up at 1:30 or 2. The titlarks, however, and the stonechats, marsh snipe and our corncrake visitors, seem never to sleep unless they take catnaps in the middle of the day. The schoolmaster says that about one-fourth of the kittiwakes are as busy as in the daytime. They seem to take turns in sleeping, and at any hour of night I can hear their peculiar barking and crying notes.

Myggenoes Holm, the only breeding place in the Faroes of the gannet, is divided from the main island by a chasm twenty fathoms in width. The only landing place is perhaps an eighth of a mile away, and as the surf often prevents any going or coming for weeks at a time, a strong line has been stretched across the chasm to enable men to cross, and food to be sent at the seasons of bird catching and sheep gathering. The island is about half a mile in length, and the grass grows unusually thick and sweet. Sheep live there all the year round, and twenty-five or thirty oxen from April until December. Then they are brought home to spend three months under shelter. In the autumn before the worst storms set in, several are killed and sent to Thorshavn, where "Myggenoes beef" is held in high esteem.

I made the acquaintance of these oxen under painful circumstances. The schoolmaster had given me glowing accounts of the beauty of the gannets, and of course I wished to visit the Holm. But we waited two weeks before the surf allowed us to venture. Then Herr Abrahamsen, the schoolmaster and I set forth the first quiet morning with a fishing crew which had agreed to land us and call for us on their return from the cod grounds. We climbed over the tang-covered rocks and found ourselves in a nursery of Arctic terns or "tedna." There were hundreds of nests, and with difficulty we avoided treading on the olive and brown spotted eggs, so closely did they resemble the lichens and mosses around them. All along the coast were kittiwake colonies. I crept as near as I dared to the edge of the cliffs, and lying down and peering over, found myself close to the upper tiers of nests. Such pretty dainty creatures the kittiwakes are! I never tire of watching them as they sit on the nests, so spotless in their soft gray jackets and white hoods and bibs. I had just arisen from a kittiwake investigation

when I heard a queer noise on the hill above us, and there were all the oxen galloping down, with eyes rolling and horns and tails high in air, bellowing with joy at the sight of human beings again. Now, I ask if it is not trying for a timid woman to be on a grassy slope ten feet from the verge of a perpendicular precipice two hundred feet high, and landward twenty-five oxen charging down in a body? How was I to know just when those oxen, in the exuberance of their welcome, were going to pause? I skipped behind Herr Abrahamsen, and giving my fjeld staff to the schoolmaster, hurriedly told him that he had advised my coming to the Holm and on his head rested the responsibility of my fate. So he went after them, and with the aid of the fjeld staff induced them to be a little less demonstrative. After that they followed us as a devoted body guard, standing in an anxious, troubled row when we climbed down to places where they could not follow, and gamboling around us like dogs when we went on again.

On the western end of Myggenoes Holm live the gannets, or the "sula," as the Faroe folks call them. Their nests are crowded together on the cliff ledges, and on great masses of rock which have become detached from the island by the action of the waves. One of these "drangur" looked like an immense plum cake, the effect of glittering frosting on top being caused by hundreds of white gannets which covered the summit. Rows of guillemots were nesting in friendly fashion among the gannets. I noticed that the guillemots whose eggs are unhatched sat with their backs to the sea. When the little ones came out the mothers face about, looking like rows of prim, white-petticoated, hoop-skirted young ladies. Puffins flew to and fro, with their peculiar straight flight like shuttles in a loom, scores of oyster catchers, titlarks, curlew and stonechats cried and quavered from the grass fields, now and then a pair of razor-billed auks passed, and flocks of eider ducks and a few pretty black guillemots (*Uria trolle*), bobbed up and down just beyond the breakers. It was a true bird paradise, and its inmates showed little fear, for the Holm is seldom visited.

I doubt if among the sea fowl a more successful bird than the gannet can be found. He is charming in looks, powerful in flight, graceful, confidant and accomplished. I had not expected to see such large birds. The males must have measured three feet in length, and weighed perhaps six or seven pounds. The snowy white plumage of the breeding birds shone like silver in the sunlight; we were near enough to see plainly their pale yellow eyes, blue eyelids, the black spot on their foreheads and their dusky bills. Perhaps the prettiest of all were the three-year-olds—those which had attained the soft buff plumage of head and neck, and white body, but kept a little mottled gray and brown on their wings.

The breeding birds were more wary and watchful, but these care-free three-year-olds seemed quite fearless. They divided their time between the eating of anchovies and making the most careful and elaborate toilets. Three dandified young fellows seemed to be "showing off" for my special predilection. They sat on a ledge just below the crest of a cliff, and allowed me to approach within a distance of fifteen feet. They would preen each wing feather with their long beaks, laying it daintily in place, and then smoothing it down with the side and back of their sleek heads, turning their supple necks easily from side to side, and then glancing confidingly up at me, as if to say, "Are we not beautiful?" and I found myself nodding and smiling assent.

In April the fjeld men come to the Holm to take the adult birds when they have made their nests, but have not laid their eggs. Then the birds are left undisturbed until September, when the young birds are almost ready for flight. In all, about one thousand are captured in a favorable season, but the Myggenoesers do not encourage too large a booty. They are proud of possessing the only breeding place in the Faroes of the beautiful "sula," and wish to keep their colony in a flourishing condition.

The sula catching is very dangerous. It takes place always at night, and in April and September the Faroe nights are dark. Herr Abrahamsen showed me places above a cliff four hundred feet high, where four white flat stones in line showed the men where to descend with the line. On the detached "drangur" no lines are used, and it makes one shudder to think of the men climbing in the darkness on those perilous crumbling ledges. No wonder that the sula catchers sing a special hymn—the "Sula Song"—as they leave Myggenoes at night for the Holm. It has eight verses, and begins as follows:

"The light of day has passed away
And night hangs over us,
O Jesus Christ,
Our Lord so dear,
Be with us now,
Cheer us, God in heaven."

And when all is in readiness, whether the men descend with lines or go down without them, all kneel on the edge of the cliffs and say a silent prayer.

Five years ago, on Myggenoes Holm, an event occurred which made a stir among the ornithologists of Great Britain and Denmark. Johannes, my companion of the puffin-snaring morning, shot an albatross (*Diomedea melanophrys*) as it sat with the sula on one of the drangurs at the west end of the Holm. As the most northern limit of this species in the Atlantic is 23° 9′ south latitude, and its usual habitat from 40° to 50° south, this event was in itself of great interest. But this Myggenoes Holm albatross had made itself an ornithological wonder by coming every February with the sula to the Holm, spending the summer with them, and leaving with them in September, and doing this for thirty-four consecutive years. It was first observed in May, 1860, by a party of twelve men of Myggenoes, all keen, intelligent fjeld men. Thereafter, every year, it was seen on the Holm, leading a solitary life, and it was never known to breed. There is some story about one queer-looking sula having been captured with a strong large beak, unlike that of the other birds, and some people think it may have been a young albatross, but this is only conjecture. The Myggenoesers had never seen or heard of an albatross and thought this a very large sula. It was called the "konge sula," the "gannet king," and the men noticed that the other birds treated it with the greatest respect and made way for it when it approached.

Johannes did not mean to kill the "konge sula." He happened to have his gun with him, and he fired, wishing only to make the bird fly up, so he could see its great wings, when to his surprise and regret it fell dead. It was sent to Herr Pederson, on Naalsöe, a local ornithologist, and a skilled taxidermist, and later forwarded by him to Copenhagen. It was a female, well developed and in beautiful plumage. Inquiries were at once made, affidavits taken and pamphlets written both in English and Danish, but no satisfactory explanation has been given of the motives that caused an albatross to forsake the sphere in which it had pleased Providence to place her, and spend thirty-four summers in solitary living among sea fowl that granted to her at best only a respectful tolerance. Johannes did not know, and I of course did not tell him, how he had tempted Fate. He might, if he knew, think of it in some bad moment on the cliffs or at sea. But to kill an albatross, and such an albatross, makes it highly improbable that Johannes will ever die the "straw death" disdained by his Viking forefathers. A pity it is, for Johannes is a fine man among a race of fine men. He seems to have invisible wings attached to his Faroe moccasins, so lightly does he step. His face has a serious look, as befits one who looks so much on mighty seas, but his face and eyes light up with a bright quick smile.

Were creature comforts more plentiful, and Mother Nature less prodigal of storm, fog and cold, a long summer stay in Myggenoes would be delightful. But I have been here twenty-two days, and in all that time we have had three days when the weather was fine from dawn to sunset. Little can be done when heavy fog makes all dismal, drenching the grass and shutting out from sight the fjelds and bird cliffs. So I end this letter from Bó, whither I came this morning with a crew of Bible-named Myggenoesers—Abrahams, Isaacs, Zachariahs and Matthiases. We had planned to start at 9, but at 7 some of the men came to my door, and I heard that dreaded word "brenning"; there would be surf, and I must come at once. So I hurriedly packed my traps, and in half an hour was on my way to the boat houses. There was brenning! I looked with dismay at the big waves surging over the reefs and flooding the embarking place. "I dare not go!" I exclaimed to Herr Abrahamsen. "Yes, yes," he replied reassuringly, "look at the sea outside. All will go well when you once get out, and every little while comes a quiet time." "Don't be afraid," shouted up the men, "we can make it!" So I climbed down and waited on the rocks for a lull, while the men kept the boat in a quiet spot under some cliffs across the inlet. "Now!" cried a man, who was watching the sea. The boat shot forward to where I stood, I tumbled in anyhow, waved a farewell to those on shore, and in an instant we were tossing high in a whirl of white water between the reefs, cutting through masses of foam, and reaching the open sea just before the next big wave broke. There we were safe; there was little wind, and the great waves swept shoreward in unbroken lines. We could easily climb them and race down their outer slopes. It was a glorious day. No Venetian skies ever shimmered with more lovely tints than those that showed on the bare ranges of Vaagöe and Stromöe, while the sea gleamed with royal purples and intense blues. And yet with all this unusual display of color, we seemed to be in one of those "non-sounding areas" that puzzle the scientists. All round the coast the surf broke high against the cliffs, sending clouds of spray forty feet in the air. But it came to our ears only as a soft hushed thunder, and above it my men's voices rang clearly as they sang the "out-going song," "I turn now to Thy help."

Bó smelt to heaven this morning with a mighty smell of pitch. The village, church and all, has just received its annual coat of tar, and shines like a polished stove pipe. And I had planned to make a sketch of the charming weather-worn houses here. Bó has lost all interest for me. I will tarry here no longer, but return to Hans Kristoffen's comfortable house at Midvag, and see how my flower seeds have thrived that we planted in his pretty garden.

ELIZABETH TAYLOR.

A Summer on the Labrador.

(Continued from last week.)

As we left Okak we passed several Eskimos in their kayaks engaged in seal hunting, and in the distance the high land of Cape Mugford towered above the surrounding country. Mugford Tickle connects the inside with the outside passage, and is perhaps half a mile wide at its narrowest part, while on both sides the rocky cliffs rise perpendicularly to a height of 3,000 feet. The wind is always either "fair" or "head" in the Tickle, and that it blows sometimes with tremendous fury was evidenced by several wrecks piled up against the rocks. The altitude of the coast line had changed much since leaving Nain, the land now rising continuously in jagged irregular snow-capped peaks to heights of three and four thousand feet.

We steamed past Nannoutuk (White Bear), Watch Island and numerous small icebergs during the afternoon and approached Hebron just at dark. As the unusual sound of the steamer's whistle echoed through the hills, natives could be seen running along the shore toward the station, and as we came to anchor the same scene of eager happiness was enacted as at Okak. It is no wonder that both missionaries and Eskimos rejoice at this event, bringing as it does letters and news to people cut off most of the year from all communication with the outside world, and provisions and fuel for another long winter.

The Hebron station was opened in 1830, and has about 250 Eskimos. We did not land, but were not deprived of the company of the natives on that account, for they came aboard in unusually large numbers, and showed a great interest in everything about the steamer. They seemed especially interested in the working of the winch as goods were brought up out of the hold. Taking a prone position on the deck, they filled the air with expressions of wonder and surprise at the work done without any physical effort, and the effect of the flickering light of the torch shining on their swarthy faces and blanket clothing made the scene one to be long remembered.

The passengers did considerable "truckying" here, exchanging old clothes, tobacco and sometimes money for skin boots, seal skins, stone lamps and carved ivory. Old clothes seemed to be the most desirable trading material, for tobacco they can get from the missionaries, and money they have but little idea about. The nature of the article mattered but little so long as it could be turned into something useful or ornamental, and one of my trades consisted of a pair of white duck pants, a pair of heavy socks and a worsted bag given for one dressed seal skin. The native girl went off happy with her new possessions, as I did with mine, and may have started by this time an innovation in feminine Eskimo dress.

The customary summer dress among the men is a blouse with hood made from thick woolen "duffle," and

FISHERMEN'S SUMMER HOME.

trousers, either of the same material or of seal skin. The women's upper garment is a similar blouse, but while that of the men is cut off short at the hips, the women's has a tail which extends down and rounds off below the knees. Skin pants are not uncommon among the women, and the only footwear that is known are the seal skin boots, the bottoms of which are made from tough square flipper, and the upper of harp seal, and sometimes—on the children—caribou hide moccasins. In the winter their clothing is entirely of seal skin or caribou hide, which is worn over the lighter blanket clothing, and the mittens are of the same material.

We steamed away from Hebron toward Rama early in the morning. The coast continued as before, very high

and bold, broken up into many sharp peaks, some of which reach into the clouds, and all were more or less covered with snow. No growth of any kind could be seen, however, for we were now above the timber line, and within ninety miles of Cape Chidley. Nothing grows within 100 miles of Rama, an impossible distance to transport timber over the hills which rise here from four to five thousand feet. All wood for the missionary house and chapel at Rama was brought by schooner, and the Eskimos live in huts built under ground. A difference in the temperature and the absence of mosquitoes were two very noticeable facts. Vegetation is impossible, owing to the short and cold summer season.

Rama is a comparatively new station, having been

ON THE WAY TO NAIN.

opened in 1870, after the post at Nachvak had been abandoned and the Hudson Bay post established there. It is an extremely bleak and desolate spot, surrounded on three sides by high rocky cliffs down which in the spring flows an avalanche of ice and water. Two missionaries with their wives and children are in charge of the station and have a family of about eighty Eskimos.

It is characteristic of the Eskimos of the Atlantic line of the peninsula that two out of every three met have a cough and evidently lung trouble in some stage of development. This is caused principally by their habits and exposure, and is the cause of a large number of the deaths among them. Formerly, and even to-day among the primitive natives of further north, the method of burial was to place the body either in a sitting position or on its back on the bare rock and to cover over with a skin. By its side were placed the gun, spear, stone lamp and

ther articles common in Eskimo life, and a mound of locks built over all to protect from the animals and birds.

At Okak, with the Eskimo boy Frederick as guide, we visited the place of the early settlement of the Eskimo before the missionaries came to the coast. Remains of the od houses were still plainly visible, but the most interesting relic was the number of graves which we found. In ome were visible the perfect skeleton of a single person, hile others showed the bones of four or five lying side y side. We found pieces of stone lamps and pottery in ery fair shape, but everything of value had disappeared,

GROUP OF BOYS AT RAMA.
Photo by J. Westall Borden.

graves at some previous time having been visited and sacked. To-day, however, among the civilized Eskimo dead are buried under ground except in the winter e, when the body is kept in a protected place until mmer comes, and the frost is out of the ground.

Frederick also took us to the big rock which, so an kimo legend says, was brought from the top of a high two miles from Okak by the Eskimo giant Kautjajok. e rock is sixteen feet in diameter and weighs perhaps tons, and tightly wedged into a crack in the center is Eskimo skull plainly visible from the top. There are ny stories of the deeds of strength of the giant Kautok, but among them there are none which are told with much pride by the present-day Eskimo as the moving this immense boulder.

From Rama the missionaries reach the Eskimo around be Chidley during the winter season, when they travel k and forth with the dog teams over the snow-covered face, and through these Eskimos they indirectly reach se little-known tribes which occupy the country been Hudson and Ungava bays. One old squaw at Rama on the ground by a comitek cleaning codfish, every

A young boy had broken an arm some time before the arrival of the steamer, and this had been set by the missionaries. Carelessly running about he had fallen and broken it again much worse, and this the missionaries were unable to properly set. The offer to send the boy to Hopedale where a doctor is connected with the mission was refused by the boy's parents, they fearing that if he did not die his arm would be cut off.

The older people at Rama were all heathens a few years ago, and still retain a great many of their fears and superstitions. They are full of doubts and mistrust, are slow to understand, and until a stranger has obtained their confidence are unwilling to part with much information.

The missionaries on the Labrador coast from Makkovik to Rama are all of the Moravian faith, and the stations were established and are controlled by the Moravian Missionary Society. Too much praise cannot be given these men and women for the work they have done and are doing in bringing a people, formerly without any literature and living in a heathen state, to the enjoyment of the blessings and comforts of semi-civilization. It was our common experience that we were received at the stations very cordially, and the presence on the steamer of many of the families being transferred from one station to another, added much to the pleasure of our visit to the coast.

Indians, or mountaineers, as they are called, of the Montagnais tribe, occupy the interior of Labrador. They make a trip each summer to the coast with the skins and furs trapped during the winter and trade at the Hudson Bay posts. The return trip is made in the early fall. The permanent white population consists of adventurers from Newfoundland and in the northern part of descendants of servants of the Hudson Bay Company who have

ESKIMOS IN SUMMER CAMP, FORD'S HARBOR.

and then tossing a piece of refuse to the waiting , and took no more notice of the party from the ner and the excitement occasioned by its visit than were an every-day occurrence. Another stationed id a mound was trying to coax a little fire into a few s and vines which were to furnish the heat for a pot out.

e entered one of the underground abodes with a misry as interpreter. A stone lamp gave out a faint from the center of the room, near which a girl sat ig on some garment. A couch covered with furs, ou skins and seal skin garments, occupied one end of apartment, while lying about in confusion were es of the hunt, dress, tools for making and repair- a vessed containing molasses and a plate of blubber ntrails, and in one corner the pile of stones on which ne the little cooking required. At the further end of partment was a partition, and another but smaller . Groans were suddenly heard coming from this , and upon investigation the missionary reported an nan very sick. Somebody suggested typhoid fever, stampede for the outside and fresh air took place, boat was sent for the ship's doctor.

married Eskimo women and remained on the coast after their term of service had expired. These latter are called "planters," and engage in the codfishery in the summer, and in the winter move inland to the wooded country around the heads of bays and engage in the trapping of fur animals. The whole permanent population of Labrador, Eskimos, Indians and planters, is estimated to be about 14,000.

Rama was our turning point, and with a last look north toward Chidley, Hudson Bay and Baffin Land, and with a thought of the man who was waiting for the ship and cargo destined never to reach him, we steamed south, and after touching again at Hebron and Okak, reached Nain during the afternoon of Sept. 1.

Taking a family for Makkovik, a newly wedded couple for Hopedale, the wrecked crew of the Mariner, and our own belongings, except our tent, which we "truckied" for three pairs of camiks (skin boots), we were off again toward evening, and anchored for the night about 8:30, five miles south of Lord's Harbor. Soon after, as I was writing in the cabin, I suddenly heard hurried steps on the deck above, but thought nothing of it, until one of the passengers hurried through the cabin, calling my attention to the fact that the ship was on fire. Going on deck, I found considerable commotion. The companionway had been lowered, boats loosened, lines of hose stretched along the deck, and a line of men were passing buckets of water forward to the bows, out of which a great cloud of smoke was pouring. The fire was confined to the forecastle deck, and the greatest danger seemed to be that it might communicate with the oil and a keg of powder stored there.

The crew was largely augmented by the men of the wrecked crews who were aboard, and it was largely due to their good work that the powder was rescued and the fire subdued after half an hour's stubborn fighting.

We touched at Hopedale and the intervening fishing stations, and at Turnavik took on our own wrecked crew, who had come so far south in the whaleboats. We heard with a great deal of interest their own account of the "Tamialupa" (bad job), as the Eskimo would call it, of their camp on the shore after the wreck, of their guarding of the wreck from the "pirates," of the auction, and finally of their trip south in the whaleboats.

The loss of a large part of their summer's work was what they personally felt the most, of course, and they all had some expression of sympathy for Jensen.

As it turned out, however, Jensen was relieved after all. Upon our arrival at St. John's and the news of the loss of the cargo reaching the owners of the whaling station, a steam bark whaler was chartered, a cargo of supplies delivered at the Cape Haven station, and the return trip with the cargo of oil, bone and ivory made before ice closed the North Sea to navigation.

We touched at Makkovik, the most southern and recently established of the missionary stations, and everything went along smoothly until the coal gave out in the vicinity of Indian Harbor.

To run out of coal on a much-frequented coast with coaling stations every few miles is a matter of little moment, but on the Labrador, where there is no such provision, and where every steamer intends to go coaled for the trip, it is a more serious affair. We were fortunate in the matter, however, for on steaming into Smoky, there lay a Mediterranean steamer waiting for fish, with her decks piled up with fine Welch coal. The two captains came to an agreement, and seventy tons was transferred from the deck of the Armourer to the hold of the Grand Lake, a dirty and exasperatingly slow process, better, however, than waiting several weeks for reinforcements from St. John's.

Once away from Smoky we went humming up Hamilton Inlet, the largest bay on the Labrador coast, forty-six miles to Rigolette, an old-established Hudson Bay post. Rigolette is situated in the narrows of the bay, and beyond the bay again widens out, and is navigable ninety miles further up to Northwest River, another Hudson Bay post, in charge of the chief factor at Rigolette. The Rigolette post is the headquarters for the company on the coast, the factor having charge of the posts at Cartwright, Davis Inlet and Nachvak.

The hills along Hamilton Inlet are high and rocky and fairly well covered with a small growth of spruce, fir and white birch, and the whole appearance suggests a fine game country.

The post at Rigolette consists of about a dozen houses, and the trade is mostly for fur and fish with the Eskimo and "planters."

Under fair skies and with a comfortable coolness in the air, we continued south, stopping at every spot where there was a possibility of picking up a letter or getting a bit of information about the fishing. Taking on a corpse at one place, cripples and invalids at others, two American fishermen, who in their dory had become separated from their Gloucester schooner, seventy miles off the coast, at another, with four wrecked crews aboard, altogether we taxed the capacity of the ship.

Stops at Punch Bowl, Bolsler, Snug Harbor and variously named Tickles, brought us once more to Battle Harbor, the first and last stop on the coast.

When we came on deck Sept. 8 we had left the Labrador shore for good, and a dim outline only was visible in the distance. Past Belle Isle and Cape Bauld, we continued along the east coast of Newfoundland all day, and Sunday passed Baccalieu, and Grates Point during the morning, reached Harbor Grace, the second city in Newfoundland, shortly after noon.

After a short stop, during which we had a glimpse of green fields, bright flowers and many welcome signs of civilization, we were once more on our way, this time express for St. John's. Past the high sandstone cliffs of the rugged coast, the little clumps of white cottages of the fishermen, through the fortressed gates of the entrance to St. John's magnificent harbor, with the booming of our cannon echoing through the hills, and with but two baskets of coal left in the ship's hold, at 7 o'clock we were at the dock and our cruise to the Labrador was ended.

C. S. HAWKINS.

More About Sport.

AVAILING myself of the privilege which the rules of debate accords to me I will reply briefly to Coahoma's "passing word."

I am very grateful for his "distinguished" consideration, and would assure him that no apologies are due me, as his manner of writing has not worried me or wounded my sensibilities in the least degree.

However, I must remind him that the subject of our controversy is his assertion "That the procurement of something useful as a result of the chase is an essential element of true sport."

I must also point out to him that this sentence, which defines and limits the issue between us, is in the present tense.

How then, I would most respectfully ask him, can that issue be proved or disproved except by "existing conditions and their approximate causes?" Or in plain terms, by facts as we find them at the present time?

"It appears to me" that Coahoma, in trying to prove his assertion with theories in regard to what happened in past centuries, is taking altogether too broad a view of the subject, and that he is at the wrong end of the telescope with which he is viewing the logic of present facts, which would explain why he regards such logic as "narrow and superficial."

As memory recalls many sporting trips, I find that some of them which afforded me the most "true sport" were those in which, as Coahoma styles it, nothing was procured which was useful to me, and I take pleasure in believing that a large majority of our FOREST AND STREAM con-fraternity, like myself, seek the sports of our forests and streams with higher ideals than the gratification of a sensual appetite. Holding such views on the subject of sport, I could do no less than promptly take up the gauntlet which Coahoma threw into the arena.

I am willing to meet Coahoma, or any other sportsman, more than half-way in any matter of courtesy, and therefore offer my apologies to him for anything which I have written which he regards as objectionable.

JOS. W. SHURTER.

GANSEVOORT, Oct. 4.

Natural History.

Animals for the Zoological Society.

WITHIN a short time a number of important additions to the collections of the N. Y. Zoological Society have been secured, and will soon be brought together at the Society's park in the Borough of the Bronx.

Lieut. Peary, the Arctic explorer, who recently returned from the north, brough thence a musk-ox calf, very likely a yearling; a young walrus and a number of Eskimo dogs, all of which have been deposited in the park. The musk-ox, the second ever brought to this country, will, if it remains in the hands of the Zoological Society, replace the little animal presented to it some months ago by the Hon. W. C. Whitney, which recently died. The young walrus is the first ever seen in captivity in America, and is well worth a visit.

Within a day or two the Director of the Society has returned from Europe, where he had been sent to purchase animals for the recently completed lion house and for mountain sheep hill. He was authorized to spend $17,000, of which it is understood $13,000 was expended, for a fine collection of lions, tigers, leopards and certain species of wild sheep and goats. Every effort was made to secure the best animals that could be obtained, and it was regarded as especially important that the great cats purchased should be desert-born captives, and not animals bred in captivity. Among the purchases are six lions, two tigers, two African leopards, two black leopards, two snow leopards, one cheetah, one clouded leopard, one jaguar and others given below.

A particularly fine and large Nubian lion is one presented by the little daughter of Andrew Carnegie, who, overhearing her father talking about the animals that were to be purchased, declared that she would like to give something to the Zoological Park. On being asked what she would like to give, she said she would like to give the biggest and hairiest lion in the world. Her father authorized the purchase of this fine animal.

The clouded leopard is quite unusual in collections and is the only one in the United States. Two pairs of the lions are remarkably fine Barbary lions. Mr. Hornaday declares that it would have been impossible for him to succeed in securing so satisfactory a lot of animals had it not been for the co-operation of Carl Hagenbeck, the Hamburg animal dealer, who has always taken very great interest in the New York Zoological Society, and has made every effort to assist it in obtaining the best animals to be had.

During the first year or two that the New York Zoological Society's collections were on exhibition, they consisted—in accordance with the plan of the Society—almost entirely of American species of animals; and indeed until very recently, except for its monkeys, its bears and a few deer, there have been few Old World specimens on exhibition. Now that the lion house is completed, efforts will be made to fill that with beasts of the tropics, and as the years go by, New York may hope to show to the public collections of wild animals from all over the world, which will be not inferior to those seen in the zoological gardens of Europe. Those gardens have the advantage of far greater age than ours, but here in America we have—if not age—energy, and, it may be hoped, the means to purchase specimens to fill our collections.

The following animals from Europe were recently received at the park: One male chimpanzee, one Diana monkey, two Mona monkeys, three yellow-throat entellus monkeys, one giant tortoise, two Nubian tortoises, two anacondas, one python, two climbing iguanas. The more recent purchases which are likely to arrive about Oct. 20 are: Two pairs Barbary lions, one pair Nubian lions, one pair Bengal tigers, one pair snow leopards, one clouded leopard, two black leopards, one jaguar, one cheetah, one African leopard, one hyena dog, two Arcal mountain sheep, two *Ovis cycloceros,* two Siberian ibex, one burhel (male), one moufflon, one thar, one *Oryx leucorys,* one pair Caucasian maral deer, one muntjac and one hog deer.

There is a surprising lack of general knowledge of the Zoological Park and its work. It is true that the attendance there is sometimes 20,000 people in a day, yet one would suppose that—now that the park is so accessible—so attractive a place and such interesting collections would draw thither much greater throngs of people. It is a matter of surprise also that the number of annual members of the Society does not increase more rapidly. In and about New York there are thousands and thousands of people who are genuinely interested in such an enterprise as this, each of whom could well afford to be, and should be, a member of the Society, receiving the benefits which accrue from membership, and feeling an active interest in the Society's welfare. It may be hoped that during the coming winter the membership of the Society will largely increase, and we should be very glad to put any one who may desire to join the Society in the way of doing so.

How Does the Grouse Drink?

SPRINGFIELD, Vt., Sept. 27.—*Editor Forest and Stream:* One winter's night in the city of New York a little group of sportsmen and naturalists were discussing over their cigars the subjects nearest their hearts. Among other things that came up was the drinking of the ruffed grouse, and most of the company expressed a belief that the bird drinks just as does the domestic hen. The doubting Thomas who raised the question had had no personal experience, but knew of a man who had caught a partridge and confined it in a cage, with abundant food and water; the bird ate but the man never saw her drink. One day for some purpose he poured water over the cage and the bird pecked up with eagerness the drops that ran down and clung to the wire. After that he watered the captive by pouring water over grasses or something from which she could peck the drops. The conclusion of the narrator of this incident was that these birds obtained their water from the dew or rain on the grass or bushes, or by some brookside where the long grasses dipped into the stream.

Has any reader of FOREST AND STREAM information to give on this point? Is there any one who has actually seen a wild ruffed grouse drink after the manner of the common barnyard fowl?

At the last Sportsmen's Show at Boston were several cages of different varieties of grouse advertised as the only ones ever successfully kept and bred in captivity. These birds must drink; how do they do it? And if they drink like domestic hens and chickens did they learn it from their foster mothers or is it their natural way? Who has seen the wild ruffed grouse go down to the water to drink?

Beasts of Prey in Norway.

EVEN in severe winters wolves rarely visit the southern districts of Norway, but of late years they have committed considerable depredations among the elk in the central and northern provinces, as well as among the reindeer in Finmarken. Like foxes, wolves are usually killed by poison or are captured in traps; occasionally, however, it happens that one is shot, while the Lapps sometimes run them down in winter on "ski," a feat which is always looked upon as a meritorious one, and which may perhaps occupy several days.

At one time the lynx (*gaupe*) was fairly numerous in Norway, and from 1846-70 premiums were paid on 3,204 (that is to say, 120 annually); between 1871-75, 604, or an average of 121 per annum, were accounted for, and in 1877 only seventy-seven; while latterly not more than fifty or sixty have been killed each year. The lynx is of most frequent occurrence in Nordland, and is seldom met with in the southwestern districts; but according to Professor Collett one was shot in 1873 in Nedenaes Amt (the most southerly province). The same author relates how at a farm laborer's place at Toten, a two-year-old child that had fallen asleep close by a wood was carried off by a large lynx, but was rescued by its father, who happened to be near; the child, however, died of the wounds inflicted. The lynx is killed by poison and by trapping; it is also shot over baits set to attract it, and by "ringing," and when hunted by dogs it usually takes refuge in a tree.

Game Bag and Gun.

Woodcock and Wood Duck.

TORONTO, Oct. 1.—*Editor Forest and Stream:* The able and opportune article on the "Woodcock and Wood Duck" in your last issue of FOREST AND STREAM by Mr. A. K. Fisher, should have the effect of producing concerted action of all true lovers of forest, field and stream for the better protection of these grand game birds.

After devoting considerable time to the consideration of the most effective measures for preventing the extermination of these two species, it is my decided opinion that it can only be prevented by the action of the Federal Government of the United States. Close season for several years to be effective must be general all over the United States and the Dominion of Canada. It would be of no avail having several years' close season in the Western, Middle and Eastern States, and our own Province of Ontario, the principal breeding grounds of the woodcock and wood duck, if the lazy, loafing market-hunters in the South—the winter home of the woodcock—were allowed full swing in their miserable work of extermination.

As a rule true sportsmen are of a kindly disposition, but it cannot be expected that they will practice self-denial to the extent of protecting game birds in the breeding grounds for several years for the sole benefit of Southern market-hunters.

I am not sufficiently conversant with the constitutional powers of the Federal Government as to its power to take action making the protection of these birds general instead of comparatively local.

Trusting that some of the many able contributors to FOREST AND STREAM, better able to do justice to this important matter than your humble servant, will take it up.

E. TINSLEY.

PHILADELPHIA, Oct. 2.—*Editor Forest and Stream:* There is at least one citizen of Philadelphia who is disposed to doubt the truth of the statement that the woodcock is rapidly vanishing. Not being a sportsman, his views are confined to his experiences with the longbill as a city visitor. A short time ago he was startled to hear a scream from his wife, who was busy in the kitchen. Upon his going to the scene and inquiring the cause of her fright, she pointed to the cellar doorway opening into the kitchen, and there he saw a fine full-grown woodcock, which had come hopping up from the cellar below and whose advent had so startled her. The bird was caught, but subsequently escaped to some piled-up boards and kindling wood in the cellar, and has probably starved to death ere this, as all efforts to recapture or liberate it have failed. Its weird cries could be heard at night for about three weeks, but it has not been seen since. The only way for it to get into the cellar was by a small tear in the netting of a window. Probably it had struck a wire and fallen to the street and thence to the cellar for refuge, or perhaps it had designs on the coal bin.

The same person a few evenings since saw another woodcock sitting on the lower part of the skeleton work of a large sign a few feet above his head. Both of these birds were seen in the thickly built up section of the city.

OCEAN.

Quail Shooting in Virginia.

PHILADELPHIA, Pa.—*Editor Forest and Stream:* I hav read with interest many of this journal's ably written con tributed articles, and while I am not like Nimrod, a migh hunter, nor able to boast of my moose or my mounta lion, yet what I can write regarding "the things where I best know" may prove not unhelpful to those who a like me, unpretending seekers after the unpretentio quail. I have noticed that the talk has been all of th North and West, of Michigan, Maine and Canada, whi lovers of sport have overlooked the rolling hills and sun slopes of the South.

The abundance of game still remaining in the lar forests of some of the oldest States—the Carolinas a Virginias—is quite surprising to one familiar only wi the thickly settled regions of Pennsylvania or New Yor It is true that in some of these States the game laws a of little consequence, or are little enforced or heeded, a especially does this seem to be true of Virginia, but would seem that there is little necessity for stringent pr tection in this State, at least in the south central part a along he smaller rivers, for the city sportsman is as y almost totally unknown there, and to the hound-lovin fox-hunting Virginian, the shooting of woodcock a "partridges" does not seem to appeal, while the gre bodies of primeval woods and long-abandoned fields for in themselves a sufficient guaranty of the game supp for many years to come.

It was on the beautiful little Meherrin River that my a quaintance with this country of rocks and ravines a pine-crowned hills began, one day in early October, whe with a Parker and my pet partners, Nip and Tuck, stepped from the flying express at South Hill Station, the A. & D. The little place must have been named f some occult reason, for there is no hill, though there a plenty of them everywhere else. An old darkey presen hailed me as "de gem'man f'om Phil'delphia," a bundling me and my traps into a light spring wagon, w Nip and Tuck at my feet, we started off through the sla fall sunshine, over the leaf-strewn roads, toward Bagl Farm, somewhere twelve miles away to the west, the darkey gabbling unceasingly of wood lore and the tim "befo' de wah." It was late in the afternoon when reached the old, low plantation house, built in the ra bling Southern style, and I had a "supper" and a welco that fully sustained the fame of Virginia hospitality. old and picturesque place this is, just responding to n life in the touch of Northern influence. Through a gap the hills Bear's Element and Mason creeks wind down, plain view, to their confluence in a deep, still lake, a there at the end, not a quarter of a mile away, is an grist mill of the Revolutionary days, its wheel still tu ing just as it did when Tarleton raided Virginia, a threw, I was told, all its grain out into the river. T section is almost in its original condition of forest, for more than forty miles back from the Southern Road th is no railway station, and very little timber has been c and hundreds of acres cleared long ago for farming p poses have been abandoned to stumpy pines and brush a broom sedge, the kind of cover which quail and mead lark like best. The first day my dogs stood three cov of quail within as many acres, and I have started late a bagged thirty-eight birds within a day. There are ple of deer and turkeys, too, though they are hard to get, a one who loves a quiet angle may spend a busy hour un the drooping sycamores by the river, and whoever tried it has regretted, I am sure, to turn his back on deep woods and clear skies of the land of the "partrid and the woodcock.

E. J.

A Successful Outing for Moose

BETWEEN the Renous and the Bartholomew river branches of the Southwest Miramichi—runs the Dung von, and on each side of it lies a tract of land that very easy of access, and, at present, is perfectly teem with big game. We hunted on the south side of the D garvon. Our party consisted of two and a guide or cal J. P. had been after moose on former occasions, though he had seen and shot at several, his gun did seem to have the power to stop them. This time he t his new .30-30. Doc had hunted deer in Ontario, was familiar with shooting birds in Manitoba, but, yet, had no experience with moose. Our guide and ca was J. Ronald McDonald. He took along his Mause which had seen service in Cuba—as Doc was not satis with the gun he had. As each could cook, a cook considered unnecessary.

Engaging a team, we went in to Whooper Spring, called from the famed Dungarvon Whooper, and oc pied the camp there on Sept. 21. On our way in thought we would rest the horses and have lunche While occupied with our repast, two caribou came out a little knoll near us—about twenty yards or so awa and were interested spectators. They were a pretty si A scramble for our guns made them think of an enga ment elsewhere, for before we could load, they vanished into the woods. The rest of our trip in was eventful. Doc shot a fine owl, while J. P. captured a fine birch partridge near the camp. After putting thi in their places at camp, there being a few hours be sundown, a visit to the barrens was proposed by I who had never as yet seen one. Accordingly, we got guns and went to the handiest one, our guide cautio us to look out for game. Sure enough, a fine cari was seen, and before he could gain the woods, four sl were fired at him, all of which were accounted for w we reached him. One, unfortunately, broke a horn, wh spoiled the head for mounting. Dressing the cari took but a short time, and proudly we wended way to camp. We sent back the team with three of quarters to friends in Blackville.

Sunday, we spent in accustoming ourselves to our roundings, reconnoitering and getting the lay of the la visiting two barrens, two and four miles respecti from camp. On the first, we saw a fine bull and cows, and on the other, two caribou. It being Sun we refrained from disturbing them.

Monday bright and early we were on the edge of barren, but had to wait till the sun dispelled the he mist. Across the barren we saw three moose. The g gave a couple of short calls at intervals, which attra the attention of the bull, and caused him to approac

ndred yards or so. The cows evidently did not approve his actions, as they kept moving around him, and then vay a little, trying to coax him with them. They would eep near enough to him to make it very risky shooting him, for fear of wounding them. We had to wait tiently for a suitable chance. The cows at last were at safe distance, when J. P. suggested shooting, for fear ey would again intervene. Doc, being familiar with stance on the prairie, gave it as his opinion that the ll was too far away to do serious injury to him with e guns they had—the Mauser being left at camp. The ide also advised waiting, and succeeded in coaxing the ll still closer. At last we could wait no longer, and cided to blaze away. Five shots were quickly fired, and e last seemed to take effect, for the moose made off pidly. Against the advice of our guide, we excitedly llowed him. We found blood on his trail, but the ase led us into a cedar swamp so impassable that we ve up in disgust. We found we had been between 500 d 525 paces from the moose when we were firing at him. eturning to camp, we rested till evening, when we ent to the other barren. A call by our guide was almost mediately answered. Strange to say, another seemed be calling between us and the answer, on the opposite le of the barren. It was explained by our guide telling it was a cow. Our guide had the art of calling down fine that we could not detect any difference between s call and the cow's. Eventually the bull came, and as met the cow first, stayed with her till a short call om our guide brought him to the edge of the bushes, his ad and horns only being discernible. Apparently he d a grand set of antlers. A monstrous cow trotted out the barren, frisked around a while, and returned to e bushes. She tried her best to prevail on him to re- rn to her, but he was immovable apparently. For fear should go before giving us a better view of him, we cided to try a shot, even though the position was an favorable one.

After our morning's experience with the lighter guns, decided the Mauser should be always in the party. e decided to try a shot with it. A carefully aimed ot by J. P. at what he thought was the neck, or rather where he thought the neck should be joined to the ad, was tried, with the effect of causing him to bound into the bushes, making an awful racket with his rns as he dashed away through the trees.

Going to where he had been standing, we found blood, d all along his trail for upward of half a mile, then more was to be seen. While J. P. and McDonald re hunting for the moose, after the trail of blood ded, they came upon two bull caribou in conflict, while female was an interested spectator, apparently. Not owing when they would come upon the wounded ose, they left the caribou to settle their dispute as st they could without help.

As night was rapidly coming on, we returned to the lling grounds, where our guide gave three good calls, d without waiting to see with what result, we continued to camp. At the calling ground next morning the or of moose was indisputable, and the guide gave short call. Almost on the instant, out trotted a mag- ficent bull moose, side to us, and when about a hundred rds from the trees, turned his head toward us and opped. He made one of the prettiest sights imaginable. oc reached for the Mauser, aimed and fired. Down opped the moose, and when we reached him he was ad. We measured the spread and found it fifty-two hes, with webs eleven by twenty-seven and a half, and even and a half by thirty-one and a half, having twen- -one points. It was very bright and beautifully veined. inning and dressing the head and storing the meat cupied considerable of the forenoon. The afternoon s taken up in moving some necessaries from our per- nent camp to a temporary one of blankets at the edge the barren to lessen the amount of travel we were ing. Examining the head attentively, we found be- een the nose and eye a recent bullet wound, and as the pearance of the moose seen the night before was very nilar to this one, and as the wound in the face was the side toward us when standing in the bushes, we uld arrive at no other conclusion than that the moose s one and the same, and that our shot the night before, stead of hitting the neck, hit in the face, just below the . It is a supposed impossible feat to call back a moose t has been wounded, and we are positive it was the me moose—so facts speak for themselves.

Tuesday night we called again, and as it was blowing y hard, we were some time before we could detect an swering sound. It was dark before he came—so late, in t, that we had gone to bed—but we knew he was near good reasons. One was the heavy odor of moose, an- er was the occasional cracking of a twig, as an animal oving cautiously trod on it, and also his putting up five rtridge on his way to us. He remained near us for a iple of hours—then we slept. We were awakened by mething snuffing around the head and hide, which was ngside our tent, and after a while it poked its nose ainst our blankets. Raising the blanket a little, the t breath of a bear came in on J. P.'s face. Needless say he dropped the blanket quickly again. After quick- debating whether to shoot the bear and let the moose , or let he bear go and trust to luck to get the moose the morning, we decided on the latter, and tried to mpose ourselves to sleep again. The bear quickly and iselessly skedaddled as soon as he got a whiff of us. couple of hours later we were again rudely awakened a lucifee, which made night hideous for a while with peculiar cries. At last dawn began to creep in, and noticed less odor of moose. On investigating, we und he was gone, though he had been within ten paces our tent, as his marks on the earth plainly showed here he had stood. As J. P. wanted the moose more an he did the bear, we refrained from bothering the ar, trusting the moose would be within hail in the rning, but he was not. A couple of calls brought up a uple of spike horns, but we did not want them. We ifted operations to another barren, on which were two, spike horn and a cow. We did not molest them. In evening we brought a bull from two cows, but light fled before we were able to get him within sure range.

Thursday our teamster was to come in for any game may have shot, so we lost the forenoon waiting for n. He did not come, so we went further afield and w a couple of bulls and three cows on various parts the barrens. There was only one fair head, and as we had seen so many moose, we felt sure we would be able to get as good a one as Doc's, so we did not molest these.

Friday Doc was used up with a cold, and decided to stay at camp and wait for the team, which would surely come that day. He intended also to keep an eye out for the bear that used to cross the trail near the camp nearly every day. He did not see it, however. McDonald went to a barren some few miles away, to see what were the prospects in that direction. When he had gone, J. P. concluded to visit a barren four miles away, where he had shot at a moose on that day the year before. On his way back, within fifty yards of where he stood the year previous when he shot at the moose, J. P. heard the unmistakable sound of horns against trees. He dropped on his hands and knees and crawled back and forth for an hour at least, trying all the while to get a glimpse of the owner of the horns. At last out walked a cow, and J. P. kept immovable. After a time the bushes parted and out walked a monster. J. P. raised his rifle, and almost at the same instant noticed it was a cow. It was a great disappointment, but patiently he waited. Presently an animal was heard to drop to the earth. Crawling still nearer the animal, lifting every intervening twig and dead branch out of the way, J. P. made his way to within fifty yards of the noise, and at last was rewarded by a sight of one ear and a pair of horns—branches effectually obscuring the rest of the animal.

J. P. fired for below the ear and up jumped a huge moose. Again he fired and the moose fell. J. P. thought it was killed and stood up. The moose jumped up also and charged. J. P. fired and again the moose fell. J. P. approached, when again the moose arose, apparently full of go yet. Again a shot and the moose was stretched out. J. P. approached to within ten feet, when the moose tried to reach his feet, J. P. fired his fifth shot, which terminated the strife. This fusilade at short distance convinced J. P. that the .30-30 is not heavy enough, nor can it be compared to the Mauser or guns of that stamp. J. P. returned for help. We measured the spread, and found it to be fifty-six inches, having nineteen points, and while the horns were not as even as Doc's, still the head was a better proportioned one, and grander looking. He was well pleased. The cows remained around all this time, until we had the meat nearly dressed. They did not seem to realize the fate of their mate.

The team having arrived in the meantime, we loaded our trophies that night, and next day returned to Blackville. This year we go in again D. V. Our guide proved to be an expert at all kinds of work. On several occasions we heard the cows call; his was a perfect imitation. We could detect no particle of difference. Then again, he brought back a wounded moose, an almost unheard of piece of fine work; and time and time again did he coax the bulls from the cows. A man who can do all these is among the leaders in that branch of sport. As a guide, he knows every portion of the ground thereabouts, and not only that, but he is thoroughly conversant with the habits of the large game wandering over that vast extent of country. Our camp was only ten miles from Blackville Station, though we had to drive fifteen to get there, but five of that is a splendid road. We could have had all the deer and caribou we would be allowed to take, but we went in for moose, and we got them. Two such heads in eight days with the one guide is fairly good work. Our advice to hunters from the States is, do not be coaxed to go fifty or sixty miles from a railway to find game. It is unnecessary. Nor is it necessary to freight supplies all over creation. A day's drive lands the party and supplies in the furthest camp in the Parish of Blackville, and moose, caribou, deer, and bear can be obtained in all parts of the parish—even the outskirts of the villages not being free from their trespassing.

TEVANUS.

BLACKVILLE, N. B.

Across New Brunswick on Snowshoes.—IV.

A Side Trip for Moose.

ADAM MOORE confessed to me that when he was a boy it was one of his ambitions to some day live in a house with long icicles hanging from the eaves, the appearance of a neighboring house thus decorated appealing very much to his youthful fancy. Certainly Adam might have felt himself satisfied in this regard when he looked upon the morning of the day which we had set for one more trial for our bull moose. The weather had played us another scurvy trick. Rain had fallen in the night, the thermometer being just low enough to allow a freeze toward morning. The snow began to soften at the first appearance of the sun, and we needed no assurance that the snowshoeing was going to be awful. None the less, with what spirit we might, we packed our blankets and some needed supplies for our trip up into the hills to the Klondike camp. Adam and I started out ahead, it being understood that we would visit Jack's moose yard, and that Jack and Charlie would meet us at the Klondike camp later in the day. We climbed for two and a half miles along a continually rising trail, working up all the time into the heavy hill country. Then we came to a half-mile of a tremendously steep descent, down which we at times had to slide, being unable to keep our feet on the snowshoes. This brought us to the Silver Brook, a pretty little stream which heads back into one of the roughest countries of New Brunswick, in as good a winter range for moose as the entire Province can provide.

The Silver Brook got its name from certain prospecting operations which were once upon a time carried on thereabouts. There is a rumor that gold was once found in this stream and indications of silver in the surrounding hills, but history does not say that mining was ever carried on there in anything but a tentative fashion.

In the Yard.

Coming presently to the forks of the stream, we took Jack's fading snowshoe trail for a mile up the right-hand fork, and we found that his report of the moose yard was indeed correct. We paused to eat our lunch before we went into the yard, and as we stood in the snow we saw the broad horn marks of a bull moose on a nearby tree. Further in we saw the brush beaten down, with trees bent over, tops nipped off, and bark stripped off freshly from the roundwood and the spruce trees. We knew that now we had come into a genuine moose yard. The tracks were fresh, and among them the broad and unmistakable sign of at least one big bull. Then Adam gave me an example of good moose hunting—as good, I imagine, as any one in the world could have given under the circumstances. The soft weather had turned off into a regular Highland fog, and the air was full of mist, which left our clothing wet as though it had been raining. The wind whipped hither and yon around the hill tops, and it was a continual puzzle which direction it would next take. We worked out to the edge of the yard as best we might, trying to keep away from the place where the moose would be most apt to be feeding, until we had been able to get an estimate of the distance the game might be ahead. The going was as bad as one often sees on snowshoes. The wet and heavy snow clogged up continually, and as we passed through the little fir thickets now and again we would break through and slide waist deep under the trees in the heavy snow. It was a mile up the ridge before we found a sign so fresh that we took on even a greater caution. At last we found very fresh sign, but not so fresh that we believed the game could be less than twenty minutes ahead of us. In reality, we were deceived to some extent by the thawing of the snow, which made all the sign look older than it was. We thought we might be perhaps half a mile back of our moose, whereas in reality we were not 100 yards.

"Jumped."

"This looks fresher," said Adam to me in a whisper, and we pushed on, I with my rifle at a ready, we being obliged at this place to cross a little thicket of snow-covered firs. We pushed on and saw that the thicket sheltered an open space 100 yards or more across. There lay the story before us, written once more upon the tell-tale snow. Once more Adam's hand dropped to his side and despair and discouragement sat upon his face. In silence he pointed to the sign. Jumped again!

It was all as plain as day. Just beyond the little thicket not more than sixty yards from where we saw the freshest sign, a miserable, beastly little moose calf, probably a yearling, had been lying. It heard or smelt us as we came through the thicket, went off on a run, and with it carried out the rest of the moose—three cows and the big bull—which we had coveted. All the moose had gone for a couple of hundred yards or more, and then had fled back directly toward us, as we came up the trail. This was the only thicket of the sort we had struck for a quarter of a mile. Once more the native cunning of these wild creatures had conquered us.

This time we had been near indeed to our bull, for had that calf not been lying there, and had we got through the thicket undiscovered, we should have had him at our mercy. We saw where he had been standing in the open, at the time the little moose jumped the herd. He was in a veritable death trap for himself. Two big spruces stood close together, and the moose had been feeding with his head behind one of them, stripping the bark of the other as high as he could reach. When feeding, a moose cannot hear very plainly. There was nothing to cover his flank, and there was nothing to conceal him from view for the first sixty or seventy yards of his flight. There he had been, and certainly he was a beauty. I stood on my snowshoes over his tracks, which sank deep into the snow, and I reached up on the tree trunk as high as I could. I could not reach within a foot and a half of the upper edge of the tale he had left on he bark. That is to say, I could not reach within that distance of his last tooth marks upon the bark, not counting the stripping of the bark above that place. He was certainly feeding more than ten feet above the level at which he stood. I could not have believed that any animal in those woods reached such dimensions. Adam and I wondered and wondered again, and more than once we deplored our sad misfortune. Certainly fate seemed against us, for even Adam was fain to admit that we would never have a better chance again, or at a better moose. "He was a whale," said Adam, "and no mistake about that. Well, for my part, I don't feel like hunting any more. Let's go back to camp."

By the Compass.

Tired, wet and sad, we turned back down the hill. We were now nearly at the summit of this ridge, but just where we were not even Adam himself could tell in that shifting, blinding fog. Of course we could take our back track and get to Bathurst camp, but we wanted to go to the Klondike side camp instead. We knew the direction of the bald Sagamok Mountain, which is the landmark for all that region. We thought that perhaps ahead of us lay the rough waters of the Serpentine chains. We had outclimbed the ultimate thread of our fork of the Silver Brook, and any way we looked we saw hills, and nothing but hills, of the most formidable description.

"Well," said Adam, "let's stop here, and we'll figure this thing out. I think a compass will be mighty handy right here. We want to go about east from here, in order to strike the other fork of the Silver Brook. If we hit that below the Klondike camp, all we'll have to do is to go up the stream. If we hit it above the camp, then we'll strike Jack's trail where he went out yesterday, or my own trail where I killed my moose. It's a heap easier than it would be to go down this fork, and then come up again." Saying which, he plunged down the steep slope in the direction he had named. I could not help admiring the tremendous physical vigor of the man. He reminded me of a big bull moose.

For myself, I was wearing my flat-bowed shoes that day, and I must say they were giving me an awful gruelling. The straps got wet and stretched, and the snow piled up icily, and the walking down hill was at this stage of the game hardly less than terrible. This is where I laid the foundation for a general loosening of a whole row of toenails. I told Adam about it, but he said not to mind it, for a fellow who was particular about his toenails had no business in that part of the country. There is something convincing in that sort of reply, which seems to leave nothing more to be said.

At last in some way we struck a stream. I thought it might be Serpentine water, running away from the Silver Brook, but Adam knew better. "This stream is running all right," said he, "and all you will have to do is to fol-

low up this snowshoe trail until you come to the camp. I will run down the trail and pick up your pack where we left it at the forks before we went into the moose yard."

The Klondike Camp.

Charlie and Jack were at the camp ahead of us and busy making ready for the night. Jack had brought down a pack of meat from the moose which Adam had killed the day before, and had now gone back for another load. He reported "blackcat" sign at the carcass, and said he had been trying to kill a sable with a snowball, since he did not take his rifle with him. The fur of a country collects from some distance about any animal killed in this way, and it is near a kill that the best takes of fur are usually made.

We all fell to, in order to make things comfortable for the night, not an easy thing to do, for the little square box-like shack was cold and half-full of snow, and the vigorous little sheet iron stove set everything afloat as it began to melt out the interior. We cut some boughs, spread out the fresh moose skin upon them, laid in a good store of wood, and then Charlie opened up his grub box. Tea and biscuit and fresh moose meat soon caused us to forget our troubles. We could not all sleep during the night, for one must stay up to keep the fire. I confess to a shameful dereliction, for when at length I thought it humanly possible for me to serve a turn, Adam calmly informed me that it was so near morning that I might just as well keep on sleeping!

Snowshoe Transportation.

Next day was Sunday, our second Sunday in the wilderness. We considered it better under the circumstances to go back to Bathurst camp, and hence early in the morning we started back over the frightful Klondike trail. There was about a half-mile of very hard snowshoeing here, since the angle was about 45 degrees and the snow wet and slippery. The logs and even the bare ground were now beginning to show through, for a general thaw was taking away the snow very fast. Charlie and Jack came behind with big packs. I didn't hear either of them complain that his pack was heavy, or that his toes hurt him in his snowshoes, but when we got over the ridge and within a mile or so of camp, I rested Charlie for a bit of the trail, taking his pack.

"Now I think I'll carry your pack on home for the last mile," I said to Jack. The latter grinned amiably and said that I had better not. "Try it," said Charlie, likewise grinning, and then I saw all that this young giant had been doing all the time so quietly. When I put my hands into the straps of the pack I could hardly lift it clear of the log where it was lying. He had over 100 pounds of moose meat, it having been his fortune as usual to draw the heaviest pack in the bunch. Nettled at their mirth, I swung into the pack, and indeed carried it down to the cabin, but I had to rest half a dozen times. Jack had never set it down at all all the morning. It is one of the wonders of the woods to me how these men can carry such loads on their backs, or pull them on the sleds.

All the way out and back on this little side hunt we had been in among the caribou, and as we came back we noticed that they were making more trails. These creatures had been feeding in among the slashings left by the lumbermen of the adjacent camp. How many there were near us we could not guess, but we did not see any.

Nervy Mink.

An odd little incident happened at the camp, as we discovered when we returned. Bill Powers, a nearby lumber foreman, told us that he had gone down to the camp while we were away and stopped to make himself a cup of tea on our stove. As he sat there eating, a mink crawled out from between the logs under the kitchen table, climbed up on the table and made away with a piece of meat which was lying there in the pan already prepared for the next meal. "He sat up there just as bold and sassy as you please," said Power, "and I just sat and looked at him. I reached for a stick and then he ran, but not until then."

"I'll get him," said Charlie, much incensed at these liberties taken with his culinary arrangements. We'll just have his hide on a stretcher before morning; now you watch."

So he set so many steel traps around the cabin that it was not safe to go around bare-footed, and found pieces of meat all around the place which the mink had hid. "He was doing a good business here," said Charlie. The guilty, however, was not long to prosper. About midnight Charlie, who had been sleeping with one ear open, heard a click and a squeal, and there was Mr. Mink. He skinned him before breakfast the next morning.

Gives Up the Moose.

By this time I was beginning to get reconciled to the thought of failure so far as killing a moose was concerned. The weather was clearly against us, as well as the general fortunes of the chase. We knew that this thaw would certainly be followed by a sharp freeze, and any moose hunter knows that a noisy crust is fatal to all hope of success in hunting so wary an animal as the moose. I did not break my heart over the prospect of failure, for the killing of a moose was only one of my purposes, but I could see that it was worrying Adam a great deal, it being his habit to sit around and think and not talk much under such circumstances. I told him not to mind, as it surely was not his fault that we had not killed our moose. Surely we had seen abundance of signs every time we had gone out.

"It does beat all," said Adam, "how sometimes when you want a moose the worst way in the world, you can't get him. I would have bet anything in the world we would have a head hung up long before this. I'll tell you what we'll do. We'll make another side trip and go over to our Moose Brook camp. That's about nine miles from here, and the trail is hardly so heavy as the Klondike trail. There's always moose over in there, and it's right near there that we have our 'Caribou Hole,' a sort of lick, where we always can get a caribou in the fall whenever we feel like it. The caribou will not be there now, but we ought to get a moose."

We arranged it as above, and although a rain gave us a bad bit of weather during the night, and although snow began to fall on the following morning, we packed up and started once more for a tramp, Adam, Jack and I making up the party. We took our toboggans with us for part of the distance, and found the shoeing good, though soft with the new fallen snow. It was two and a half miles to a shallow mud lake or "bogan" which was now a vast expanse of white. The water was rising over the ice, and we tramped in slush, pulling the sled after us for about a mile, until we came to the Nipisiguit River, along which is strung the Bathurst chain of lakes. Finally we crossed the last of these lakes, and came upon the main stream near a bend, where Mr. McIntyre had killed a caribou in the early fall. Here there was plenty of "blackcat" sign, and the carcass of the caribou had been much mauled about. Barring anything better, we set a bear trap for this blackcat and so went on our way.

Making a Bridge.

Now I saw an instance of the shiftiness of the good woodsman. Before us lay an open river, across which we must fare in order to ascend the Moose Brook trail. Without pausing for much deliberation, Adam and Jack got out their potent little New Brunswick axes and fell to work felling a clump of three fir trees which stood near the brink. These crossed to within a few yards of the other side of the stream. Jack made his way to the last boughs and with a few steps and a jump was out upon the ice, which luckily held, thence to the other shore. We followed him as best we might, all going under pack now, and leaving the toboggan at the river.

We got four miles of very fair snowshoeing, through an easily ascending country and over a fairly good trail. That is to say, there were not more than fifty or sixty logs crossing any 100 yards, which is good going in New Brunswick.

"I notice that the trouble with city people is that they can't pick up their feet," said Adam, as he strode over a three-foot log. It was not any trouble for either him or Jack to pick up his feet, and they picked them up so consistently and rapidly that they got into camp some minutes ahead of me. The last three-quarters of a mile of this trail was through a frightful swamp, where the big thaw had set everything afloat. The shoes broke through the covering of white continually, and getting wet in the water below, froze thereafter, resembling nothing in the world so little as decent snowshoes.

Making Camp in the Snow.

It was about 3 o'clock when we reached this camp, after nine or ten miles of travel. We had seen abundant moose sign as we came along in the afternoon, and Adam, while temporarily 100 yards or so ahead on the trail, saw one big moose which he thought was a cow. When I first noted him he was squatted down, looking at this moose, which stood in turn regarding him, not more than sixty yards away. "That's the biggest cow moose I ever saw in my life," said he, and we found its track bore out his assertion. Later we had every reason to believe that this cow was not a cow at all, but a bull which had shed its horns.

While Adam and Jack were getting things ready for camp that night they gave what I considered to be the best exhibition of axmanship I ever saw in my life. There is no better, indeed not so good an axman in the world, as the genuine New Brunswicker. The New Brunswick ax is not like the American ax. It has a narrow blade, being shaped in the form of a true wedge, and hung if anything with a little slant inward. These narrow-bladed, keen axes have a wonderful cutting power. I never saw trees fall with such rapidity in my life. They were big trees, solid frozen birch trees, their sap turned to ice and hard enough to chip an ax, one might think; yet they fell into sections rapidly under the assault of these two skillful axmen. Our camp was but an open-faced lean-to, provided with a bough bed, it is true, but with nothing in front excepting all outdoors, and naught above its outer opening except the sky, from which there now descended steady additions to the snow all about. In front of this open shack and leaning against the bank of snow which we had thrown up in our excavations, Adam now arranged two big logs of birch, each perhaps fifteen inches through. Then he cut two "hand logs," perhaps a foot in diameter and three feet long. Across these he piled his dry pine and his split birch, cut into lengths of three or four feet.

"Now you set this afire," said he, "and as your pine begins to burn up your green birch, you will see that the coals will fall down in between the logs and make a bed. It's from this bed of coals that the steady heat comes. I'll show you that we can keep comfortable here to-night."

And so we did, thanks to the kind faithfulness of these big friends, who took their turns at the fire. A fire properly built in this way will do fairly for about two hours. Along toward morning the end logs had to be replaced and one of the back logs renewed. It was very cold this night, five below zero, yet we slept well under our scanty covering. On the day previous Jack had gotten a wet foot by breaking through into the brook, and he quietly informed us that he had frozen one of his toes. I noticed that for a time he took off his shoepack and traveled in his stockings, an old device of the true snowshoer when he finds his feet are getting cold. Yet I did not hear either him or his father complain about sore feet, nor did any one kick on the breakfast, which was composed of biscuit, butter and tea.

"I notice that a man can go out on these short trips," said Adam, "and live on buns and tea, and no meat, and he can stand it just as well for three or four days as if he were eating more heartily. Then he goes back to camp and eats a big square meal, and he's all right again. I rather think it's well for a man to go light on his feed once in a while."

On this trip I was wearing my flat bows again, and the genuine New Brunswick snowshoe tie. I calmly advised Adam that the New Brunswick straps were man-killers, and that I didn't expect to get back to camp with a toe to my name. He repeated his kind advice that a fellow who needed toes ought not to come out in the woods, and we let it go at that.

Crust

The next morning dawned bright and cold, and, as we had feared, with a simply frightful crust upon the snow. "It's no use to hunt," said Adam, "but I suppose we'll have to go through the motions," and he sighed dismally. The beauty of the morning almost made up for our foredoomed failure. The air was keen and brilliant. The snowshoeing, although noisy, was now excellent. We struck good bull sign in less than three-quarters of a mile from the camp, and found where moose had yarded before the thaw. This thaw seemed to have set all the game in the country moving, and had apparently changed its habits. Had it not been for this big soft spell we should have killed our moose before this time. As it was, we simply went through the motions of the hunt, as Adam had said. We found a fresh moose trail presently, and in time jumped this one, a good big cow. Following this, we circled and came up over the top of a grand big hill. We saw any quantity of caribou sign in the thicket on the steep mountain side, and we were satisfied that our cow moose was somewhere in that thicket, for we had circled her trail and come back to the place where we had first jumped her. We felt sure also that there was a bull somewhere in that circle, for we had seen any quantity of bull sign in the hardwood ridge above and below our camp. It was, however, little use to hunt, and at noon we decided to go back to camp. Over our buns and tea we suddenly came to the conclusion that the most sensible thing we could do would be to go back to Bathurst, since the snowshoeing was so good and the hunting so poor that it would hardly warrant our staying. Our tremendous appetites made great inroads on our grub, and we had scarcely enough left to last until the next morning, while the hunting was practically at an end.

We started back across the wretched Moose Brook swamp, and made it over more comfortably than we had feared, though we all got wet feet by breaking through the crust into the water below, which had not been reached by the chill of the air through the protecting blanket of snow. We saw at least a dozen fresh caribou signs, or animals which had crossed our trail since the day before, and we saw very much sign of sable, but met no further adventure save that Adam broke one of his beloved pair of snowshoes. In springing across a little open place he landed square on the crust of the ice with toe and heel of the shoe, and his foot went right on through, carrying with it a straight break across both the bows. He did not cuss very much. "If it had been a broken leg, it would have been much worse," said he. Indeed, a broken leg in the winter wilderness would be pretty near the same thing as a death warrant.

We crossed the Nipisiguit River this time on the ice without much trouble, though Jack broke in and wet his leg up to the thigh. None the less he philosophically climbed out and took the trail down to see whether the blackcat had gotten into the trap or not. He reported that the cat had run all over he trap, but was not heavy enough to spring it. When we got through with our trapping operations and had the big bear trap lying safely on the toboggan, we started out for a swift run on the ice in order that Jack migh not entirely freeze his feet. As a matter of fact, although the thermometer was very much below zero, he did not freeze at all. So much for the indestructible quality of the thoroughbred hunter, and for the virtue of abundant New Brunswick wool. I had not yet heard a whimper from anybody. These men were as big and strong as the hills about them. It certainly is restful to meet such human beings once in a while.

At length we reached Bathurst camp once more, and found Charlie in the act of getting ready for supper. He had had a tramp himself that day, a little matter of fifteen miles or so, on his trapping line over on Nictor Lake. When he first started out he broke clear through the ice and came near "getting in for good," as he expressed it, having to come back to camp and change his clothing before he could go on across. Charlie had seen eight caribou on that day, and said he could have killed one without the least trouble in the world.

War Talk.

At breakfast on the morning of Dec. 18 we held a general council of war. Adam was looking mighty blue, and I felt sorry for him, he felt so bad about our bad luck. I explained to him how foolish this was, since no one had been at fault and since in such weather conditions no hunter in the world could possibly hope to kill a moose, no matter how abundant they were.

We now took up the question of the trip south across the unknown country between Adam's chain of camps and those of Henry Braithwaite, on the Miramichi side of the divide. I told Adam that I had no doubt whatever that if we stayed a week or so here at Bathurst we should kill our moose without difficulty, as the weather was bound to change. He wanted me to go with him up to his Upsalquitch camp, where there was splendid moose and caribou ground, and thence to go out to the railroad at Bathurst, about eighty miles from our present camp. I told him I should be glad to see his country and knew that we would get our game, but if I did so I would be only doing what all of his customers had done, since it was no extraordinary thing to kill a moose and a caribou in that country. On the other hand, I explained to him, if we could really succeed in making it across the divide, and come out in the Miramichi country in an entirely different region from that where we had gone in, we should surely, from a newspaper man's point of view at least, be doing a better stroke of business. In other words, much as I hated to sacrifice Adam's professional pride in the matter, I determined to give up my moose for the sake of the story. Adam, big-hearted and generous as he is, at last agreed to this.

"What do you say, boys?" said he. "It means all of us, and it means all that all of us can do. There will be a heap of hard work in getting over there, if we ever do get over at all. Now I will go if the rest of you want to, but we won't ask any one to go who don't feel like it." It hardly need be said that Charlie and Jack fell promptly into line, and thus it was determined.

I had now practically said good bye to my chance for a moose, yet none the less looked ahead with a great deal of interest to the rest of our journey. The days were now slipping by very fast, and I felt it was taking considerable chances to start out into an unknown country so late in the game. Nothing venture, however, nothing have, so we let it stand as agreed.

On the following day Adam took three steel traps and trotted down the lakes three or four miles to set out

traps for that pesky blackcat which had been eating up the caribou carcass. During the day we were the recipient of two visits, Joe Ellis and John Moulton, both declared to be of Millicete Indian breed, though looking far more like white men than Indians, especially in the case of Ellis. These men had a line of traps running over Moose Brook way, and they had stopped at our shack long enough to "boil the kettle." Charlie and they had an earnest conversation in Adam's absence, and as to the import of this conversation we shall later see. Meantime Jack and I cut wood, greased up the toboggans, burned off the rough places on the runners, fixed up our snowshoes, now rapidly showing the effects of wear, packed up the heavy stuff in boxes to send out to the railroad by a tote team from the nearest lumber camp, and in general made ready to say good bye to Bathurst camp for the winter. It was our intention not to return to this place at all, but to break on through into the Miramichi country. "It will take a good deal to turn us back if we once start over," said Charlie. E. Hough.

Hartford Building, Chicago, Ill.

Guns a Hundred Years Ago.

Editor Forest and Stream:

I have lately found in an old bookstore a volume called "An Essay on Shooting," published at London in 1791, and think that many sportsmen would be interested with a description of the guns used by our forefathers in the Eighteenth Century. The author does not give his name, but he was evidently well acquainted with the subject, both practically and theoretically, and states that he had spared no expense in acquiring information from the best gun makers. He quotes considerably from a book called "La Chasse de Fusil," by Magné de Marolles.

In the introduction he expatiates upon the physical and moral advantages of shooting and the need of man for solitude, so that he may "enjoy the converse of his own bosom and retire from the vapid amusements of the age."

Just as the double-barreled hammerless ejector seems to us, at the present day, hardly capable of improvement, so this writer says of the guns made 110 years ago: "In these days when invention seems to be exhausted," and "the genius and industry of the English workman have brought flintlocks to such a degree of elegance and perfection that we have scarcely anything further to hope for or require."

The crossbow is stated to have been not wholly disused for shooting both small and large game until nearly the end of the 16th century, "at which time the arquebuse was brought to such perfection as to enable the sportsman to shoot flying." During the transition period, many complained that the beasts of the chase "had become very scarce where the arquebuse was used," owing to its noise. It appears that, for some time after the introduction of the flintlock, many sportsmen argued that the matchlock was preferable because "the fire of the match was more quick and certain than the other."

(It was at least as quick and certain when once the match touched the powder used for priming; but the time occupied in preparing to fire must have occasionally caused the loss of a shot. In 1869 I was at a hunt in the jungles of Central India in company with several Hindoo landholders who used matchlock guns. These had a pan at the side of the breech, shaped like that of a flintlock, but fitted with a flat lid attached by a pivot so as to slide on and off horizontally and protect the priming. The slow match, made of thin cotton rope soaked in solution of nitre, was coiled under the stock, its extremity being held by a spring nipper which formed the end of a curved piece of iron corresponding to the hammer of an ordinary single-barreled gun. Before aiming, it was necessary to first blow the burning end of the match until it was in a red glow, and then to slide the lid off the pan; but when the trigger was pressed the explosion seemed to me to be as quick as that of a percussion gun. The barrels were smooth bored, and so long that the muzzle reached to a man's forehead when the stock rested on the ground. They were thus able to burn a large charge of the coarse native-made powder, and drive a bullet with great velocity. Native hunters have been known to stalk and kill tigers with these weapons, which is certainly a proof of great coolness and courage.)

The author of the "Essay" devotes a considerable portion of the book to instructions about the training of dogs, the art of shooting flying game, the pursuit of the various kinds of small game, and the construction and use of rifle barrels; but extracts from these would occupy too much of your space. The following is a summary of the details he gives about shotguns: Both plain and twist barrels were made much as they are now, but Damascus appears to have been unknown. Some French makers heated the plain barrels, a few inches at a time, and twisted them until the fiber of the iron had assumed a spiral form. One French inventor strengthened his barrels by twisting iron wire round them, soldering it together and filing the outside smooth.

Spanish barrels had a great reputation, but the author had not found them to be better than those made in England. They were usually 36 to 42 inches long, 3 to 3½ pounds in weight, and 22 to 24 caliber. The best barrels, both in Spain and England, were made from old horseshoe nails, as much as 28 pounds of these being used in forming a barrel of 3½ pounds weight. The repeated heating and forging added greatly to their toughness.

English barrels were proved in London with a ball which fitted the bore, and a charge of powder equal to the ball in weight. (This would be about 10½ drams for a 24-bore.) As to length of barrels, it is stated "Formerly every sportsman was provided with different lengths, 30 to 34 inches for shooting in cover, and 42 to 45 inches for the open country. The belief was general that the longer a barrel the further it would range; and it is not more than fifty years ago since this began to be doubted. I have, at different times, compared barrels of 28, 30, 32, 34, 36, 38 and 40 inches in length, and of calibers from .22 to .26, and with equal weights of the same powder and shot. From these trials, frequently repeated, I found that the shot pierced an equal number of sheets from the short as the long barrels. I have repeatedly compared two barrels of the same caliber, but one 33 and the other 66 inches long, at different distances from 45 to 100 paces, and the results have always been that the barrel of 33 inches drove its shot through as many sheets of paper as that of 66 did." "The barrels which I employ and have found best for every purpose are from 32 to 38 inches; and whether we consult the appearance of the piece, its lightness, or the ease with which it is managed, I believe that a barrel not exceeding the one, or below the other of these numbers, is the most eligible."

(Paper pads are not quite reliable as tests of penetration; and experiments made in England some years ago seemed to prove that there was a decided, though not very great, decrease in velocity with every inch cut off a barrel from 30 to 26 inches. The celebrated Joe Manton considered that, in a .22-bore gun, barrels of 32 inches gave the best results.)

The author disagrees with the common opinion that small bores shoot more closely than large. He says: "We have subjected this matter to the test of experiment, and the result has been that barrels of .22 to .24, which is the largest caliber usually employed in fowling-pieces, threw their shot as closely as the smallest calibers—viz., .30 to .32."

(I have tried many small bores from .16 to .42, and never found them shoot more closely than those of .14 to .11 bore, with one exception. A double muzzleloading Westley Richards gun of .32-caliber, although the barrels were only 26 inches long, when loaded with 2 drams of fine powder and 1 ounce of No. 7 shot, made such remarkably close and regular patterns at 40 yards, that a snipe could rarely have escaped. It did not shoot closely with any larger size.)

The following methods are described in the "Essay," as adopted for improving closeness of pattern:

1. Making horizontal scratches round the inside of the barrel close to the muzzle.
2. Making both breech and muzzle ends wider than the central part.
3. Gradually contracting the bore from breech to muzzle.
4. Cutting straight grooves from breech to muzzle.
5. Making the whole of the bore very smooth and perfectly cylindrical.

The author had not tested the barrels with straight grooves, but of the others he had found none superior to the perfect cylinders.

(The system of enlarging both breech and muzzle for several inches in length, prevailed until the adoption of choke boring. One of my friends, a very scientific gunner of muzzleloading days, often assured me that, by a modification of this method, he had made all his own guns shoot well, and kill at unusual distances. He enlarged the breech end only so far as the powder charge reached, so that the wad was in the cylindrical part above it. This prevented the escape of the powder gas into the shot and the consequent scattering. The shot charge, having to travel through a perfect cylinder, did not have its pellets crushed out of shape as they were in guns which were of narrower caliber toward the center of the barrel. The muzzles of my friend's guns were enlarged for 2 or 3 inches, and he believed that, on the shot reaching this part, its pellets were pressed together by the sudden rush of gas past them. Whether his theory was correct or not, the patterns made by one of his gun, an 11-bore which I tried at a target, were remarkably close and good. I feel sure that nine out of ten, among the best game shots, would do better all-round work with guns making similar patterns, than with those which are highly choked.)

Both the rough and the fine boring of barrels was done in the Eighteenth Century by methods very similar to those still used, except that less machinery was employed.

Double barrels were made with one over the other instead of side by side. "Patent shot," which was considered the best, contained the following number of pellets in an ounce: No. 1, 220; No. 2, 180; No. 3, 157; No. 4, 105; No. 5, 83; No. 6, 300; No. 7, 480; No. 8, 620. The charges recommended were, "For a fowling-piece of common caliber, which is from 24 to 30 balls in the pound, 1¼, or at most 1½, drams of powder, and 1 to 1¼ ounces of shot, but, if larger than No. 5, increase it by ¼ ounce."

Wadding was made with soft brown paper, tow, and the lichen growing on apple trees. It was also punched from old hats, cork, and thick woolen cloth.

No. 1 shot is stated to have been the best for the first month of partridge shooting, and particularly good for snipe and quail. No. 3 was best when partridges became strong on the wing, and was excellent for all purposes, many sportsmen using no other during the whole season.

It was necessary to keep the gun moving and aim "a little in front of the head of game, at thirty-five paces, and fully six inches in front and a little above it at fifty paces." "The distance at which the sportsman ought infallibly to kill any kind of game with patent shot No. 3, with good aim, is from 25 to 35 paces for hares or rabbits, and 40 to 45 for winged game."

As to killing infallibly, I do not believe that any gun is certain to do so. Out of the great numbers which I have tried at marks, during the last forty years, I have not found one which did not, occasionally, leave spaces at forty yards, through which a partridge could escape untouched, and that, too, with shot containing 260 to over 300 pellets in the charge. Doubtless the guns of the author's time, by the best makers, shot, as a rule, so closely that when he failed to kill he thought himself to blame. The charge of 1¼ ounces of No. 3 shot, which he recommends, contained only 196 pellets, and, even allowing for the close pattern caused by the small quantity of powder, a weapon which carried them well enough to be usually sure of a partridge at more than forty paces, must have been fully equal to the best unchoked guns of the present day. The distances at which he advises aiming in front of a bird, show that, practically, no more allowance for the speed of game was necessary, than with our modern guns; consequently, the flintlocks by good makers, must have caused a very quick ignition of the powder. There could have been little of the "fizz-bang" described in books by theoretical writers.

The remarks of the author, in the latter part of the book, about shooting game like rabbits and woodcock in covert, or snipe and grouse in open country, prove that guns, even with barrels 38 inches long, were so nicely balanced that our forefathers were able to use them with great rapidity and accuracy. I have tried the charge recommended, viz., 1½ drams of powder and 196 pellets of shot, from an old Maynard 18-bore barrel, slightly recess choked, but only 26 inches long. The pattern at forty-two paces is close enough to insure killing a partridge, the weight of the large pellets giving the necessary penetration with the small powder charge; but the killing circle is not more than 24 inches, consequently a very accurate aim had to be taken. That this was the practice, may be inferred from a remark of the author: "A true sportsman is not content with only breaking the wing of a partridge or the thigh of a hare when he shoots at a fair distance; for in such case, the hare or the partridge ought to be shot in such a manner that it should remain in the place where it falls, and not require the assistance of the dogs to take it."

J. J. Meyrick.

England.

A Gun-Shy Squirrel Dog.

It was years ago, and yet as if yesterday, my first trip to Connecticut in quest of game. While eventually R. S. evolved into an A1 wing shot, yet in the early days squirrel shooting was his forte. When he could steal away from the farm work late in the autumn he would take his trusty and rusty single-barrel muzzleloader, and, accompanied by his mixed collie dog Girth, saunter off toward the chestnut ridge on East Hill in quest of squirrels. Girth was unexcelled on cows and squirrels. When the shades of evening began to fall it was necessary only to say, "Cows, fetch them home, Girth," when he would trot down the river road until he came to the fenced-in cows upon the rich river bottom pasture. He could nose at a bar in a rail fence until it fell, and with equal adroitness when driving the cows to pasture replace the light pole rails in their places.

Girth was a great watch dog, and woe betide the one who raised a hand even in play against his master when he was around.

The first morning we started out upon our quail and partridge hunt, Girth insisted on coming. R. S. had shouldered his rusty gun loaded to the muzzle with squirrel shot, and Girth was romping in great glee in company with Dick. We did not question Girth's ability as a squirrel dog, but we did have serious doubts as to his properly "backing" Dick pointing a bevy of quail.

We suggested tying Girth up and thus keeping him at home, but R. S. pleaded for him and argued that being such a good squirrel dog he should go along to tree the squirrels we should run across. And we, giving reluctant consent, went on our way with more or less misgivings.

Leaving the main road we got into the stubble and set Dick to work. We could hear Girth off in the woods to the right clattering through the fallen leaves and giving tongue as he chased a nimble chipmunk into a hollow log. It was not long before Dick came to a staunch point. Girth had given up his chipmunk and leaving the timber made straight for Dick, who was standing as if cast from a mould, frolicking ahead of him and despite our calling and R. S.'s commands actually flushing the birds. Dick looked back at us, wagging his tail in an inquisitive sort of a way, as if to ask what kind of business that was, anyway.

R. S. split his sides laughing at the discomfiture of ourselves and of Dick, but promised to keep Girth well to heel in future, a thing about as easy to do as to keep track of some spilled quicksilver upon the floor. The birds pitched into the woods and scattering lay close. We worked carefully along until we came to a conical depression about fifty feet across the top, and as many feet deep. Dick had disappeared within the pit, and Girth, roaming free once more, had romped along the edge of the opening. With a whirr a solitary quail broke cover well down the depression and sailed upward. No one paid any attention to anything but that moving bird, and Bob being in line shot and killed the bird. How it just happened that way no one knew, but when Bob shot the quail and Girth were just in line, and the shot that missed the quail found lodgment within the wooly surface of Girth's hide. Giving an unearthly howl, Girth put his bushy tail between his legs and pointing toward the farmhouse, staid not on the order of his going, but just went, making his fleeting course known by the occasional yelps he gave out.

Now for a moment relations became strained between Rob and R. S. Had Rob missed his quail nothing would have ever made R. S. believe otherwise than it was an accidentally on purpose occurrence, but when Dick fetched the dead bird and the matter was explained, R. S. absolved Rob from any sinister motives.

With Girth safe at home, we got R. S. into line and with Dick doing splendid work, there were enough birds to keep us all busy. We were all using muzzleloaders and there were times when before the wads could be driven upon the shot more birds would get up. R. S. after he had dropped his first quail on the wing, flatly rejected squirrel shooting for ever and a day, and then and there vowed to train Girth on quail. But he counted in vain. The No. 9 shot in their scattering course had not done much more harm to the wool-protected skin of the dog than would have been caused by quick contact with some sharp nettles. We found on examining Girth that not a drop of blood had been drawn and really the dog was more frightened than hurt. The stinging impact of the pellets coincident with the report of the gun was sufficient to convince Girth that something awful had happened, and he forgot squirrels and all else in his haste to seek the back track and sanctuary under the front stoop.

After that day R. S. never could shoulder his gun but that Girth would give a low growl of disapproval and hunt safe quarters under the stoop until he was out of sight. He became a gun shy dog, and until the day of his death renounced squirrel hunting as a frivolous pursuit, and confined himself to the dignified duty of herding his cows night and morning, at which work he certainly was unexcelled. Charles Cristadoro.

A year ago Veterinary Surgeon Custer picked up a small dog on Sixth street, near Penn, that had had a foot crushed by a car wheel, and, taking it to his office on Cherry street, he dressed the injury. A farmer took the dog home a few days later. Yesterday afternoon the dog, since then full grown, appeared on the doctor's office steps, and, when admitted, gave every manifestation of the joy in meeting its old friend. A case of wonderful instinct.—Reading (Pa.) Times.

Non-Resident Shooters.

Editor Forest and Stream:

I notice in your columns an advertisement of the facilities offered by that most excellent steamship line, the Old Dominion, to "the gunning grounds of Virginia and North Carolina."

I notice also that you advertise the *Game Laws in Brief*, wherein I find the following highly interesting information touching the laws of Virginia: "No person who is not an actual resident of this State shall kill any wildfowl in any waters, or on any marshes, islands or beaches within the jurisdiction of the State, below the head of tide water." Non-resident members of the Eastern Shore Game Protective Association are excepted. "Numerous local and county laws prevail. Great care must be exercised." Good advice. Now, concerning North Carolina, let us see what the law says: "It is unlawful for non-residents to hunt or shoot any wildfowl in the county of Currituck from any box, battery or float of any kind not on land at the time." It must be lots of fun to shoot out of a float on land. But let that pass. Here is a provision likely to please a sportsman who wants to remember the friends who "can't get away": "Shipment of quail or partridge dead or alive prohibited."

Now what are we to gather? No cheaper nor pleasanter means of reaching the "gunning grounds of Virginia and North Carolina" exist than those furnished by the O. D. S. S. But what are their patrons to do when they reach them? Violate the statute? Run the risk of arrest and fine? Or suck their thumbs? R. S. V. P.

NON-RESIDENT.

[Notwithstanding what our correspondent says, it is the fact that each year thousands of sportsmen go to the gunning grounds of Virginia and North Carolina and there do have good sport—sport so good that the next year they repeat the trip, and do the same thing year after year. Whether any of them violate the law or not of course we cannot know. We do know that the most famous gunning grounds of Virginia are along the eastern shore, and that any person of good character may become a non-resident member of the Eastern Shore Game Protective Association on payment of a small fee, and that this gives him the privilege of killing "any wildfowl in any waters or on any marshes, islands or beaches (in Accomac or Northampton counties) within the jurisdiction of the State below the head of tide water." In other words, membership in this Association amounts nearly to the payment of a non-resident license fee for the privilege of gunning in these counties in Virginia. The waters of the James River were formerly famous gunning grounds, but we hear little of them in these latter days, and imagine that non-resident sportsmen do not resort to them to any great extent.

In like manner, thousands of gunners go each year to North Carolina by way of Norfolk, and while non-residents are not permitted to shoot afloat, many men annually have fine sport by shooting from the land. One need only examine the pages of the most recently published volume on wildfowl shooting ("American Duck Shooting") to learn what are the opportunities for sport on Currituck Sound.

We take it that there are a very large number of FOREST AND STREAM readers who go annually to the States named, and who neither violate the statutes, nor run the risk of arrest and fine, nor suck their thumbs. All of which is respectfully submitted to Non-Resident.]

Quail in East Tennessee.

KNOXVILLE, Tenn., Sept. 30.—The outlook was never more promising for quail shooting in East Tennessee and the sportsmen are eagerly awaiting the opening of the season, Nov. 1. The absence of heavy beating rains during the breeding and hatching season has resulted in the maturing of more quail in this territory than for many years past, and in a great many instances the second brood have been raised, the extraordinary growth of field grasses having afforded great protection to young birds.

There are always more or less eggs destroyed in reaping hay fields with machines which are in general use in this section, and a gentleman told the writer that in mowing one field of clover, his machine destroyed seven or eight nests, the birds seemingly having come from other fields to nest in this dense growth of clover which afforded protection from the sun and heavy rains. He stated, however, that there were two nests passed over undisturbed; he carried the eggs, while yet warm, to the house, and his wife placed them under two bantam hens after having removed the eggs they were sitting on; the result was that two broods were hatched and have been raised around the large yard and garden, only three or four having died out of the thirty-six birds hatched. These birds are now nearly grown, and when feeding time comes, at the call of his wife, the whole brood come flying, some alighting on her shoulders and outstretched arms, while the others perch at her feet, and are seemingly not in the least afraid. This gentleman adds, that should some "town fellow" or any one for that matter, come along and shoot into this covey of birds while out feeding in the orchard, he would certainly get into no end of trouble with his wife and daughters.

I get the best of reports from all directions as to the quantity of birds in East Tennessee this season, farmers saying they have never had so many birds on their plantations. One gentleman who has a fine river bottom farm seven miles from the city, told me that owing to the fact that his place was close in, he could never keep any birds because the old lawns afforded no protection, but that last season he took full advantage of the newly enacted bird laws, and persons not authorized by him to hunt upon his inclosures were fired bodily from the premises and the offense placed in the hands of the authorities with instruction to act. The result is that he now has twelve to fifteen coveys of quail on his farm, and Bob Whites are calling from all directions. He does not propose to furnish sport for any but the "chosen few" of his friends, and they must limit their desires to a reasonable bag of birds during a day's hunt, as he considers his "shy" little friends his personal property. His neighbors are also acting on his good judgment, and the man who "goes a-gunning" around that neck of the woods had better arm himself with a permit, or else he may find that it would have been much less expensive to have gone to the market.

The laws passed by the last (1901) Tennessee Legislature are broad and far reaching in this respect, making it a misdemeanor for any one to hunt with dog or gun upon the inclosed premises of another without the owner's written consent, except in cases of chasing foxes when once started; it also prohibits the netting or trapping of quail under any circumstances and conditions, and places heavy fines upon such offenders, such fines to apply to the State school funds, etc., etc.

These laws were practically aimed at the pot hunters who trap and net birds and who in the past have destroyed thousands and thousands of birds in East Tennessee. The framers of these laws did not lose sight of the pot hunters' "partners," who have in the past handled and shipped these birds, so with our State laws, aided by the National Lacey Law, these men who hunt for "revenue" only, have had a crimp put in their "tail feathers," and this season will in all probability see some of these fellows doing some other kind of work.

While quail shooting is going to be a burden to some of those who have heretofore gone out and indiscriminately slaughtered fifty to seventy-five birds in seven hours' shooting a day, I want to say to any gentleman who might want to drop off in East Tennessee and take a few days' shooting, that the farmers are good people, and when approached in a gentlemanly manner, any gentleman (and these farmers seem to be excellent judges of human nature) will, I am sure, be allowed the privilege of getting into as fine sport as can be found in the country.

The farmers in East Tennessee, as a rule, are plain, conscientious fellows, who, when dealt with honestly, are your friends from sun to sun, and I doubt if in two or three days' hunting any gentleman would be denied the courtesy to enjoy a hunt through any field he might come to. The land is rolling and fields are, as a rule, long and narrow. Late in the season, after the birds have been hunted, they will, as a rule, when flushed, go to the woods, and when once there, you had better have on your "shooting clothes" if you want many birds, for then they are big and strong, and when once up, go like the wind, but it's the greatest sport in the world to catch them as they go darting over the hills and afford shots from all imaginable angles.

I read in a recent number of FOREST AND STREAM that Mr. Hough, of Chicago, refers to what he is pleased to call his "meat dog." Now, I also have one of these "meat dogs," and if that gentleman should ever honor us with the presence of himself and his "meat dog," I and my "meat dog" would like to meet him in the "Sweetwater Valley," where, I am sure, that both Mr. Hough and his dog would quickly realize that they were not following prairie chickens, but on the other hand, the gamest open field bird in the world, and when these birds "get up" it behooves "the man behind the gun" to straightway "get busy."

We must have some heavy frosts to knock down the very rank growth of weeds before the best hunting is to be had, and it is usually Nov. 15 to Dec. 1 before the fields are in really good condition for either the man or the dog.

With another season like that we have had this year, I venture to say that East Tennessee will afford the finest quail shooting to be found in the United States, for every man's land is fully protected for the asking, and the man who has and can make friends, is the man who will be able to satisfy his full ambition in this direction.

SAMUEL B. DOW.

Maine Deer.

BOSTON, Oct. 4.—The Maine deer season is open, but it has rained nearly all the time since October came in; a condition much against hunting. Hence reports of deer taken are yet very meager. The Megantic Club members and guests have not yet taken deer in Maine to any extent, though a few continue to be secured over the Canadian border. At the club house the shooters have seen a great many does, but the prevailing sentiment is against killing them; hence they have generally been allowed to escape. W. S. Richards has the honor of having killed the first bear of the season, by Megantic Club members. His trophy is to come out to Boston. The weather has generally been too stormy for partridge shooting, and only small bags are noted. Mr. and Mrs. A. W. Robinson started for the Megantic Preserve today. Mr. and Mrs. D. C. Pierce go in about the 13th. Dr. Payne, who has been staying at his camp, Big Island Pond, reports the best fishing in years, with many trout of two and three pounds weight.

The continued rain has also been much against the opening of the Massachusetts game bird season, Oct. 1. Nearly all the gunners have put off trying the shooting till better weather. Friday was fair at last, and some of the gunners were out. One hunted the woods of Reading, starting five partridges and securing one. He pronounces the birds very wild.

A later report from Bangor, Maine, says that the first day's record shows three deer shipped, to go through that city; all does. They were shot by J. P. Lawry, of Benton; J. Samuelson and Dr. J. Ackerman, of Boston. Mr. Lawry has been hunting in the neighborhood of Moosehead, and says that the outlook there is very good. Neither Mr. Samuelson nor Dr. Ackerman appeared to identify their game in Bangor, so Warden Blanding was obliged to seize both deer. Before doing this the warden made a careful search through the train, but could not find the men. All sportsmen should remember that they are obliged to appear and identify their game at Bangor before it can proceed. Failure to do this will result in the confiscation of all unclaimed deer and moose by the State. One deer was brought into Bangor by team, Oct. 2, the second day of the open season.

Evidently the game laws are being enforced in Arlington and Belmont, Mass., this fall. Monday a man was fined $10 in the Cambridge district court for shooting a squirrel in Arlington. Friday Peter Cosseta, of Boston, was locked up in Station 1, Cambridge, on the charge of shooting a robin in Belmont. Cosseta was bailed and will be arraigned later. It is a notorious fact that a great many song birds are shot, especially robins, by gunners who go out of Boston, and return with bags of what they pretend are "snipe," "peep" and "reed birds." Some of the farmers and residents of outlying towns are very indignant, and have called upon the officers to enforce the law.

Mr. and Mrs. J. H. Jones, of Boston, their son, and Mrs. Jones' father, Alvin Jones, are on a hunting trip to Carthage, Me., where they were to camp. But the weather has been against them; raining almost every day since their departure.

BOSTON, Oct. 6.—The Maine hunting season is on, and nobody has been shot yet, so far as reports are received. It is to be hoped that the chapter of shooting accidents will be greatly lessened this year. Writers, who evidently know as little about hunting as may be, are full of suggestions. One would have a hunting suit with checks of black and white not less than a foot square. Another would avoid red, as that is the color of the maple leaves. I would avoid whisky in the stomach of the other fellow. About all the trouble comes from firing at the first motion in the woods. It matters little what the hunter may have on. No man in his right mind would shoot at another man when seen with such distinctness as to distinguish even the smallest part of his dress or form. If novices would always remember that it is almsot impossible to shoot game unless it is distinctly seen, and that if one waits for a couple of seconds or more, the game is almost sure to show itself plainly, they would not only secure more game, but avoid the terrible sorrow of having shot a fellow hunter.

Up to Saturday, fifty-one deer had passed through Bangor, a larger number than for the same days the first three seasons a year ago, when twenty-eight deer were noted. Still, it is estimated that there are a greater number of sportsmen in the woods than a year ago, with the great rush yet to come. A feature this year is the marked number of women hunters. Of the above fifty-one deer, four were taken through by women. Among the lucky Boston hunters were Ogden Brewer, Alice K. Brewer, W. F. Smith, E. Binghurst, J. S. Mundy, Dr. G. E. Whitehill and Mrs. J. Sawtelle. The first deer reached Kineo, Moosehead, on the morning of the opening day. Three were taken by Mrs. Henry S. Durand and Master Durand, of New York. Three other deer were shot during the forenoon by guides. Mr. A. Roderick, of Farmington, is believed to have killed the first deer of the season in the Rangeley region. He secured his prize at the foot of Sluice Hill, on the Phillips & Rangeley Railroad, on the morning of Oct. 1.

Reports concerning partridge shooting in Maine are conflicting. In some sections in Franklin county they are reported to be fairly plenty, though the cold rains of the nesting seasons are believed to have destroyed the chicks. Woodcock shooting is reported to be good in the vicinity of Farmington and above. In the towns of Weld, Carthage and Dixfield a good many partridges are being secured, with some good woodcock shooting. Bird shooting is still unsatisfactory in Massachusetts, although better weather is expected to improve it somewhat. Hunters are having some luck in northern New Hampshire on birds, but partridges are scarce. Big game in the northern counties is said to be in greater abundance than ever before.

Coon hunting is in order with the hunters of Lewiston and Auburn. They go out of nights with torches and dogs, returning at daylight, often with several good specimens. The vicinity of sweet-corn fields and orchards, near the woods, are good points to hunt. One 'coon hunter in one of those cities does not care to associate the hunting of 'coons with molasses, although the boys insist that one has something to do with the other. About ready for a hunt the other evening, he went into the back room of his store for his gun and ammunition. The dog, a good one on 'coons, was greatly delighted. He scooted about that back room in the dim twilight in great glee. His master called him and locked the door. Returning next morning, he unlocked the door to put away his gun, and hang up his 'coon till he had time to skin him. Behold the sweetness! The whole floor was covered with molasses to the depth of an inch or more. The tired dog jumped in, but was out again in a moment, with all four feet stuck with molasses. The mystery suddenly solved itself. The dog, in his gambols of the night before, had completely turned the spigot of a barrel of molasses, and it has been running all night. Say "'coons" to that dog now, and he will run to the door of the back room where the gun and molasses are kept, pause, whine, then lap all four feet.

SPECIAL.

A Memory of Barnegat.

ON Tuesday afternoon, March 4, I went to Barnegat, N. J., on a wild goose shoot. That evening I started out (after having arrived by the C. R. R. of N. J.) to get a guide, and going to the village grocery, which is used as a sort of country club room at night, found the man I wanted. He was a grizzled old gentleman, and he stood his sixty-six years much better than we city boys do our forty-five. I retired at 7:30 P. M. ,and after sleeping, I think, five minutes (though the clock said 3 A. M.), the banging at the door aroused me and I hopped out of bed and then to a most delicious breakfast of bacon and eggs, with fried oysters and coffee. Everything seemed to reach the spot where it would do the most good. The guide came in just then with the cheering information that it was snowing, with some sleet, but would probably clear up with daylight. My host also ventured the information that whenever the weather was too bad to keep a dog out of doors, then the ducks and geese flew low and the shooting would be better.

My guide and I started out on our two-mile journey to the bay, where we had to kick the snow and ice off of the cover of the sneak boxes, so we could get under way for our five-mile sail down the bay to the shooting grounds. By this time it had turned to a drizzle, with some snow and lots of sleet. I now commenced to freeze from my toes up. After an hour and a half's sail, both wet, uncomfortable and partly frozen, we arrived at our shooting ground, a marsh island called Sunken Sage. Here the guide got out his spade and commenced digging a small bay so the boats would rest easy. While he was putting out the decoys, both goose and duck, I was covering my

oat with sea weed, and mighty cold work I found it. When this task was finished it commenced to lighten up a bit, so we lay stretched out full length in our boats (sneak boxes), waiting for the first flight. This happened a half hour later. The guide was industriously calling all this time, and as the ducks were passing they noticed the decoys, and wheeling, prepared to descend, whereupon I arose and banged at them. Mine was a clean miss, though the guide got his. They, the flock, were out of sight in five seconds. About the quickest get-up-and-get I ever saw.

The guide poled out and got his bird and I stamped up and down the meadow to restore circulation. It was cold, freezing work lying down in the boat, and I did not come down prepared for such weather. Again lying down, a solitary broadbill came along, hesitated and I had him.

Again we went down just as a flock of teal came over from our back and stopped to descend, when bang, bang, four more joined our party. Then a solitary redhead came flying overhead and hesitated, but I made a sure thing of him, as he came down without a tremor.

While the guide was out getting the ducks, he came in hurriedly, and yelling to me to get down, I did so, though not knowing what was up. Then my guide commenced to honk, honk, honk, and by peeping from the corner of my eye I saw a flock of geese, about ten of them, coming toward our decoys. They were on the point of wheeling when I got excited, jumped up and filled him with No. 4 shot, whereupon he came down with wings outstretched, looking as large as an ostrich. I was trembling with both cold and excitement, and I had forgotten for the time I was half frozen. The guide gave me the devil, and said if I had not jumped up so quickly we would have had the entire flock alighting and would have got four of them anyway. I apologized and very humbly promised to obey orders, and again stretched ourselves out, waiting for more. Later we got an occasional shot at ducks, our day's shooting representing one goose and nine pair of ducks, not counting the jackass in the boat. We passed two gentlemen, Johnson and Henriques, of Philadelphia, a little further up, and after reaching the hotel at Harvey Cedars, and thawing out, they came in. Each had a guide, and a live goose decoy. I, while watching them, saw their guide come to the hotel and get a wheelbarrow and take out to the pier, whereupon I saw one goose thrown in, then two, three, four, five, six, seven, eight, nine, and then I almost fainted. After coming around I went to the porch, and their shoot was nine geese and twenty-six ducks, all hanging head down, wings outstretched, and the prettiest sight I ever saw; my poor one goose hanging a short distance away with the eighteen ducks making a poor showing. There was one flock of geese which flew up and down the bay with a thousand in it. We also had a flock of several hundred brant around us all day, but too far away to get a shot. In the afternoon a flock of swan alighted a half-mile away and sported around for an hour, but there was no way to get to them. They were the prettiest things I ever saw. Some one had been trying to sneak up to them, banged away, whereupon they arose and looked like so many patches of snow flying away. The next morning I got one more goose and three pair of ducks, and having taken a chill from the exposure, I came back to New York and went to bed for a nice week's rest, and to recover from the strenuous life. But I shall try it again this winter, and next spring, but will take the proper garments.

MAGNUM OPUS.

How Long Will It Last?

Editor Forest and Stream:

Shooting being no longer permitted in and about the streets of Saint Louis and on this military reservation, one of necessity turns his attention to other matters and devotes some time to reflection, that, under other circumstances, might have been spent in action. Having thus no longer deeds to recount, I must ask your indulgence a few moments while I give you a sample of my thoughts; possibly others of your readers may have similar ones. The present coal famine, of which we hear so much, brings constantly to my mind the vision of that coal famine, possibly yet to be, which no arbitration can obviate and no legal process remove; the famine that may arise, not from any disagreement between master and man, but because the coal itself is exhausted. We are catching now a few fleeting glimpses of what may some day be ever present, probably not in this or the next generation, possibly not for several generations. I have no date wherewith to determine the period required to exhaust at the present rate the entire coal supply, nor am I aware that such date is even in existence; but no one familiar with the current theory of the origin of coal can view the present enormous draught upon these deposits and yet consider them inexhaustible. The arguments leading to such a conclusion are few and simple: Coal is nowhere being deposited to-day, or, if such deposit may be claimed in the peat bogs, it is taking place at a rate practically negligible in comparison with the consumption; the coal deposits, though vast, are still of limited extent; constant diminution without increase must eventually exhaust any limited quantity. Taking it all around, the present generation in the United States reminds one of a young spendthrift just come into a fine property, accumulated by the thrift and carefulness of many ancestors. He thinks he is something out of the ordinary and intends showing others how things should be done. In the society of flatterers, speculators and gamblers he soon parts with his ready money and bank stock. He then sells the timber off his land. After that is spent he sells his live stock. Having thus deprived himself of the means for the proper tillage of his soil, he then sells the hay crop from his meadows until they are no longer productive. He next mortgages his property, and the last scene in the final act is the auctioneer's hammer at the public vendue.

The people of the United States during the past thirty or forty years, under one pretext or another, such as the development of the country's resources, the duties of an advanced civilization, etc., have, speaking broadly, cut off and disposed of all their timber, diminished their water sources, swept their wild game from off the face of the earth, polluted their streams so that nothing can live in them, and are now consuming with an extravagance amounting in many cases to a prodigal waste, their stock of coal, regardless of those who are to follow them. To be sure, there is something to show for all this; there are monuments—principally large towns and cities—indicating the grandeur of the country and the refinement of the age; a considerable number have become fabulously wealthy; and the country itself may be regarded as exciting the envy, or, at least, the admiration, of foreign nations; but, after all, are the people in general any happier, more comfortable, or more content than they were years ago before the country was sought after by monarchs or refinement had become a burden? If we are to believe our beloved writers of FOREST AND STREAM, Rowland E. Robinson, The Parson, Fred Mather, and I know not how many others, I cannot think that we are. As some writer has well said, we may have the improved apparatus, but alas, they had the game. Ours is the technical, the artificial, the make-believe; theirs the genuine, the real. The whole fault in our history I believe to have been due to a lack of wisdom. I am not of those who believe that any one does wrong or commits error for itself alone, but rather because, through ignorance, he fails to appreciate the eventual results of his present act. I cannot think that in cutting off all the timber, destroying or permitting the destruction of fish and game, or in the prodigal consumption of the treasures of the coal deposits, this generation is actuated by a desire to do posterity an injury, but rather hold to the opinion that the majority of them knew no better. It is true that we now boast a great deal of our schools and our educational system, yet I fear that, aside from the relatively few who read FOREST AND STREAM, the mass of the people are learning new and more rapid methods of destruction rather than improved methods of preservation of our country's real resources, and that in the end it will require the services of that stern old teacher, Experience, to finally inculcate true wisdom in the minds of the American people.

WM. F. FLYNN.

JEFFERSON BARRACKS, Mo., Oct. 3.

CHICAGO AND THE WEST.

A Rainy Day in Camp.

CHICAGO, Ill., Oct. 4.—In the theatrical profession, when things are not going as they should, one says there is a "frost." Indeed, in general circles, as well, the significant expression is used, and when one says there has been a "frost," there is a general understanding that hard luck or hard times is meant. Just why the word "frost" should be used is difficult to be determined from the standpoint of the sportsman, for whom the word calls up only the pleasantest ideas. The frosty mornings of early fall—how can anything be more delightful? Frosty weather in camp is good weather, and frosty days afield are pleasant ones.

The most unpleasant weather which one can experience in camp or in the field is rainy weather. A rainy day in camp or in the field means discomfort, boredom, irritation. Would that we were having frost in Chicago to-day instead of the cold, gloomy, dismal rain which is steadily falling. Nothing will cover the situation of Chicago and the West to-day except to say that it is a rainy day in camp. Things are worse than a frost in a sporting way in this part of the world this fall. Chicago is dull, almost unmitigatedly dull, and so is the Middle West, so far as sporting opportunities are concerned. The trapshooting situation has flattened out here completely. The prairie chicken shooting was a failure. The duck shooting has not as yet amounted to anything. And the quail crop, according to best advices at this time, bids fair to be a poor one. Add to these discouraging signs the gloomy weather, the moist and slippery earth and the disagreeable downpour of rain water, and one could hardly be blamed to-day if he did not feel in hilarious frame of mind regarding sporting matters in the Mississippi Valley.

We need not expect any duck shooting to amount to anything for a couple of weeks yet. The big fall storms have begun in the West, but nothing very severe is reported directly above us, unless the present cold rain may turn into something severe in the north. Ducks are reported as far north as Fox Lake, Wisconsin. These are mostly bluewing teal, which would not indicate that the northern flight of big birds had begun as yet. Some shooting continues on the Tolleston marsh, very little on the Fox Lake Chain, and still less along the Illinois River. We wait for the first cold storm in the north.

As to the jacksnipe, we have not had any light nights for their migration for several days last past, and although this rain ought to bring in a flight, it cannot be expected to be a general one. During the last week a few birds have been picked up, scattered here and there, but there has been no shooting entitled to attention.

Some of our friends think that the wet weather last spring did not hurt the quail in their breeding operations, and indeed believed that wet weather in the spring never does hurt the quail, since they always nest above the levels of the moist ground. In this respect I cannot agree, for I believe that nests of quail very frequently drown out in the spring, or that the young birds are frequently killed out by cold, damp weather. Some of my friends who have a keen interest in game reports from different parts of the country, state that they hear nothing encouraging from Illinois or Indiana thus far, although they admit that the heavy vegetation may have kept the birds out of sight of chance observers along the roads and fields. We had a bad storm early last winter which did not do our quail any good. The most conservative estimate would not extend any great hope in regard to the quail crop for this year. There will be some birds, but by no means so many as we had three years ago. Last year the quail crop in lower Illinois showed a distinct falling off.

Chickens in the West.

A friend recently back from a trip which included parts of South Dakota, Nebraska and Wyoming, states that there are plenty of prairie chickens in South Dakota. He mentions Iroquois and Salem as points where the birds were abundant. It is well enough to keep South Dakota in mind for next season's chicken trip.

Can't Do It.

A gentleman in North Carolina writes me as follows: "Pleas send me address of some kendells. I want to corrospond in regard to a spannll dog."

I regret to state that I cannot act as an unpaid and unthanked dog industry in this country. Once in a while I help a friend to get a dog or get rid of one, but I am not in the "kendell" business. The "kendells" who do not advertise in the FOREST AND STREAM ought not to expect the FOREST AND STREAM staff to go to work for them for fun. I respectfully, but firmly, decline.

A Small World.

This is a shore small world. You hear of friends all over it whom you have met, are going to meet, or have just missed meeting by a fraction. The following letter is from Mr. C. S. Hawkins, of Fall River, Mass.:

"I have been waiting since the first of the year with a great deal of interest for the story of your trip into New Brunswick last December. It is especially interesting to me, for my friend Mr. Borden and myself were up at the headwaters of the Tobique with the Ogilvy boys at the time you were making your trip across country. You had left Plaster Rock the day before we reached there, and we left in the teeth of that snowstorm which caught you up at the forks of the river. I simply want to thank you for the pleasure I am receiving from the account of your trip and the description of the conditions found in that glorious country, and to express my regret that I did not happen to make your acquaintance. We got no moose, but the caribou fairly hindered our progress on the tote roads."

Tips on Deer Hunting.

When you go deer hunting, the best thing you can do is to stay at home. If you feel that you must go, wear a red cap and a red coat. In this way you can lose only a leg or an arm. If several of you can make up a party, the safest thing to do is to stretch out in line about 200 yards apart. Then, as you go forward at about the same pace, let each member of the party whistle at regular intervals, so he can keep track with the man on each side of him. In this way you will be able to keep your line fairly regular and ought to get through each day with the loss of only a few of the party. It gives the deer good warning of your presence, but in deer hunting these days the main thing is not so much to get deer as to secure personal safety.

By the way, as to that hunting in line, it really was done by some Eastern gentlemen who made a hunt in the Rocky Mountains near the Two Medicine country a few years ago. Their guide objected, stating that if they went through the woods so closely together and making so much noise they would not see any game. They replied that they were a little lonesome in the woods and would be much more comfortable if allowed to whistle and keep track of each other in this way. They didn't kill anything, but had a very pleasant time.

Death of M. J. Eich.

Last week it was a painful duty to report the death of Mr. A. M. Hofmann, long prominent in Chicago sportsmen's circles. This week it again becomes one's duty to chronicle the death of a Chicago sportsman. Mr. M. J. Eich, one of our best-known shooters, died on last Thursday in this city. Mr. Eich and Mr. Hofmann were friends and had a very wide circle of friends in this city. Mr. Eich was twice a winner of the capital prize of the Illinois State Sportsmen's Association, the Board of Trade Diamond Badge, was long known in different sporting clubs in this city, and was prominent in the councils and committee work of the Illinois State Association. A man of singularly quiet and unobtrusive manners, he was universally respected by those who knew him, and his death removes from the ranks of Chicago sportsmen one of the very sort of figures which can ill be spared. Mr. Eich was fifty-two years of age.

E. HOUGH.

HARTFORD BUILDING, Chicago, Ill.

New Hampshire Grouse and Woodcock.

I FIND grouse very scarce in this section this season. On the opening day a neighbor and I hunted all day over some of the best ground I know. We started four broods averaging four birds each, and once in a while a single bird. We killed nine and worked hard to get them. I have never found grouse as wild, and it was very hard to start them a second time. Since the opening day I have been out several times in nearby covers which have not been hunted this season, and I am sure that birds are very few and far between. I find but one young bird in a place, and not another within a quarter of a mile.

Here, in this town, we have miles of good cover, plenty of food and but three bird dogs, owned in the town. Never were birds better protected than during the last two years. Markets closed and no out-of-season shooting, yet the birds do not respond. Perhaps our grouse have become fashionable and no longer believe in rearing large families. There is one thing as to the few birds I have killed so far. I never killed young grouse at this season which were larger or in better condition; never a sign of a woodtick on them.

As for woodcock, some years we find some flight birds and a few locally bred. Both are growing scarcer. Our wood ducks practically disappeared with the wild pigeon.

In a recent issue of FOREST AND STREAM woodcock and wood ducks are mentioned as "Two Vanishing Game Birds." Does not the vanishing clause apply to all New England feathered game?

Other sections may have a better showing. What I have said refers to this locality and I have described it just as I find it.

C. M. STARK.

DUNBARTON, N. H., Oct. 1.

Adventures with Bull and Buck.

Adolph, Minn., Oct. 2.—*Editor Forest and Stream:* The Duluth News-Tribune of yesterday relates that John Gunn, a Duluth timber cruiser, has just returned from northern St. Louis County, where he had probably the most remarkable experience with a moose on record. He mounted and rode a bull moose at lightning speed for nearly a mile.

"I was working in the vicinity of White Birch Lake, southeast of Tower," said John Gunn, in explaining the incident: "Last week I had the most exciting experience of my career. Moose are pretty thick up that way, and the male animals are very bold and saucy if one happens to get in their way.

"About 11 o'clock in the forenoon of Sept. 23, I was sitting near the camp behind a jackpine writing up my minutes of some land that I had explored. I heard the brush crack several times nearby, but did not look up immediately, supposing that it was Dennis Keegan, my helper, getting ready to prepare dinner. I got up from the ground and turned around, intending to speak to him about something, when to my astonishment there was a huge bull moose right beside me. I thought sure he was on the point of attacking me and quick as thought I grabbed his antlers on the left side of the head with my right hand and threw my right arm over his shoulders so that he could not swing his body around and rush me.

"But the moose was just as much surprised as I, and every bit as frightened. Quick as a flash that mighty head went up and he simply left the ground and seemed to shoot through space like a comet. At least that is the way it seemed to me. I don't know how it happened, but I found myself astride the moose and going through the woods so fast that I could scarcely catch my breath.

"It seemed to me for all the world that I was aboard a runaway locomotive. I was afraid the moose would collide with a tree or something else that would fetch him up short, but the trees just seemed to open up ahead of him as if they were glad to get out of the way. I don't know how far that moose would have carried me, or where, if I had not fallen off. I did not get off very gracefully, but the dismount was a success. The animal came to a fallen tree, which was held up about three feet from the ground by the stump, and then he made a leap that would, as it seemed to me, just as well have carried him over the tree if it had been standing upright. The moose simply shot out from under me and let me fall to the ground. Very happily for me I did not light on any rocks, or hit the log that the moose cleared, and merely sustained a few bruises. I was so excited that my nerves were badly shaken and I could scarcely walk. I met Keegan in hot pursuit. He was approaching the camp at the time I mounted the moose, and had seen my surprising and exciting adventure at the start. I thought he would never quit laughing when I told him how I dismounted."

The Cook County Herald in last week's issue contains a story of how a moose pursued a man in a buggy in that county a short time ago. Andrew Hedstrom was returning from the West Side district and he passed a bull moose near the Mayhew farm. The animal was beside the road. The road turns at right angles near there, going around one side of the farm. Mr. Hedstrom looked back after making the turn and saw the moose vault over the fence and run across the field after him. He whipped up and later saw the moose clear the other fence and get into the road. Mr. Hedstrom stirred his horse to faster speed, when the moose abandoned the pursuit and turned into the wood.

So much for the Press-Tribune stories. Now I will give you my own experience with a large buck deer, which will tend to encourage belief of Mr. Gunn's veracity. It happened two years ago; it all comes back to me, and I marvel at what peril we will put ourselves into, either thoughtlessly or, as Mr. Gunn says or intimates, for self-protection, in his case. It was on the morning the law was out that I shouldered my .32-40, having previously had the displeasure of seeing several fine deer cross my path, as I was wont to travel going to work at 6 in the mornings. But this morning I started a little earlier than usual, so that I could take a birdseye view of some other places where we could later on secure our usual allotted number of deer without much trouble. It had snowed about 1¼ inches the evening before, and so having things about right to suit my fancy, I took my oldest son Claude with me, a lad of 16 summers. We had come to the runway about a mile from home, just at good, fair daylight, but saw no fresh tracks and heard no noise save of the usual cottontail rabbit on his homeward bound after his first trial of snow wet feet. We stood, perhaps, 20 minutes and saw nothing, and as the chilly November air was not exactly congenial to our unused custom yet, the lad said, "Pa, I'll take the rifle and walk slowly home and you can go on to the depot." Being a telegraph operator, I had to answer roll call promptly at 7 A. M. But I was hardly satisfied with the result of our early watch, so I said, "Let's go down the track a little further, as that is on my road, anyhow, and you will then take the gun." I was walking along very slowly, when off to my right by chance, I heard some shell ice that had formed, and being covered with snow sort of fooled the wary deer. It gave a sharp crack, but only once, for deer are very cautious about the racket they make. I stood motionless for three or four minutes, when I got my optics spotted on the buck, about 110 yards down the track, preparing to jump the five-wire fence, so he could cross the track. In an instant he got his peepers on my frame, but stood perfectly still, as they always do until you make any move in such cases. I raised my gun exceptionally quick, saw his neck through the Lyman sights and turned on the necessary pressure to the trigger, and that deer went 20 feet into space, if he went an inch. I sent another bullet after him, where he lit; but shot too high. He then disappeared in the woods. "Well, well, Pa!" says the lad, "And you missed him. But what made him make such an unusual high leap?" We lost no time except the usual formal scrap and blue air getting over and through that five-wire railroad fence; and just where he lit with his first jump we saw blood, and in three or four more jumps plenty of blood. We forgot all about roll call and went after our morning visitor. I was in some way watching for blood in the snow when the lad said, "Pa, there he is again." I raised the gun to shoot, when I saw he was bleeding profusely by spurts. "I guess I'll not cut you up with bullets and spoil the best of your meat," I decided; for he was standing tail toward us and 50 yards ahead. Right here is where I have since been educated not to monkey with a deer until you're sure he is dead. I stood only half a minute and advanced. He stood perfectly quiet till I got within 10 feet of him, when he turned tail end the other way, but staggering. Then I thought surely he was safe. I set my gun down and pulled my knife and walked up closer. He acted as if ready to fall any second. Thinks I, "Old fellow, I'll just give you a push over." He had a very heavy set of horns and with my left hand I took hold quite strong of his antler and tried to push him over. Well, say, here is where I learned a good deal. The buck proposed then to show us tenderfeet a trick of riding through the air without any of Professor Darius's contraptional wings. I hated to let go, of course, and didn't for a long half-minute, until I felt I wanted the "earth," and I came to the conclusion that the dispatcher might be calling me for a train order; and as my antagonist was not headed in the right direction to land me where I could get to the red flag, I let go. I found myself in a heap all covered with hair, and was red enough with blood to flag any old train. The lad came running with the gun and caught up, half out of breath; and to beat all, he said, "Well, Pa, I wanted to tell you to stop for postage stamps, so you could get back, but you didn't give me time."

To cut this short, we followed that buck just 350 yards more and saw him standing 60 yards ahead broadside. I concluded that he had the best of me on the second round and no chances of mine would go on third. I saw him one better again, through the Lyman sights. There was a sharp crack, another big jump, and we had the pleasure of calling the buck ours. We dressed the game, left him to cool, and got to office thirty minutes late for roll call. A letter came from the chief dispatcher as to why, etc., but my usual prompt deportment cut me out of necessary hookey reply, and saved my job.

Last, but by no means least, my son's mother, the best woman I ever knew, said that that deer must have been the one Noah had in the ark, or else it had practiced jumping that five-wire fence so long that it was as tough and elastic as whalebone. It dressed 217 pounds. I have killed many a deer since and but few before; but am more careful of the close company I keep with them until I get them into the frying-pan.

J. W. Russell.

From Currituck.

Currituck, N. C., Sept. 26.—*Editor Forest and Stream:* We have had some excellent bay bird shooting during the past ten days, principally large yellowlegs, with a sprinkling of golden plover. I heard of one bag of 160 of the former to one gun. English snipe have just begun to drop in during the past day or two.

Teal, pintails and widgeon are not so abundant as usual at this time. A few came very early, but the numbers do not seem to increase. A flock of five Canada geese came over my house on Sept. 10, which is sooner than I ever remember to have seen them before. About 200 to 300 ruddy ducks remained at Currituck all summer. I never knew them to do this before, but I think it was because the market-hunters quit shooting a month sooner than usual last spring.

I think quail are unusually plentiful. It was exceedingly dry during the breeding season, and many of them have raised two broods.

The club men and other sportsmen who visit Currituck will be glad to learn that all kinds of duck food is abundant, and in fine condition, so they may expect keen sport when the season opens Nov. 10.

Gentlemen who have private shooting grounds, but no natural food, will find by using white Indian corn they can keep ducks and geese on their grounds when nothing else will keep them. The corn must be soaked until it swells. This is especially desirable for canvasbacks, redheads and blackheads; but is also good for black ducks, mallards, pintails and widgeon. I write from experience and have been abundantly rewarded in every case where I have tried it. Black, black-eyed and brown peas are also excellent food, but white corn attracts attention more quickly, being about the size of the roots of wild celery seed, of which all ducks are fond.

More Anon.

The Hyposcope.

A recently devised instrument, for aiming a rifle without exposing to view any part of the person of the shooter, possesses a certain interest for all riflemen. Such a device is useful chiefly in war, because by it the soldier can fire at the enemy without danger of being hit himself. Its use to big-game hunters is very doubtful. Yet circumstances may be imagined where such a device—either as an attachment for the rifle or as an instrument for observing country without alarming any game that might be in the neighborhood—might profitably be employed.

The implement in question is called the hyposcope. It is a combination of mirrors by which the observer, while still perfectly concealed, may look over the cover behind which he rests, and sight his rifle.

Apparatus acting by means of mirrors has been used for heavy guns by a number of nations, but Mr. Wm. Loulten is the first who has devised an attachment, which can be adapted to any rifle, by which the act of aiming may be performed from a point considerably below the trigger guard.

Four mirrors are employed, and the sights of the rifles are seen and may be used just about as well with the instrument as under ordinary circumstances. In another form of hyposcope only two mirrors are used. The British National Rifle Association, at its meet at Bisley this year, offered prizes for shooting at a 200-yard range, using the hyposcope in sighting. The bullseye was seven inches and each man shooting was allowed seven shots; 35 points was the highest possible score, and the average for the thirteen men competing, was 32.15. The instruments used are said to be strong and not likely to get out of order. It is probable that we shall hear more of this device in the future.

Wisconsin Game.

Green Bay, Wis., Oct. 3.—Thought I would give you a little news to go with your Western notes. Redhead ducks have come from the north, and also the smaller bluebills, with a few widgeon and larger bluebills. One market-shooter brought in thirty-one redheads and bluebills yesterday. The weather is getting cool, with frosty nights, and we should get a great many birds within the next twenty days.

Snipe are not here for some unaccountable reason. There have been quite a few prairie chicken in this section this season, and reports of a large crop of ruffed grouse are also vouched for.

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in Forest and Stream.

Fish and Fishing.

Salmon and Ouananiche in Labrador.

Mr. W. F. McCormick, of Biscayne Bay, Florida, has returned here from a visit to the far north of the Newfoundland Labrador, in the course of which he proceeded some distance further north than Nain, which is the usual northern terminus of passenger steamship travel. Some of the photographs which he brought back with him were obtained by sunlight exposure at midnight. During his travels he fell in with General Richard Dashwood and several other well-known sportsmen. He corroborates all that General Dashwood has said relative to the wholesale destruction of fish by cod traps, declaring that they will destroy anything from a capelin to a whale. He was shown, as a matter of fact, a small whale which had become suffocated after being entangled in one of these traps.

American sportsmen were found to have penetrated to all the far northern waters visited by Mr. McCormick. One of his companions on shipboard was Dr. Hedges, of Charlotteville, Virginia, who landed with him at Nain and fished some of the waters that looked like promising salmon pools. The doctor started in to fish with three flies, which had no sooner touched the water than it and the angler alike were troubled. There was furious lashing of the surface of the pool, and two or three fish at a time up in the air, but the commotion was short-lived, for the strain was more than the tackle could endure, and the ouananiche had broken away, taking the angler's flies with them. These fish are in very great abundance, not only in the waters of the streams round about Nain, but in all of the rivers of far northern Labrador. They seem to be even more plentiful than salmon are in these cold water streams. The doctor tried the single fly on his trout tackle and was rewarded with splendid sport among the ouananiche. Mr. McCormick soon saw that there was no use in casting for salmon upon water where the ouananiche were waiting to seize the fly as soon as it touched the surface, and so moved a short distance up stream. There he was not long in hooking and killing a salmon of nineteen pounds and several grilse. It appears that on this coast the small salmon and ounaniche alike are called grilse by the natives and fishermen, and sometimes the name "slend" is applied to them, which, it will be remembered, is also reported by M. de Puyjalon, to be that applied by the fishermen on the north shore of the Gulf of St. Lawrence to the white flesh salmon found in some of the rivers of that locality.

Some sixteen miles above Cartwright, on Sandwich Bay, Mr. Duggan, of Philadedlphia, has a summer camp, where he was recently visited by Mr. and Mrs. J. B. Thomas. This party has enjoyed splendid grilse and salmon fishing, their biggest fish of the season having weighed 41 pounds.

Newfoundland Salmon.

After my experience of a few years ago upon some of the Newfoundland salmon rivers, I was naturally astonished at the surprised tone of a recent writer in an English sporting paper, who related some of his own sport in the island, adding that the experience completely disposed of the prevailing supposition that the salmon of Newfoundland would not rise to the fly. This is certainly the very first time that I ever heard of anybody supposing such an utter lack of gameness on the part of Newfoundland salmon. Most sportsmen who have fished upon the island will agree with me that in no waters do the salmon rise more freely to the fly, considering their numbers, than in those of the island colony. Is it not probable, as my good friend, Colonel Haggard, has already suggested, that the writer to whom I have referred, had in his mind an altogether different fish from the *Salmo salar*, or salmon of Newfoundland and Canada, namely the salmon of the Pacific coast? The temperature of the water in the Newfoundland rivers is much lower than that of some of the Canadian salmon streams, and it is not, therefore, to be wondered at that the fish in the former are less shy about taking the fly.

Killing Salmon at Night.

The recent reference in this column to the success of night casting for salmon on the Grand Cascapedia, has brought me a good deal of correspondence. One angling friend directs my attention to the fact that Mr. W. P. Campbell recently claimed to have killed two good fish at midnight on a Scotch river. The strange part of this angler's experience is that he was not fishing with a bright fly, like the silver-gray, or something of that kind as they do late in the evening on the Cascapedia, but with a large black-dose. I can quite understand the claim that the tackle need not be fine for this night fishing, and that the flies must be large to attract the

notice of the fish; but must confess to a little surprise at the story that dark flies are the best for this night fishing in Scottish waers.

Royal Anglers Again.

King Edward has been seeking health and enjoyment, like so many of his humblest subjects, in fishing. Avoiding the excitement and sport of salmon fishing, he has spent some time of late angling for brown trout on Loch Muick, accompanied by the Queen, the Princess Victoria and a party from Balmoral. The Prince of Wales and his sister the Duchess of Fife, on the other hand, have been killing salmon in the Dee.

More Heavy Trout.

During the last days of the trout fishing season, which came to an end in Canada on Sept. 30, some extraordinary catches of speckled brook trout were brought to town. One of these was made in Lac Moise, on the Triton Tract, where the late Mr. A. N. Cheney was so successful a few years ago. Among the fish in one day's catch there of Mr. E. D. Church, of Wall Street, New York, were six fish, one of which weighed 6 pounds, two others 5¾ pounds each, one 4½, one 4¼ and another 3½ pounds. All of these were taken upon the fly. Three of the fish in the following day's catch of Mr. Church weighed respectively 5, 3 and 3 pounds.

From the lakes of the Quebec Piscicultural Association, situated in the county of Rimouski, come reports of fall fishing almost equalling the above record of Mr. Church, and Mr. Sampson, who has just returned from the preserve, tells me that he had the enjoyable experience of killing a double, which weighed nearly 8 pounds.

Kingfishers and Cormorants.

I am constantly hearing complaints of the frightful havoc wrought among the young fish in salmon rivers by kingfishers, despite the measures taken against the winged enemies of the fry. Guardians on their way up and down Canadian salmon rivers, in the performance of their duties, are now usually provided with guns, but seldom get near enough to obtain a shot at these exceedingly clever winged anglers, who seemingly know only too well how to avoid the traps set for them on the tops of poles set into the banks of streams overlooking the holes frequented by the young fish. In Tasmania the cormorants are among the worst of the winged enemies of fish, and there the Government gives a reward or bounty of a shilling a head for their destruction. Last year this bounty was paid upon 450 cormorants. The killing off of these birds in the southern island is chiefly for the protection of the rainbow trout introduced there from the United States, and of the sockeye salmon, introduced from Canada.

What Did He Do With Them?

One of the Quebec newspapers reported a few days before the close of the trout season that a local angler had returned to town with a catch of 800 pounds of trout. There are still, unfortunately, a few people who gloat over stories of this kind. No true sportsman, however, will be able to suppress a feeling of indignation at such wanton destruction. Unfortunately, there is room to doubt how far the law, as it at present stands in this Province, can be applied to cases of this kind. But efforts will be at once made to secure desirable amendments, as well in this as in some other respects.

E. T. D. Chambers.

How I Caught the Liner.

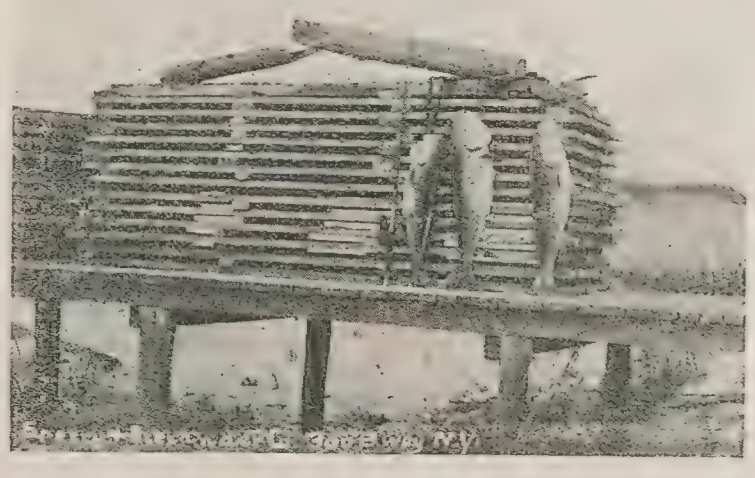
In the early part of the seventies I was engaged in propagation of salmon in the United States; a gentleman who was much interested in the work then being done decided to attempt the introduction of Scotch salmon into American waters. I was selected for this work, and in due course I arrived in Scotland, and on presenting my credentials to the proper authorities I was given permission to obtain what was needed. In due course I obtained all the salmon ova that I required, and then proceeded to get it across the Atlantic. The best line for this purpose was the Anchor Line sailing from Glasgow. In due course I got the boxes containing the ova to Glasgow and placed in the ice houses on the steamship India; this was to sail about 10 A. M., but owing to some repairs to the machinery not being completed, we were told that they would not start until 11 P. M. that night, so during the day I amused myself as best I could. I got acquainted with some people, and as the ship was not to sail until 11 P. M. it was decided to go to the theater; this we did, and the play was very interesting, and 10.30 came very quickly. I said good-by to my new friends and started for the quay to get on board the steamer. When I arrived alongside there was some little commotion; it appears that one of the passengers had fallen into the water between the ship and the quay wall, and was rescued with considerable difficulty.

All the gangways had been taken away, so I prepared to jump; the ship was not more than three feet off, so I could have had no difficulty in doing this, but just as I was about to spring a dock policeman secured me by the arm and stopped me, and I was forced to stand on the quay and see the ship start off without me. I found out that she had to stop at the tail of the bank below Greenock and take on some more cargo. I made instant inquiries about trains for Greenock, but found there was not any at that time of night. But to Greenock I was going to get by some means, so I started to look for a boat in order to row down the river. I soon found one, but the next thing to do was to get on board without attracting attention. It was dark, and an opportunity soon presented itself. I slipped on board, cast off, and in a few minutes I was in the middle of the stream going down the river with oars and tide. Presently I came close to a dock in which was a tug boat engaged in hauling some schooners out. This I got alongside of, and found that she was bound down stream. I slipped on board and gave the boat a shove, sending it adrift. I got in a dark spot, and kept out of the way of the crew until they had made up their number and got well into the stream and on their way down toward Greenock. As there was no one on the bridge but the captain, I climbed up to him and informed him how I was fixed. I found him a gentleman, and he said that he would do all he could to assist me. He said that he was not going to stop at Greenock, but there was a pilot in the next ship who was going on shore there, and that if I went with him very likely I would find some one who would take me off to the liner. So when we got to a favorable place in the river he slacked up and allowed the schooner to come alongside. I jumped into her rigging and scrambled on deck, where I found the captain and the pilot who was bound for Greenock. I explained what I wanted, and found both men good sorts. Toward morning we got near to Greenock, when the captain blew his whistle, and a boat soon came off to take the pilot ashore. We both got into the boat and soon landed at Greenock. Then commenced a search for a boatman. It was by this time about 4 A. M. After some search we found a man asleep on some bales of wool. We woke him up, and he agreed to see what he could do. By this time it was blowing fresh and very dark; we got into the boat and pulled out of the dock into the open. As soon as we got clear of the dock the wind and sea struck us; in a short time we had run about three miles, dodging the ships at anchor as best we could. So far we had seen or heard nothing. We lay to under the lee of a barque and listened as well as we could. All at once we heard a big steamer blowing off steam about a mile off, so we made off in this direction as well as we could and ran up alongside of a large steam lighter that was fast to the liner. There was no means of getting on board the liner by a gangway as all the cargo was got aboard by a whip, so the only thing to do was to get on board the lighter and from there on to the liner. I soon saw that as the lighter rolled her bridge came close to a fender; on to the bridge I got, and as soon as the roll came I jumped and landed on the ribbon that runs round the ship and close to a fender. I did not care then. I was on the liner, although outside. I tried to make some of the crew hear me, but the noise of the steam blowing off and the wind made it impossible for those on board the liner to hear me. Anyway, I felt quite contented. I knew when the lighter had finished discharging her cargo she would cast off, and then it would be quieter and I could make myself heard. But even then I could not draw their attention on the liner, and the rope that I was holding on to was passed through a hole, so that if I climbed up to the top I could not get aboard.

After we started, the stoker commenced to throw the ashes from the stoke-hole overboard. I kept shouting; at last one of them heard me. They showed a light and saw where I was. One of the stokers then leaned over the rail while another held him by the legs. I was then soon hauled on board. After an explanation and a visit to the steward, I turned in. I found all my boxes of salmon ova safe, and in due course landed them in New York; they were hatched out and put in a stream in the State of New Jersey.—W. T. Silk, Pisciculturist, in London Fishing Gazette.

Channel Bass at Harvey Cedars.

New York, Oct. 4.—*Editor Forest and Stream:* We all read with much interest the pleasure many sportsmen enjoy in Florida tarpon fishing and in Canada wrestling with big, gamy salmon, but in both instances we realize that that sort of sport costs much time and more money, while right at our doors there are big fish taken that delight the past masters, and wet the entered apprentice, yet we hear little of surf fishing along the Jersey coast where a 50-pound channel bass will take an hour's time from the strike to the gaffing,



CHANNEL BASS AT HARVEY CEDARS.

exercise 600 to 900 feet of line, tax the quality of a $25 rod, and use up all the energy of a $50 reel, and make the average angler feel as though he had done a fair morning's work when the battle is over.

While at Harvey Cedars this week I became greatly interested in this sort of fishing, and through the courtesy of Mr. Lafayette Streeter, of Watertown, N. Y., and Mr. Chas. Atkins, of New York hotel fame, I am enabled to give to the readers of Forest and Stream a bit of data that they should take the time to emulate.

At the south end of Barnegat Bay, by the inlet on the coast, is found the old sportsman's resort, Harvey Cedars, and it is here that these big fish seem to be found in sufficient abundance to entertain many men of affairs until one wonders how long their partners can stand the strain. The writer had the pleasure of meeting, in addition to Messrs. Streeter and Atkins, Capt. Fenimore, of Philadelphia; Mr. Seger, of Asbury Park and "Rod"(ville); Mr. Johnson, from the same dear place; Mr. Wilson, of New York, whose office is in a high building near the Brooklyn Bridge, and Mr. Harvey, of Ocean Grove. Others of their party had left, but left several holes in the sea before going, Mr. and Mrs. Frank Kimbacher, of Brooklyn; Mr. C. F. Shucraft, of New York, as well as Mr. Atkins' friend, "The Count," known among his friends as the early riser and late diner.

A record of this party's catch, I am sure, will be surprising to many, but I give it, believing, as I do, that when it is fully known that within eighty miles of New York and seventy-five from Philadelphia, others may want to help the "rod makers" and make the line mills run overtime:

Sept. 21.—Streeter, two, 43 and 22 pounds.
Sept. 22.—Atkins, one, 37 pounds.
Sept. 22.—Seger, two, 16 and 23 pounds.
Sept. 23.—Atkins, one, 15 pounds.
Sept. 23.—Seger, two, 26 and 28 pounds.
Sept. 23.—Streeter, three, 21, 20 and 18 pounds.
Sept. 24.—Atkins, one, 21 pounds.
Sept. 25.—Atkins, one, 36 pounds.
Sept. 26.—Atkins, one, 36 pounds.
Sept. 24.—Fenimore, two, 20 and 15 pounds.
Sept. 26.—Fenimore, one, 21 pounds.
Sept. 24.—Shucraft, one, 35 pounds.
Sept. 25.—Shucraft, two, 18 and 21 pounds.
Sept. 24.—Kimbacher, one, 26 pounds.
Sept. 25.—Kimbacher, one, 20 pounds.
Sept. 24.—Streeter, two, each 43 pounds.
Sept. 25.—Streeter, two, 41 and 40 pounds.

It is to be regretted that the picture taken of seven of these fish could not be published, but the light was not good at the time of the taking, the accompanying one will, however, show "big game" enough to exercise with before breakfast.

It occurred to me to ask Mr. Streeter what they did with these big fish after they had taken them, and I was more than gratified to learn that they have them carefully dressed and sent to charitable institutions of Philadelphia, express prepaid. Nor is this record kept as a "fish jerking" record; it represents much sport and much rest.

T. E. B.

Note.—D. M. White, of Harvey Cedars, will gladly answer any inquiries as to conditions for fishing and duck shooting at all times.

CHICAGO AND THE WEST.

A New Sort of Angling.

Chicago, Ill., Oct. 4.—Here is something which every disappointed muscallunge fisherman ought to read with interest. It is a letter from Mr. P. F. Stone, for many years a prominent sportsman here in Chicago, but for a year or so located at Munising, Mich., in the lumber business. Mr. Stone has evidently kept his sporting eyes open as usual, and his letter in regard to this big lake trout fishing is interesting in the extreme. I only wish that I could take advantage of his kind proposition and make a run up there this month and get a little personal experience in the game. Perhaps others will be able to do this. The letter follows:

"If you will come up here and make me a little visit I will do my best to put you right on some big fishing that was new to me, and I think is new to fishermen generally. During the month of October the big lake trout come in out of the deep water on to shoals of 5 to 10 fathoms and bite at most any bait, from a herring to a spoon. I think the boys would come in good numbers if they knew what was to be had. A year ago, in October, I saw three market-fishermen land between thirty and forty fish, of an average weight of over 20 pounds each. They ranged between 15 and 40 pounds—most of them 20 to 25 pounds. The fish run larger than muscallunge, and are about the same on a hook. The fish mentioned were caught in about four hours. I was fishing at the same time and caught one, a 35-pounder. I fished about an hour when I got him, and then quit. They are just beginning to bite now and the sport will be prime in a few days. My brothers and some of the Oconomowoc crowd will be up to try them soon. I think you could get a new idea if you tried them. I have a bang-up good launch which is at your service and you will find all the other conditions O. K.

"The drawback is windy weather from a northerly direction. The fishing is in the open water of Lake Superior, hence can only take place when the wind is off shore. The way to work it is to leave Chicago when southerly winds are predicted for Upper Michigan. Train leaves Chicago at 8 P. M. (C. & N. W. Ry. copper country train) and reaches Munising at 9 A. M. next day. A change of cars is made at 7 A. M. at Little Lake, Mich. I assure you the fishing is O. K., and will attract many fishers when they find it out. I expect to get from half to a dozen of these big fellows some morning within next ten days."

Tips from an English Angler

I believe I said that my friend, Mr. John D. McLeod, of Milwaukee, made me the present of a little steel butt spear to screw into the end of my fishing rod. He has all of his rods equipped in this way and finds it a great convenience when doing any bank fishing. Perhaps Mr. McLeod or others may be interested in the tip which Mr. Cornwall Simeon, an English writer, gives in what must be an interesting volume, known as "Stray Notes on Fishing and Natural History." I take these extracts from the Fishing Gazette. Mr. Simeon has a rod spear made with something of the bill hook form, pointed but with a recurved hole cut in the side, the jaws of this hole being sharpened to a knife edge. In this way there is a cut-and-thrust spear head made. If you want to cut off a little twig which you cannot reach with your hand, you can drop this hook upon your bough or twig, give a little pull and off goes your tangled fly—let us hope.

Mr. Simeon gives another interesting tip on how to loosen tackle which is hitched up. Take a stone, says he, and fasten it to a piece of stout string, which you should have always with you. Pitch the stone over the offending branch or weed and haul away. This will very often clear your tackle, whether it be caught on some tree above you or out on some obstruction in the water. This same angler tells how to fasten dropper flies to a leader. He does not use the clumsy loops which are found on most of the flies one purchases of

the sporting goods stocks. He uses a method which I myself have long employed, of passing the guide of the dropper fly between the strands of the leader at one of the leader knots. But he gives another useful tip which I have never heard of before, of just leaving enough but projecting at each side of the leader knot to enable one to take hold of it and spread the knot when he wants to. This, supposing one ties his own leaders. Mr. Simeon says he catches hold of this loose end on one side with his teeth and upon the other with his pincers. In this way he can always spread the strands of the leader knot without any difficulty. He has learned, what every angler ought to have learned, the value of a pair of pincers or pliers. These are very handy in many ways, especially so in cutting hooks out of your anatomy when the hooks have gone in over the barb. I need not state that a pair of scissors is something equally desirable in an angling outfit, although Mr. Simeon does not mention these. He does add some remarks in regard to practical fishing which seem to me too good to be left out of the approving knowledge of the FOREST AND STREAM readers. I am afraid my friend, William Wood, would not wholly indorse all that is said about the fly on the surface. Thus:

"My experience leads me to believe that—whether using the fly or spinning—it is, if your tackle is fine, a great mistake to fish too fast. The act of drawing the fly along rapidly imparts to it an unnatural motion, for when did a trout ever see a fly propelling itself rapidly under water? Beside this it must have a tendency to bring the fly to the surface, when it leaves a wake behind it which cannot but frighten the fish. Although small fish will take a fly under such circumstances, as, like kittens, they will run at almost anything which passes rapidly by them, yet it is rarely that a steady old trout can be induced to do so. It is even more essential, when fishing with a 'dry fly,' to leave it almost entirely to its own devices, as it will thus float much longer than it would if interfered with and its movements unnaturally hastened. These observations do not apply with equal force to the bob-fly, which, traversing the surface of the water (as its name implies) with a succession of dips or bobs, might be taken by trout for the natural insect. Steady fishing will, however, be found more successful even with the bob-fly. In casting generally straightness of line is, in my opinion, the first point to be aimed at, and lightness the second. Both, however, are most essential. It should be a rule never to fish with a yard more line than is absolutely necessary." (There spoke a real fisherman, and not a mere tournament caster.)

"In some very fine, clear water," he continues, "trout can be taken with a hair casting-line, when it would be almost useless to fish with one of gut. I found this to be the case on the Wharfe, where the tackle ordinarily used consists of a hair casting-line and five or six diminutive flies also tied on hair, and where I was told it would be lost labor to try gut. I was rather skeptical on the point and tried fine gut, but soon had to resign it in favor of hair, when I found an immediate and striking difference. Where the water is clear, it may, I am persuaded, be often used to great advantage. It is somewhat troublesome to fish with, inasmuch as it requires great care in its use—for if you get hung up slightly and clear yourself without a breakage or apparent mischief, yet perhaps the hair will start at a knot in consequence of the strain and come asunder in a minute or two afterward at the slightest touch. It is, however, astonishing, if the pull be a steady one, how much it will bear."

Bass.

Mr. Fred Peet and two or three friends fished for bigmouths in Scott Lake, Mich., last week, and had very good luck. They killed most of their bass on small spoons, mounted above large and brightly colored flies.

Bass fishing was reported good in the Kankakee River last week, but the information is too vague to entitle it to a great deal of confidence as an actual sporting tip. There ought to be good fishing in the Kankakee for bass as well as pickerel, since the dams have been overflowed this season and the game fish have had a good chance to run up stream.

Rainbow Trout on the Iron Mountain.

ON Friday, Sept. 19 last, the U. S. Fish Commission, under the direction of Commissioner Burnham, sent out from St. Louis, over the Iron Mountain Route, a carload of 10,000 California rainbow trout to be planted in certain streams along and adjacent to lines of that railway system. Upon the return of the party to St. Louis, Traveling Passenger Agent A. V. Brigham made the following report to General Passenger Agent H. C. Townsend of the trip and the places where the trout were planted: Friday afternoon, Sept. 19, stopping at Big River Bridge (just north of Irondale), 2,500 trout were planted; also stopping at Bismark, where one messenger and 2,500 fish were set out, and carried on to St. Francis River Bridge (between Bismark and Loughborough). At Annapolis the car was cut off from the train, and 500 fish were planted in a creek just northeast of the town, and 2,000 more were carried overland seven miles up in the mountains and planted in headwaters of one of the tributaries of Black River by moonlight at midnight.

Car was moved back to Bismark Saturday morning, and a messenger with 2,500 fish started south for Naylor and Doniphan, planting 500 at the former in Big Black River, and 1,900 in Current River, at Doniphan. Balance of 100 were given to Mr. Adams, a merchant at Oakdale, who planted them in an affluent of Black River running through his farm, just outside of town. The writer accompanied the messengers on all the planting expeditions, except the one at St. Francis River."

The Heron Nuisance.

I OWN a large hunting and fishing preserve (Kildare) in the Adirondacks, and I find a great many heron on the place, which are eating quantities of my trout. I have been stocking the place with trout for a number of years, and I find the heron help me get rid of the same.

Can't you tell me some way in which I can get rid of the heron? I have trapped quantities of kingfishers and hawks, but I have found it impossible to trap the heron.

Canine Elegies and Epitaphs.

XXIV.—Fannie.

(In Greenwood Cemetery, Brooklyn, N. Y.)

FANNIE.
Died Dec. 10, 1881.

Only a dog, do you say, Sir Critic?
Only a dog, but as truth I prize
The truest love I have won in living
Lay in the depths of her limpid eyes,
Frost of winter, nor heat of summer
Could make her fail if my footsteps led;
And memory holds in its treasure casket,
The name of my darling who lieth dead.

National Beagle Club.

For the information of those who intend to attend the thirteenth annual field trials of the National Beagle Club of America, which will commence on Nov. 3 next, the club desires to state that the trials will be held on the Westbury grounds, Long Island, and that the headquarters of the club will be Johren's Hotel, Mineola, L. I.

Mineola is on the line of the Long Island Railroad about one hour's ride from New York city, and is reached from the Thirty-fourth Street Ferry, New York city. The train service is convenient and there are frequent trains between Mineola and the Thirty-fourth Street Ferry.

All those who intend to attend the trials should communicate with George F. Reed, Committee on Arrangements, Barton, Vt., in order that hotel accommodations may be arranged for them.

CHAS. R. STEVENSON, Secretary.

Yachting.

For Cruising Yachtsmen.

WITH the purpose of stimulating the interest in cruising, and the keeping of a detailed log by cruising yachtsmen during the season of 1902, the publishers of FOREST AND STREAM offer prizes for the best stories of cruises submitted to be published in FOREST AND STREAM. It is believed that these will form not only entertaining records of pleasant summer days spent afloat along our coasts and waterways, but will furnish information of practical value to other yachtsmen making subsequent cruises on the same waters.

Prizes will be awarded to the three best stories as follows:

First prize, $50.00.
Second prize, $30.00.
Third prize, $20.00.

Contributions are invited under the following conditions:

1. The cruise must be made in waters of the United States or Canada in the season of 1902.

2. The cruise must be made in a sailing yacht, power to be used only as an auxiliary, if at all.

3. The story must be prefaced by a description of the boat. Cruises should be treated in as interesting and readable a way as possible, but should be practical and contain all possible information and data that would be of value to men going over the same route. A description of the handling of the ship in all weathers will be regarded very favorably in making awards, and it is suggested to writers that an accurate account be kept of all incidents happening while under way.

4. An outline chart suitable for reproduction, showing the course taken, must accompany each article. When possible, articles should be accompanied by amateur photographs taken on the cruise, including one of the boat. Good photographs will be considered in making the awards.

5. The story should contain about seven thousand words, written on one side of the paper only, and must be received at the office of the Forest and Stream Publishing Company, 346 Broadway, New York city, on or before Nov. 15, 1902.

Mr. T. C. Zerega has very kindly consented to act as judge and to make the awards.

Seventeen Days' Cruise on Long Island Sound.

BY THE CREW, THE SKIPPER AND THE OWNER.

BELIEVING it foolish to ignore the lessons learned from Mother Experience, and it being "moot" to set down as matters of record and observation those incidents which would be likely to prove of interest to others, one of three who cruised for eighteen days on the beloved waters of Long Island Sound last summer, has jotted down this somewhat amplified log in the hope of interesting his fellow Corinthians.

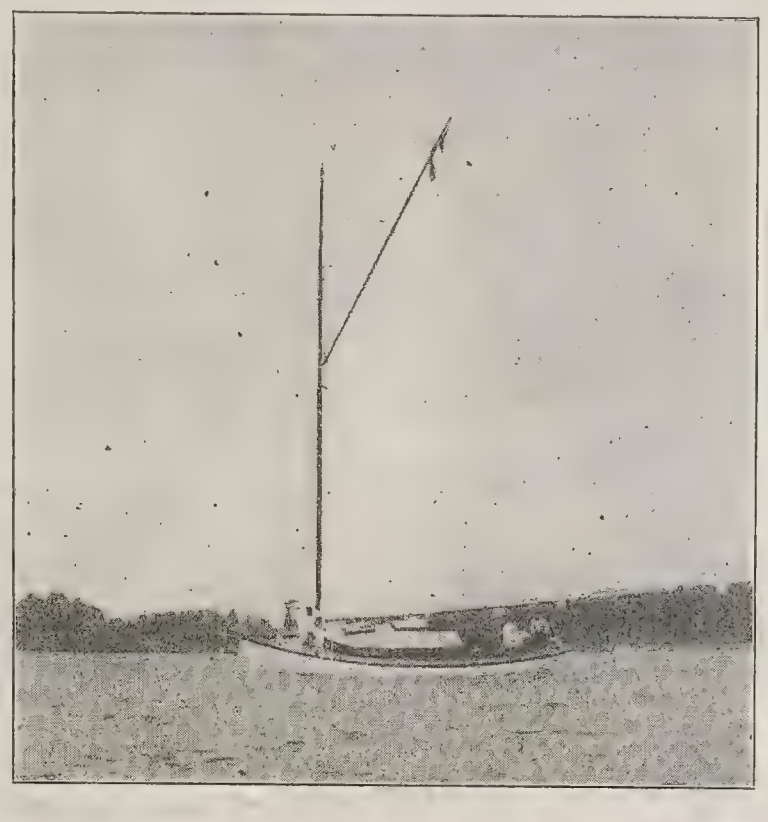
First, the boat! The Innocent is a keel boat, 27ft. 6in. over all, 21ft. on waterline; draft about 5ft. 6in., all outside ballast, head room, 5ft. 1in. She has a small watertight cockpit, large cabin, plenty of storage room, extension bunks, and is comfortably fitted for cruising. The cut of Medart, which has appeared in FOREST AND STREAM for the past two years, shows how she looked in frame, Mr. Medart having furnished this material to the Skipper, who built her from the design of Mr. Charles Young, of Brooklyn. She had on starting a full complement of stores, 60 gallons of fresh water, according to the Crew, who was supposed to fill the water tanks, and a party of three—the Owner, the Skipper and the Crew. The Crew was also, on occasion—generally about six times a day—Cook, also Bartender. Thus, we virtually had on board that which the Skipper called the "Holy Trinity." This nautical Pooh Bah filled whatever rôle the occasion might call for. At mess he was the Cook; when old Sol was getting in his fine work the Bartender, and when Boreas was putting the Innocent's decks under, the Crew. On Sunday the Owner mildly asked him to read prayers, but the Skipper deferred. He was afraid that the Crew's religious training was hardly orthodox. Indeed the Crew himself informed the Skipper "he was no bloomin' sky pilot." The Crew had been through the Spanish-American War, and was as rich in anecdote as a vivid imagination and actual experience could make him. The Skipper and Owner—well, their peculiarities are to some extent set down in this log.

On Saturday, July 27, at 11 o'clock, after various trips in a new dinghy which showed a decided disinclination to accommodate the Owner's 180 pounds comfortably in the stern sheets, with the water a scant two inches from the top streak aft, carrying dress suit cases, bags, pillows, the Owner's easy chair (an "indispensable" to him after dinner), the few belongings of the Skipper; canned goods, boxes of beer, soda, ginger ale, etc., etc., we hoisted sail. The day was warm and sultry, with the faintest breath of air from the south. Slowly we drifted with the ebb tide from our moorings off the Harlem Y. C., City Island, not a very auspicious start from the Skipper's standpoint, as we had decided to try for Port Jefferson that evening. For two long, warm hours there was "nothin' doin'" in the way of a breeze, and we slowly boxed around the compass, gradually drifting out to the red tower of Stepping Stones. It was here we noticed that the Crew was very intimate with the Bartender, and that a vigorous onslaught was being made on the Wet Goods' Department. The Crew's invariable formula was to take a drink and then ask the "Bartender" to "have somethin'." However, the Owner and the Skipper had no objection to this providing they were included—and that was the way it was fixed up. By this time the ebb had taken us off the southern end of Hart's Island, and far astern some yachts seemed to be getting a little breeze. Gradually we brought old Execution on our port bow, the breeze still light and fluky. By this time a score or more of working schooners bound eastward, with here and there

a yacht whose gleaming topsides and dazzling canvas offered a striking contrast to the weather-worn carriers of trade. Indeed, the Innocent herself, with her enamel topsides, burnished mahogany cabin and new yellow cross-cut sails, looked as dainty a little lady as any one could wish. The Skipper noticed here the coolness and nonchalance of the captains of two schooners, the bowsprit of the one almost across the little after cabin of the other. But there was no excitement or vituperation, such as the Skipper has sometimes noticed among amateurs. The crews of the schooners lay around the deck looking on indifferently; perhaps constant occurrences of a like nature makes one indifferent. While thus communing, the Owner and Skipper had not noticed a dark streak away aft along the surface of the water which meant wind. With a slap and a bang a good 15-knot breeze came out of the southwest. Such a scurrying. It is a pretty good working schooner that can outfoot a smart little boat like the Innocent, and the way we held those big schooners was a caution. The conditions were quite to the Innocent's liking, a strong sailing breeze and a fairly smooth sea. We gradually picked up a Knickerbocker Y. C. sloop about our class, and went by a yawl flying the New Rochelle Y. C. burgee, as though they were anchored. The wind gradually strengthened and our lee rail was buried with the puffs, but as we had decided to give up the idea of Port Jefferson and to make Oyster Bay for the night, we lugged our large sail spread, about 900 sq. ft., trusting to our stick and rigging, which was the best money could buy. The patent log showed we were making about 8 knots, quite nice going for a boat 21 on the waterline; of course, we had wind and tide with us. But we still held all the working schooners. Flattening in sheets a trifle in rounding at Center Island, we stood in toward the Seawanhaka's club house in company with a score or more yachts. The Innocent managed to hold her own with any thing her size, but we had the pleasure of seeing two or three yachts give us a fine view of their transoms. But the wind beginning to lighten and softening out altogether in spots, we soon picked them up again. The Innocent is probably one of the fastest light weather boats for her displacement the Skipper has ever sailed on. When other boats are becalmed she moves along as though she had a "kicker" in her—which remark from the Skipper elicited the retort from the Owner—"She has"—but the Skipper only smiled at the Owner's little joke. The wind held long enough to take us off the town dock, and we dropped the hook in 8ft. of water on the edge of the steamboat channel at 7.30 o'clock. After the Cook had prepared a bountiful and tasty supper, the Owner and the Skipper went ashore and played a few games of pool, in which game the Owner, out of brotherly love for the Skipper, played as badly as he knew how, but the Skipper—well, he would sooner have been picking up the light on Port Jefferson breakwater, and thinking of this, he did not play up to his regular form—the Owner's kindly excuse. We mooched about the village for a while, and growing tired of the Saturday night attractions of Oyster Bay, decided to go aboard and sleep, in time for an early start next morning. On arriving at dock the Crew was not there, and we had to hire a friendly boatman to take us out to the Innocent for the modest ferriage of a quarter. The crew was aboard enjoying his beauty sleep. With a few earnest remarks from the Skipper as to what was required of the Crew and as to the use and abuse of the new dinghy, we turned in, beautifully tired, and as our weary heads touched our pillows, we promised ourselves a fine day on the coming morrow.

Sunday, July 28.—Good breeze from southeast; cloudy, rain promising. The Owner and Crew up at 7, go ashore for fresh meats and ice, leaving the Skipper to enjoy another forty winks. In what seemed an incredibly short space of time the drowsy Skipper heard a 100-pound chunk of ice go scraping over the polished rail and mahogany seats of the cockpit, and he at once knew the Crew was getting in his fine work. Rolling out of his bunk, with all the soothing language he could command, he called the Crew's attention to a much better way of polishing mahogany—with a file, or brogans, or as a match lighter, etc. The Crew seemed doubtful whether he would have to swim for it or not, but on his explaining that it was the Owner who had been juggling with the ice, to paraphrase the song, "What could a poor Skipper do?" Just about this time we discovered that the Vim, a 30ft. sloop, cruising east, had not received her stores. In our hurry to get away, the Owner had "couped" everything in sight, as we had left a large order with the grocer. The Vim also had left an order, and the fool grocer had packed them all together. Owing to a very thorough system of checking our stuff, the Owner was able to restore to the Vim her full consignment of provisions, for which the Cook on board the Vim said, "For what we have received, the Lord make us truly thankful"—and the rest of them said "Amen." After breakfast we turned out, and putting in two reefs in our 700ft. mainsail, we got under way for Port Jefferson. The wind was strong and puffy, and as we lay over to the puffs the Innocent's fin was near the surface of the water. We were doing 6 knots easily. We went by Lloyd's Neck like a steam boat, and feeling it would be a crime to throw away such a breeze, the Skipper proposed running across to New Haven. The Owner consenting, sheets were eased off a trifle, and, whew! we began to boil along. The Skipper's proposals were, it must be confessed, backed up by an argumentative spirit, but this time there was no kick coming, and the Owner piped all hands to grog. It, by the way, was the first time he had "piped" that morning, and we needed it. As we had started with the intention of running into Port Jefferson, we had hugged the Long Island shore. We now lay our course E. by N. ¾ N. The day was certainly a fine one for logging, otherwise it was unpleasant, damp, the wind chill and moist; seas short and vicious. That old bete noir of all yachtsmen, the dinghy, began to give us the usual trouble. Davits are out of the question in a small yacht, and are a source of danger in any but vessels with good freeboard, the Skipper knowing of a case were the deck had been badly wrenched and sprung by a sea which had smashed over the cabin top of a yacht just after receiving a knock down in a squall. After two or three frantic attempts to overtake us, our dinghy managed to drive her fender-lacking nose into our mahogany taffrail, chipping off a piece of the wood, leaving an unsightly scar. Giving all the scope we could she behaved a little better. The Owner made a vow he would investigate the qualities of some folding or sectional dinghy which could be folded up and carried in the cockpit.

We were now racing across the sound with the wind slightly forward of the quarter, and the patent log showed 7 knots. This allowing 1 knot for drift, would take us behind the breakwater in good season, and we thought we would be able to go ashore and stretch our limbs that evening. The gray, oily sky line to the east'ard seemed to be breaking, and aft, massed against the Long Island shore, huge masses of blue-gray clouds were breaking away from the leaden pall that a few minutes ago enwrapped the Long Island hills. On our port bow Stratford Point Light stood out suddenly. The wind had perceptibly lightened, but the seas were still steep, choppy, and seemed to want to come aboard by way of our stern. We evidently were not sailing fast enough for absolute comfort, and as the Skipper did not want a sea to poop him he decided to shake out the reefs in the mainsail. Therefore, wearing ship, the Crew at the mainsheet, Owner at the stick, we lay her up in the wind, when—crack!—away went the gooseneck pin, and the boom slipped 3 or 4 feet forward of the mast. To make matters worse, the halliards had jammed aloft, and we could not take the peak off her. Now, there we were, a mile and a half from Stratford Point, crippled and on a lee shore. The Innocent was jumping about



doing her best to throw us all off, and in one of the jumps her port backstay carried away. The mast now whipped forward and aft with every plunge, and it was plain that to save the stick we must get way on her somehow. The Skipper asked for volunteers to go up the mast and clear the halliards, but the shaking up and excitement had done neither the Crew nor the Owner any good, and the Skipper decided to go up himself. This, however, the Owner insisted he should not do, and with wisdom, for a few minutes after the Owner succeeded in getting the peak down. Then we put on a double tackle to get boom back into place and fit a new pin, but no use. The strain simply bent our traveler. We then desisted. The sea was pitching us about to beat the band, and we decided to try and weather the Point with our jib, and, with the wind slightly forward of the quarter, we managed to do it. Drawing 6ft. of water, the Skipper hesitated about running into the Housatonic with only jib hoisted, and decided to run behind Charles Island. Gradually we brought the Island abeam, and, turning in, left the bell buoy off on our port hand, and, as night settled, dropped the hook in 15ft. of water. After supper—of which the Skipper consumed the most—we turned in and enjoyed a good night's rest, to the lullaby of a summer night's gale, which blew up from the southard, and rocked us—sometimes gently, sometimes not so gently. And thus ended the second day!

July 29.—And the morning of the third day rose fresh and clear, with a wind that promised much. We cleared up ship, had a swim, enjoyed a hearty breakfast, and after enjoying a cigar, repaired the gooseneck—an easy matter with a calm sea and plenty of time. We purposed sailing into New Haven, a short spin only, and we could afford to take our time. On our port beam lay the summer resort of Beach Meadows. The Skipper thought it out himself without communicating his thought to the Owner, and decided that if one were to run into every place of interest, it would take a year instead of twenty days. Consequently, when the Owner suggested that sail be made, no kick was coming. Generally it was really astonishing the difference of opinion that prevailed among the Owner and Skipper. The Skipper insisted on smoking countless cigars in a seaway—the Owner didn't; the Skipper liked black coffee as a stimulant after a hard tussle with wind and sea, the Owner preferred whisky; the Owner wanted to put in a reef, the Skipper didn't, and so on. But the Owner won one well-contested opinion from the Skipper before the trip was over, the desirability of the auxiliary motor. Without doubt, a good motor is a necessity in these times. The old dread of lee shores, making strange harbors in a gale, carrying away spars, Paddy's hurricane, all dispelled with the "ker-chug" from under your cockpit, which space is generally wasted, either transformed into a cramped and leaking ice box or a place that is allowed to become the receptacle of all kinds of trash which should be sent overboard. This is not the Owner's argument, but the Skipper's, and this after twenty years' experience of sailing craft of all descriptions, and a prejudice against smoke and tea kettle boats of any description. The old familiar argument that a man is not a true sailor when he has the "Little Joker" under his lazaretto is all rot—and it is not sincere; five miles from port and the wind up and down the mast. Guests want to catch a train; pleasure party immediately turned into a querulous, impatient never-go-out-again crowd. Tug steams in sight. "Yes, $15; no, make it $10; all right. Give me your tow line," and away you go. Accepting the Robber of the Sea's extortion because you wish to be a real sailor, and will not carry a little power of your own. Fudge!

The breeze was now pretty fresh from the S.E., and seemed to be easting more; but the morning was fair and propitious. As the Owner was after a comfortable spin, the Skipper had no objection to turning in a reef, and we beat over to the fish weirs at Pine Point on the starboard tack. We were quite hilarious this morning, and "Good morning, Carrie," was done with great effect on the f'csle head by the Crew, much to the indignation of a canine on a neighboring schooner, who barked vociferously at this outburst on our part. We made good time of it this morning, and were in Morris Cove in a jiffy. It had been clouding up, the southeasterly breeze bringing rain, and it rained quite some, but comfortably esconced in an easy chair at the Pequot House with his customary cigar, the Skipper looked with equanimity on the rain, the flesh and the devil—which last was the Crew vainly trying to carry a hundred pounds of ice and countless other bundles to the yacht's tender. On ordinary occasions the Skipper would have helped the Crew, but as he had slept an average of thirty-three hours out of the last thirty-six, the Skipper thought a little exercise would do the Crew good. The Owner had gone to town to look up some of his business acquaintances, whom he was going to take out sailing the following day. It was now evening; the Crew had the stores aboard; the rain had stopped; the Owner was back, and his friends were to come and have a little game of draw aboard that evening. Perhaps it was the generally warped condition of the Skipper's credulity, but he was willing to bet that either the trolley system would be out of order, or an earthquake or something would happen, and—but, no, there were the Owner's friends, and the Skipper felt quite relieved that for once his judgment had gone astray. So we all ambled off to the float stage, and the Owner pulled out his whistle, purposely bought for this purpose, and sent a delicately modulated squeak across the waters. It was here that the Skipper did a little swearing himself—under his breath, for, of course, the Crew was taking one of those little naps. Megaphone, cat calls, whistles, all thrown away on the Crew. There was the dinghy floating peacefully behind the Innocent, as far from us as heaven from the Skipper. To make matters worse, there was not a tender in sight; the dockman at the Pequot had gone off for the night, all the oars were locked up—and the Crew slept on. The Owner's guests liked the yacht very much, admired her graceful lines, etc.—they seemed to keep looking at a well-illuminated 200ft. steamer—and then decided that, as they had waited seven hours, and sleep was one of their necessities, they trusted the owner would not be offended if they went home. Home they went. And the Skipper said, "Oh, joy!" This is not the exact language, but it looks and sounds better than the original. And thus we dawdled about for an hour, when a welcome yachtsman off a steam yacht took us aboard in his gig. Remarks to the Crew were rapidly assuming the characteristic of a formula, and it was dawning on the Skipper that some other persuasion than that of argument would soon prove necessary, and talking the matter over, the Owner and Skipper fell asleep.

[TO BE CONTINUED.]

Stuyvesant Y. C.

PORT MORRIS.

Sunday, Sept. 28.

THE thirteenth annual open regatta of the Stuyvesant Y. C. was sailed on Sunday, Sept. 28, in a puffy southeast wind, with frequent rain squalls.

The course was from a stakeboat anchored off the club house at Port Morris to Gangway buoy for classes A, B and E, and around Stepping Stones Light for the other classes, except class H, which turned at College Point Buoy.

In class H Edna mistook the course, and Sea Gull unfortunately started in the division ahead, which disqualified her.

W. H. Gill, which boat made the best time among the open cats, was not eligible for a prize, as the club had no class for her, she being 6in. longer than the limit allowed in class G.

Zetes, the old reliable Stuyvesant flyer, got away over 11m. behind her field on account of delay in the arrival of part of her crew, but picked up her boats in good style, finishing second in her class.

Zaza, which made the fastest time in her class, will sail a match with Pinochle Sunday, Oct. 5.

The club will close the most successful season in its career on Saturday, Oct. 25. The summaries follow:

	Finish.
Class A—Cabin Sloops, Cutters and Yawls Over 30ft.—Start, 12:10.	
Yarkee, W. Strong	3 40 06
Mascotte, G. Schultz	Withdrew.
Class B—Cabin Sloops, Etc.—Over 25 and Under 30ft.—Start, 12:10.	
Zaza, E. P. Granberry	3 28 57
Bride, W. Dent	Withdrew.
Aller, R. Nafis	3 43 26
Class C—Cabin Sloops, Etc., Under 25ft.—Start, 12:15.	
Pearl, W. E. Long	3 07 55
Jack Rabbit, M. J. Vehsbedt	3 09 55
Bacchante, G. Wagner	3 17 53
Volunteer, A. Rae	3 22 18
Gertrude, J. H. Curtis	3 37 18
Class D—Open Sloops 20ft. and Over—Start, 12:15.	
Eleanor, J. McGregor	3 15 25
Zetes, C. H. Ten Eyck	3 33 40
Maybe, M. Velsen	3 33 50
Pirate, C. Klug	3 34 20
Class E—Cabin Cats 25ft. and Over—Start, 12:10.	
Whileaway, W. C. Cartwright	3 46 37
Class F—Cabin Cats Under 25ft. and Over 20ft.—Start, 12:15.	
Little Chief, A. Rae	3 38 58
Annie C., J. Custance	Withdrew.
Class G—Open Cats 23ft. and Under—Start, 12:15.	
Ping Pong, V. E. Bauer	3 17 13
Venus, W. Jacoby	3 28 01
Punch, J. Lynch	Withdrew.
W. H. Gill, C. Hagan	3 10 30
Class H—Open Sloops Under 20ft.—Start, 12:20.	
Buzzard, A. Weiss	1 45 30
Edna, C. Burgland	.. ..
Sea Gull, G. Grasselly	.. ..

The winners were Yankee, Zaza, Pearl, Eleanor, Whileaway, Little Chief, Ping Pong and Buzzard.

The Boomerang on Shipboard.

Editor Forest and Stream:

Some of your boating readers may be interested in an implement that I have contrived to aid one in throwing a hand line. It is marked by simplicity and freedom from expense, for the whole combination consists of the line to be thrown, a swivel, a faking device and a boomerang. The latter is by no means as difficult to throw accurately as one might think who was content to take his knowledge of it from the accounts of travelers. A few minutes' prac- will enable any man to throw the boomerang effectively 150 to 200ft., and carry a line strong enough to lift thirty pounds. Such a cord will haul a person out of the surf or support him until other aid is available. The contrivance ought to be of service on board ships or yachts where it is at times desirable to send a line to a boat or to a wharf, etc. The whole apparatus does not weigh over 2lbs., and of this the boomerang is the chief factor, as it will average eight to ten ounces. The act of throwing a line by the device can be performed as easily as pitching a ball. The flight of the boomerang is almost horizontal, and, strange as it may seem, it can be thrown nearly or quite as far against the wind as with it. This phenomenon, which any one who has ever tried to cast a line by a fly-rod might doubt, is perhaps accounted for by the fact that the boomerang seems to fly on the wind, and draws the cord end on through the air, thus exposing but a small surface of the cord for the wind to impinge against.

I gave a demonstration of its working before the United States Life Saving crew at this harbor, and the men without any hesitation, pronounced it the best thing for the purpose they ever saw. They said it was far ahead of the "heaving stick" heretofore employed for casting a light line. The heaving stick sinks instantly if it falls on water, and carries the line down. But the boomerang floats and sustains the line on the surface of the water. The boomerang can be thrown with more accuracy than the heaving stick, and does not endanger the lives of the crew that employs it.

No one of the many who have seen the operation of the device ever heard of the boomerang being harnessed to do any service except as a missile weapon or toy. But my experience with it is convincing that it can be made serviceable to both amateur and professional mariners.

Any man skillful enough to whittle out a paddle can make the apparatus by following these directions:

Fig. 1 is an outline of the boomerang, which may be about two feet long, half an inch thick, and three inches

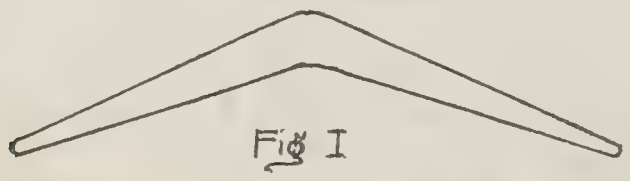

Fig I

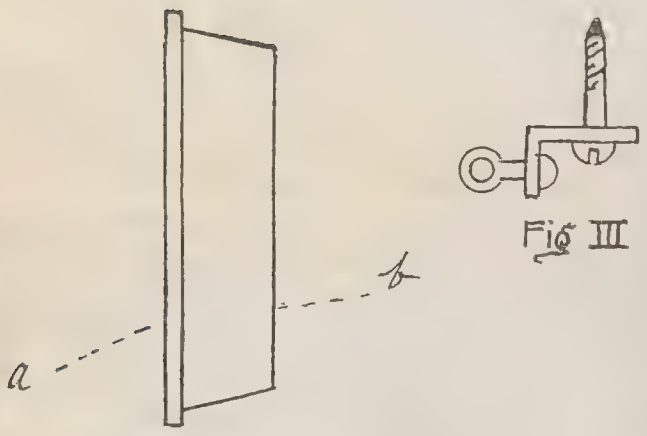

Fig II

Fig III

wide at the middle, tapering to two inches at the ends. Fig. 2 is a faking device consisting of the handle a, and wire frame b; the handle is an inch square and two feet long, the wire frame is trapezoid formed, projects from the handle, and on it the cord is to be wound to prevent it tangling, and run off freely when the boomerang is thrown. Fig. 3 is a swivel to be attached on the under side of the boomerang at its center to carry the line.

EDMOND REDMOND.

ROCHESTER, N. Y.

English Letter.

THERE is little or nothing of note in yachting at this time of year with us. A few vessels remain in commission for cruising, and it seems likely that they will have the best weather of the whole season. The anticipated challenge for the America's Cup is the chief topic of the press, and, as usual, rumors are set afoot every day, apparently for the sole purpose of contradicting them the next. One daily paper—usually free from blunders in the little yachting it publishes—had an article "from a correspondent" on the suggested challenge in which the writer was at pains to hint that the new vessel will be the joint work of Mr. Fife and Mr. Watson. At the time when the first Shamrock was being built, the same attempt was made by innuendo, to divide the honors and responsibility. What the object may be is not very clear. Certainly the majority of yachtsmen would be satisfied to confide such an order to Mr. Fife. No doubt Mr. Watson will be able to lend the most valuable assistance in permitting the inspection of Shamrock II.'s plans. That is an act of reciprocity that must render the greatest help. At the time of writing, Sir Thomas' latest statement is that in about a fortnight he will have definitely decided on his plans, which means, no doubt when the Royal Ulster Y. C. receives a reply either to a challenge already sent or to a preliminary communication.

Mr. Lawson's book has made its appearance over here, and has not created a favorable impression. His grievance is not very plain to outsiders, and his references to Sir Thomas Lipton are not in good taste. It is an interesting book, all the same, the more so, perhaps, because the author is out of temper. A report has been cabled across that a new Boston defender will be built for the next races. If she is to be managed on the same lines as Independence, it seems silly to build the boat, for, even if it were willing to stretch a point, the New York Y. C. could not do so with dignity now, in face of this literary thunderbolt. What an immense amount of ink has been wasted over that Cup!

It is stated that the German Emperor has given, or is about to give, an order to Messrs. Herreshoff for a new racing schooner, and that Herr Watjen, owner of Navahoe, is anxious to sell that vessel for the purpose of building a schooner likewise. It is to be hoped that Herr Watjen will patronize a British designer, for in that case there will be an international feature in the racing. Meteor III. seems to be the result of a mistake that only too often involves designers in perplexity, viz., the inability of the designer to find out what the owner wants. In the phrase "fast cruiser," it is far from easy to say on which word the emphasis is to be laid, and the safest course when in doubt is to go strong on the adjective, even to the verge of turning out a racing machine. Anything will pass as a cruiser nowadays—at least we find it so over here. One of last year's 36-footers is racing in a 15-ton handicap class, not, mark you, under the flag of her original owner. She was bought, apparently, for this purpose, and made her appearance at the western regattas with four paid hands aboard. It is good for the owner that I have nothing to do with making handicaps.

But to return from the ridiculous to the sublime, I do not believe the Emperor will ever get a schooner so large as Meteor to race with success against Cicely. The little Bona was more than a match even for the first Meteor, and the new schooner is a ship in comparison with her. I believe 100ft. is the limit of useful length for racing, and that even 90ft. would be better.

Motors are still booming. Even at this dull season I hear of a new 40-ton auxiliary boat, and any amount of small fry. It is noticeable that the tendency is to put on the market engines of two or more cylinders in preference to the single-cylinder type. One of our makers has a 12 B. H. P. 3-cylinder and 6 and 3½ B. H. P. 2-cylinder engines as standard makes. These are 2-cycle, and are certain to be largely sold. Most of our makers cling to the 4-cycle type, and to my mind these have been unduly despised in America. Weight is a matter of little importance in most boats, if it is carried low down. By and by we shall have a motor America cup, no doubt, and it will be interesting to know the terms of the inevitable "Deed." France will stand a good chance in the first few years.

E. H. HAMILTON.

Inter-Club Racing.

Seawanhaka Corinthian Y. C.—American Y. C.

MILTON POINT, LONG ISLAND SOUND.

Saturday, Oct. 4.

THE Seawanhaka Corinthian Y. C. and the American Y. C. closed their racing season on Saturday, Oct. 4, with a team race between raceabouts of the two clubs. The race was sailed in the home waters of the American Y. C. at Milton Point. The crews of the Seawanhaka Corinthian Y. C. boats were entertained at dinner on Friday night at the American Y. C. The dinner was most enjoyable and there was nothing left undone by the members of the American Y. C. which would add to the comfort of their guests.

The committee in charge of the race were Mr. H. de B. Parsons, for the American Y. C.; Mr. W. C. Kerr, for the Seawanhaka Corinthian Y. C., and these two gentlemen chose Mr. C. P. Tower, of the Riverside Y. C., to act as referee.

Saturday morning the weather was cloudy with a moderate breeze from the N.E. The committee decided to send the boats over a triangle, starting at the Scotch Caps buoy, the first leg being one and two-thirds miles N.E., the second one and two-thirds miles S. by E., and the third one and two-thirds miles W.N.W. by W., to the starting line.

The warning gun was fired at 12:30, the preparatory at 12:35 and start five minutes later. All crossed on the starboard tack, at the windward end of the line, with Howdy first, Joker second, but to windward, Hobo slightly ahead and to leeward of Whistlewing, and Jolly Roger to windward of Jolly Tar, and about on even terms with her.

The first mark was turned in the following order: Hobo, Howdy, Joker, Jolly Roger, Whistlewing and Jolly Tar.

On the next leg Jolly Roger and Whistlewing passed Joker and caught up slightly on the leaders, and Howdy nearly caught Hobo. After turning the outer mark for the reach home, Howdy succeeded in passing Hobo, and Jolly Roger still further closed the gap. The first round was finished in the following order: Howdy, Hobo, Jolly Roger, Whistlewing, Joker and Jolly Tar.

After hauling on the wind for the beat to windward, Hobo held the inshore tack, followed by Jolly Roger. Howdy went off shore with Whistlewing, Joker and Jolly Tar in the order named. Jolly Roger rapidly gained on Hobo until at about a quarter of a mile from the windward mark the boats were side by side, only about 20ft. apart. Here Hobo did some beautiful sailing, and worked out to windward of Jolly Roger so she was able to pass the mark without tacking, while Jolly Roger was obliged to make a short tack to clear it. As they neared the mark Hobo crossed Howdy's bow, but Jolly Roger being on the port tack was obliged to give way to her. Jolly Tar had also passed Joker just before the mark was reached. They rounded in the following order: Hobo, Howdy, Jolly Roger, Whistlewing, Jolly Tar and Joker. On this reach the position was unchanged, except that Whistlewing passed Jolly Roger.

On the final reach for the finishing line Howdy and Whistlewing luffed well out to windward of the course and were followed by Jolly Roger and Jolly Tar. All finally set spinnakers and squared away for the line with positions practically unchanged, except that Jolly Roger had caught Howdy and Whistlewing, and all three went over the line lapped, making a beautiful finish. The times at the finish were:

Course 10 Miles—Start, 12:40.

	Finish.	Elapsed.	Points.
Hobo, T. L. Park	2 23 06	1 43 06	6
Howdy, S. Wainwright	2 24 49	1 44 49	5
Whistlewing, H. M. Crane	2 24 53	1 44 53	4
Jolly Roger, T. B. Bleecker	2 24 58	1 44 58	3
Jolly Tar, S. Howland	2 25 12	1 45 12	2
Joker, Walter Jennings	2 26 21	1 46 21	1

Rear-Com. W. J. Matherson, of the Seawanhaka Corinthian Y. C., towed the boats to and from Oyster Bay with his steam yacht Lavrock.

Com. Eaton's yawl Zenobia was used as the committee boat.

ALLEN E. WHITMAN.

Little Haste—La Rita Matches.

CHICAGO, LAKE MICHIGAN.

Monday, Sept. 29.

IN the third and last race between Little Haste and La Rita, sailed on Monday, Sept. 29, the Eastern boat beat the Western craft by over 14m.

The boats covered a fourteen-mile triangular course. The times at the windward mark follow:

Little Haste .....3 33 20 La Rita 3 47 2

At this point La Rita was 14m. 8s. behind. The following times were taken at the second mark:

Little Haste .....4 10 42 La Rita 4 24 3

On this run La Rita had done better and cut down Little Haste's lead somewhat. The times at the finish were:

Little Haste .....4 37 24 La Rita 4 51 3

La Rita was beaten 14m. 15s.

YACHTING NEWS NOTES.

The match between the cabin sloops Pinochle, of Stuyvesant Y. C., and Zaza, of Morrisania Y. C., was sailed on Sunday, Oct. 5, from a stakeboat anchored off the northern end of Riker's Island around Sands Point buoy and return. The wind was light from the S.E. Pinochle won by 4m. 25s. Her time for the course was 4.08.13.

The following sales have been made through the office of Stanley M. Seaman, yacht broker: The Burgess 35ft. sloop Sibyl, for Mr. Geo. G. Williams, Hartford, Conn.; 36ft. sloop Annie, for Mr. B. D. Luce, of New York city; Herreshoff special 21-footer Vaquero I., for Mr. Dwight W. Tryon, South Dartmouth, Mass.; Seawanhaka knockabout Sigma, for Mr. L. L. Lorillard, Jr., of New York Y. C.; Ofeldt launch Adelaide, for Mr. Colin S. Eaves, of New York city; catboat Idler, for Mr. P. J. Kane, Larchmont, N. Y.

A. C. A.

Editor Forest and Stream:

In accordance with Article XII. of the Constitution of the American Canoe Association, notice is hereby given that at the next meeting of theExecutive Committee the following amendment to the by-laws will be offered, viz:

Amend Sec. 2 of Chapter 1 of the By-Laws by inserting after "January 1" in second line the words "The Purser shall send as a receipt for such payment a card plainly marked with the year for which the payment is made." The rest of the section to remain as it is.

ROBERT J. WILKIN, A. C. A. No. 47.

Trapshooting.

Fixtures.

Oct. 8-9.—Clinton, Ont.—Clinton Gun Club's twelfth annual tournament; live birds and targets:

Oct. 9.-11.—Excelsior Springs, Mo.—First annual target tournament of the Excelsior Springs Gun Club. C. H. Coppinger, Corresponding Secretary.

Oct. 9-10.—Irwin, Pa.—Irwin Game and Gun Club's tournament.

Oct. 9-10.—Fort Wayne, Ind.—Annual target tournament of the East End Gun Club. F. W. Leidelf, Sec'y.

Oct. 15.—Mt. Sterling, Ill.—Seventh annual target tournament of the Mt. Sterling Gun Club. J. Breidenbend, Sec'y.

Oct. 15.—Cleveland, O.—Fall tournament of the Cleveland Gun Club.

Oct. 15.—Charlotte, Mich.—Central Michigan Trapshooters' Association's fourth tournament. Hartel & Robinson, Mgrs.

Oct. 15-16.—Baltimore, Md.—Tenth annual fall tournament of the Baltimore Shooting Association; targets and live birds; $100 added money. Open to all. J. R. Malone, 2671 Pennsylvania avenue, Manager.

Oct. 15-16.—New London, Ia.—Sixth annual tournament of the New London Gun Club. Dr. C. E. Cook, Sec'y.

Oct. 15-16.—Springfield, O.—Springfield Gun Club's tournament. B. F. Downs, Capt.

Oct. 21-22.—Kenton, O.—Second annual fall tournament of the Kenton Gun Club; $75 or more added money. K. P. Johnson, Sec'y-Treas.

Oct. 21-22.—Sistersville, W. Va.—Sistersville Gun Club's target tournament. Ed. O. Bower, Sec'y.

Oct. 21-23.—Spirit Lake, Ia.—Klein & Burmeister's fall tournament.

Oct. 22-23.—Crawfordsville, Ind.—Crawfordsville Gun Club's tournament. M. Stillwell, Sec'y.

Oct. 24-26.—Bisbee, Ariz.—Tenth annual tournament of the Arizona State Sportsmen's Association. M. J. Cunningham, Sec'y.

Oct. 29-30.—Raleigh, N. C.—Two days' shoot of the Raleigh Gun Club; $100 added each day. R. T. Gowan, Sec'y.

Oct. 30-31—Dalton, O.—Annual fall tournament of the Dalton Gun Club. Ernest F. Scott, Captain.

Nov. 27.—Ossining, N. Y.—Thanksgiving Day tournament of the Westchester County Trapshooters' League under the auspices of the Ossining Gun Club.

Newark, N. J.—South Side Gun Club target shoot, every Saturday afternoon.

Chicago, Ill.—Garfield Gun Club's target shoot, every Saturday afternoon. Grounds, West Monroe street and Fifty-second avenue. Dr. J. W. Meek, Sec'y.

DRIVERS AND TWISTERS.

The many friends of the sterling shooter, Mr. J. A. R. Elliott, will deeply sympathize with him, while rejoicing that it was no worse. The following, taken from the Cincinnati Enquirer, of Oct. 1, explains itself: "J. A. R. Elliott, the champion wing shot of the world, is himself badly winged and a patient at the Seton Hospital on West Eighth street, where he yesterday submitted to a painful operation at the hands of Dr. L. E. Russell. His affliction is directly due to his profession of a shooter, and has been several years in developing. About two months ago, while at his home in Kansas City, Mo., Mr. Elliott noticed that every time he raised his rifle to his shoulder the shock would cause a slight pain. increased many times when the weapon was discharged. Submitting himself to Dr. Russell for examination, the physician soon discovered that a fibroid tumor had developed immediately over the clavicle. This tumor formation was caused by the recoil of the gun, Mr. Elliott estimating that he had fired the weapon over 5,000 times during the year. The task of removing the tumor was entirely successful, and Mr. Elliott will soon be able to compete in tournaments again."

The improvements in the way of grading and preparing for homes at Rockaway Park, L. I., have so encroached on the ground of the Oceanic Rod and Gun Club, formerly the Cuckoos, that is uncertain whether or not the club will hold any more shoots on its old grounds. A meeting of the club will be held in a few days to definitely settle the point.

The Kenton, O., Gun Club for its tournament of Oct. 21 and 22 has a programme of twelve target events, alike each day, nine at 15 targets, two at 20 targets, and one at 25 targets, $25 being added to the latter on the first day, and $40 on the second day for those who have shot through the day's programme. Total, 200 targets; $20 entrance. All known 90 per cent. men barred from purses, but may shoot for a high average prize of $10. Lunch served on grounds. Targets, 2 cents. Ammunition and guns shipped to K. P. Johnson will be delivered on the grounds free of charge. Shooting commences at 9 o'clock. Magautrap and expert traps. The secretary is Mr. A. G. Merriman.

William A. Stuart, of Brooklyn, L. I., died in the Hotel St. George, in that city, on Sept. 30, in the sixty-fifth year of his age. Although an invalid many years, his death was unexpected, for he had contemplated moving soon into a new home, which he had purchased in Flatbush, a section of Brooklyn. He was a member of the old Fountain Gun Club, and the New Utrecht Gun Club, in the shoots of which he actively participated, particularly those which were held at Interstate Park. He was of a quiet, amiable disposition, and was highly esteemed by a host of friends, who will profoundly mourn his loss.

The tournament of the North Side Gun Club, of Allegheny, Pa., Oct. 1 and 2, had high guns as follows: First day: Watson, of Sewickly, with 162 out of 175; second, Fleming, of Pittsburg, with 156; Atkinson and Shaner, of New Castle, third and fourth respectively, with 155 and 152. On the second day Mr. L. B. Fleming was high with 157 out of 175; Kelsey, second, with 155; Atkinson, third, with 152; Deniker, fourth, with 150.

On Sept. 29, the first day of the Interstate Association's tournament, given for the Lewistown, Ill., Gun Club, Mr. Tom Marshall was high with 166 out of 180; Mr. Guy Burnside was second with 164; third, Messrs. J. L. Head and A. C. Connor tied on 163. On the second day Mr. Connor was first with 162; Mr. B. Lewis second with 158; Mr. E. B. Coe third with 149.

Mr. J. S. Wright informs us that he will give a live-bird shoot at the Hudson Driving Park, N. J., at a date to be announced later. He will endeavor to hold it in the latter part of this month. He states that the birds will be first class, and that no irregular shooting will be allowed. Lunch can be obtained on the grounds. The programme will be arranged on popular lines, and will be published in the near future.

The daily press recounts the death of Maj. E. P. McKissick, of Asheville, N. C., which occurred suddenly at Norfolk, Va., Sept. 28. He was specially known in the trapshooting world in connection with several pleasant trapshooting tournaments given by him at Asheville, sometimes jointly with Col. J. T. Anthony, of Charleston, N. C.

In a conversation last week, Mr. S. M. Van Allen, of Jamaica, L. I., informed us that he would start for Atlanta, Ga., Oct. 5, on a business trip. He will do more or less shooting while in that section, and as he is one of the most skillful shots, he will give a good account of himself, whether in competition at targets or live birds.

The first shoot of the Crescent Athletic Club's season, 1902-3, took place on the club grounds at Bay Ridge, L. I., last Saturday, and was honored with a good attendance, notwithstanding that the weather was cloudy and betimes rainy. Dr. J. J. Keyes established the first claim on the October cup with a score of 48.

Mr. R. T. Gowan, secretary of the Raleigh, N. C., Gun Club, writes us as follows: "I must have made a mistake in writing you about our shoot on Oct. 29 and 30. It should have been $100 added each day, which makes considerable difference. It will attract more shooters."

Mrs. Frank E. Butler (Annie Oakley) started recently on a theatrical tour in the West. She has the leading part in a play, the chief incident of which is some skillful shooting, which saves the day. We heartily wish her success.

Mr. L. B. Fleming, of Pittsburg, retained possession of the bronze medal, emblematic of the championship of Western Pennsylvania, defeating the challenger, Mr. W. L. Harper, by a score of 90 to 82.

In the shoot of the South Side Gun Club, of Newark, N. J., on Saturday of last week, Mr. I. Terrill won in the Troisdorf trophy event.

BERNARD WATERS.

Handicaps.

The following, from Mr. H. D. Kirkover, of Fredonia, N. Y., is of general interest, as it concerns the withdrawal of a fine amateur from general shooting competitions, and contains a manly expression of conviction. He writes us as follows:

"You ask if the report of my withdrawal from competing in trapshooting is true. It is, and it isn't. I shall continue to shoot pigeons at the clubs in the vicinity of New York and Philadelphia, and possibly in Canada, and may occasionally attend a large target tournament where all stand at 16yds., but as far as handicap target tournaments are concerned, I will get my pleasure reading the reports in the sporting press. It would be all O. K., if there was a governing body to control trapshooting and the handicapping of contestants, but where this is all left to the local clubs, why, more or less 'injustice' is liable to creep in.

"Last week Field and Fancy published a photo of Mr. Ed Rike, and with it a short biographical sketch. He gives his reasons for disliking the present system of handicaps and division of moneys, and I heartily agree with him, only personally would like all moneys in all trapshooting events to go to the high guns. There would be plenty of shooters who would enter, and if the masses are to be catered to, let the shooters be divided into classes.

"The only persons deriving remuneration from trapshooting are the manufacturers of guns and ammunition. I don't blame them for wanting large fields in the tournaments, but personally I prefer quality to quantity.

"I will take a chance with any field, and when it is demonstrated to me that I am not eligible or am a 'has been,' I will step down and out, and watch the other boys.

"When I was serving my apprenticeship at the trapshooting game every man had to put up his money and take a chance even up with the best of them. At pigeons it was high guns, and at targets class shooting, all at 16yds. For a long time the chance was all I was able to take, but as time rolled by I became proficient enough to break a straight occasionally, but by that time the moneys were cut up so that the best I received was less than the amount the fellow drew down who dropped in the fourth or fifth hole. I know from experience that the only shooters that are money winners the year round are the paid representatives, and they earn all they receive, and more, too.

"Now the sweepstake feature of target tournaments, as conducted to-day, is a farce, and I am in favor of abolishing it altogether, and in its place substituting trophy or prize events, high guns to win.

"In conclusion would like to ask if there is a game to-day in which the novice is given a better chance than the seasoned consistent performer, or where hard-earned skill is obliged to give way to the crude, uncertain beginner.

"This will undoubtedly convey to you my opinion of target-shooting and my reason for practically withdrawing from same."

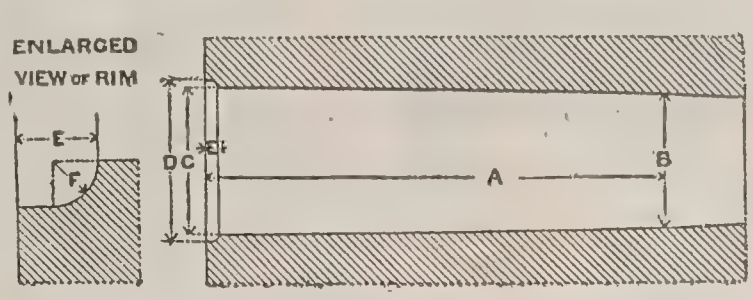
Cincinnati Gun Club.

CINCINNATI, O., Oct. 4.—In the sixth contest for the Troisdorf medals, Gambell, Faran and Osterfeld tied in Class A. Class B medals were won by Barker. The contestants, distance handicaps and scores were as follows: Gambell (19) 44, Faran (18) 44, Osterfeld (19) 44, Baker (17) 44, Dreihs (16) 43, Herman (16) 43, McBynard (18) 41, McB. (16) 40, Capt. (17) 40, Coleman (20) 39, Van Ness (19) 39, Randall (18) 38, Ahlers (21) 37, Block (18) 37, Jay Bee (17) 37, Medico (21) 36, Corry (17) 34, Ward (16) 34, Ackley (16) 34, Steinman (18) 34, Sec (20) 33, Jack (16) 33, Boeh (14) 30, Miles (17) 29, J. Steinman (18) 27, Nye (20) 26, Jones (19) 24, Schneider (17) 17.

Chamber Sizes for all Bores.

THE Gunmakers' Association has added to the good work it has done in the past in connection with the standardization of cartridge and chamber sizes by issuing a series of dimensions for the bores not previously dealt with. We give in tabulated form the figures which are now put forward and issued for general circulation among the gun trade. It will be noticed that the chamber sizes for 12, 16, and 20 bores have been altered by comparison with what were previously issued, the reason for the change being that the Association has endeavored to make all the chambers conform with the following rules:

1. That the length of the chamber (A) equal the nominal length of the case for which it is constructed.
2. That the front end of the chamber (B) be a constant dimension in all chambers of the same nominal gauge.
3. That all shotgun chambers shall have a uniform taper of .005in. in every inch of length.
4. That the diameter of rim (D) shall be one-ninth greater than the diameter of the front end of the chamber (B), with a minimum difference between (C) and (D) of .050in. $(D = B + \frac{B}{9})$.
5. That the depth of rim recess (E) shall equal one-twelfth of the diameter of the front end of the chamber (B), with a minimum depth of .050in. $(E = \frac{B}{12})$.
6. That the wall of the rim recess and the wall of the chamber be joined by an arc of a circle (F) having a radius equal to one-half the difference between the diameter of the rim (D) and of the chamber under the rim (C). $(F = \frac{D - C}{2})$.



The changes involved are, as a rule, of small moment, amounting as they do to less than .005in. where diameters are concerned. For instance, the old diameter of the rim of the 12-bore was stated at .882, whereas it now stands at .886. The size of the head was .811, which remains as before for the 2½in. case, but has been increased to .812 and .813 for the 2¾in. and 3in. cases respectively, the diameter at the front end of the chamber remaining .798 as heretofore. The rim thickness has been reduced from .074 to .067, which is a change that is likely to be of advantage, as the old size was, if anything, on the large side, allowing for effects of wear causing a slight rounding off of the edge upon which the cartridge takes its bearing.

The most serious change is, however, concerned in the alteration of the length of the chamber. The first rule, as above quoted, accounts for this divergence. We are not sure exactly how things stand with regard to this last-named alteration. The present card, unlike its predecessor, does not contain the registered acceptance of the sizes by the ammunition manufacturers, and so large an alteration in the length of the cartridge is bound to create difficulties unless special steps are taken to prevent the same happening. The guns at present in use have been constructed with chambers 2.56in. long, and a proposal that in future 2.5in. should be the figure involves an excess of chamber length amounting to .06, which is practically 1-16in. It is generally agreed that the best shooting is only to be obtained from guns whose chambers closely approximate to the length of the cartridge case intended for them, and to produce a change of this character is open to objection in that it sacrifices the efficiency of the shooting to a slavish following of an empirical rule.

The cartridge maker, on the other hand, will also be affected by the change, especially in view of the want of common action that is likely to result from the absence of a preliminary indorsement. By inference, the minimum size of the chamber is the maximum size of the cartridge, and hence if the cartridge is materially shorter than the maximum size, and the toleration of the chamber also works at the extreme limit, the difference between the two is likely to be much more than is desirable. Then again, the whole question of cartridge loading is materially affected by a shortening of the case by an amount representing the thickness of a medium card wad. The cartridge loading of the present day is based upon the existing length of cartridge, and although, as we pointed out in our last issue, there is space to spare with the short charges of shot that are now popular, the loading instructions which are used by the trade are based upon the greater length of case, so that it would be necessary, where standard charges are used, to obtain the extra space by greater compression of the charge, by altering the wadding, or by reducing the amount for turning over. All these changes are of a kind which are likely to cause trouble unless made in simultaneous agreement by all concerned, and there is no evidence that this agreement exists at the present time. Of course, the actual effect of a chamber shortened to the new sizes on a 2 9-16ths cartridge is largely regulated by the form of the cone adopted; but assuming that the cone is ½in. in length, there will be a total reduction from the front of the chamber to the bore of the barrel of .069in., which would make a constriction of .008in. at the mouth of the case, with the turnover opened out. This may not appear to be a very large amount, but, on the other hand, it is against the principle of harmony between cartridge case and chamber. Our columns have frequently contained evidence of the danger to the gun and the bad shooting that results from firing pigeon cases in a game gun. The pigeon case is 3-16in. longer than the game cartridge case; it would seem that an error amounting to one-third of this amount must still contain objectionable features. Of course, there is no question as to the unsatisfactory results that would be bound to follow in the case of guns bored to the new sizes with a square or very nearly square cone when fired with the longer cartridge cases. Under these circumstances, we hardly feel prepared to adopt the new length suggested for the nominal 2½in. chamber until there is more complete evidence that the change will be generally accepted by gunmakers and cartridge loaders.

We think that the several diameters and thicknesses of rim may be accepted without demur at the present time, though, of course, there are in several instances changes of an almost revolutionary character. For instance, some cartridges have had disproportionately large rims, while with others they have been so small as to make satisfactory extraction almost an impossibility. The 24-bore cartridge as ordinarily supplied has a rim thickness of about .080, and a rim diameter of .750. According to the new rule, these have been altered so that the first measurement becomes .054, and the other .722. The 20-bore, on the other hand, has erred on the opposite extreme, the usual thickness being about .054 and the diameter .743, these now being .057 and .761 respectively. In the case of the 20-bore cartridge the change cannot cause any considerable difficulty on account of the facility with which guns with unduly small rim recesses may be opened out, but, as metal cannot be added, it is possible that, if the ammunition manufacturers adopt the new sizes for the 24-bore, it may be necessary for the next few years to make cartridges of two patterns, so that the old guns may not be rendered obsolete.

There is very little to say in explanation of the general rules that have been laid down for controlling the sizes of the different bores of the chamber. The basis of the whole calculation is the nominal diameter of each caliber of barrel as recognized by the proof houses. The diameter of a 12-bore barrel is, for instance, .729in., and the walls of the 12-bore cartridge case are, as a rule, about .030 thick. The external diameter of a cartridge case which is 12-bore internally would therefore be .789in. Allowing about ten-thousandths of an inch to permit the easy entry of the cartridge, it will be seen that the mouth of the chamber would need to be about .799in. diameter, which is in close agreement with the size specified in the accompanying table. The bore of the barrel being therefore a fixed quantity, and the mouth of the chamber being determined by the thickness of the cartridge tube, the next dimension to fix is the diameter of the chamber at the breech. It is an accepted principle of gunmaking that the chamber shall be in the form of a straight taper, so that when the cartridge has been slightly withdrawn in the process of extraction it shall be an easy fit, so as to facilitate extraction. Experience has shown that a taper of .013in. in the 2½in. chamber is quite sufficient to provide the necessary freedom for extraction, and Rule 3 states this taper as .005 for every 1in. of length. By adopting a uniform taper of this kind the work of the gunmaker is greatly facilitated, because he is thereby enabled to adjust his chamber tool making lathes and grinders to the universal taper, so that the need for constant readjustment is obviated. With the old sizes for 12, 16, and 20-bore cartridges this convenience was not recognized, so that the machines had to be readjusted according to the taper required for any given caliber or length of cartridge. It is in this connection that the new sizes merit full recognition, though, of course, we must still maintain our reservation with regard to the want of harmony which appears to exist in regard to the matter at length.—Field (London).

Notes.—The figures in large type are the arbitrary dimensions on which the above rules are based. Those in smaller type are built up from the foregoing rules, with the arbitrary dimensions as a basis, and are calculated to the nearest .001in.
The figures immediately below the nominal bores are those accepted for proof purposes.
The 5-bore given above is intended to replace the old 4-bore, whose dimensions were inconsistent with the nominal size of the bore.

The Lehigh Rod and Gun Club.

BETHLEHEM, Pa., Oct. 3.—Appended are the scores for the one-day tournament on Oct. 2 on the grounds at the club. The day was fine, and all the shooters were in exceptionally good humor.

In the shoot-off Mr. S. Glover won first prize, a Winchester pump gun. Daudt won second, Du Pont third, Ritter fourth, M. H. R. fifth, Peifle sixth, Koch seventh, Deitrich eighth, Benner ninth, Englert tenth, Frederick eleventh, Delegate twelfth, Huff thirteenth, Sobers fourteenth, Thomas fifteenth, Brey sixteenth, Hankey seventeenth, Hahn, eighteenth, Miller nineteenth, Murfy twentieth, Hausman twenty-first.

Glover won first high average; Bray won second high average; Murfy won third high average.

Winchester Gun Club.

DETROIT, Mich.—At the regular shoot, Oct. 4, conditions were not favorable for high scores, the air being raw and a high wind prevailing. The tie in Class B between Guthard and Hitchcock on the ten best club event scores of the year to date was not broken.

Brodie won the medal in Class A with 20. Guthard was high in Class B with 18, and Ford had it easy in Class C with 20. Following are the scores, the last event being the club event:

Interstate at Lewistown.

Lewistown, Ill., Oct. 1.—The closing tournament of the Interstate Association series for the season of 1902, scheduled for Lewistown, Ill., Sept. 29 and 30, is a thing of the past, and what is better, success can be written up against it. This applies to it in all senses.

The attendance, from an Interstate Association standpoint, was very good, over forty different shooters being present, and of this number but two were manufacturers' agents. Beside the shooters, there was a good-sized crowd of spectators. The tournament was the first big event conducted by the Lewistown Gun Club, and it made a record which places it well up in the line of progressive gun clubs.

The second day of the tournament was not so well attended as the first. When the sport began in the morning, rain was falling, and after the rain ceased it blew; but it did not deter the sportsmen from continuing the sport of the day before, and they banged away as if it was the fairest day ever seen.

The visiting shooters expressed themselves as highly pleased with the new club house and shooting grounds of the Lewistown Gun Club; the light is good and the background enables a contestant to see his targets clearly as they rise from the traps.

The evening of the first day the local club entertained its guests with a smoker, which was deemed quite a pleasure by the visiting sportsmen, and evidently enjoyed by them.

Much of the success of the tournament was due to the efforts of Messrs. McCumber, Maguire, Sharrets and Strode, the committee who had immediate charge of same.

The scores of both days follow:

First Day, Sept. 29.

North Side Gun Club Tournament.

Pittsburg, Pa., Oct. 4.—The fall tournament of the North Side Gun Club, of Allegheny, Pa., closed Thursday night, Oct. 2, and while the attendance was not quite as large as expected, the shoot was the best held in Pittsburg or vicinity for a number of years.

The first day of the shoot opened with extremely bad weather, and it rained and blew most of the day, which undoubtedly kept down the attendance.

The visiting shooters were well pleased with the tournament, and the North Side Gun Club wishes to state that they never had the pleasure of entertaining a more gentlemanly lot of shooters.

The trade was represented by J. T. Skelly, Howard Sergeant, W. M. Annette, Chas. G. Grubb, Robt. Hunter, J. R. Hull and Chas. North.

The cashier's office was in charge of L. Lautenslager, W. M. Annette and I. W. Morrow, and these gentlemen certainly did their work to perfection.

Chas. G. Grubb, Howard Sergeant and Chas. North worked from morning until night both days, and the North Side Gun Club wishes to thank all these gentlemen for their able assistance.

Owing to the lateness of some of the out-of-town shooters reaching Pittsburg, shooting was not started until 11 o'clock the first day. However, the programme was finished by 5 o'clock, and about 5,000 targets were trapped.

The magautrap and bluerocks were used, and the targets were thrown about 55yds. The second day shooting started promptly at 9:30 A. M., and the last event finished by 4 o'clock. Over 10,000 targets were thrown during the two days.

The first day, Watson, of Sewickley, was high gun with 162 out of 175. Fleming, of Pittsburg, second with 156. Atkinson, of New Castle, third, with 155, and Shaner, of New Castle, fourth with 152.

High score for the second day was made by L. B. Fleming with 157 out of 175. Kelsey won second with 155; Atkinson third with 152, and Deniker fourth with 150.

The high average for the two days was won by L. B. Fleming, of Pittsburg, with a total of 313 out of 350. Watson, of Pittsburg, second with 311; Atkinson, of New Castle, third with 307, and Kelsey fourth with 304. Fleming also retains the bronze medal and title of champion of Western Pennsylvania, beating W. L. Harper, the challenger, by the score of 90 to 82. The race was shot on the second day at 100 bluerocks.

Wenona, the celebrated rifle and revolver expert, shot in the sweepstakes, and did very fine work. She also gave a marvelous exhibition of rifle and revolver shooting. In a special event, the second, at 5 pairs, Wenona won first money alone by breaking 9 out of 10 targets.

Oct. 1, First Day.

Notes of the Shoot

L. V. Byer, of Rochester, N. Y., was suffering from a severe cold and was obliged to leave for home after the first day.

Howard Sergeant was so busy that he had no time to talk.

There may be better referees than Charley Glancey—but we have never seen them.

Joe Taylor, John Kiser and Alf. Hamilton were "clean off" in their shooting, but stayed in the game from start to finish.

Charlie Grubb found plenty of time to talk business, but he never allowed a squad to delay the game.

Billy Kinser says he did not win the bronze medal, but had as much sport as any shooter on the grounds.

New Castle was well represented by Shaner, Moore, Atkinson and Agnew.

Jim Skelly wore a 7 by 9 smile when his powder won high average and captured the bronze medal.

Come again, boys; the North Side Club is always glad to see you.

ON LONG ISLAND.

Crescent Athletic Club.

Bay Ridge, L. I., Oct. 4.—The opening shoot of the Crescent Athletic Club's season, was held to-day on the beautiful grounds of the club at Bay Ridge. The competition began merrily and strong as to numbers. Dr. J. J. Keyes established the first claim on the October cup with a score of 48. In a contest for a trophy Mr. H. M. Brigham won after a number of closely contested shoot-offs.

The shooting committee, the members of which are Messrs. A. W. Higgins, chairman; G. A. Sykes, H. M. Brigham, T. W. Stake and F. B. Stephenson, awarded handicap allowances as follows:

Targets:	25	15	10p	Targets:	25	15	10p
W W Marshall	6	3	3	E Banks	0	0	0
F D Mead	7	4	5	A M Boucher	5	3	3

Faulkner	8	16	24	Marshall, Jr	10	7	17
Marshall	6	16	22				

Trophy, 25 targets, distance handicap: Brigham, 20yds., 19; Sykes, 16yds., 19; Money, 18yds., 18; Kryn, 16yds., 15; Marshall, 14yds., 15; Rhett, 14yds., 15.

Shoot-off, 5 targets: Brigham, 20yds., 5; Sykes, 16yds., 2.

Trophy, same conditions: Brigham, 20yds., 22; Kryn, 16yds., 18; Money, 18yds., 18; Marshall, 14yds., 14; Rhett, 14yds., 13.

Trophy, 10 pairs; handicap allowances added:

	Al'ce.	Brk.	T'l.		Al'ce.	Brk.	T'l.
Kryn	2	13	15	Rhett	4	8	12
Keyes	2	12	14	Brigham	0	12	12
Marshall	3	11	14	Money	1	10	11

Sweepstakes, 25 targets: Brigham 21, Money 18, W. Marshall 16, Meyer 14, Marshall, Jr., 6.

Sweepstake, same conditions: Brigham 22, Kryn 20, McConville 20, W. Marshall 20, Money 19, Pool 15, McDermott 12, Faulkner 11, Marshall, Jr., 3.

Brooklyn Gun Club.

Brooklyn, L. I., Oct. 4.—Cloudy weather and drizzling rain betimes were deterrent conditions concerning trapshooting around New York to-day, so that the shoot of the Brooklyn Gun Club to-day was but lightly attended. The scores:

Events:	1	2	3	4	5	6	7	8
Targets:	25	15	10	10	10	25	15	25
Waters	19	15	9	9	9	23	..	23
Batten	12	8	4	5	2	8	..	..
Wright	9	..	7	..	..	..	8	18
Newton	..	..	..	6	..	..	9	..
O'Caloghan	3	2	..	..	2	..	..	..
Wright	..	..	5	..	..	..	10	..

No. 3 was at 5 pairs.

Middletown Gun Club.

Middletown, N. Y., Sept. 27.—The Middletown Gun Club's shoot to-day was open. A feature was a visit of the Wanderers. There were six events on the programme—one at 10, three at 15, one at 20, and one at 25 targets; 100 targets, and $5 entrance in all. The purses were divided by the Rose system, points 5, 3, 2 and 1. The scores:

Events:	1	2	3	4	5	6	7
Targets:	10	15	15	15	25	15	15
Apgar	10	15	14	15	22	12	14

Central City Tournament.

Central City, Ia., Oct. 2.—The tournament of the Wapsie Gun Club lasted but one day, owing to light attendance.

The programme called for eight 15 and four 20 target events, open to all, and a medal and cup event at 25 targets each, open to amateurs only.

The regular events were all handicaps. Budd was the only one handicapped, and shot from the 18yd. mark. No money was added. Events 7 and 14 were not counted in averages. Holden, of Marengo, won the medal, having to shoot off a tie on 24 with Foley, of Nichols. They shot at 15 targets. Holden broke them all and won. Ford, of Central City, won the cup with 25 straight.

Events:	1	2	3	4	5	6	7	8	9	10	11	12	13	14	
Targets:	15	15	20	15	15	20	25	15	15	20	15	15	20	25	Av.
Holden, 16	14	14	19	13	14	18	24	15	13	20	15	15	19	24	.945

No. 7 was badge contest. No. 14 was cup contest.

Hawkeye.

A correspondent, writing to a contemporary, mentioned that he was a regular visitor at the meetings of the F. R. C. S., and noted the evolution of the technical language in the way of precision and elegance, as follows: "In certain compound tunicates the atrial wall, in the egg development delimited by a pair of ectoblastic invaginations, in the bud development may be formed from the parental endodermic branchial sac." Certainly. We concur.

PUBLISHERS' DEPARTMENT.

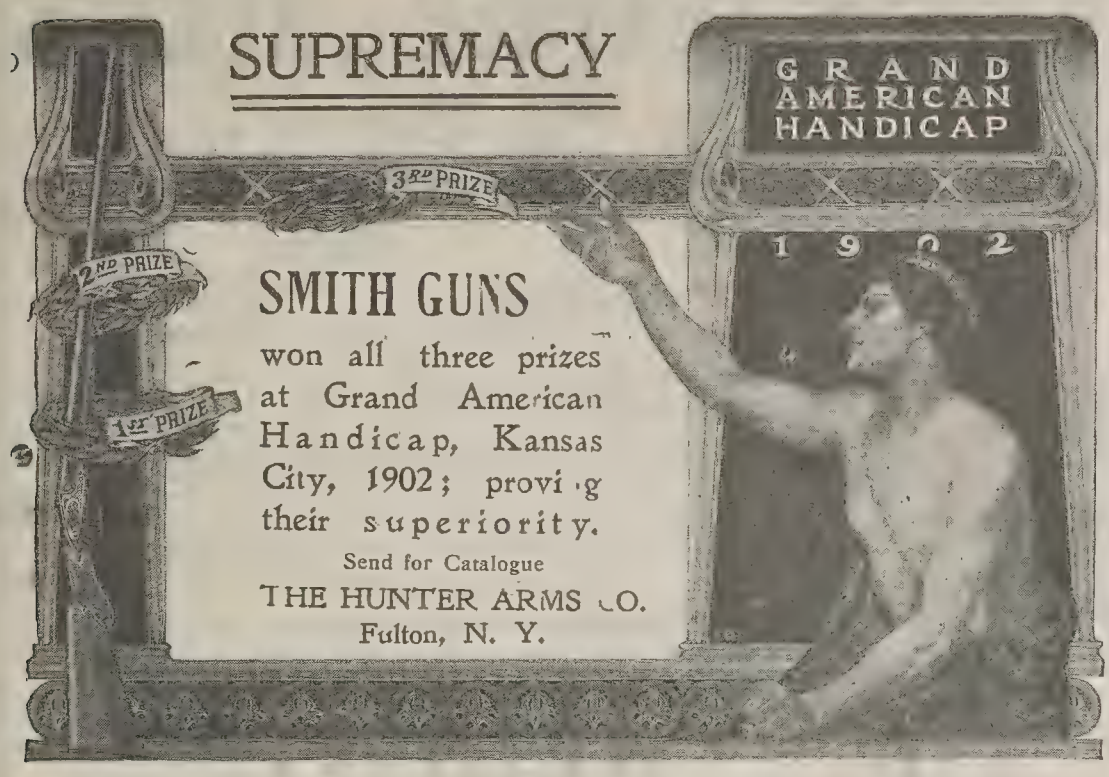
The Southern Railway has recently issued a handsome illustrated pamphlet entitled "Hunting and Fishing in the South." It purports to describe the best localities in the South for various kinds of game and fish, and to give the game laws for the different Southern States. Moreover, for most of the States it gives tables furnishing name of town, hotels, names of guides, kinds of game, cost of team per day, and names of individuals from whom reliable information may be obtained. The pamphlet is one which should be in the hands of every one intending to make a Southern trip this winter. It will be mailed on receipt of three cents postage, on application to Alex. S. Thweatt, E. P. A., 271 Broadway, New York.

The name Cammeyer has long been famous among the shoemakers of the United States. Within a few years Cammeyer has taken to manufacturing shooting boots and shoes of all sorts and descriptions. Every field shooter has his own idea as to the sort of footgear he wishes to wear, and at Cammeyer's he is quite sure to find what he requires, both as to style and material.

Last spring the Spruce Cabin Inn, owned by Price Brothers, of Canadensis, Pike county, Pa., was burned down, and many sportsmen do not know that in order to accommodate their old friends and customers, Price Brothers have erected a spacious and comfortable cottage on the same grounds, and are thoroughly equipped with dogs and guides for the season.

There are few styles of boat for which there has been more demand than for the Barnegat Sneak Box, and as may be inferred from its name, the home of this boat is at Barnegat, N. J. Messrs. A. F. Kilpatrick & Son, of that place, are large makers of sneak boxes, and gunners desiring these boats should inspect their yards.

Guns, Revolvers, Ammunition, etc.



SUPREMACY

SMITH GUNS won all three prizes at Grand American Handicap, Kansas City, 1902; proving their superiority.

"MY TRAP SCORES"

WILL ENABLE YOU TO

Preserve Your Scores.

A POCKET trap score book containing 50 pages of score sheets and the Interstate Association rules for target and live bird shooting, and for shooting under the Sergeant system. The cover bears the title "My Trap Scores," and the pages, in number and form, are arranged to make a complete record of the shooter's doings at the traps. The pages are ruled to make a record of the place, date, weather conditions, number of traps, number of shooters, gun and load used events, etc. The score sheets are ruled for 25 targets. Bound in leather Price 50c. postpaid.

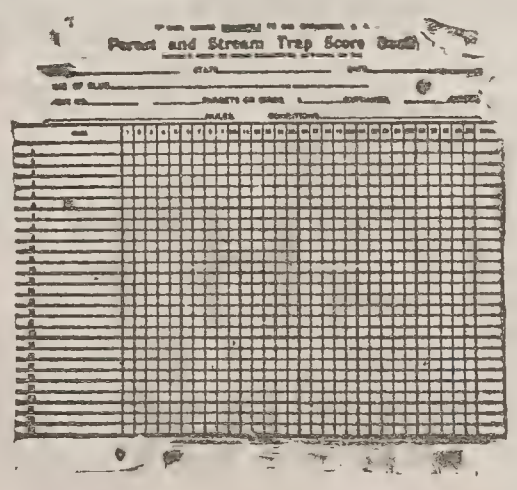
FOREST AND STREAM

Trap Score Book.

The only one containing the new (1902 revision) Shooting Rules of the Interstate Association, for targets and live birds; The American Shooting Association Rules; and the revised Hurlingham Rules. And a detailed description of all the shooting systems in practice for the divisions of money.



FOREST AND STREAM'S new Trap Score Book will admirably fill the needs of clubs and contestants in affording a means of keeping a faithful record of contests Each book contains a generous number of sheets, so ruled as to make all the chief divisions of the shoot plain at a glance. For instance the horizontal spaces are numbered from 1 to 27, every sixth line being distinctly heavier than its fellows; hence the squads are distinguishable at a glance. The perpendicular spaces are numbered from 1 to 30, ample space first being left for the contestants' names and their handicap allowance. Heavy dark lines are between each five spaces, and the numerals 5, 10, 15, 20, 25 and 30 are in heavy-faced type, so that the number of targets or birds to be shot at are apparent at a glance. The heavy ruling also is an advantage in bad lights. However dark a nook the scorer may be in, no straining of the eyes or incorrect entering of scores is possible on account of inability to distinguish the lines of the score sheet. At the head are the usual spaces for current data. Each sheet is perforated, so that it can be readily torn out when manifold copies are made, and yet each sheet is strong enough to hold firmly in place if the book is desired for permanent club records. A neat pocket on the inside of the back cover holds carbon sheets for manifolding. The book is neatly and substantially bound in cloth, and contains 150 score sheets. The price is $1

FIELD GUNS.

When, 15 years ago, we introduced the light weight, short barrel 12 gauge **Featherweight Francotte Guns,** most hard practical field shooters who were lugging their 8 or 9 pound guns when following their bird-dogs, shook their heads and very much doubted that anything like the same bag could be made with these "grasshopper" or "mosquito" guns as with their heavy old-fashioned guns.

When, however, one of these full-choked little guns made highest percentage of pattern and penetration in gun trial where most of the leading guns competed and when others were winning highest honors at the trap—then, public opinion began to change. Since then thousands of our Francotte and Knockabout Guns have gone into the hands of leading sportsmen.

FRANCOTTE AND KNOCKABOUT GUNS have always kept well ahead of all competition as regards shape and model, strength coupled with light weight, shooting and wearing quality, fit and finish, and the ownership of either make of gun is a testimonial as to a sportsman's standing.

FRANCOTTE GUNS, all gauges, weights, length of barrels and shape of stocks from $80.00 to $450.00 net.

KNOCKABOUT GUNS, all gauges, weights, lenght of barrels and shape of stocks, $60.00 net.

We are willing to take your second-hand guns as part-payment for new ones.

MAUSER SPORTING RIFLES, $45.00 to $50.00.

MAUSER AUTOMATIC PISTOLS, $22.65 to $25.00.

Soft and pliable as kid. A complete protection to sportsmen or any exposed to cold or wet. Worn under the overcoat, they are a handsome garment and much used. A capital jacket for bicycle use, skating and sleighing.

☞ We take the entire product of the manufacturers of above Finest Jackets, and this make cannot be obtained elsewhere in the United States.

A Quality, of the very finest skin -	$18.00
B Quality, 2d grade, - - - - -	$15.00

Send measurement around chest outside vest. If money is sent with order we will forward free by mail, and if not satisfactory on receipt, we will return money on return of Jacket. Entirely different from any other make.

☞ As there are many different makes of Leather Jackets in the market advertised as finest, etc., mostly made here of common skins, we invite those desiring such to send for one of ours, and if not found superior on examination to any other, it can be returned at our expense, and we will refund money.

WM. READ & SONS, 107 Washington St., Boston, Mass.

ESTABLISHED 1826. THE OLD GUN HOUSE.

THE "REGENT."

A WONDERFUL NEW ENGLISH HAMMERLESS.

Price, $65.00 net, worth double.

The cut does not do justice to the gun, but we can guarantee them to be made by the best gunmaker in England and bored on the same principle that has won world wide honors for English guns.

The barrels are best Siemans Martin steel, and the shooting is unexcelled. The stocks are selected English walnut, latest model Anson and Deeley action, top automatic safety, nicely engraved, and finish and workmanship throughout up to the best English standard.

English guns have long been the standard of the world, and this new product will mark a new era in price as well as quality.

We have never before been able to offer so fine and good a gun for so little money. They can be supplied in weights from 6¼ lbs. to 8 lbs., in 12 bores, and from full choke to true cylinder.

We carry a large line of guns and rifles from $6.00 to $600.00, and are sole U. S. Agents for the celebrated W. W. Greener.

FOREST AND STREAM PUBLISHING CO.

CANOE CRUISING AND CAMPING.

By Perry D. Frazer. Illustrated. 95 pages, cloth. Price $1.

This interesting little volume is a practical guide for the cruising canoeist, the man who wishes to start away from the city and for a short time to make his canoe his home. With this in view, Mr. Frazer, who regards canoeing as a healthful and economical method of passing away leisure hours, has written briefly but attractively of canoes, camping outfits, clothing, firearms and ammunition; fishing tackle, photography, and in general of cruising, camping and all that pertains to this phase of outdoor life. While the volume has been written chiefly for the younger men, it is yet full of practical information and suggestion that appeals to those who have had a wider experience.

Such a book as this should be in the library of every man who is interested in outdoor life or the things which pertain to it. It is one of the manuals which should stand on the shelf alongside of "Woodcraft," of which, in fact, it is a part.

YACHT ARCHITECTURE.

By DIXON KEMP, Associate of the Institute of Naval Architects, and Member of Council. Second edition. Super-royal 8vo. Price, $16.80.

This work enters into the whole subject of the laws which govern the resistance of bodies moving in water, and the influence a wave form of body and wave lines have upon such resistance. It also deals comprehensively with the subject of steam propulsion as applied to yachts. An easy system for designing is provided, and every necessary calculation is explained in detail. The latter part of the work is devoted to yacht building, and engravings are given of every detail of construction and fitting, including laying-off, taking bevels, etc. The list of plates (exclusive of over thirty devoted to the elucidation of the text, and nearly 200 wood cuts) exceeds fifty, and comprises the lines of some of the most celebrated yachts afloat by the most successful builders and designers.

FOREST AND STREAM PUBLISHING COMPANY, NEW YORK.

Hints and Points for Sportsmen

Compiled by "Seneca." Cloth, illustrated, 224 pp. Price $1.50.

This compilation comprises six hundred and odd hints, helps kinks, wrinkles points and suggestions for the shooter, the fisherman, the dog owner, the yachtsman, the canoeist, the camper, the outer; in short, for the field sportsman in all the varied phases of his activity. The scope of the information it contains embraces a wild field, and "Hints and Points" has proved one of the most practically useful works of reference in the sportsman's library.

PROPAGATION OF THE GRAYLING.

DR. JAMES A. HENSHALL, we opine, is destined to be remembered as the American angling writer who has done most to popularize the black bass as a game fish. His "Book of the Black Bass," published twenty years ago, served to draw attention to the bass, and had large part in giving the fish the place it now holds.

Dr. Henshall is in charge of the Bozeman, Mont., station of the United States Commission of Fish and Fisheries, and he has signalized his service there by the successful propagation of the grayling, an achievement which bids fair to transcend in its far-reaching effects all that Dr. Henshall ever did for the black bass. A record of the grayling work was published in our issue of Sept. 20, 1902, from Dr. F. M. Higgins, of Oswego, N. Y. There it was told that after several thousand grayling eggs had been hatched and deposited in the hatchery ponds, they refused the food which was taken by the young trout, and eventually died. But it was from these very starved fish that Dr. Henshall learned the secret of success in grayling culture. Putting them under the microscope he discovered that their mouths were equipped with minute sharp fangs. "This discovery he thought solved the problem of the death of the grayling fry. The spring water used for the hatchery as it came from the rocks was walled up and roofed over, and was therefore absolutely pure water, or at least water entirely free from infusoria, and as the grayling fry had those invisible fangs in their mouth, they must derive their food from infusoria." The next year Dr. Henshall put his grayling fry into creek water, in which there was a native store of the food they required, and they lived. Since then he has shipped each season about a million and a half of grayling fry to Eastern stations, some of them as far east as Maine, New Hampshire and Vermont; and other plantings on a generous scale have been made in Michigan, where, it is not too much to hope, the grayling fishing may in time be restored.

If all shall come to pass of which there now is reasonable promise, Dr. Henshall will deserve well of his countrymen, as one who has added substantially to the country's fishing resources.

A QUAIL PROBLEM.

ON Wednesday, Oct. 8, a woman and a boy who happened to be looking out of the window of a house in the upper part of Manhattan Island, were astonished to see a quail run along the lawn, across the drive and stop under the shadow of a Japanese quince. An elephant or a Bengal tiger, promenading over the grass near the house, would hardly have created more excitement.

The two promptly went out of doors and approached the bird. It seemed disposed to cling to the cover of the few stems of the bush, and to be unwilling to run out over the short cut grass. Nevertheless, as they slowly drew near, it left its shelter and ran as hard as it could to the shadow of another bush, but a few yards away. While running over the grass in the full light it was, of course, distinctly visible to the observers who were within a dozen or fifteen yards of it, but when it gained the shelter of the bush, where there were patches of light and shadow, and stems and perhaps a few leaves on the ground, the bird seemed to melt out of sight, and could hardly be seen.

It was not at any time badly frightened, and more than once stopped on the grass in the open, always, however, choosing a place where there was a dead leaf or a little group of leaves, and when standing there it was hardly visible. Sometimes, when it stopped at the foot of one of the shrubs, it walked about a little bit, and appeared to be feeding, picking up something from the ground.

When under a bush near the road it disappeared. It was not seen to fly. What it probably did was to run to the road, keeping the bush between the observers and itself. It must have traveled east over the road for fifty or sixty yards, for after considerable search it was spied walking over the grass on a hill to the southeast. When next approached, the ground here being perfectly smooth and bare of cover, it took wing, flew off strongly toward the west, and was not seen again.

Where can this bird have come from? Certainly not from New Jersey, to the west, for the river is a mile or a mile and a half wide, a distance far too great to be covered by the flight of a quail. Hardly from Central Park to the south, for that is a region infested by cats and dogs which in their continual hunting would be likely to destroy the nests of any ground-inhabiting birds, if not the birds themselves. Long Island, to the east, is equally out of the question, and there remains only the mainland to the north—the Borough of the Bronx.

Thirty or forty years ago there were still a few quail to be found north and west of Van Cortlandt Lake, in what is now Van Cortlandt Park, but it is not to be supposed that any of their descendants still inhabit that populous region. Of course, it is possible that this quail was a bird which had escaped from confinement, but this hardly seems probable.

On the other hand, this is just the season of the year when quail and grouse set forth on wanderings which lead them they know not whither, and which often result in death. We have seen a half a dozen cases where ruffed grouse have been killed by flying against houses, and once years ago, at this season of the year, knew of a quail flying into the open window of a bedroom in which two persons were dressing.

A few years since it was not very unusual to see woodcock in the little parks of New York, and in the gardens of the upper part of the city. Indeed, it is but a year since one was seen and flushed several times. A migratory bird like a woodcock might well enough drop down anywhere in city or country, if it became tired in its flight, or saw an attractive spot. But a bird like the quail or grouse, most of whose wanderings are performed on foot, would hardly be expected to penetrate to the middle of a great city, since this involves foot journeying over miles of distance, during which it must pass thousands of people, many of whom would observe it, and all of whom would wish to destroy it.

SHALL WE PRESERVE THE WOODCOCK?

THE suggestion recently made in FOREST AND STREAM that there should be a close season on the woodcock for a term of years, has been received with much favor by our readers generally.

The older men who can recall the days when woodcock were fairly plenty, and who, still keeping up their shooting, realize how scarce woodcock are to-day, are especially earnest in their advocacy of such action. The younger men, who know less about woodcock, are naturally less interested.

The woodcock is one of our vanishing game birds which is disappearing with a rapidity that is genuinely alarming. Of all game birds, he is least able to take care of himself. Shy, nocturnal in habit, and during the day haunting for rest the darkest thickets of wood or swamp, he is easily found by the dog, and when flushed rises close to the gunner, and, perhaps bewildered by the glaring light of day, flies uncertainly a little way and then drops back to earth. In some covers, and under certain conditions, not one bird in five is likely to escape the aim of the expert shot. Now that our woodcock are so few in number, it seems as if for a while all men might be willing to unite in stopping their slaughter.

We should be very glad to hear from readers in different localities as to how they may feel with regard to this question of absolutely protecting woodcock for a term of years. Obviously if any good is to be accomplished by such protection, it must be general. To have one or two or half a dozen States or Provinces protect the bird, and still to have it shot in other States or Provinces, would accomplish nothing, and would be a waste of effort. To accomplish the best results, all Canadian Provinces and all the States of the Union east of the Mississippi River, should unite in measures looking toward the protection of this fine game bird—not only one of the most delicious of birds for the table, but a bird about which cluster traditions, sentiment and memories that make him especially dear to the sportsman's heart. Obviously these different political divisions cannot act together, but game protective and natural history organizations in each Province, or each State could, if they thought best, agitate the matter within their own territory and urge upon their legislators the passage of the proper laws. As has frequently been pointed out, the slaughter of the woodcock is great in the South in winter and early spring, but it is also great in the Northern regions where the few that are left rear their young. It is well worth while to urge strongly on sportsmen the importance of an effort to give the woodcock an opportunity to recover the ground that it has been losing constantly for the past twenty years.

What do the sportsmen of America think about this? It is a matter that they must take in hand themselves. No one will do it for them.

Is the woodcock to take its place as a museum specimen by the side of the wild pigeon, the pied duck, the great auk and the buffalo?

FORESTRY IN NEW YORK.

BOTH of the political parties in New York have adopted a forestry plank in their platforms. The Republicans set forth:

> We regard the Adirondack and Catskill parks, with their forests, waters and fauna, as one of nature's priceless legacies to our imperial State, which the dictates of prudence, wise public policy and foresight require should be carefully safeguarded and protected, not only as health resorts and pleasure grounds for the people, but as a conservator of the water supply for our rivers and canals so necessary for the continuous supremacy of the State. We, therefore, favor the resumption by the State of the purchase of lands within the limits of these parks.

And the Democrats, whose convention came later, said:

> We condemn the policy of the present Republican government in abandoning the purchase of lands within the limits of the Adirondack Park. These woods are necessary for the protection of the water supply of the rivers and canals of the State, and serve also as a pleasure ground and health resort for the people. If intrusted with authority, we pledge ourselves to the immediate resumption of the policy inaugurated by a Democratic Governor for the acquisition, for the sole benefit of the people, of the Adirondack forest lands, and we recognize the necessity of furnishing full and adequate protection for game animals, fishes, song and game birds, and we pledge ourselves to secure the enactment of just laws to this end.

The forestry question is not reckoned by political managers to be one of lively interest, and probably nothing more will be heard on the subject from either party during the campaign. It has come to a pass, however, where neither party can afford to ignore the Adirondacks in the party declaration of principle; and it is something to have both of them thus committed to the right side of the question.

GAME AND POLITICS IN WISCONSIN.

GAME protection has entered into Wisconsin politics this year, one of the candidates for the governorship promising that if elected he will abolish the protective system and relieve the taxpayers of the burden of supporting the wardens. This comes close to bosh. As President Plambeck, of the Wisconsin Game Protective Association points out, the farmers are not anxious to have the game laws done away with, nor are the people groaning beneath a heavy burden of taxation for game protection. On the contrary, the intelligent landowner recognizes the advantages of protection and would retain it, and as for the expenses, these are borne out of the funds collected for shooting licenses and for fines. In other words, the wardens are paid by the sportsmen and by the law breakers who are gunners but not sportsmen. In one case cited, seven Michigan hunters were fined $50 each, and the entire $350 remains in the county treasury available for paying all expenses of taking in another lawless set of hunters. It is said that more than $60,000 have been collected for hunting licenses this year at one dollar each, and a large surplus remains in the treasury to the credit of the game protection fund. Under these circumstances a political candidate who talks about relieving the people of Wisconsin of the cost of protecting the game must think that his audience is composed of idiots.

THE GAME AND THE GOVERNMENT.

IN another column Mr. Edward A. Samuels writes in advocacy of the oft-suggested plan of giving the National Government control of migratory game. Although it is manifest that such a system would have its advantages as well as its disadvantages, we have never been able to persuade ourselves that the National Government could constitutionally assume control of the game, or that a constitutional amendment to grant that power would ever be seriously considered by Congress. The fact—and we must reconcile ourselves to it—is that if migratory game is to be saved, it must be saved by the machinery of the individual States and by the States working in some sort of union of effort. We are not unaware that numbers of men, who, as Mr. Samuels, have labored long in the cause of protection and pondered the problem, believe in the recourse to Washington as the only solution; but none the less is it clear that under our Constitution the game is not to be preserved in that way.

The Sportsman Tourist.

"Over the Long Divide."

In response to Shoshone, "Beyond the Long Divide," in Forest and Stream, Sept. 13, 1902.

"Over the Long Divide"? with anxious thought
Man has an answer to this question sought,
What lies beyond? The entire human race,
Chaldea, Syria, Egypt, Greece and Rome,
Have crossed the crest to an unfathomed home,
Nor knew the semblance of that dwelling place
That waited them; with portals dark and wide
Beyond the summit of the Long Divide.

Over the Long Divide? the endless streams
Of passing mortals leave us but their dreams,
The Hindoo of Nirvana, while on fields Elysian
The Greek and Roman sported, and the souls
Of Odin's warriors drained their wassail bowls;
Saint John in his Apocalyptic vision
Bland choral symphonies, resounding wide
From golden harps, beyond the Long Divide.

Beyond the Long Divide, the Indian found
Wide prairies spread, a happy hunting ground;
No dreams agreed, Hope colored every thought,
Eternal Hope! the only gift of Heaven
Left in the casket by Pandora riven,
Although no answering message she has brought,
Illumed by Faith, she's yet the only guide
To light the traveler o'er the Long Divide!

Von W.

The Self-Reliance of Piscator.

BY HENRY WYSHAM LANIER.

Piscator had theories concerning guides.

"It's a radically false idea of sport," he declared at the breakfast table. "If there's anything at all in fishing, it's a test of a man's intelligence and skill and tackle against a fish—an individual contest. But when a guide puts my rod together, and chooses the cast, and soaks out a leader, and fastens on the flies, and paddles me in his canoe to a spot he selects, and tells me where to cast and how to play the salmon, and then to finish up with, nets the fish when he is tired out—whose skill does that particular landlock victim represent? I'll be hanged if it's mine."

Piscator had warmed to his subject while the cakes and maple syrup grew cold. Glancing around after this peroration, he intercepted a look from the Peri, which sent his coffee the wrong way and caused him to pass her father the pickles instead of the doughnuts, to the infinite disgust of that purple-gilled old warrior. It took some moments of chaff from the other men to recover his equilibrium, for the Peri was exceedingly good to look upon, and up to this time she had gazed neither to the right nor to the left. Piscator felt his position trebly impregnable.

"Why, look at that steel-rod duffer," said he, "who lets Jerry hook half his fish, then simply socks it into 'em with his iron pole and a twisted gut leader—and sends home box after box of salmon to his admiring relatives in 'Wareham, Massachusetts.' Put that creature on his own resources, and he'd be food for the fish in twenty-four hours, instead of boring every living thing he meets with his 'score' for each day of the week."

"After all, though, he isn't quite representative, even of the sportsmen of this place; is he?" asked the Peri.

"I'll admit he's the limit, as the boys say," Piscator hastened to reply. "But he's merely an exaggeration of the same principle which you'll find in nine-tenths of the city man's sport. The fellow who goes out to shoot a deer or a moose is led by the guide, provided he doesn't get tired, till he gets a sight of the poor beast, and then, if he isn't too nervous, our mighty nimrod pumps lead into him. He might as well, so far as sport goes, drive a cow into the woods and fill her full of dum-dum bullets. Soon we'll be as bad as the Britisher who sits on his lawn, with brandy and soda bottles handy and an attendant holding the guns, lest he get wearied, while his flunkies beat up the coverts and make the home-raised pheasants fly over him!"

"Did you ever try a double on a pair of pheasants coming down with the wind?" asked Grafton, the Englishman.

"No; and I'm not particularly keen to. I'll grant you lots of those chaps can shoot all around me; but they've lost all idea of true sport and the pleasures of self-reliance as completely as the Long Island magnate who casts into a stagnant pond swarming with logy, liver-fed trout."

The honors of the morning were clearly with Piscator, but under the rays from the Peri's eyes he inflated like a hot-air balloon, until forbearance became a difficult virtue.

"Excuse me, sir," remarked the Colonel, "but did I not observe you during these last few days in the company of Peter the Dane?"

"Yes, sir." Piscator flushed. "It's true that my theory won't hold absolutely, for the average man doesn't have time to learn even the rudiments in his few weeks of fishing or hunting at any given place. Consequently he's obliged to submit to this degrading tutelage until he knows the ropes. But I'm not going to keep it up."

This happened upon a Wednesday. The next night, true to his determination, Piscator dismissed the bewildered Peter, finding it necessary to soothe that worthy's smarting and puzzled professional dignity by a substantial addition to his bill and repeated assurances that one of the two best guides he had ever struck in all his experience was named Peter the Dane—but that he thought he would just knock about by himself for a few days.

Now it chanced that at dinner the Peri had turned up her already fascinating *retrousse* nose at the broiled salmon. "They are beautiful," said she to her father with finality; "and they skip like young lambs when they're hooked; and I'll admit every quality of gameness you choose. But they are not very good eating to begin with, and I'm tired to death of them."

Piscator decided to go a-trouting next day in Bonny Brook. He knew nothing about it except what he had gleaned from rough maps and from Peter—and a remembrance of having crossed the stream on the thirteen-mile drive from the railroad. But no matter; it would be a welcome change, it would signalize his emancipation—and what more felicitous votive offering for the shrine at the nor'west corner of the table than an unexpected dish of delicately browned pink-fleshed trout, secured by his own unaided craft? Clearly a direct and manifest inspiration.

Eight o'clock next morning found him with an after-breakfast pipe swinging along the high road at a five-mile gait, rod and landing net in cases under his arm. He had decided not to be conspicuous and spoil his surprise by either an early start or an announcement of his intentions. The robin and song sparrows and martens were filling the air with a conversational medley in spite of the lowering clouds and fog. A few moments of rigid self-analysis, following a comparison of his case with theirs, led Piscator to the conclusion that his own exhilaration in the face of the muggy atmosphere was due to two causes—the entire freedom and solitary dependence on his own resources, and, perhaps quite equally, the remembrance of an appointment at half-past one to teach the Peri how to catch a salmon off the old dock by the canal. While apparently contradictory, these two causes were really harmonious, for he felt sure it was his pronouncement of the true principles of sport which had brought the prize to him rather than that red-faced and insufferably familiar Grafton. He could remember her very words, "We women," she had said, with the most enticing humility, "aren't like men and can't be self-reliant. The world seems to have settled it for us that we shall be dependent and have at every step instructors and protectors." (Piscator had blinked rapidly several times at this.) "But if we must be taught, let it be by a thorough sportsman and a gentleman, not by a day laborer who happens to make a profession of guiding."

Piscator broke into a vigorous whistling of a randy-dandy march tune, setting his pace to keep time.

After what seemed like a very long two miles, he met an old man walking into town who directed him to the trail through the woods which he had been told met the brook a mile or two above where it crossed the road. With this timely help he struck the correct path a little further on, and after fifteen minutes' brisk walking between the almost impenetrable young growth of spruce and birch and hemlock, he descended the slope of a beautiful little valley at the foot of which beneath a line of tall grass and alders purled a hidden streamlet.

He jointed his rod with trembling fingers—for he wanted trout badly, and did not feel entire certainty of his ability—another humiliating proof, he told himself, of the truth of his theory. It took some time to do this, and to rig a cast of a Parmacheene-belle and a green-drake, for the day was one of those close, heavy-aired, smothery ones in which the infernal legions of black flies and mosquitoes rage mightily; so that, bearing the full brunt of the attack in the myriad-swarming enemy's own stronghold, Piscator had to pause for a thorough coating of tar and pennyroyal "dope" on face and hands. With every exposed surface glistening oilily, a pipe going, collar turned up and hat brim pulled down all around, it became possible to look about and consider the question of trout once more.

Cautiously approaching the bank in this little clearing, he deftly cast ten feet around a jutting overleaning clump of alders. Hardly had the fly touched the invisible water when there was a thrilling tug, a splash, and with a business-like yank Piscator urged a handsome quarter-pound trout, all gleaming red and yellow and live brown, into the capacious landing net. He passed from doubt to triumph in a twinkling; the thing was ridiculously easy if a man could but get down to first principles and do it all for himself; and such a zestful flavor was not to be had of a ten-pounder secured by a personally conducted expedition. Two more fish came out of this corner, but he decided they were too small to keep beside the first capture, so he moved on down stream.

The going became rather difficult after leaving this partially cleared space. The line caught a dozen times in a hundred feet while pushing one's way through the dense growth; often five minutes' patient maneuvering was necessary before the flies could be induced to drop on the surface of a shallow pool ten feet away; and before long he had to take alternately to the stream bed and the shore to make any progress. But he fished every yard of it conscientiously, crawling on his hands and knees to likely spots and sliding the rod through the branches till the flies could be flipped out; working down and up the riffles and swift water with minute care; greasing face and hands and reloading pipe every now and then to mitigate the insect pests; and after two hours of arduous labor he found himself, hot and breathless, a mile down stream, with a brace of ten-inch trout in his net. He was never able to decide quite finally whether or no he had wished to let go all of the three smaller fish which had been hooked, but not brought to bag; there are distinctions almost too fine to draw accurately between careless handling and actual releasing; and an escaped trout seems larger in the retrospect with only two in hand. But he was pretty well content. They were his very own; there was still over an hour's fishing of the larger brook in which to make up a respectable half-dozen; and then dinner and the Peri.

Presently the bushes became even thicker, and a still, deep pool, so closely overhung as to make fishing impossible, drove him out on the left-hand bank. He had thought progress difficult before, but this absolutely flat land and its intertwining undergrowth tried the temper. Upon attempting to work his way back to the stream, which had seemed to be turning to the left, he met soft ooze and marsh grass, showing that the brook fifty feet beyond must have ceased its flow. Of course he knew enough about trout to realize that this sort of a quagmire was no place for them; so he went on, stumbling over the roots that stuck out of the soft earth, raked fore and aft by the greenbriers, and forced to stop continually while he went back to loose the line from the leaves or unhooked from a twig the net in which he was carrying his two trout. Half a dozen times, too, he had to drop everything and cut the hook of the dangling dropper fly from his coat, in which it had buried itself.

These vexatious small hindrances harrassed him, their cumulative effect being to raise both the physical and mental temperature to some degrees beyond the comfortable normal; but he stuck to his task doggedly and floundered along, assuring himself that he must come soon to swift water or to the place where the stream crossed the road.

After traversing what seemed, even allowing for the difficulties, well over a mile, and finding no change of outlook or direction, the swamp began to get softer underfoot and darker with hemlock and tamarack ahead. For the hundredth time he reasoned it out, wondering if this could possibly be a deadwater slough forming an offset from the brook. It was just conceivable that the real stream went straight ahead or turned the other way beyond the point where he had left it; anyhow, he decided, the road was certainly on the other side of all this mud and water, and if the infernal slough did lead way down to the big marshes he had observed miles back when driving over—and the prospect ahead was steadily growing worse instead of better—he would do better on the opposite bank.

So he turned to retrace his steps. But this plausible logic was a serious admission, as he found by his shaking hands upon lighting a fresh pipe. "Now keep cool," he adjured himself aloud, "and don't be a childish idiot." However, it is difficult to bluff the inner ego—who has as an opponent the distinctly unfair advantage of omniscience—and Piscator found himself somewhat in the condition described by Heine—brain repeating Kant's "Critique of Pure Reason" to substantiate its disbelief in ghosts, while flying heart and prickly scalp and chilly spine did involuntary homage to the mysterious apparition. The very simplicity of the thing made its difficult solution unexpected, out of reason, exasperating.

It took some time to reach the end of the swift water where he had left the brook. Splashing across and working down on the other side, he found it did turn abruptly to the left where it became still, and he was again forced away from the water by soft mud and tangled bushes. So he set his teeth and vowed he'd stay beside it till it crossed the road if he had to walk all day, for cross it must somewhere.

This determination was eminently satisfactory until he reflected upon the Peri. What in the world would she think if he were late for his engagement? Already it was near the dinner hour, and he must reach the highway speedily to be in time. He advanced with fresh energy, though making slower progress as the half-obliterated trail began to run through and under spruces, while jagged tree trunks across and along it often completely blocked the way, and every ten steps the omnipresent alders and birches laid hold of tip or line.

After going much further apparently than on the other side, he came to the same sort of tract that had turned him there—a wall of evergreens, and beyond black ooze and an ever-thickening tangle of snaky-rooted alders. He stopped for a moment for breath, mopping his forehead, which streamed oil and perspiration; then, again encouraging himself aloud, he plunged head first through the spruce barrier, the more energetically since he was forced to admit that a real panic was making earnest efforts to take possession of his—and had almost succeeded.

Before he realized what was happening, the pointed spruce needles had become entangled with the line near the tip, jerking the tail fly off the reel bar below his left hand; and as he pushed through, the pressure pulled the lower hook into his left thumb, burying it well beyond the barb.

Piscator always laid it to his mental credit that his only comment on this was to whistle loud and long, his usual recourse in perplexity or trouble. Then, blessing his stars that it was the left hand, he painfully got out his knife and managed to cut the hook loose, tying his handkerchief around the thumb to stop the bleeding. Unjointing his rod and stowing away the reel in his pocket and the leader and flies in a fly-book, he set out again.

The deep swamp seemed to have no end, but he pressed forward. Some rising ground with huckleberry bushes gave him fresh courage; but this soon dipped back into flatness and quagmire.

At length, really unnerved by the protracted and irritating labor of stooping and worming his way as well as by the wound in his thumb, and convinced that the road must be off to the right, he decided to abandon the stream, though he hardly dared to do so. In desperation he struck out at right angles into the forest, where the young spruces joined prickly arms in a solid row.

He had not gone two hundred yards when he burst through the bushes skirting the edge of the highway. And there, a hundred yards to the left, was the bridge where the deceitful brook, having recovered its flow and spirits after its long marshy wanderings, sang merrily across the road.

Washing off the perspiration and blood in its grateful ripples, Piscator looked at his watch. It was already nearly half-past one; he could not get back to the house in time for his appointment—but of course the Peri would understand, and some day she would sympathize while he made light of his adventure. Meanwhile he had for her supper the two little trout, to which he had clung through everything.

Putting his hand to his pocket he discovered to his dismay that his fly-book was gone. It was a new book, well stocked, and the pride of Piscator's heart. Moreover, his salmon fishing was practically over without it. He was already late for the Peri—and, more than all, a distinct dislike to return to that miserable swamp made it absolutely necessary to do so. Depositing rod and fish in the bushes, he tramped wearily back. He expected to find the wallet where his accident had occured, since he had taken it out there; but a thorough search in every direction failed to bring it to light. Quite dispirited by this culminating misadventure, he decided to make his way home, and he had retraced about half the distance to the road, when, to his delight, his eye made out the black leather book fifty feet ahead. Stowing it away securely, he arrived at the highway without further trouble.

It was 2:25 when Piscator toiled up the steep

hill of The Birches. Reaching the porch he was smitten to the heart to perceive two figures rounding the crest of the hill toward the lake: the Peri and—yes, by Beelzebub, chief of the devils—Grafton! The Peri looked beyond commonly fetching. She had once explained confidentially to a bosom friend, who was condoling with her upon being dragged off to the end of nowhere by her "anglemaniac" father, that there was after all something in fishing, for she recognized some of the same ideas of color and form in tying a Jock-Scott to delude a salmon that where so essential in the Art of Dress; adding that beside she had some clothes to which no man yet had ever failed to rise.

She was wearing them now—a scarlet jacket beyond words, and the simplest perfection of an English walking skirt, beneath which appeared a pair of bewildering little high boots, the whole crowned by a white canvas hat on a pyramid of yellow hair.

Piscator looked, and groaned, and looked again. And then he sat him down and swore softly at trout and swamps, and went to his dinner.

He derived a poor consolation from the thought that he had really fished Bonny Brock and come off with more or less credit; but the reflection did not buoy very successfully. However, he mentioned his exploit casually to Peter the Dane.

"What luck?" queried Peter.

"Five or six small ones."

"H-m-m. Did you come to some deadwater?"

"Rather. I stopped fishing at the head of it."

"H-m. That deadwater has the only pools worth fishing in the brook. The rest doesn't pay for casting over."

Piscator smiled weakly. Then he went privily, fed his two quarter-pounders to the cat, and retired to his favorite salmon pool down the river.

But if the whole truth must be told, and the tale carried to its far from bitter end—the Peri did sup later on off luscious trout inveigled by the cunning of Piscator from the deadwater of Bonny Brook. And another engagement with her was kept by him punctiliously—but that, though the same story, is far too ancient a one to bear repetition.

A Trip to the High Sierras.—II.

(*Continued from page* 283)

Early the next morning, July 30, the Sierra Club took its departure, while D. and I stayed behind to ascend Alta Peak, 10,500 feet high, from which it was said we could see several glacial lakes. As we neared the summit we crossed a large snowdrift, where we tarried for a few moments to indulge in a game of snowballing, just as we had often done fifty years before in the far New England village where we were born. The air was soft and balmy, the aroma from thousands of flowers just below us was wafted to our nostrils on the gentle breeze, and over our heads a golden eagle was soaring and screaming his defiance.

From the top we had a fine view, including two lakes, but they were small, evidently destitute of fish, not very clear and as a whole rather disappointing. Returning to camp we prepared dinner and at 1 P. M. started for Bear Paw Meadow; the distance was only eight miles, but a high range intervened, and the trail soon became as steep as our horse could climb, with a descent equally precipitous on the other side. At Bear Paw it was said deer were usually quite numerous, and as the season opened Aug. 1, we were anxious to get out of the park, the line being just beyond Alta. Up to date we had seen very little game, except quail, but on this trail we saw several flocks of blue grouse, and could have shot a number had it been the open season.

Reaching Bear Paw, which was 2,000 feet lower than Alta, we were agreeably surprised to find that the Sierra Club had decided to pass the night there, and once more, and for the last time, we had the pleasure of listening to the discourses of these talented men. We spent two nights at Bear Paw, employing the intervening day in examining the vicinity for deer, but with very unsatisfactory results, for we found so little sign that we decided to leave the next morning. That our decision was a wise one was confirmed by a party of four who came in the next day and hunted the surrounding country faithfully for two days without seeing a deer, although in previous years the same men had killed many in that region. Later information revealed the fact that for some unknown cause the deer were much lower down on the range this year than they usually were, and most of them were far below us. Before dismissing the *Cervidæ* for good from this article, I will venture a few remarks about the deer of this section, although we neither killed nor saw a live one during our three weeks' stay in the mountains. I am quite familiar with the northern counties of California, and I feel certain that most of them contain far more and much larger deer than can be found as far south as Visalia. During the first three days of the open season four deer were killed near Mineral King, a place which will be referred to later on, but inquiry elicited the fact that with one exception their haunts had been located during the close season, and no more were killed during our stay. It is considered a good-sized buck there that will dress 100 pounds, and those that we saw were destitute of fat. In the northern counties the abundance of wild pea vine, a nutritious food of which deer as well as domestic stock are very fond, makes the deer very fat if not larger in frame, but I saw none of it in Tulare.

We left Bear Paw on Aug. 1 for Cliff Creek, eleven miles distant, with a good trail nearly all down grade, which brought us into the big tree belt once more, and also into the park. Disappointed as we were at the deer prospect, we were somewhat consoled by finding trout abundant in Cliff Creek, rather small, but of excellent flavor, they furnished an agreeable change to bacon straight. It was a beautiful stream, with pools, falls and rapids that made it an ideal trout stream, but it coursed its way through high ranges and heavy forests, rarely broken by meadows, and horse feed was therefore hard to find, so one night was all we decided to stay in this otherwise delightful place.

Our drive the next day was only six miles, but it led us through one of the most charming sections we had yet seen. It began with a climb of over 4,000 feet, and ended with a descent of 1,500. As we left the creek the trail began to ascend at once through a magnificent forest of pine and fir abounding in blue grouse, but before we reached the summit we passed through meadows richly endowed with flowers, one of which contained at least ten acres. The summit was reached in "Timber Gap," and soon after we began to descend we came to the deserted mine of Mineral King, after which this section is named. The mine seems to have been discovered by ranchers, who, although having considerable means, knew very little about gold and silver ores. They opened it up and built a mill in the cañon several hundred feet below, connecting the two by an aerial wire cable tramway, by which the ore was to be transported from mine to mill. The plan was all right, but unfortunately the ore proved so refractory that they could do nothing with it, and after various costly experiments it was abandoned.

Looking down into the bottom of the cañon from this point, we could see a wagon road, the first we had seen for two weeks, winding its way upward through meadows and alder thickets, until it terminated in a small cluster of rude cabins that made the Mineral King of to-day, owing its perpetuity chiefly to the summer influx of visitors seeking to escape from the torrid heat of the valleys. During the winter it is entirely deserted, as the elevation is 8,000 feet, and snow falls to the depth of eight or ten feet. One of the largest buildings is used as a store, post office and boarding house, and it has a tri-weekly stage to Visalia, sixty miles distant, bringing the mails and passengers at $5 each. The variety of coloring in the adjacent mountains indicate large mineral deposits, and within a quarter of a mile of the store there are four springs of sulphur, soda, arsenic and iron, respectively, all except the arsenic being strongly impregnated. It is one of the coldest stations in the mountains, frosty nights being quite common all summer, and in camping there two pairs of blankets are indispensable for comfort.

It was still early in the afternoon when we arrived at the store, and the lank condition of our horse, the result of twenty-four hours' fast, induced us to stable him for the night, with an ample supply of hay and grain, eating our own supper at the boarding house, for which we paid fifty cents each, although we found it inferior to that at the Giant Forest. Close by the hotel on the side of the hill were pitched the tents of a small detachment of Government surveyors, under Chief Barnard, and during our stay here we were indebted to them for many courtesies. One of the tents, containing cots, table, chairs, etc., was temporarily vacant, and Capt. Barnard placed it at our disposal for the first night, which we appreciated all the more from the fact that there was quite a heavy shower during the night.

There were several families located for the summer in the cabins and tents near by, and two or three parties who were in search of deer, as well as sections of the Sierra Club, and other tourists temporarily stopping here while doing the mountains, and during the evening most of the men came to the store, as they used to gather at Uncle 'Lisha's cobbler's shop, where they sat around on stools and boxes, smoking and discussed about game hunting, fishing and mountain travel, and pursuits generally. The store did not contain a very extensive stock of anything. The road from Visalia was a long and hard pull, the season at the camp short, and its present incumbent evidently not very opulent. Rows of canned fruit and vegetables were placed where they would make the most imposing appearance upon the shelves, with tobacco, a couple of boxes of cigars and some pipes; with a few groceries, could be seen through the dim light furnished by a kerosene lamp and a candle; no liquors were sold, and all of those present seemed to be of a highly respectable class.

During the evening we learned of a sheet of water three or four miles away, called Eagle Lake, where trout of incredible size were said to be abundant, but exceedingly difficult to catch with any known bait, and we decided to visit it the next day. A fine trout stream ran down the cañon within 100 yards of the camp, but the fish were small, and after hearing of the big fellows in the lake, we lost all interest in fingerlings.

The altitude of the lake is over 10,000 feet, and the trail steeper than any we had yet traveled. There were three or four fine mouse-colored burros grazing about that belonged to the proprietor of the store, so after a refreshing night's sleep in the tent we decided to turn our horse into the meadows and engage one of these for the trip to the lake. We had some trouble in packing the little fellow, who vigorously showed his resentment by kicking us every time we came within reach of his heels, a thing, however, which we only permitted to occur at rare intervals after we discovered his weakness.

The trail for the first half a mile led up the main cañon. The air was filled with the perfume of flowers after the rain, and the scenery would have excited the admiration even of a mountaineer. In front at the end of the cañon, three miles away, and 2,600 feet higher, was "Farewell Gap," through which the trail going to Kern Lakes and Kings River crossed the range. The two great glacier-scarred peaks that on either side formed the portals of this giant gateway, and which were joined by an inverted arch that was almost geometrically perfect, stood out distinct and clean-cut against a sky of purest blue, their snow-choked gulches glistening in dazzling whiteness beneath the rays of the morning sun. Off to our left across the cañon a view unfolded itself whose counterpart I have never seen. A ridge running from the bottom nearly to the top of the range was flanked by wide gulches, down which two streams, lashed into foam until they resembled broad ribbons of silver, came tumbling down from their sources in the snowdrifts near the summit. These were rather more than a mile away at an altitude of over 3,000 feet, above where we stood. In their lower courses they ran through steep meadows, gorgeous in their mantle of flowers; beyond lay thickets of mansinita and chemisal. Still higher were the magnificent pines and firs of the Sierras, and above all the great bare cliffs that culminated in "Saw Tooth Peak," reared their massive fronts far into the sky. I do not think it was possible that every foot of the water courses from the time they left their snowy birthplace until they were lost in the larger stream at our feet was visible, but if such was not the case, there was no evidence that would lead us to that conclusion. The line was unbroken from top to bottom, and the effect was charming beyond description.

Turning abruptly to the right, the climbing now began in dead earnest, in places the trail was so steep that several times our sure-footed little beast was thrown to his knees, and we were obliged to stop and rest both him and ourselves every few yards. The trail ran through rocks and heavy timber, broken by two or three small meadows, the last one of which where we were to camp we reached about 11 o'clock. On our way we saw some grouse and several woodchucks, the first we had met, and which are plenty in this vicinity.

The meadow, which was knee high in grass, with an area of about two acres, had a fine stream running through it, and was surrounded by fir and tamarack trees. It was about 400 feet below the lake, from which it was separated by a ridge of rocks, many of which were as large as a cottage. Staking out our burro, in whose fidelity we had but little confidence, we prepared our dinner, and after a rest and smoke started for the lake. It was of glacial origin, about 600 yards long by 200 wide, and perhaps 30 feet deep. On the opposite side, the mountain, bare and forbidding, arose abruptly for a thousand feet to the summit of the range, in its deeply scarred sides the snowdrifts came down almost to the water's edge, but nowhere there was a spear of vegetation visible; but on the near side a thrifty growth of large tamaracks were growing, and at intervals a few purple daisies and shooting stars relieved its somber outlines. Many large trout could be distinctly seen in its clear waters swimming about or floating lazily in the shadows of the great rocks in the bottom. They paid no attention to the fly, cast I ever so deftly, and after repeated futile attempts, in despair I substituted a bait of raw bacon, a move that was suggested by seeing one of them eagerly snap at a large white miller that fell in the water near me. The experiment proved eminently satisfactory, for within fifteen minutes I landed two splendid rainbow trout at least sixteen inches long, either of which would make a full meal for a hungry man. This was glory enough for one day, and after amusing ourselves by trying to hook a wood rat that lived in the rocks near the water, and who seemed determined to secure the tempting bait, we unjointed the rod and taking off our shoes soaked our swollen, feverish feet in the cool water.

As the sun began to decline, we returned to camp, after gathering a quantity of tamarack gum for chewing purposes and visiting the upper end of the lake, where we found the wreck of an old boat made of boards that some enthusiastic fisherman must have brought up with incredible labor on his back, as no horse or burro could get above the meadow.

As we intended to pass two nights at this camp, our first care was to make a comfortable couch of silver fir boughs, after which we made a delicious meal of the trout, which, contrary to past experience, were equally as good as the fellows we had caught in the streams. Another distinguishing feature was the color of their flesh, which was as deeply red as a fresh-run salmon.

After the dishes were washed and set aside, we clambered to the top of a huge boulder that commanded a glorious view of the surrounding ranges, and finding comfortable seats, we lit our cigars and enjoyed a spectacular treat that repaid us for all the fatigues of the trip. The lower half of the higher peaks were in the shadow for at least two hours before the sun left their summits. In our immediate vicinity the appalling destruction wrought by the glaciers was the most noticeable feature. John Muir stated in our hearing that a mile or more in depth had been removed from the ranges and swept down into the valleys and cañons, and appearances around us seemed to fully justify the assertion, hundreds of acres at the base of the range to our left were covered with rocks from the size of a two-story house down, some piled two or three deep, others standing on end like a tilted freight car, all bearing evidence of having been torn from the peaks above them. Away to the southwest lay the Mineral King district, its parti-colored rocks making a pleasing contrast to the dark green of Timber Gap. To the west and north the ranges hemmed us in with an amber-colored barrier that deepened as the sun went down, until the sunset glow that presaged the expiring efforts of the departing day threw over the whole scene a weird, almost unnatural, radiance that seemed borrowed from the light of other worlds.

The hummingbirds, which were plenty, even here went early to rest, and a single bat flitting about the treetops was the only sign of animal life visible as we descended to the camp-fire and sought our blankets. Notwithstanding the fact that the altitude was over 2,000 feet higher, we found the nights much warmer here than at Mineral King, and no sound disturbed our slumbers until daylight again appeared. To the north of our camp lay a timbered ridge that looked as if it might be a favorite haunt of deer, so the next morning D. took the rifle and went over to investigate its possibilities in that line while I in the early dawn clambered over the rocks again to the lake. As the fly seemed to be useless here, I opened the campaign with the same seductive lure of the previous day, but for some time without success. Many a big trout made a dash for the bait, but changed his mind when his nose touched it, but perseverance at length brought its reward, and within two hours I had all the trout we could use, not one of which was less than a foot long.

The climb and the pure mountain air had by this time given me a wolfish appetite, and I went back to camp where I found D., whose trip had been a fruitless one, engaged in frying onions for the morning meal. In the afternoon we changed and washed our underclothes in the stream, laying them upon the rocks to dry. The evening and night passed much like the preceding one, and the next morning we returned to Mineral King.

A small buck had been killed by the hunters during our absence, and we succeeded in getting enough meat for one meal, which was the only venison obtained during the trip. There was more rain with thunder and lightning during the day and evening, but ensconsed in Capt. Barnard's tent, we could defy the storm.

I remember a hill just west of my childhood home, whose far side I longed to explore. I observed that the sun, as it went down, barely cleared its summit, and I felt sure that over beyond was a land of fairies and mystery, such as I had yet experienced only in my dreams. It was with feelings somewhat akin to this, tempered slightly by the recollections of numerous gold

bricks I had been inveigled into purchasing in maturer years, that we now gazed upon the glorious sweep of Farewell Gap. We had watched the Sierra Club as they crept like insects slowly up its steep side, until standing for a moment in bold relief against the sky, they had gradually faded from our view, and straightway decided that our next move should be in that direction.

FORKED DEER.

[TO BE CONCLUDED.]

O'Hara and His Sheep.

AT the mention of the word shepherd a score of pleasing scenes arise before the mind's eye—fresh green pastures, dotted with sheep; cool leafy woods, melodious with the chants of birds; murmuring streams, or placid pools, reflecting their margins like a mirror; bright sunshine, or mayhap a gentle shower, whose drops seem to turn to buttercups and daisies, etc. Not only this, but a score or more of poetic legends or allusions arise to the memory and unconsciously we begin to quote:

"When shepherds pipe on oaten straws
And merry larks are ploughmen's clocks."

Or again:

"For, O! the shepherd's life is jolly,
Free from strife and melancholy."

Or again:

"And there he fed his fleecy flocks
Remote from care—from jars and shocks;
And played upon his pipe all day
Blithe as a bird in merry May.

Or yet again (from Spenser's quaint and delightful "Shepherd's Calendar"):

"Now leave, ye shepherd boys, your merry glee,
My Muse is hoarse and wearie of this stounde;
Here will I hang my pype upon this tree
Was never pype of reede did better sounde.
* * * * * * *
"Gather together, ye my little flocke—
My little flocke that was to me so liefe;
Let me, ah! lette me in your foldes ye lock
Ere the breme winter breede ye greater griefe.
* * * * * * *
"Adieu, delightes, that lulled me asleepe;
Adieu, my deare, whose love I bought so deare;
Adieu, my little Lambes and loved sheepe;
Adieu, ye Woodes, that oft my witnesse were;
Adieu, good Hobbinoll, that was so true;
Tell Rosalind her Colin bids her adieu."

But enough. My object here is not to make an anthology of pastoral verse.

There seems reason to believe that the shepherd's life has been a little idealized by the poets. In ancient times, when the shepherdess was in vogue, it was no doubt invested with considerable romance, but modern materialism has shorn it of this. Nevertheless, it remains a goodly life—fresh, free, devoid of care. But the man must be suited to it, or, in other words, must be native and to the manner born. I have such a one in mind as I write, and his name is not Daphnis, nor Strephon, nor Thyrsis, but simply O'Hara.

Before I describe him it will be proper to inform the reader that the Department of Public Parks of the city of New York, with an eye at once to economy and æsthetics, has provided two flocks of sheep—one for Central, and the other for Prospect Park. These, while securing a certain revenue, fit into the landscape very gracefully, rounding out, so to speak, its pastoral character. The department has also of course provided two shepherds, and these, with a judiciousness which does the department great credit, have always, so far as I know, been selected from the ancient race of shepherds beyond the sea.

I use the latter term advisedly. Now take O'Hara. He comes, as he has assured me, of ten and perhaps twenty or a hundred generations of shepherds. What is the consequence? He not only understands and sympathizes with his sheep, but he harmonizes with them almost, as much as they harmonize with the landscape. He may, indeed, be said to belong to the flock, and this is very far from implying a disparagement. (I opine if flocks of wolves were kept it would be much easier to find a man to harmonize with them than with a flock of sheep.)

I first met O'Hara on a fine bright afternoon in July. He was guarding his flock in the long meadow of Prospect Park. He was dressed in a loose canvas suit and an old straw hat, and leant upon his crook with a degagé air. As I approached him his air changed to one of attention, and I could not help noticing that he eyed me a little suspiciously. The fact is, O'Hara is used to being "guyed" by a certain class of city ninnies who think that a farmer or a shepherd or any one of that ilk is a fit butt for ridicule or "funny," as they express it. Well, seeing that I was eyed with suspicion, I assumed my most conciliatory mien and saluted the guardian of the flock. My salute was returned civilly, but coldly. This would have discouraged some, but I knew my man, or at least thought I did. So I held my ground and began to praise the flock and talk of washing and shearing and other matters connected with the care of sheep.

In an instant my auditor's attitude changed. He turned toward me and regarded me with the utmost interest.

"You were brought up in the country, thin, sir?" said he.

"Indeed I was—thank heaven!" I replied. "And I'm only sorry that I didn't stay there and be a shepherd." O'Hara's blue eyes shone with joyful surprise, and every vestige of distrust vanished from his hale countenance. I had won. And I confess I felt pleased immensely at the result of my diplomacy.

A reflection occurs to me here. How often the man who complains of gruffness or rudeness has himself only to blame? No one, however humble, likes to be approached in an arrogant or a patronizing way, and if he is free to resent it, depend upon it he will. On the other hand, a considerate mode of address will almost invariably insure civility and good will. Let sportsmen and others who have to do with guides, etc., make a note of this.

"I have a hundred and ninety-five in the flock, sir," said O'Hara, becoming open and communicative. "Southdowns they call thim here, but in the old country we called thim mountain sheep. Yes, sir, they keep me movin', but Tommie here" (indicating a lad of seven or eight—his son), "and the dogs is a great help to me. It's aisy, now, though, compared to the lambin' saison. Thin I had to hustle. No, sir, since the lambs came I don't drive thim into the fold at night (it's too small), but up on the hill beyant there under the trees. Whin do I take thim out? At 5 in the mornin', sir. Oh, that's not early. Sure it's only laziness to be sleepin' up till 7 or 8 as they do in this country. I was always an early riser, sir. You see, I was brought up to it. I can't sleep after 5. Were you ever up early, sir—m'anin' no offince. Sure it's the grandest time of the day—the dew on the grass and the birds singin' and everythin' smellin' so fresh and sweet! Did I ever play a pipe? No, sir, but I smoke a pipe, if that's what you mane. Hi, boy! Stand back there!"

O'HARA, TOMMIE AND THE DOGS.

While we were talking, a number of women and children had gathered about the sheep and one lusty lad conceived the idea of having a ride, and was in the act of mounting when O'Hara broke into his sudden exclamation. Some of the women had infants in their arms, and these they would hold down, urging them to stroke and pet the lambs. The infants at first would hold back as if in the presence of so many lions, but ultimately the mother's words of encouragement prevailed. It was all very pretty, but not much to the mind of O'Hara, who was jealous of his flock. Even less to his mind were some of the questions which were put to him, and which betrayed a woeful ignorance of pastoral life. To most of these he turned a deaf and scornful ear.

"Herdin' here, sir, is not what it is in the old country," he said, plaintively. "There you have no one to bother

THE SHEEP.

you, and you haven't to be watchin' the sheep all the time."

"Won't you tell me something of your life in the old country?" I said.

"Wait till the crowd goes home, sir," he answered, "and I've got the flock rounded up for the night."

So I hung about and took some snap shots, longing for the crowd to go home. Toward 6 o'clock they began to melt away, and in a little while there was hardly a soul to be seen. Then O'Hara sent his dogs about and the sheep went scurrying in the direction of the hill, the shepherd somewhat laboriously but valiantly trying to keep up with them. When they were pretty well bunched O'Hara shouted to Prince, one of the dogs, and that intelligent creature instantly darted to the head of the flock and kept it from ascending the hill. The object of this maneuver was manifest when O'Hara, with his faithful aide, Tommie, came up.

Leaving Tommie and Prince at the bottom of the hill, O'Hara ascended for about twenty yards and then posting himself at the edge of a well-beaten path and leaning on his crook, he cried: "Let thim come."

Tommie and Prince formed a gap, so to speak, and the sheep urged by Topsey, the second dog, began to file through. Up the hill by the beaten path they rushed, and when they reached the shepherd, out went his right hand and he began to beat time, as it were. O'Hara was counting. The object of this was not very clear to me, as I failed to see how any of the sheep could be lost, and I suspected it was mere force of habit, which indeed it proved to be. At first the counting was easy enough, but presently the stream of sheep grew thicker, and then the counter was evidently in trouble. Quicker and quicker went the hand, till finally it was waved wildly aloft, and then fell down with a gesture of despair. Facing about, O'Hara shouted to Tommie and wanted to know in vigorous language why he had let the sheep come so fast. Tommie (who had been watching the writer more intently than the sheep), proceeded to defend himself, but was ordered to be silent and prepare for another count. So the dogs were sent up the hill after the sheep, which came down in a hurry, and then a gap was formed as before and Tommie being more circumspect this time, O'Hara was enabled to make his count. A smile of satisfaction was on his face when I accosted him.

"Well," I asked, "have you got them all?"

"Yes, sir," he said, "a hundred and ninety-five. I'd be unaisy if I didn't count them, for I always counted my sheep, night and mornin'."

I went up the hill where the flock, gathered together beneath the thickly spreading trees, was preparing to pass the night, with a great bleating of lambs seeking their mothers and vice versa. After a while the bleating ceased and the flock for the most part was lying down. Their breathing, mingled with the whispering of the leaves, was the only sound to be heard. To accentuate the peace of the scene, there, twenty feet away, on the other side of a rustic paling, was the old graveyard where

"Each in his narrow cell forever laid
The rude forefathers of the hamlet sleep."

When I came down the hill I found O'Hara seated on a rock smoking his pipe pensively, with the dogs at his feet. I stretched myself opposite him on the grass and lighting my own pipe reminded him of his promise to tell me something of his life in the old country.

He continued to smoke for a while in silence, with the expression of one whose memory was working, then removed his pipe, wiped his mouth with the sleeve of his coat, and spoke substantially as follows:

"I was born, sir, in the County Roscommon, and as long as I can remimber I had charge of sheep. My master was one Mr. O'Conor, of Dundermott, a fine man, the Lord have mercy on him! He owned hundreds of acres and I couldn't tell you how many sheep, but we used to sind thousands of thim to Ballinasloe every year. It came natural to me to look after the poor craytures, so helpless and like childer, sir. In the winter the life was a trifle hard, for the weather was wet and cold, but not the murderin' cold we have here. Often I lay at the back of a ditch all night, with the wind and the rain whistlin' through the bushes. But whin the summer came—ah! thin it was different. Sure nothing could be pleasanter, sir. To see the fields covered with buttercups and daisies and to hear the larks in the mornin' and the corncrakes at night. (Ah! the corncrakes! Often I lie awake thinkin' I hear thim.) And thin the washin' and the shearin'—what fun and divarsion! Heighho! Sure we have nothing like it here, sir. Well, I grew up without knowin' it, as I may say, but thin a change came. The master died, and the eldest son (the second eldest became the famous Roosian Ambassador, Sir Nicholas)—the eldest son bein' what we call here a great sport, ordered my father to get rid of some of his dogs for why they disturbed the game. My father loved his dogs, and by the same token had a will of his own. 'Mr. O'Conor,' says he, 'wherever my dogs is there I will be!' So they parted. My father was broken-hearted at leavin' the old home, and in throth so were we all. Howsomedeavor, we found a new place under Lord John Browne, but my father could never warm to it, and faded away and died, sir!"

The speaker paused for a few minutes and then resumed:

"My eldest brother thin got married, but as it turned out, the wife began to wear the breeches. As they say here, she tried to boss the whole show. But she couldn't boss me, so after we'd had a few rows, for peace sake I left the house.

"I drifted about for a while, not much carin' what became of me, till by chance I met my old friend, Tom Mealish, who was home on a visit from America. He told me all about the wonders of New York and how he owned a saloon and expected to be an alderman and maybe mayor some day. I listened to him till sure my head was turned, sir. 'Tom,' says I, 'after hearin' all you've told me, I'm afeard I never can contint myself here.' 'And why should you?' says he. 'Why not come back with me?' 'But the passage money, Tom?' says I. 'Oh, that'll be all right,' says he. 'I'll advance it to you, Pat, and you can pay me back or not as you have a mind to.' Sure he was the ginerous soul! Ah! but in throth, sir, I was sorry to leave the old country—and sorry to leave my dog Rover, that shared all my troubles. And, do you know, sir, he seemed to know that I was goin' for he did nothing but cry about the fields all night for a week before I left. Oh, he was the wise dog! Well, sir, at length I said good bye to all, fearin' it was for the last time, and I'm fearin' so still."

O'Hara paused again, and I saw two great tears begin to trickle down his weather-beaten face. I could not trust myself to gaze upon a picture of such genuine emotion and turned away my head.

"But God has been good to me here, sir," he said, resuming, "to give me the care of sheep, for that is all I know anything about, and I don't want to know about anything else, for as I said before, sir, I love my sheep and feel like a kind of father to the poor craytures."

"O'Hara," I said, when he had done, "you are a true shepherd, and I'm sure your sheep return your love."

"Well, sir," he answered, with a humorous twinkle in his blue eyes (and the quick transition of his mood betokened the true Celt), "I think they'd vote for me if they could. But I'm not wantin' to turn politician."

"That's right," I said. "Don't. A shepherd is a happier man than any politician in the land—happier than a president—happier than a king."

The woods were growing black against the tawny western sky and the stars began to glimmer through the sultry midsummer haze. I glanced toward the sheep. They were all lying down now, peacefully chewing the cud, or with heads outstretched asleep. I divined that the shepherd would fain be following their example, so I got up and wished him good night.

"Good night, sir, kindly," said O'Hara, in a tone so kindly that it is still lingering in my ears.

FRANCIS MOONAN.

"In Boyhood Days."

Editor Forest and Stream:

Under this caption in this week's issue of FOREST AND STREAM, Mr. T. J. Chapman has said some very pleasant things about the picture by my son, published as a supplement to your admirable paper.

But I shall have to differ with Mr. Chapman's claim that the boy in the foreground is himself, as I know for a certainty "that's me" and my little "yaller dog" Ponto.

Dear old Ponto was the most enthusiastic squirrel and woodchuck dog for his size that I ever saw. He was no larger than a pocket beagle, but would tackle any woodchuck that he could get in a stone fence or ledge of rocks, and when he treed a black or gray squirrel, he would stay at that tree or follow him from tree to tree as long as there was any prospects of getting it.

My father was a country doctor, and Ponto, with his running mate, "Old Bull" (a large, white mongrel of bulldog and half a dozen other breeds, but the bulldog predominated), often followed him into the country. On one such trip, when about half a mile from home, they chased a woodchuck into a stone fence beside the road, and when father returned he found the dogs where he had left them, the chuck still "holding the fort." Leaving his horse in the road, father went to help dislodge *Arctomys monax*. The little dog was on the field side of the fence at an opening large enough to admit him facing the woodchuck. Father removed some stone, which enabled the large dog to get a hold on the hindquarters of the rodent, which he pulled through the wall with the little dog fastened to it; and then it was "nip and tuck" as to which ('chuck or little dog) was getting the most of the shaking. But enough about the dogs, who died and were buried more than half a century ago within twenty rods of where these lines are written; and the woodchucks about here are having a comparatively peaceful time, as shown by one of them making his home under the veranda of a house within ten rods of the Presbyterian church that stands at the head of the main street of this village (Theresa). (This church was built and presented to the Presbyterian Society by the late Roswell P. Flower, whose parents were of the original charter members in 1828.)

But to return to "Boyhood Days." Mr. Chapman is also mistaken about the gun represented in the picture. Originally it was not the "little gun" it looks to be. It was once fourteen inches longer than when the writer carried it. In fact, it was the gun carried by the great-grandfather of the artist (whose name is in the corner of the picture) through the War of the Revolution. Of course it was a flintlock then. Afterward it was changed to a percussion lock, and just before I commenced to use it in the early forties, it was cut off, restocked and changed to a cap lock. Yet it was the same old gun of grandfather's. In August, 1852, I loaned it to a country boy to shoot ducks in Hyde Lake, two and a half miles from the village. A few days later the boy reported that he had dropped it from the boat into the lake. Afterward he paid me the munificent sum of $5. Had I it today I should add two more round figures between the five and the period, as its value, with "Not for sale."

A month ago (more than half a century after the gun was lost) I was in a boat on Hyde Lake for the first time in my life. I saw seven ducks, five of them within reach of the old gun, had I had it, and for which I wished.

As for the stone fence in the picture, that Mr. Chapman thinks resembles "Captain Peter's, down by the river," I do not deny. I only know that it was changed somewhat from the original of which it was made, but the near-by tree remains the same. J. L. DAVISON.

P. S.—To show that the hunting instinct that was instilled by the old gun sixty years ago (I commenced using it when nine years of age) has not diminished, let me relate that for the past two weeks a young friend from Rochester and myself have been in camp on Red Lake alone, except that for three days we had some young friends from the village with us. Most of the time we were walking up grouse (we have no dog), of which there were plenty. Up to yesterday morning my young friend and myself were even as to the number each had killed, but yesterday he "wiped my eye," coming in with two at noon. I missed the only one I saw during the three hours I was out, while my friend reported putting up about a dozen. We went separate and in different directions. I am not going to report the number we killed, suffice to say that we had plenty of grouse in the camp from the second day. We also had two gray squirrels, of which there are plenty, but we shot only what happened to come to us. There has been no frost or heavy rain to disturb the leaves, and the trees are beautiful with their green, red and sere brown leaves. I have not taken a grouse that had not a fair chance of getting away on the wing. I have missed many more than I killed, but I would rather miss one on the wing than to "pot-shoot" it. With the old gun they were always shot on the ground or log or from a tree. J. L. D.

THERESA, N. Y., Oct. 4.

Natural History.

The Kinkajou.

IN April last we published a short article about the curious kinkajou (*Cercoleptes caudivolvulus*), that curious animal which was long regarded as one of the lemurs, but is now placed in that division of the carnivores known as *Arctoidea;* a group which contains the Southwestern bassaris, the raccoons, nasuas, bears, otters and weasels. It is an extraordinary animal, whose hands have no opposable thumb and whose fingers are webbed for nearly their whole length. Nevertheless, it uses its hands much as the human being does his. The tongue is long, slim and extensive, and can be inserted into small holes in search of insects or the honey of bees. Its life is spent chiefly in trees. It is a nocturnal animal, and very active in the hours of darkness. It is easily tamed, and is said to make an intelligent and affectionate pet, as was shown in our issue of April 5. From the London Country Gentleman we take the accompanying illustration and these observations, contributed by one who has studied the kinkajou:

"Suspended Animation" was the title suggested by a contemporary for the portrait of this strangely attractive beast, taken in its favorite position of hanging by its tail. It eats its food and drinks in this inverted pose, which it is reported by the Indians to assume when drinking from the rivers of the Brazilian forests. The kinkajou descends a branch hanging over the water, drops itself to the length of its tail, and then laps comfortably like a dog. It has the longest tongue, in proportion to its size, of any living mammal, the ant-eaters not excepted, and is the only creature which habitually climbs up its own tail, or uses it as a rope to haul on. The tongue seems practically endless, yet it uses it with as much precision as if it were a hand. With it it explores all the holes and crevices in trees for insects. It will put it out to reach food at a

THE KINKAJOU.

distance as neatly as an elephant does its trunk. If made a pet of (and it makes a very charming pet) it will try to explore your ear or the space between your neck and collar with the same inquisitive organ. In the forests of South America and Mexico, which it frequents, it is said to feed largely on the honey of the various wild bees. The solitary bees which make small nests in holes and cracks with a few honey cells, probably suffer most from its attacks, for all their care cannot keep out its endless exploring tongue. There are other bees, too, which make honey, but have no stings, which the Brazilians have rather humorously named "Angelitos," or angels. The nectar on which these angels feed is, no doubt, an easy prey to the keen-scented, night-walking kinkajou. In appearance he is one of the most taking of all the smaller animals. His fur is like yellowish plush, as deep and soft as the wonderful carpets made for the central aisle of Westminster Abbey, for the Coronation. The hand sinks into it as if it were moss, and the "pile" is so thick and springy that the fur comes back into place at once. By day it mainly sleeps. Its eyes dislike the light, and the pupils vanish into mere points, but it is by no means so great a hater of the day as the lemurs and the lorises. If wakened up it will feed and even play. But it is at dusk that it wakes up and shows its activity and wonderfully friendly disposition. It is a most graceful climber, and swings itself from point to point with its tail. One kept at the "Zoo" used to swing from the top of its cage to any point at which food was offered it. It had also a pretty habit of holding the food, which it took in the first instance with its tongue, in its hands, and eating it with great propriety in the pendent position it had just assumed. Swallowing "upward" apparently gives it no trouble. When hanging thus it frequently holds on to its own tail by its hind feet, just as if the tail were a rope detached from its body, which it was nervous about letting go. In size it is as large as a cat, but much more strongly built. It is probably quite carnivorous when it gets the chance. A correspondent of the Spectator states that one which he kept killed a whole brood of young turkeys, and occasionally tried to use its teeth on him.

Blue Fox Raising in Alaska.

FOR some years past, efforts have been made to increase the production of blue foxes on various Alaskan islands by the destruction of male animals only. The blue fox is believed to be monogamous, and it has been hoped that by artificial selection and environment it might be possible to change its habits, so that it would become polygamous. If this could be accomplished, a very large proportion of the males might be killed each year, the supply of blue fox fur would be materially increased, and yet the annual production of young would constantly increase.

The Treasury Department has permitted the carrying on of extended experiments on the Pribilof Islands, and for the last four seasons all females taken in the traps on St. George Island have been released, males only having been killed. In 1901 an effort was made to ascertain the total number of foxes on St. George's. All animals captured were marked and released, so that no fox was counted twice. According to theory the method practiced on this island should have resulted in a great preponderance of females, but such excess does not exist, as shown by the record of 1901-02, which gives for a total of 1,304 foxes caught, an excess of only 76 females over males.

If the effort to increase the number of breeding females had been successful, and only two young were allowed for the increase of each female annually, it is obvious that the females would have doubled up every year—less of course such as died by accident or from natural causes; while if seventy-five per cent. of the male increase was destroyed, the numbers of that sex would increase very slowly. As a matter of fact, it is believed that foxes sometimes have ten, twelve or more young ones.

On the Semidi Islands is a fox colony owned by the Semidi Propagating Co., where the foxes are cared for and all the females trapped—as well as a certain number of the males—are released. Nevertheless the foxes here have not increased as they should have done according to the figures. Very little is known about the causes which keep down the blue foxes, but the observations made show clearly that these causes exist, and it is known that certain blue foxes bred in the National Zoological Park were killed by the parasite *Uncinaria*.

We may imagine for the present that the profits of the blue fox industry in Alaska will not equal the glowing expectations of the enthusiasts who have gone into it. At the same time it may be a very profitable and satisfactory business.

The food problem has always been regarded as the most important one to be faced in the carrying on of this industry. It may be imagined that many other difficulties stand in the way of the fox breeder, as has been found true in the case of persons who have endeavored to breed other fur-bearing animals for profit.

About Sea-Gulls.

From Cornwall Simeon's "Stray Notes on Sea Fishing and Natural History."

SEA GULLS I have heard, which had been caught young, and tamed, have continued to keep up their intimacy with those who reared them after they had gained the full use of their wings and were at perfect liberty; though they took advantage of it to go away every year at the breeding season, and might have been supposed to have entirely resumed their natural habits. Both of these instances occurred in the Isle of Wight—one at Calbourne, where I well remember "Old Phil," as he was called, year after year, sailing over the village green and alighting on a low wall at the grocer's shop, from which he used to be fed with bits of cheese, of which he was very fond, and other similar dainties. The other instance was near Sea View, where, I am informed, the gull used to return in the same way, his former tameness not appearing to have been at all affected by his temporary retirement into wild life. Not the least remarkable part of the history of these birds is that, during the breeding season, each of them occasionally brought his mate with him to introduce her to his old friends and to invite her to partake of their hospitality. I don't think, indeed, that "Old Phil" ever prevailed on his better half to come and share his cheese, but she used to keep him company into the village, and sometimes amuse herself in a pond hard by, while he went to pay his accustomed visit to the grocer. In the other case, near Sea View, my informant tells me the wild gull used to come up and feed with the tame one under his dining-room windows, though she would not approach quite close so long as anyone was visible at them, but sat on the grass plat a short distance off, or hovered round until the coast seemed clear.

Perhaps there is naturally less fear of man entertained by gulls than by most other birds. One can scarcely be for a few hours at sea, or by the water in a harbor town, without some of them, from curiosity or carelessness, coming round so close to one as to afford sufficient proof of this. On one occasion, while fishing at some distance outside the harbor at Stornoway, I threw over, foul-hooked, and brought into the boat, with a short cuddy rod and line, which happened to be on board, two gulls, as they flew round close to us, allured by the hope of a share in our fish. The first, when released, not having exhibited the slightest fear, but continued to hover round us, closer, if anything, than before, as if he fancied he had then a special claim to our attention, I thought on catching the second I would see to what extent he might be disposed to entertain friendly relations toward us. Accordingly, I took him in my lap, and offered him some nice bits of fish. At first he professed to be angry, and pecked at my fingers instead of the fish, as if to ask whether I thought it possible that he would condescend to accept my donations under restraint. However, having accidentally-on-purpose got hold of a piece of the fish, down it went; and, apparently thinking that under the circumstances he might do worse, he set to work with no ill will or appetite, and soon got through a good part of a haddock. Then, however, whether from eating too fast, or from his position being uncomfortable, or perhaps from a feeling that he had been compromising his dignity—

fortunately for me I had a pair of mackintosh overalls on—up it all came again. As I had been for some time engaged in feeding this nursling, who thus repaid me by "puking in his nurse's arms," and the fish were biting freely, I left him to his own devices, and away he went. On regaining his liberty, however, so far from appearing to resent my compulsory kindness, he rather seemed to wish for a repetition of the same course of treatment for he continued to fly backward and forward within a few feet of our heads, as if he thought he had been a fool after all. The captain of one of the Dover and Ostend steamers told me that he had seen a gull come and take off the taffrail food which had been placed there for him.

Changes of weather may be foretold with considerable accuracy by observing the flight of gulls, as, after feeding inland, they, according to their invariable custom, wing their way homeward toward evening to their roosting places in the cliffs; making this transit in fine weather high and in comparative silence, but in bad blustery weather, and before rain, much more noisily and nearer to the ground, merely skirting the tops of the coverts which lie in their course.

Do Not Destroy Hornets' Nests.

Editor Forest and Stream:

As the leaves are dropping from the trees and the hunting season is approaching when many sharp-eyed gunners will be abroad in the woods, we wish at this time to take the opportunity to call attention to the error of the common practice of shooting through hornets' nests. These nests will soon be conspicuous in the forests, and by the close of the hunting season scarcely one of the many now existing will be left uninjured by the gunners. The fact that this is a useless, idle practice that results in the destruction of living things that can not be replaced by man, should be enough to condemn it with all thoughtful persons, but there is much more to be said against it than that it is a useless waste of ammunition. It is a positive destruction of some of the most useful creatures which by their habits benefit mankind without his generally being aware of the fact.

Hornets or "white-faced wasps" have no evil traits or obnoxious features. It is true that they sometimes sting, but this is only when they are attacked in their own homes, or think that their young are in danger. Any brave man would do the same, and we would despise the coward who would not fight for his own.

The great value of these insects is in their feeding habits. They live entirely upon insects, mostly flies, and, in fact, when they are near dwellings their food is generally the common house fly. They are nature's greatest factor in reducing this serious pest. It is well known that flies carry disease germs, such as those of typhoid fever, and it can thus be seen that hornets have a decidedly sanitary effect as a result of their desirable insectivorous habits. Where there are more hornets there are fewer flies and fewer disease germs conveyed. Spare the hornets' nests, and add to the comforts and healthfulness of mankind.

THE PENNSYLVANIA STATE COLLEGE, Oct. 16.

Nova Scotia Bird Flights.

CANSO, Nova Scotia, Oct. 7.—*Editor Forest and Stream:* Nearly all migratory birds were from three to ten days late in arriving here this spring, probably owing to a very backward season.

Hedge sparrows were here on March 17. Some robins stayed with us all winter, as usual. Last winter was very mild, the thermometer never going lower than six degrees above. Bluebirds were quite a week late; yellow warblers about ten days. Swallows and sand martens exceptionally late. I saw two swallows on May 7. From the 4th to 7th, included, were warm, with south to southwest winds, but after the 7th the weather broke and remained hot for several days. The next lot of swallows appeared on the 13th. I never saw one between the 7th and 13th.

It is no exaggeration to state that the sea ducks of nearly every description pass this cape in thousands on their southern migration. The flight is now on, principally coots and eiders. Any one anxious to add to his collection would do well to try Canso.

Horse mackerel are very numerous in our bay. The man from Halifax does not know much about the Nova Scotia fisherman when he states they would not fish for horse mackerel. Two-thirds of Gloucester vessels are manned by men from this Province. That ought to be guarantee sufficient. They will dare anything in a boat.

C. O. D.

The Ruffed Grouse's Drinking.

BROOKLINE, Mass., Oct. 11.—*Editor Forest and Stream:* In answer to W. W. Brown's question in the FOREST AND STREAM for Oct. 11, I would say that at the last sportsmen's show at Boston I saw the ruffed grouse drink from a pan of water like common barnyard fowl.

DAEM.

Ruffed Grouse in Confinement.

LAST week I saw four ruffed grouse under wire at Blooming Grove Park which were raised from eggs covered by a domestic hen, and they walked out to the end of a perch and pecked cabbage leaves from my fingers through the meshes. CHARLES HALLOCK.

The figure of a man impaled on a set of magnificent elk antlers hanging on the walls of the National Museum startled visitors to that institution. The screams of the unfortunate man quickly brought assistance and he was relieved from his perch after hanging only a few moments. The man was John Fisher, forty years old, a workman employed at the Museum. The prongs of the antlers had entered his thighs to a considerable depth. The man was conveyed to the Emergency Hospital, where his wounds were dressed.

Fisher was employed in the main hall of the Museum, making some repairs about fifteen or twenty feet from the floor. Below him, attached to a heavy shield, hung a set of elk antlers. Fisher slipped from his position and fell, alighting on the antlers. He broke off three of the longest prongs. The short prongs near the base of the set caught the man in the thighs, however, and such was the force of his fall that the prongs entered the thighs to a sufficient depth to support Fisher's weight. The noise of the fall and the cries of Fisher attracted the attention of the Museum employes, and the man was quickly removed from his painful perch.—Washington Post.

Hints and Wrinkles.

Readers are invited to send for publication under this head hints and wrinkles drawn from practical experience, and pertaining to shooting, fishing, camping and outdoor life.

No. 1.—A Home-Made Rifle Cover.

Years ago I enjoyed the companionship of C. M. Wilcox, a venerable gentleman, in many one-day excursions after small game and prairie dogs in the sandhills of the West. Mr. Wilcox was very fond of small-bore rifle shooting, and as prairie dogs were numerous everywhere, it was natural that we should practice on them. Mr. Wilcox always carried a small take-down rifle wrapped in a sheet of stout paper, and one who observed him as he sat in a trolley car with this neat package lying across his knees would never suspect the nature of its contents, or that his pockets were stuffed with sandwiches, cartridges, cleaning material, etc. Arrived at our destination—generally a couple of miles from a dog town—he took the rifle out, put it together, folded the paper and put it in a pocket until night, when, in returning home, the rifle again reposed inside its wrapper. No bulky canvas case for him to lug around all day, and to attract attention and queries as to his luck.

It is a nuisance to the man who goes out thus for a day afield to carry a stiff case with him, but a better substitute than the wrapping paper is a cover of light brown duck, which may be folded almost as small as a handkerchief. If the rifle has swivels and a sling strap, the handiest sort of cover may be made in a few minutes on any sewing machine. In form it should be similar to the conventional rifle cover, with a flap to button or buckle over the butt, and with soft leather reinforcement over muzzle, to protect the front sight. Buttonholes should be worked at the two points where the swivel studs touch the cover, and by this means the cover has a sling strap or not, as desired. If the former, remove the sling before putting the rifle in the cover, then snap the swivels into the studs through the buttonholes in the cover. Nothing could be simpler. Six-ounce duck is heavy enough.

The cover may be waterproofed by dissolving paraffin in turpentine and applying one coat with a brush, then hanging in the sunlight a short time until dry.

PERRY D. FRAZER.

Game Bag and Gun.

Shooting Along Great South Bay.

Editor Forest and Stream:

In the city of the Greater New York and its immediate vicinity there are many sportsmen who cannot take the time from their business to go on a shooting trip, as shooting trips are generally understood. Such a trip almost always implies many miles of travel and considerable outlay of time and money. Because such men do not know where to go to find good shooting near home, they often do not go shooting at all.

It is generally known that there is excellent quail shooting on Long Island, and it is easy to say go to Bay Shore, Islip, Bayport, and on out to the end of the island. Such advice, however, is vague. It implies much, but gives nothing definite. And this indefiniteness applies equally to duck shooting, rabbit shooting and all game.

After a week of travel and careful study of the South Side of Long Island, I am convinced that at various points from Bay Shore to Good Ground one can have a profitable outing of one day or one week, can be well cared for, and need be under no heavy expense, either in the way of time or money.

At Bay Shore I met Mr. Fred Dominy, of the Dominy House, a comfortable hotel. Mr. Dominy is a sportsman, owns good dogs, and is in close touch with all the best guides, including Capt. Hicks. He is prepared to help people to duck shooting also, and by writing him a few days in advance, any of your readers may learn what the prospects are.

Here I also met Capt. Veltman, of the sloop Madeline. I visited him on board and found him well prepared to accommodate a party of from two to six duck shooters. He furnishes batteries, decoys, and indeed everything except the ability to shoot, and ducking weather.

If one prefers to go to Islip, the Orowoc Hotel will be found comfortable. Mr. Frank Buchacek is a good sportsman, and will take care of deer, duck and quail shooters, procure guides for them and fit them out with what they need. For the benefit of his guests he has built on the outer bar a substantial cabin as a refuge for his duck hunters, in case they are caught there by bad weather. Arrangements should be made in advance here as in all other places.

At Bayport, the Bayport Hotel is kept by Mr. Henry Stokes. The hotel is a good one, and the proprietor is near deer, duck and quail grounds. He can secure competent men as guides or assistants.

Bellport is not far from Bayport. It has long been famous as a duck shooting ground, and the Wyandotte Hotel, kept by Uncle Billy Kreamer, will be remembered by many of the older generation. Although Mr. Kreamer is not as young as he used to be, his son is following in his footsteps, and can take charge of visiting gunners. Their sloop, batteries, scooters, sharpies and men are all in excellent condition.

At Centre Moriches, conditions for duck shooting are excellent for those who can shoot there, but not for the general public. An old English grant covers the bay for about eight miles on the outer bar, and six along shore, and the shooting privileges are rented out to one man by the present generation of heirs. However, you can get off before you reach Centre Moriches, or can stay on the train and go just beyond, and may thus forget that King George eever existed. But this antique grant does not cover the adjacent land, and one may get fine quail shooting, excellent accommodations and good guides, by writing Mr. J. W. Rose, Long Island Hotel. I spent an enjoyable evening at this hotel under the palms before an open grate fire studying Long Island ancient history.

The waters of Shinnecock Bay, near Good Ground, are well known to duck shooters, and the name calls up many memories, cheerful and sad. Mr. E. J. Bellows, of the Lighthouse Cottage, makes it his business to care for gunners. After he takes you in charge, all you need is to be able to shoot. Mr. Harry G. Carter is a shooter and guide at East Quoque, and at East Quogue also is Mr. Lew Morris, who has taken a comfortable cottage for the entertainment of gunners. Mr. Morris has many friends who will be glad to learn that he has opened this resort.

Black ducks are now on in goodly numbers, and the writer got a few black ducks last week. Some broadbills have come, too.

A copy of the *Game Laws in Brief* will post one as to the law regulating the taking of game and should be carefully studied.

The outlook for quail has not been so good in years, and this is true also of deer. As to the ducks, they have always visited the South Shore in great numbers, and I guess they always will. T. E. B.

NEW YORK, Oct. 18.

[Note.—Arrangements have been made with all nearby advertisers to report to the FOREST AND STREAM from time to time the conditions of shooting in their localities. These reports will be published for the benefit of our readers.]

The Extirpation of Valuable Birds.

I HAVE read with a great deal of interest and pleasure the valuable article by A. K. Fisher, entitled "Two Vanishing Game Birds," which was printed in FOREST AND STREAM Sept. 27. It sounds a timely note of warning which should not pass unheeded by sportsmen and others who are interested in our native birds, for, that there is danger of the practical annihilation of the species he has named there is no doubt.

For many years I have watched the steadily increasing dangers which not only threaten these, but other species also, and have often wished that some concerted action all over the country could be brought about by which in the various State legislatures proper laws could be obtained.

I have had in years past my full share of work before legislative committees, and I will state now, though I dislike to make the admission, that the time I have wasted in endeavoring to secure discreet and wise laws for the better protection of birds is among my greatest regrets.

There are always members of these committees who "know it all" so far as game laws are concerned, and it is a wise and eloquent and thoroughly persistent man only who can make any impression on them. To the first two qualities I do not lay any claim, but the third one I think I possess in a fair degree.

I suppose that if a large number of individuals in every State were at once to begin a crusade for the protection of the vanishing birds, working zealously and persistently among the legislatures, the effort might bear some fruit, how valuable that fruit would be is a question. But it is very difficult to enlist even sportsmen—who are interested in such matters more than others are—in such work. I had good opportunities for becoming acquainted with this fact during my twenty-one years' term of office at the Massachusetts State House and in my seven years' Presidency of the Massachusetts Fish and Game Protective Association.

I have also found that among the "men behind the gun" it is difficult to secure an unanimity of opinion. So that to obtain from them anything like "concerted action to make a strong effort to have proper laws enacted," as Mr. Fisher suggests, and that they will "take an unselfish view of the matter and work for a universal close season," is something that I wish might be brought about, but I am not much of an optimist in the matter. It is not because they are stolid, or indifferent or even careless, but legislation and legislators are things which, as a rule, are quite out of their line, and it is almost impossible to arouse them to effort in that direction.

But supposing that every one, not only sportsmen but all who are interested in our game birds, could be induced to take concerted action to obtain proper legislation, their efforts would avail not unless they were successful everywhere, for manifestly a law obtained providing for a close season in one State and not obtained in an adjoining one, would be of little benefit to species which know nothing of State lines and boundaries, and would be a rank injustice to the sportsmen of both States.

Suppose that a close season for a term of years were obtained on woodcock and wood duck in Massachusetts and could not be obtained in Connecticut, into which State most of the Massachusetts-bred woodcock move when the moulting season begins, how long would such a law be supported by public opinion.

Beside this, the work could not be done at once, but would have to be extended through several years at least for the reason that the sessions of the legislatures of the different States do not occur simultaneously, some having annual and others biennial sessions, beginning at varying dates and extending through longer or shorter terms.

So that while it is undoubtedly most desirable that "sportsmen and others especially interested will take this matter in hand and secure proper legislation for the better protection of the woodcock," as Mr. Fisher again suggests, I believe that so far as the enactment of uniform State laws is concerned, there will be but little accomplished.

Now I have given this matter of bird protection a good deal of thought in years gone by, and have tried to devise ways and means "by which an uniformity of protective laws"—not of all, but of special species—in the several States could be obtained. That there was any probability of this being brought about by the various legislatures, I never believed. I am sorry to say I am not much of a

lawyer, but I have felt that something tangible could be obtained from Congressional action. I believe that it is in the province and power of Congress to enact such laws as are deemed necessary for the preservation of animals and birds which are threatened with extirpation.

That similar action in this direction has been taken in the past is shown by the familiar example of the law for the better protection of the mackerel which was obtained very largely through the efforts of our Massachusetts Association.

As I before stated, I am not enough of a lawyer to say just how far Congress can go in a matter which seems off-hand to be something over which the several States should have jurisdiction, but it seems to me that if the interstate commerce law is and the mackerel law was constitutional, one enacted for the preservation of migratory, not local, *ferœ naturœ*, something which belongs to all the people of the Union, regardless of State lines, might also be placed on the statutes.

Now assuming that Congress has the power to enact such a law as I have named—i. e., one providing for an uniform close season of say three or five years on woodcock and the wood duck—the question is in what manner can the matter best be placed before that body to secure favorable action. From the fact that it is something quite out of the usual run of matters brought before Congress, it is necessary that it should be presented in a way that shall secure an instantaneous and intelligent hearing.

The only practicable method available, so far as I can see, for securing this seems to be by the usual form of petition, but in order that this may have any weight it must be presented in the most forceful manner possible.

Now fortunately there are at once available a vast number of powerful agents who can render good service in the work of memorializing Congress.

The U. S. Department of Agriculture which has, I think, agents and correspondents in about all the Congressional districts throughout the country, and which has already done a very great deal in the way of scientific investigation, would, I am almost certain, enter into this matter with enthusiasm. Of course I cannot vouch for this, but I believe it to be true. If it did so, the assistance it would be able to render would be very great, and it would, of course, be more far-reaching than would that of any other organization.

The very large number of Audubon societies, the various societies of natural history, the State and local fish and game protective associations, the sportsmen's clubs, and last, but not least, the press, would make a powerful and effective army to enter into this campaign.

Some one centrally located would be needed to attend to the necessary correspondence with these various organizations, and to furnish them with petition blanks uniform in style, to be filled with names and forwarded by each society to its respective member of Congress. If this work were done with even only a moiety of the thoroughness that should be bestowed upon it, there would be such an avalanche of petitions sent in that, I venture to say, speedy and favorable action would be taken in the matter.

It is something in which there is no politics, and it would not call for much debate. In the U. S. Senate such men as Henry Cabot Lodge and George F. Hoar would, I have no doubt, advocate it, for they are both well informed in ornithological matters, and both of them have done good service in behalf of the birds.

In carrying out this undertaking, the principal expense that would have to be met would be for printing petition forms and circulars, and for stationery and postage. A very few hundred dollars would be amply sufficient, and there ought to be among our many public-spirited wealthy men at least one who would supply the necessary funds.

He who has charge of the details of the work involved in correspondence and the distribution of circulars, blanks, etc., should be a man of experience, who should take the labor in hand *con amore* and leave no stone unturned that would in any way aid him in achieving success.

I have said that there are other birds in addition to the two species above named, that are rap dly approaching the danger line of extirpation.

Of course we must remember that the great army of sportsmen is annually receiving great numbers of recruits; that it is increasing in a degree which is not generally appreciated, while the breeding stock of game birds is gradually diminishing, so that in the natural course of events many species which are now comparatively plentiful will rapidly become more and more scarce as the ever-widening inroads are made in their numbers. Among these, some of the larger shore birds seem particularly marked for destruction.

The long-billed or "sickle-bill" curlew is becoming a rare bird in the North, although in the Southern and Western States it is more abundant. It is one of the species which stool well and when several individuals are shot from a flock, the others, which are full of solicitude for their dead or wounded companions, hover in circles above them, until repeated discharges from the gun bring them all to the ground.

The Hudsonian, or "jack curlew," which was never plentiful, is becoming fewer in numbers every year. It comes freely to the gunner's call, and is as sympathetic as is the "sickle-bill," returning to and hovering over its wounded mates until the last bird is shot. It seems to prefer the Pacific coast to the Atlantic in its migrations, and it traverses both continents in its long flight from the Arctic regions to Patagonia.

The Eskimo curlew or "doe bird," which in former times was very abundant ,is like the other two species, rapidly diminishing in numbers. It stools well, and is so sympathetic it will return to the blinds again and again in its solicitude for its fallen companions.

The northern shore of Prince Edward Island used to be a famous locality for these birds and for plovers, that being their first stopping place on their way south from Labrador, and in years gone by, I have had a number of very satisfactory days with them there.

While not having special decoys out for them, my only decoys set being for plover, I found that I could almost always whistle them down, and they always proved a welcome addition to the day's bag. I have frequently seen six or eight of these birds scattered through a large flock of golden or black breast plovers, keeping pace with them in their gyrations, their sometimes meandering, yet always rapid flight, and coming to the stools with them freely and without suspicion. I have not in recent years visited my former favorite hunting ground for them near Malpeque Cut. I am informed that the doe birds are growing more and more scarce.

I mention these shore birds, not that I believe that any general law can be enacted that will save them, but because they are familiar examples of species which are very rapidly diminishing in numbers; many others in the same category among the shore birds might be named as well as a number of species among the swimmers (*Natatores*), but for the present I will pass them by.

If an attempt to secure legislation from Congress is made in relation to woodcock and the wood duck, and it meets with anythink like a satisfactory degree of success, further efforts may be deemed advisable to secure protection for other species. EDWARD A. SAMUELS.

Reminiscences of Early Oklahoma.

THE beginning of October, 1889, found my old partner, Ed S. (with whom I had hunted in central Nebraska the two previous seasons on my annual vacations) and myself in Omaha, busily making preparations for another hunt, this time in Oklahoma, but then recently thrown open for settlement. Reaching Kansas City, we took the A. T. & S. F.—then the only railroad through the new Territory, although the Rock Island was also preparing to build in that section—and shortly began to feel fairly en route. The train was crowded with every conceivable type of humanity, of whom a description would be almost impossible, all bound for the new country. Business was brisk throughout the Territory and nearly every one seemed to have money. Crossing the river, we rolled through the Cherokee Strip, and were then in Oklahoma proper, here showing from the car window as a rolling prairie. Passing Guthrie, a prosperous looking place, a short distance south, the appearance of the country changed to the extent that, interspersed with the rolling prairie, one saw numerous blackjack groves, and the further we proceeded the more numerous these became. Ten or fifteen miles before reaching O. K. City, I saw a flock of wild turkeys cross the railroad track after the train had passed, and at not infrequent intervals quail would whir up beside the train. This gave every promise of sport when we reached our hunting ground.

In the afternoon we reached O. K. City, a place of about 4,000 population, constructed entirely of pitch pine buildings, with a few tents, but bustling with humanity. Freight was piled everywhere around the railway station, constantly arriving faster than it could be hauled away. At this time a company of U. S. Regulars was stationed at the city, presumably to keep things quiet, for there was every chance from the many irresponsible parties scattered throughout the country for a disturbance without much agitation; but it can be said to the credit of the better element, that things in and about the town moved along very smoothly. One thing absolutely was prohibited—the sale of intoxicating liquors of every description, and smooth indeed was the party who managed to get a good drink. This prohibition was necessary for various reasons. The whole section was part of an Indian reservation, subject to military rule, and not a part of any existing State or Territory; hundreds of Indians daily visited the town, and these considerations, with the generally irresponsible nature of many of the roving class temporarily at the place, all combined to make this a matter of necessity. The only beverage noticed was a drink brewed outside of the town and bottled, sold under the name of "Hop Tea Tonic"—tasting like warm, stale beer, but very mild. Capacity to contain this was necessary to receive much inspiration.

In a few days we were comfortably installed in a two-room house on one of the main streets of the town, having bought enough to comfortably fix it up—at least from the point of view of two young fellows. The front room was used as a sleeping and sitting room, and the rear room in which to cook, eat and take care of the game, of which we afterward obtained plenty.

The first two weeks we familiarized ourselves as fully as possible with the surrounding country, and found that immediately adjacent to the town game was scarce and confined to a few coveys of quail. About this time my dog was shipped to me from New York State, and he certainly merits a short description, for he proved to be a grand animal after his training in this country. He was a young Llewellyn setter sired by Gun Gladstone and Morning Star, of about 55 pounds weight, good disposition, dashing style and grand staying qualities; he was indispensable for the character of sport we found. About the same time I purchased a horse, wagon and harness for $87.50, and although the outfit was rather plain in appearance, it was perfect for the business. The horse was a gray, with a weary expression, and when at rest it would invariably lean against the thills of the wagon, but was the best animal to ford a stream I ever drove. The deeper the water, the steadier it attended to its business, and as this fording was of daily occurrence—for there were no bridges in the country—this trait of the animal became indelibly fixed on my mind.

We had made a few trips and were having but fair shooting—about twenty-five quail each or so a day—when we became acquainted with a young man by the name of Hank Mc——, who lived outside the town a few miles. He proved to be one of the best fellows I ever knew, and invaluable on account of his thorough knowledge of the country as far east as Shawneetown, and even beyond. His acquaintance with the Indians at the Pottowatamie and Kickapoo reservations was considerable, and to him we were indebted for the best quail shooting that ever fell to the lot of any individual. One day when calling on us, Hank made the remark, "How would you fellows like a good quail hunt. I mean, go where quail are so plenty that when we find a covey, we'll only give them one whirl, then go on and locate another?" This was a most enticing prospect, so it was accepted on the spot. "Well, drive out to my dug-out this afternoon and I'll meet you, and to-morrow morning we'll start out and have a hunt on the reservation. Bring plenty of shells and some grub; I have a tent and cooking outfit." We were on time, but our friend showed up about midnight. The following day we started as agreed, and as many subsequent trips were but a repetition of this, it might prove of interest to go into some detail. The Pottowatamie reservation adjoining part of the original Oklahoma strip on the east, was similar in respect to the strip, a rolling prairie dotted with black oak groves and well watered by numerous small creeks flowing into the North Fork of the Canadian River. Along the river and creek bottoms an abundance of black walnut and cottonwood, with, in many places, a very heavy undergrowth at times intertwined with a running vine, having many thorns and called, in local parlance, "green brier." These bottoms were a great resort for deer and quail, and but a few years previous, wild turkey were abundant. Of the latter few were left, but were still common twenty to twenty-five miles from the town. The quail ran to this cover at night, and spread out among the blackjack groves and on the edges of the prairie during the day to feed. Following one of the numerous trails and letting the dogs range, it was not long after entering the reservation before Hank's dog—a black pointer bitch, staunch as a rock—gave us a point, and we were soon into a covey; and this was repeated time and again during the day. The shooting, outside of that done by Hank, was indifferent for the first few days, then we steadied down, and but few birds got away.

Constant shooting at quail five days a week for six weeks will give any man a chance to become a good quail shot, and we improved on our opportunity. The setter as yet was not reliable on a point, so we used him mainly for locating the dead birds, and not once during the entire trip did he stand false. Later on he became very good, and at the end of the six weeks was as good a dog every way as one could ask for. This young dog was so full of ginger, that it was necessary every morning to give him at least a ten-mile run to work off his wire edge, and after a hard day's hunt, when we were glad to lie around the camp-fire, he was still ready to go on. As for the black pointer bitch, she was unequalled. Absolutely true and staunch on point, many times have I seen her strike the trail of a covey that had crossed the road, follow that trail for a quarter to a half a mile, and come to a point. I do not claim that she was the only dog, but she certainly was as near perfect as dogs often become.

Quail were so abundant at times that we only worked a covey up, getting point after point from the dogs, and the birds that escaped we gave no further attention, but hunted a new covey. Some days we located as many as forty coveys, and the abundance of quail we found seems almost beyond belief in these days of game scarcity. The coveys were of all sizes, from a dozen to forty and fifty birds. But why should it have been different? They were very rarely hunted, the Indians practically never molesting them; the whole country adapted to their wants and food and shelter plenty. Of deer we saw numbers at times, but too far away for a shotgun, and we did not care for any. True, we had buckshot shells, but outside of the fact that we would be ready in case of suddenly running on to one, we never attempted to hunt any. I do not recall a day of the six weeks that we failed to see at least one deer, and one morning, as we were preparing our breakfast, having camped within the edge of the timber along the bottom, seven deer broke cover, ran across the rolling prairie and disappeared in a blackjack grove.

Our usual routine of hunting was very nearly this: Starting from town early Monday morning with grub and plenty of loaded shells, we drove to Hank's cabin, he joined us with his team hitched to an ordinary farm wagon containing tent and the few necessary adjuncts. Heading for the reservation, we soon put out the dogs, and then it was but a short time until we got a chance at a covey. Along the reservation edges, quail were but moderately plentiful, and then the nature of the country to some extent governed the abundance. Hunting throughout the day, nightfall invariably found us along some creek bottom where we always camped. An ordinary day's hunt generally ran about thirty-five to fifty quail per man. When on the reservation we never camped in the same spot two nights running, but in the language of our friend, always "kept moving." Our never-changing diet was quail, salt pork, pickles, Dutch oven biscuits, now and then some potatoes and coffee. From this, night and morning, we never varied. At noon, crackers and apples, of which we had plenty. Our hunt ended Friday night, which found us again in town, and then for a two days' rest. On our trips we many times met with individuals of the Pottowatamie and Kickapoo tribes, most of them riding horses, but now and then one afoot. They were found in many moods—some, friends of Hank, would meet him with a smiling, "How?" others were surly and resented our being on the reservation, but all alike absolutely protested against our attempting to kill any deer, claiming these as their own; the quail they cared nothing about—in fact, at times we were followed by individuals who apparently were delighted to see the dogs work, and applauded every successful shot. One individual I shall never forget. We met him one morning; he was in an ugly frame of mind, and was armed with an ancient-looking old musket. On meeting he signed us to stop, then was determined to order us off. Even Hank's persuasive manner had no effect. This Indian followed us two miles watching us hunt, and then we began to see evidences of a softened mood. Climbing into the wagon, he helped himself to crackers, and then begged a chew of tobacco from Hank. From this on he was friendly, and during the afternoon proposed that we lend him one of the guns to take a shot at a quail. Ed's gun, a notorious kicker, was handed out, and I gave him a dozen shells loaded with 4½ drams of FFF Hazard powder. These were so strong I rarely shot them. Away he went, and soon after I heard a shot and a yell. Later, this was repeated several times, and in the course of an hour he returned, handed me the gun, stood motionless, then vigorously rubbing his shoulder, said, "D——n gun kick like h——l." We had to laugh, and finally he smiled, too. Toward night this acquaintance ended as abruptly as it began. Hank's explanation of the Indian's persistence in following us was that he did not propose that we should shoot any deer.

These quail hunts were replete with many incidents. One night while camped on a small creek in the Kickapoo reservation, and fully thirty miles southeast of town, we had just finished eating our supper when four men abruptly entered our camp, all wearing masks, consisting of a strip of cloth with eyeholes across their faces. This party looked us over, and when the cigars were passed around,

one made the remark, "Well, boys, I guess you are right," and the party vanished as suddenly as they had come. Their object we never could even guess, and the incident soon passed from our minds.

I shall never forget the few hunts for wild turkey we had. The mention of one will suffice. It had been a beautiful mild December day. The nearly full moon was rising, shedding a flood of light. Our camp had been made along the North Fork of the Canadian, and we had had our evening meal at the close of a successful day's hunt. After a good smoke, and when lying around the camp-fire, Hank said, "How would you like a turkey hunt to-night? I have seen sign, and we might go down the river and find a few on the roost," so he and I started out. We had gone but a mile or so when a large black object was seen fully sixty feet up in a cottonwood, and in a whisper Hank said, "There's a turk." The shot was given me, and I, remembering his instructions, pulled from under on to the bird, and the moment the sight disappeared, let go a heavy charge of No. 1 shot, followed by the second barrel. For an instant, silence, then a crash through the limbs, and a faint, distant thud. After looking for some time, the bird was found—a fifteen-pound gobbler. Although we saw a number more the same night, this was the only success we had. One can hardly realize the work attending this sort of sport unless he has experienced it. The rough grounds along the river bank, exceedingly deceptive at night, overgrown with the before-mentioned "green brier," the many thickets of undergrowth, and the necessity of going over this character of ground with the utmost silence, leave a lasting impression of a hunt of this nature. Still the thrill one feels after he has crept up to and succeeded in killing a fine gobbler turkey more than compensates for the trouble taken.

One day while driving through the Kickapoo reservation, I noticed a collection of what looked to me like small pens built of logs, from two to three feet in height. In answer to my inquiry, Hank replied, "Indian burying ground, but we won't bother with looking at them now." Some weeks later we were on a trip some twenty miles southeast of O. K. City, when late in the afternoon I noticed one of these "pens" standing isolated on the open prairie, but not far from the timber line of the river. I asked to stop, but Hank said, "We are going to camp about a mile further on, and to-morrow morning, while the boys get breakfast, we will take the bitch and try a little morning hunt back that way." So at sunrise we were up, and putting the dog out, started for the objective point. We had gone but a short distance, when the bitch began to trail, and going fully a quarter of a mile, gave a fine point on a covey of quail, of which we killed a number. We did not bother to hunt down the scattered covey, as coveys in those days were too plentiful and soon reached the grave. This was simply a pen, almost square, of small logs laid crossways, and built to a height of some three feet. The top was covered with logs laid parallel lengthwise of it. At one end were two poles about seven feet long, with an end of each imbedded in the ground, the other ends crossing and the whole forming an inverted V. Over the point of intersection was a rope, one end disappearing within the pen. Removing the logs from the top, we saw within the body of an Indian, in a sitting posture, evidently having been there about a year. The end of the rope within the inclosure was noosed about the neck. The trunk was practically without any article of clothing, and the frame showed as a skeleton with a dry parchment stretched over it. Sand had drifted over the legs, leaving but the feet exposed. The face and head likewise had a perfectly dry appearance. On the ground around the body were numerous cooking utensils, and many pieces of bead work. After a due inspection, we carefully replaced the logs on top, and with my curiosity satisfied, we left, Hank remarking, "They always look like that, but don't always have the rope; I am not sure what that is for."

On the return from this particular trip and when some six miles from the city, as we were driving along the trail, the dogs not hunting to any extent, game being scarce, my dog showed signs of a point, and working up to a clump of bushes on the open prairie, nearly a hundred yards away, suddenly came to a dead stand. "Well, Ed, we might as well take a shot," I remarked, supposing it to be quail, of course. We had not gone twenty-five yards when the dog looked at me. I guessed something was up and called "Steady." He stiffened, then turned his head, looked at me again and made a dash. Out jumped a doe and two lovely fawns, and away they went for the river, the dog full bent to catch one. I shall never forget the beautiful sight. They just played with that dog, running at full speed, then stopping and facing him until he almost reached them, when away they would whirl and make another run and face about; and so it went clear to the river, half a mile away, when they disappeared. In about fifteen minutes we saw the dog coming back, the nearer he approached the slower he came, seeming to know what he would get, and he got it.

On one of our trips to the new town site of El Reno, at that time consisting only of the land company's frame building and two very small, what Western parlance would designate "shacks," with a total population of five people, a party hailed me with, "Want to buy any wild turkeys?" "How many have you got?" we asked. "One hundred and ten pounds at five cents a pound," was the reply. We took them. There were eleven birds, nine hens and two gobblers. Not far from this place was Ft. Reno, with the trading post of Darlington. Both of these were within the limits of the Arapahoe and Cheyenne reservations, and if my memory serves me aright, Monday was "trading day," and on that day the post was thronged with Indians from the reservation. We found the Arapahoes much more talkative than the Cheyennes, the latter being a surly lot but almost without exception of finer physique, of medium height, but very strongly muscled and powerful fellows. Some of the beaded buckskin leggins, skirts and moccasins worn by their squaws were very fine, but it was about impossible to purchase any of these articles. The interior of one of the trading stores on trading day was most interesting, thronged by a crowd of Indians who exchanged beef hides—these from the animals issued to the tribe by the U. S. Government, and many of them bringing moccasins and beaded work in exchange for the necessary—or otherwise, articles kept in stock by the trader. I well recall the interest shown by some of the Indians in my hammerless shotgun. A minute examination on their part failed to reveal to them how the gun was fired. A number inspected it carefully, and finally by signs asked how it was worked, but I did not attempt to explain. This reservation was said to have fine chicken and turkey shooting, but the proximity of the fort prevented one from taking any chances of a hunt in that section.

On two occasions we hunted for a week at a time in Oklahoma between the fort and O. K. City, and near the valley of the North Fork of the Canadian, stopping with a party who was holding down a claim near the river. Here we found fairly good prairie chicken shooting, with some few quail, and the evenings were spent sitting in the shanty around the fire, listening to our friend's yarns, which at times fairly eclipsed Munchausen in his palmiest days. Etiquette prevented our showing any signs of disbelief, but the stories were simply awful. An illustration will suffice. We were on the subject of bears, and our friend said: "Speaking of bears, I was running with a partner in the mountains of eastern California near Nevady. Bears were some plenty around there, and so one day we thought we would take a hunt. My pard had a fine gun, a Winchester that cost $150, so you know it was good; shot seven times. We started out, hung together awhile and then separated. Along toward afternoon I heard a shot, then another, followed by five more. These shots were just kinder deliberate like, but I thought something must be up, so hurried over that way. Soon come in sight of him and called out, 'What's the matter?' He said, 'Come over,' and when I about reached him he said, 'Look a-thar.' I did so, and what do you suppose I saw? Seven grizzly bear; one for each shot. My pard said, 'I saw one bear and took a shot at him, and at the crack, six more riz up and started for me. I just stood on this spot and put them down one after the other.'" This was so steep that we could only sit perfectly dumb, but we lay for him, and one night Ed baited him with a fair story, and after he had countered with a better, I told such a strong one that at its conclusion he was perfectly silent for some few minutes, then he said, "Well, boys, it's time to go to bed," and we dispersed.

Once while driving to El Reno, and not more than a mile outside of O. K. City, we saw a beautiful sight. The road went down a hill, the bottom of which ended in a draw leading toward the river, followed by a slight ascent, then turned at a right angle, and we had gone but a short distance when the crack of a rifle, followed by a second report, was heard, coming from the crest of the hill we had previously driven over. The next moment a fine buck deer showed running at full speed down the hill toward us. On sighting us almost directly in his route he stopped short, threw up his head and stood for a moment motionless, the picture of grace, then suddenly turned toward the river and ran down the draw at top speed, sailing like a swallow over two wire fences bounding both sides of the road, and disappeared in the timber along the river, and with no regret on my part that he escaped harm.

The amount of game shipped almost daily from O. K. City to Chicago and Kansas City was nearly beyond belief. There was no game law, and as the Atchison gave a rate of $3.75 per hundred pounds via express, there was every inducement with game so plentiful, for many to shoot and ship, and it was done. It was not an uncommon sight to see several tons of deer and quail go out on the morning train, and the Chicago commission firms worked the country for all there was in it. Ruling quotations on quail were 65 to 80 cents per dozen; deer in carcass, 7 to 8 cents per pound; wild turkey, about 10 cents. It was not unusual to see a man drive into town with from three to seven deer on his wagon to sell at the local market, for most of the meat markets purchased game not only for the local trade, but also to ship, and all the hotels had quail and venison regularly every day on the bill of fare. Truly 'twas game plenty.

The town was filled with a heterogeneous class of people, and gambling of all sorts ran wide open; everything but whiskey could be had provided one could pay. Real estate boomers were more than plentiful, and business bore an air of prosperity. On the whole, though, the town was fairly quiet, owing, no doubt, to the presence of the company of U. S. Regulars stationed on the hill to the east; otherwise, possibly affairs might have been more hilarious. Of course, there were some acts of lawlessness throughout the newly settled district. The telegraph operator at Perry, north of town, of the A. T. & S. Fe, was shot one night, and a train was also held up one evening some distance south of the city. A week or so later, parties supposed to have been concerned in this latter act, were captured near by and brought in irons to the town on their way north for trial. Now and then there was a hold-up, but on the whole the town was no more or less lawless than probably any Western town has been under similar circumstances.

An election for city officials was held the latter part of November, and in this my chum and myself participated. We were by this time legal voters, and took part at the request of a friend, one of the prominent citizens, for appearance indicated a close election, and every voter was lined up for one side or the other. Native-born or naturalized citizens of the United States and thirty days' residence in the new Territory were the requisite qualifications. There was no politics in this particular election, but the opposing factions were divided into two parties called the Seminoles and the Kickapoos. The former, the supposed Northern element; the latter, the Southern. One of the two polling precincts was almost directly opposite our house, and I well recall my vote. Falling in line with many other voters, as we stood waiting our turn to cast our ballot, a real wild Westerner strolled along the line and looked us over. "Well, Jim," he said to a man ahead, "I know you are all right." "You bet," was the reply. "And you, too," to the next fellow. "Here's a cuss I don't know," he said, addressing me; "and how are you going to vote?" "All right, I guess," was my reply. "D——d if I know about that; show up your ticket." As I had sized him up to be a Kickapoo and had about reached the broken pane of glass in the window through which we handed our ballots, I replied, "Don't worry about me." "But I want to see your ticket." By this time I managed to pass it in and made my escape, as he was too persistent to suit me. The result of the election showed the Kickapoos winners by a small margin, and the night was passed in whooping it up.

The best description of a fair proportion of the population of those days, not particularly of the city, but of the section, was aptly described by a resident in a remark to me one day: "Darn my skin, if they don't nearly all seem to be rags, boots and whiskers."

But some of these same people were laying the foundation of what has since proved to be one of the best Territories west of the Mississippi River, and now entitled to have statehood conferred upon it. Good luck to that section, is my ardent wish. Some of the pleasantest memories of my life are connected with it, and I shall always recall my sojourn of four months or so there with the keenest pleasure.

S. F. Rathbun.

Seattle, Wash.

Across New Brunswick on Snowshoes.—V.

The Act of Louis Bear.

We shall best hasten the action of our story if we pause for yet a while by the way. In short, we must go back something like forty years or so. I have said that a couple of Indians visited us in our camp at Bathurst Lake. These Indians had something to do with the success of our trip across the country. These Indians, moreover, were connected with other Indians. Their story ran back for forty years.

Some forty years or so ago there was a well-known Indian by the name of Louis Bear, a member of the large and influential Bear family, who have been chiefs among the Millicete Indians for some generations. Louis Bear lived somewhere in the settlements down the Tobique River. For the most part Louis was a good Indian and peaceable, and as he was trying to follow the white man's customs and to raise a little white man's garden truck it annoyed him very much to have his neighbor's horses break in and eat up his garden. One morning his anger overstepped his prudence. He took down his flintlock and with a certain amount of precision shot the daylight out of the leading offender among his neighbor's horses. Then Louis bethought himself that he had committed a crime against the white man's law. He did not stop to find out what that law would do to him, but, in brief, as one weary of sin, he fled as a bird to the mountains.

These mountains aforesaid were precisely the range over which Adam proposed to take the Forest and Stream man in the hope that somewhere on the southern side of them we should find trace of Uncle Henry Braithwaite. As shall presently appear, it was a most lucky thing indeed for us that Louis Bear, long since gathered to his fathers, once upon a time shot his neighbor's horse and fled as a bird to the mountains.

When Louis became an outlaw in that wilderness which lies between the heads of the Serpentine, the West Branch, the little South Branch and the North Pole Branch, which latter runs into the Miramichi, it was none the less necessary for Louis to do something for a livelihood. In effect, he started out and built himself a line of traps, beginning somewhere between Sagamok Mountain and the heads of the Silver Brook, crossing the country where Adam and I had jumped our big bull near the Klondike camp, working around the heads of the Serpentine streams, swinging over toward the headwaters of the Little South Branch of the Nipisiguit, swinging thence back toward the steep Serpentine hills, and thence working east and a little north again into some country not even in this present time much known to mortal man. Louis was quite safe in his selected wilderness.

A line of sable traps, if well built, will last five to eight years. Louis trapped on his line and lived out in the woods until people forgot about the horse. He then either cashed in his checks or got tired of trapping, and later his trapping line fell into the hands of Ambrose Bear, who used it for a while. It lay fallow for a time and then Joe Ellis, our present Indian friend, and Ambrose Lockwood trapped on it for a time, running the traps as occasion demanded. Then Joe Ellis took over John Moulton, his present partner, and these two were owners of the line for a long while.

Any fool can chip a piece of bark off a tree, but in New Brunswick it is only a fool who does chip that piece of bark without a definite and intelligible purpose. We now were possessed of the fact that, owing to the escape of dead and gone Louis Bear, there was running from somewhere near the Bathurst Chain, over across a part of the country which we wanted to traverse, a line of trees with chips cut out of the bark, some chips cut forty years ago, others twenty years, others two years, and some one year ago. In short, if we could once strike in on this old Indian line, we would have a fair chance of getting somewhere, even if no one knew just exactly where. Hence we waited with considerable interest the return of Joe Ellis and John Moulton from their trapping line on Moose Brook. So far as the Governmental authorities are concerned, they do not trouble themselves over trapping lines originally constructed by Indians now defunct. The Indian does not ordinarily explain where his traps run. In point of fact, this old line had been running out into the New Brunswick wilderness for more than forty years, and no white man, so far as we could tell, had ever known anything about it, until by chance and under the softening influence of a stiff drink of gin, Joe Ellis communicated a part of the news to his friend Charlie Cremin, Adam's partner.

Woods Lore by the Way.

Since Adam was away trying to catch his "blackcat" down at the caribou carcass, and since Joe and John were also away and uncertain of return as are all Indians, Charlie and I kept camp. We practiced moose calling by ourselves and talked over a lot of things. Which reminds one, by the way, that Joe Ellis had said he had heard a cow moose call the previous week, that is to say, in the second week of December—a fact of natural history new to every one hearing it, although Ellis is an old hunter and insists that he was not mistaken. He heard this moose in the heavy country not far from the Silver Brook divide.

The calling of moose, as I learned from different sources, does not go according to any hard and fast system. Adam says that he has never heard the loud call of the cow but once in all his experience. You may hear it very often at the sportsmen's shows, but not often in the woods. "A cow makes all kinds of noises when she is

calling," said Charlie to me, as we held our little symposium. "Sometimes she goes around whining and complaining, with a voice about like a puppy. Sometimes she will call louder, and sometimes you cannot hear her very far at all. It is not always just the same sound. Now a calf is a good deal the same way. I have heard a calf whining or squealing or crying all the way across Nictau Lake.

Adam said that the call of the caribou is a sort of grunt or croak and that the calls of the bull and cow are very much alike. As to the call of the bull moose, there is a great deal of variety in that also. Sometimes a bull can be called into the water by imitating the call of the bull rather than that of the cow. Sometimes the bull will come right on down in a hurry, and again he will hang back in the cover at the edge of the lake and run up and down and thrash the trees and grunt and snort and yet will not come out into the open.

As to the time when young moose take to the water, Adam and Charlie on the 29th of May, 1900, caught a moose calf which they did not think could have been more than a day old, possibly but a few hours. This was on one of the Bathurst lakes, and Adam showed me the place where it happened, a point where the lake was perhaps three-quarters of a mile wide or more. They saw the cow swimming, looking back all the time, and at last they discovered something following her in the water, which they saw was a young calf. When the calf tried to get up the bank to follow its mother, it fell back and would probably have drowned had it not been reached by the men. Mr. Buckhout, a New York gentleman who was stopping with them at the time, tried to photograph the calf, but was unable to get a good picture. Adam at one time found a dead calf in a tree top along the Nipisiguit River, the little fellow probably having drowned in the attempt to ford the river.

All the time one learns odd facts like these in natural history when he is with close observers such as my companions were. For instance, Adam told me of a partridge which had been an object of great interest at the Nictau camp during the year 1900. This partridge was seen walking about where the men were building a log house, and at length was tracked to her nest. To their surprise she seemed to be entirely tame. She would allow herself to be picked up and handled, and sometimes would peck at the hand in a petulant sort of manner. She would peck at Charlie's feet sometimes as he stood near the nest. This grouse would frequently, when off her nest, walk directly up to the men who were engaged about the log house. The nest was watched carefully, and of the eleven eggs, all of them hatched. "You never saw anything develop as fast as a young partridge," said Adam. "I kept track of the hatching very closely. At 12 o'clock that day two or three of the little fellows were out and all the remaining eggs were pipped. That evening all the remaining eggs were hatched. At 8 o'clock on the next morning all the young had left the nest. I don't know where they went, but know that we never saw the hen again. While the little fellows were hatching I sort of supervised things around the nest, and took out the empty shells as fast as they were deserted. The hen did not seem to mind this very much. Mr. Buckhout—his name was Wm. H. Buckhout—of New York, took a photograph of this partridge while I held her in my hand. We were sorry, but the light was not such as to enable him to get a good photograph. We watched the nest about two weeks in all."

I asked Adam how, in his opinion, the woodcock carried its young, and he replied that his brother Will had seen a woodcock carrying its young, and in some way she carried them between her legs or feet. I have heard it said that the young birds were supported by the thighs of the mother as she flew.

Among other curious things, Adam told me of some little ducks, whistlers or golden eyes, which he saw on the banks of the river one time as he was going along in his canoe. "There were seven of them," said he, "all fuzzy little fellows, about the cutest little things you ever saw. They were arranged in a row directly underneath a stick, and you had to look mighty close, I can tell you, before you saw them. I would have given a good deal for a photograph of that row of little ducks."

As to the habits of the caribou, Adam says that in his caribou lick the caribou eat the mud, it seeming to possess some saline quality which they covet. All the guides said that caribou were becoming more numerous in New Brunswick. No one pretends to know how many there are in the Province. They come down to these licks in large bands at times. Adam knows yet another caribou lick somewhere near Red Brook. It is possible to photograph caribou at these licks, and Mr. Osborne, of Rochester, made a very good photograph which is shown at the Crown Lands Office of a cow moose which came to the licks and was photographed at a distance of only ninety feet.

Deer as well as caribou are now increasing in the Tobique country. Eight years ago there were no deer at all, but the deer appear to be working toward the eastward, having been more abundant for a time west of the St. John River.

In all this game country there is no overlapping or crowding of one guide by another, and I was curious to discover on what sort of tenure the guides held their "country." Such a territory is gained usually through a good acquaintance with the railroad or private owners of the pine lands. The guide leases the country four rods back of the river, that distance being ceded to the owners of the fishing leases. Lumber is king in New Brunswick, and a good understanding with the big lumber outfits is the best chance a guide has to get his privileges and hold them. Thus I imagine it would be very difficult for any one to supplant Adam Moore in his country, since his privileges would not be duplicated by the owners of the pine lands in favor of any other guide. Adam has ten camps, the chief of which are Nictau and Bathurst camps. Out of the latter camp are the side camps, Klondike and Moose Brook, both of which have been mentioned. Then there is Upsalquitch camp and Upper Bathurst camp, and on the Nictau Chain the Foster's Hole, Cox's Hole, Halfway Brook and Ridge camps. Thus it may be seen what a wide strip of country is thus drawn by a guide so fortunate as Adam Moore and his partner, Charlie Cremin.

So much by the way, and while we are, as it were, waiting for Joe Ellis and his partner, John Moulton, to come back and tell us something more of the late Louis Bear trapping trail. This was to take still a couple of days. Adam and I trotted down to his blackcat trap on Thursday, fixed up the steel traps and were back in time for lunch, a distance of about nine miles. That afternoon he and I marched five or six miles up to the "Carry" after caribou. We saw some sign, but we thought that the soft weather had sent the caribou away from the lake for the time being. We saw considerable otter and mink sign on the lower side of the Bathurst Chain, this making the fifth instance of otter sign we had noted.

The Trail Over the Mountains.

At length our two Indian trappers showed up at Bathurst camp, and we held a long pow wow together. We now began to hear of a certain lumber camp, far up toward the head of the Little South Branch, and known as the Branch camp. There used to be another camp further down the stream, and this old camp Joe Ellis said he knew, and could no doubt find, as he ran his trapping trail up into the mountains. To reach this lumber camp one needed to travel six miles or so to the mouth of the Silver Brook, thence eight or ten miles more to the southward up the Little South Branch of the Nipisiguit.

This was a distance of about five miles more than it would be in a straight line over the hills to the lumber camp. For a time it was our intention to take our toboggans up over the trapping trail which Ellis and Moulton said they were now going to run (the same being the old Louis Bear trail). Yet when we began to talk of that awful trip over the big mountains, even those hardy citizens, Adam and Jack and Charlie, looked grave. We all of us knew by experience what it meant to climb those hills with nothing but rifle and a light pack. To cut across with toboggans meant that it would consume four times as much time as to go light; and the toboggans were a necessity. Hence we formed a plan of campaign which, if a little risky, proved in the end a wise one. We decided to get off of the rough country over which the old trail ran at its northwestern end, and to trust to fortune to make some kind of a meeting with Ellis later on at the Branch camp. From this point we intended to head south and to take Ellis along with us, so that he might give us the advantage of all he knew about the old Louis Bear trapping trail. Of course all hunters, especially the hunters of New Brunswick, will know that this so-called "trail" was not a trail at all, but simply a line of blazed trees. An Indian never does any unnecessary work. We did not wish the task of dragging the toboggans over the Indian trail any more than was absolutely necessary, but any sort of trail is better than none, especially when you don't know where you are going.

Starting into Unknown Country.

Charlie had been baking biscuits industriously for about three days, and these we packed in boxes on our toboggans. We had plenty of tea and sugar, plenty of blankets, but unfortunately were at this time short of meat, as we had eaten up all that we had been able to carry down from Adam's moose, and had killed nothing since. We thought that our total weight on the three sleds was between 300 and 350 pounds. We took with us our precious bundle of furs, also took along some rifles which we intended to take out to the settlements, having four rifles in all, the camera, the horribly heavy glass plates for the camera, a little ammunition, and some odds and ends which we did not care to send down by the slow tote team, sixty-five miles down the Tobique River. All in all, we had pretty stiff loads.

As luck would have it, good or bad, we made our start south on Friday, this being the 20th of December, at which time I ought to have been going home, instead of starting out into the wilderness, where there was a very fair working chance that nobody would hear of us for a month, if at all.

The sledding was beautiful, however, and we did our six miles down to the Bear House, Silver Brook, in jig time. (The depot camps are called "bear houses" because it is necessary to build them tight and strong enough to keep out the marauding bears, which otherwise would rob the stores.) Adam left us at a point on the trail for a run across lots to have one more look at his blackcat trap. Although we had found these creatures had pretty much torn up all the country the day before, they had not returned during the night. Hence we went away and left the steel traps to hold their silent watch on the banks of the Nipisiguit, trusting to Providence that one of us might get back and visit them later in the winter. While Adam was gone I got into the toboggan shafts, and had the pleasure of three miles at this sort of travel. I should not fancy it as a steady diet, it remaining a wonder to me how these men pull these sleds with such loads and across such country.

We all rounded up for lunch at the mouth of the Silver Brook, and then started for a long ten-mile tramp up the Little South Branch, which we picked up but a short distance from the mouth of Silver Brook. It was cold that day, and our faces were well hung with ice when, just before dark, we pulled up at the little lumbering settlement known as Branch's camp. Forty men here lived in one house, and were packed like sardines. Branch himself, the foreman, we found to be a quiet sort of fellow, and the cook was willing to do his best at least. It was beans and black tea as usual, and for the first time in my life, I think, I sat at a table where there was absolutely nothing provided except a knife wherewith one might eat. Not that a knife is a hardship, but on the contrary a very simple and practical thing. I did not notice any of the lumber crew eating any more than any one of ourselves.

Accident in Camp.

That evening as we were all sitting around the stove taking off our stockings and jumpers to hang about the big stove, one of the men came in from his work limping badly and looking pretty pale. He had met with one of the accidents which are by no means infrequent in the woods, and had cut himself badly with an ax. The poor fellow sat on the bench afraid to take off his stockings to see how badly he was hurt. No one seemed to help him, and even the foreman was indifferent. I got the stockings off at last, and de disclosed about as badly damaged a foot as I imagine any human being had ever seen. An earlier accident had cut off three toes on the outer side of the same foot. These had healed and retained their place on the foot, although entirely stiff and unmanageable. Now he had cut himself straight back from the front, the deepest part of the cut being under the foot, the two outside toes being severed clear back almost to the original cross line, which had nearly separated them from the foot. It certainly was an ugly looking wound, and certainly the conditions for treating it were bad enough. The poor fellow searched around his bunk for a rag, and produced the dirtiest looking handkerchief I have ever seen anywhere. This I discarded and taking a couple of my own rendered them as antiseptic as possible with boiling water, washed the foot, and fastened the bandages as well as possible. They had what they called "h'asat," a solution of carbolic acid, which at times it appears is provided in the lumber camps against such accidents. I wet the bandage with this "h'asat," and although the sufferer did not sleep very well that night with the pain of the wound, he could eat his breakfast the next morning, and thought that in two or three weeks he would be around.

This was the second accident of the kind that had occurred within a week, a man at the Bathurst camp having cut his leg to the bone just above the knee. He was just getting around at the time we left. The unfortunate soul who meets an accident of this kind at a lumbering camp is in bad luck indeed. His "time" does not go on, and in some camps they even make him pay his board while he is laid up crippled. If he is cut so badly that he has to go out of the woods, it is customary for the other boys to chip in and raise the price for sending him out to the settlements. I never heard what became of my patient, but hope he got around all right.

Life in a Lumber Camp.

A cheerful, happy-go-lucky, hard-looking, hard-talking, but after all, soft-hearted crowd, are these workmen about a lumbering camp. I can't imagine any life much harder than theirs. They get up at 4 o'clock in the morning, and start out in the dark to walk perhaps a couple of miles in the cold and snow. Then they hammer spruce butts all day, where every blow of the ax sends a shower of snow down on their backs. They come back to camp an hour after dark, and yet you will see them walking into the cook house with an easy step and an elasticity of movement which does not seem to denote any physical lassitude. Proof enough, this, of the excellent tonic of hard fare and winter weather. We all of us walked that way when we came out of the woods. We were dressed also after the crude fashion of the woods, in wool and then more wool, and socks, socks, socks. Some of our lumbermen wore shoepacks. None of them wore rubbers, and some of them wore a low, wide and roomy moccasin over their numerous layers of heavy wool socks.

One of the drivers, an Irishman by the name of Lanigan—you will always find an Irishman in a position of authority in any gang of laborers—called a meeting together after supper and took up a contribution for some church or other at some settlement whose name I did not catch. One after another these unkempt fellows, whose wages were not more than $22 a month, called out "Put me down for $1," or "Put me down for $2," to Lanigan, who kept the subscription list. He raised something like $60 or $70 in a few minutes, all of which will be subtracted from the men's pay when they come to settle up at the end of the month. If the lumber jack is able to pay for his clothes and come out even at the end of the winter, he considers himself rather lucky. His money goes, one way or another.

Fur Trade in Camp.

All these Frenchmen at the logging camp seemed to be doing a little trapping on Sundays or other off times, and this camp was pretty near full of fine bunches of sable, fox, etc. This made Adam's eyes shine, for if there is anything in the world which he loves, it is a bit of good fur. We started in to buy fur soon after supper that night, and we kept on buying until all our party was broke and we had to run our face for one or two bunches. We were all of us broke, but we had not yet bought all of the fur when that time arrived. There was one bunch of seven sable skins, fine big fellows, every one of them, and it pretty near broke Adam's heart to leave them hanging on the wall. We were paying $2.25 to $3.00 for sable skins which would bring on an average at least $4 at Fredericton, yet we paid the men about as much as they would have received had they sold them at Bathurst or anywhere along the railroad on Tobique side. By the time we were through our impromptu merchandizing, the precious bundle of furs which was strapped to Adam's toboggan had taken on goodly proportions. I may state here that we sold out for just $175 when we struck Fredericton. Whereupon Charlie Cremin promptly bought a fur overcoat, a new horse and a set of harness, and the woods saw him no more for this winter, I am sure.

Just Projecting Around.

It came off very cold indeed that night in the lumber camp, and in the morning the thermometer was between 12 and 15 degrees below zero. The men at the lumber camp asked us where we were going, and we told them we hadn't the slightest idea, but were just projecting around. Mr. Branch tried to persuade us to go back, and not to try to go across this unknown country in such weather, but having started, we did not intend to take the back trail. We were hoping that Joe Ellis, who had started across on his trapping trail, would meet us at the Branch camp, but no Joe Ellis appeared. Hence we decided to start out on our own hook. Branch showed us a map or plan of the country adjacent to his camp, which was partly made up from the maps of the Crown Lands Department and partly, as we imagined, from guess. We could see that in very many particulars it was manifestly wrong, as it had mountains three or four miles from where they belonged, and described directions and streams in fashion which we personally knew were impossible. No one could tell us anything about the country to the south of this camp. The teams were working two or three miles up the Little South Branch, but beyond that no deponent could say. There was a rumor of an old lumber trail over toward the Serpentine waters, but this trail was precisely what we did not want, for the last injunction of Henry Braithwaite had been to "beware of the

Serpentine." Henry had told us to stick to the "height of land." We looked about us steadily, and could see nothing but a "height of land" anywhere we looked. The whole country was broken up into a series of steep, rounded hills, and it took no very experienced eye to see that to pull a toboggan across country over one of these hills would be something asking even more endurance and strength than our party could furnish. It was therefore a question of winding along the easiest way we could find by some valley, then scaling the top of the ridge which we must ultimately find, and feeling our way onward, until we found water running in the opposite direction. It was our vague hope and wish that this water might be Miramichi water, but as to that we could not in the least tell.

It is one thing to write about a trip across the country in the winter time, and quite another thing to do it. It is one thing to look at a map, and quite another thing to look at the country which that map purports to represent. Now, as a matter of fact, when we got into this journey we found that there was no guide, no map, no help whatever which proved of the least service to us. We were just as much adventurers and discoverers as was Columbus when he struck America, although perhaps on a slightly smaller scale. We missed Joe Ellis very much, for although we were not satisfied that he could take us through, any company is better than none in a quest like this, provided that such company has the remotest idea that he knows what he is about and where he is going.

Be that as it may, we left the Branch Camp, the men staring after us and jabbering in French about the crazy fools who were going into the woods with sleds when there was "so much frost in the air." We pushed up the right-hand branch of the Little South Branch, climbed a big hill, found we were off the trail, and climbed it back again. We broke off to the left, followed an old and snow filled abandoned logging road, passed a dam made by beavers and a dam made by loggers, and pushed on up until we came to another trail, which we followed for a time. At last, two miles or so along, we came to a tree, and on this tree were sundry ax marks.

The Mute Sign in the Wilderness.

As I have said, any fool can cut a chip out of a tree with his ax, but few fools do that in New Brunswick without a purpose. Here was a tree upon which the ax marks were apparently many years old. Also there were fresher ax marks. Also at one side of this tree, at a distance of about 50 or 60 yards, there was another tree bearing a blaze. Now the question was: Were these blazes made by the Frenchmen who were running their sable traps near the lumber camp, or had we, without any advice or instruction, by good fortune located the old Louis Bear trapping trail along which Joe Ellis might, could, would or should have passed some time within twenty-four hours ahead of us or after us? That does not sound like a very serious question as one reads it, but I remember how serious it seemed to us at the time. It was very bitterly cold. Charlie and Jack had to take off their shoepacks to keep their feet from freezing. I had to kick my feet against a stump to keep them from following suit. Adam and Charlie went on ahead, but came back and said they did't believe it would pay to follow the old brushed-out road any further. We again swung around, 20 degrees to the south, and started out into untouched country.

There was a trail, a trapping trail. This much seemed plain, but where it ran or whose it was no one could tell. We found no sable trap, nor had we found it could we have told who made it. It might have been Joe Ellis or any one else.

When the thermometer is 15 below zero, and going lower, and when you have all your worldly goods on a sled, and when you reflect that a sled pulls frightfully hard up hill, and when you add to this the information that the view at the top of the hill only leads to another hill apparently just as hard to climb, then you may observe that it was a grave question whether we should follow this faint and wandering trail of ax marks which presently we discovered leading on out into the wilderness. But at any rate some one had been through there. And it is at least some comfort to go where some other fellow has been, even if you don't know who the other fellow was, or where he was going.

Adam and Charlie started out along the trail for a little voyage of exploration. Jack and I, he in his stocking feet, started in to build a fire in order to keep from freezing to death. We had it just nicely started when we heard the snowshoes returning, and Adam called out, "Come ahead. We'll just start in here, and chance it."

HARTFORD BUILDING, Chicago, Ill. E. HOUGH.

Save the Woodcock.

Editor Forest and Stream:

Your octogenarian humble servant lived in the days when woodcock, that most desirable of all game birds, nested in every bit of moist and bushy ground, and in the fall could be kicked up in every wood or thicket. But few people seemed to prize the woodcock then, and being so seldom molested they were so tame that, as a boy, I knocked one over with a stone.

A little later on in life I began to hear of the "long-billed mud ducks" being occasionally shot as game, and now I find, with an amount of regret that could never be expressed by words, that I must live to see the passing of the woodcock—unless the legislators of the various States can be roused to the importance of protecting laws. Pot and market hunters ought to be wiped out by legislative acts, and then if a close season for a few years could be brought about in every State we might see a condition of things that would gladden the life of every sportsman in the land.

FOREST AND STREAM must be credited with a vast amount of good in its fights, on various points, for game protection, and now I want to see it buckle on its armor for a fight that I consider of greater consequence than anything except the lynching of all the market hunters. One of FOREST AND STREAM'S contributors opened the fight a few weeks ago by a vigorous article, which ought to be followed up till the importance of saving the woodcock from utter extermination is drilled into the noddles of every legislator from Maine to Louisiana. DIDYMUS.

ST. AUGUSTINE, Oct. 6.

October Mountain.

From the Springfield Republican.

To the average man, a plaything seven and a-half miles long by five miles wide would be about all he would care to drag at the end of a string. William C. Whitney, politician, turfman and millionaire, seems to think differently, and now and then adds a few hundred acres to his newest toy, beautiful October Mountain. Away up in the heart of the Berkshire hills, in Massachusetts, rests this vast estate of over 12,000 acres, where Mr. Whitney spends nearly $60,000 and two weeks every year. Wild with the wildness of the Berkshire hills, October Mountain stands as a rough shooting box of to-day, and a magnificent estate of to-morrow. How much money has been fed into the open jaws of the hills Mr. Whitney alone knows, and it is doubted if he could give anywhere near the exact amount which he has expended to make October Mountain rank as one of the greatest estates between the two oceans. It stands even now with Biltmore and some of the great Pacific coast estates in size. Where the future will find it depends on Mr. Whitney, for no one else knows what his plans are for the future, or how much more money he will sink into the barrens and woodland, which, as far as his eye can see, are his alone. Doubtless he intends October Mountain for a shooting box, for already he has herds of buffalo, elk and deer roaming about in a 1,000-acre inclosure, and hundreds of English pheasants have been liberated in wood and field, and the clear lakes and rustling brooks stocked with fish. Yet taking Mr. Whitney's well-known love of sport into account, one can see underlying the whole vast plain in the mind of the millionaire, a clear cut touch of philanthropy and the basis of the idea that his money must be spent so that a people who need it may derive a benefit which is still in no sense a gift of charity.

For years the farmers of the town of Washington have said that they could get along if it was not for the drag which was put upon them by the western portion of their big wandering town. They prayed that something might be found there which would make the land valuable and worth the taxes levied upon it. They cut off the woodland in places to make money on the lumber, and they thought of many plans to rid themselves of their burden, but one plan after another broke like a bubble, and with each breaking the tax rate went up a notch. Then suddenly Whitney came to Washington like a bright angel and took the hated property from the people who had been land poor for generations. His agent bought farm after farm and paid a good price for each, far more than most of them were worth, but he wanted them, and, as they say in Washington, he is a millionaire. Slowly the estate spread its boundaries, and farm after farm was swallowed and dollar after dollar was added to his taxes, until now the great burden has been lifted and Washington can look down from her hilltop squarely into the face of the world and say that, by the grace of Providence and Whitney, she is as good as the next and better than Peru. This year Mr. Whitney will pay the Washington assessors $1,795 for his taxes, and his real estate in that town is valued at $75,520. But October Mountain has wandered into the outskirts of little Lee and close to the town line of haughty Lenox, and in Lee he must pay taxes, for the valuation of his property there is $5,181.

It was six years ago that Mr. Whitney found Washington. No one knows why he decided to start the October Mountain estate or how the plan originated in his mind. He could not want more ground for shooting or another country place, for he owned already a vast tract of land and a chain of lakes in the Adirondacks, and a beautiful country place on Long Island. But at that time rumor spread through the scattered farmhouses of little Washington that some one wanted to buy land in the western part of the town. This was followed by the report that options had been secured on many farms, and then the statement was made that a large number of places which joined one another had been bought by Thomas Post, of Lenox, for some one. Washington stayed up until 9 o'clock at night discussing the wonder and guessing at the name of the man for whom Mr. Post was acting. Finally some bright mind thought of Austin Corbin and his big Blue Mountain game preserve, near Newport, N. H. A town meeting was considered so that the matter might be solemnly discussed, but then Mr. Corbin was killed, and the Washingtonians were at sea again. At last the magic name of William C. Whitney came to their ears, and the town awoke one bright morning, after six months of vain conjecture, to the realization that the ex-secretary of the Navy owned one-third of their town. A few bright spirits had been sharp enough to see that some deep-laid land-buying scheme was on foot, and had invested in swamps and hillsides in the western section of the town, and great was their reward. The power and good of the Whitney millions had begun to be felt, and each year more and more checks have been cashed and their fruits put away in the family stocking. If the religion of their forefathers was not as deep-rooted in the hearts of the simple, kindly natives, it is an open question whether they would not be bowing down even now before a golden idol. They wished to hand down the stamp of Mr. Whitney's features to their children on the town seal, but after giving his consent to this desire, and presenting the desired seal to the town, the New Yorker, after a more mature consideration of the subject, recalled his gift. There is no danger of his being forgotten in Washington for several generations, at least.

The statement that October Mountain is in Washington will not convey a vast amount of information to many people, but, nevertheless, the town is of importance and once in six years sends a representative to the Legislature. A section of the western line of the town serves as the eastern line of Lenox, and Pittsfield is only a half score miles or so to the north. The Boston and Albany Railroad runs through the eastern section, and at the little depot is the highest point of the road in its winding course over the Berkshire hills. The Whitney family, when going to October Mountain, do not go in from the east over vertical hills and rocky roads, but from Lenox on the west, and the roads are far better on that side. Mr. Whitney has already spent much money on road improvements, and the one from his estate to the railroad on the west is now in good condition, while the one from Washington's town hall to October Mountain is bad with the badness which only a Washington road can boast of. Going into the estate from Washington the view across the eastern hills is beautiful and the scattering farmsteads of much interest, as one cannot see how these people eke out an existence on their rocky, brush-grown farms. Near the town hall the warning white signs against fishing and shooting begin to appear, and then a sharp turn to the west from the main road, down a rocky hill and into a tunnel of green trees and one is on the October Mountain estate. No more warning signs are to be seen, they are all on the edge of the estate, and farmer as well as game-keeper sees to it that no poacher shoots Mr. Whitney's birds. For a long two miles the road tunnels through the woods, where the silence is only broken by the whirr of a frightened partridge disturbed while dusting herself in the road, or the faint rustle of the underbrush as a startled rabbit goes to cover. Then suddenly the woods come to an end, one stands, breathless with wonder, on the summit of October Mountain.

Far away to the west, to the north, to the south, lie the fields and forests of the vast estate. Its enormity strikes one as an impossibility. It does not seem credible that one man owns the valley below, the blue-green hills in the distance, the glimmering lakes, the many trim white houses and red barns, and the great shooting box lording it over all from the crest of an opposing hill a mile away. From the valley a faint buzz of mowing machines, stone crushers and many men at work floats up on the fresh breeze which forcibly brings to mind the fact that it is always cool on October Mountain. Far to the north a few black specks can be seen moving about on a hillside. They are buffalo. To the west are tiny little patches of white, half-hidden in the tall grass. They are the little houses of the pheasantry. To the south are a cluster of barns, the winter quarters of big flocks of angora goats and sheep. In the still woods roam elk, moose and deer, and close at hand is the warren of a large family of Belgian hares. Down the entire length of the valley winds a slender, silvery string, a beautiful road running from the hunting box to Basin Pond, up in the heart of the southern hills. This road is only a forerunner of what is to come, as it is evident that Mr. Whitney intends to put in similar roads throughout the entire estate. Already there is talk of a new road to be cut through the woods to Washington town, and many other changes are rumored. Mr. Whitney will never be able to close his estate to the public, for it is crossed and recrossed with county and town roads, which are thoroughfares. But it is doubtful if he wishes to do this, for the public have always been welcomed at October Mountain, and every courtesy is shown to the visitor by the employes upon the estate.

The House Built in a Few Nights.

The greater part of the visitors who go to October Mountain without an invitation are curious to see how the millionaire has provided for his comfort and where he lives while there. Some are disappointed in the house, or shooting box, as there is nothing about it which gives the idea of vast wealth. It is more like the ordinary cottage that can be seen at any fashionable watering place. It is not a large structure and is built of wood and painted a dark gray. On the southern side is a broad piazza and the view down the valley from it is most beautiful. The house is set in the center of a great, soft green lawn and at its rear are four Adirondack camps which can be used for guests if desired. If one is disappointed in the house he need only remember the manner of its building and in that find any excuse needed. In truly characteristic manner Mr. Whitney decided to build the house in a great hurry. He had the plans drawn and then gave orders to have the house completed in twenty days. This staggered everyone, but Mr. Whitney wanted the house to live in for a few weeks at once, and as his bank account seemed able to stand the strain the work began. From New York came a force of men with great calcium lights, and these were placed about the fast-growing house and blinked and dashed on the carpenters as they worked all night. From far and near came the awe-inspired country people, and on the surrounding hills they stood with open mouths wondering if perpetual Fourth of July had come to October Mountain. Sad to relate, the house was not finished within the desired time, nor even twice the time, for the interior is elaborate and much work was done to make the house comfortable in every way. It stands now as a monument to money and energy, but in time it will doubtless be succeeded by a more elaborate house and one which is architecturally more suited to the surrounding country and the ideals of the place.

A couple of hundred yards to the north of the house are the stables, and they are the genuine Whitney affairs. Mr. Whitney is known all over the world for his love of a good horse, and how many he owns would be hard to estimate. His racing stables in various parts of the world hold some of the fastest horses on the turf, and he races entirely for the sport, caring but little for the rich prizes he wins. The stables at October Mountain are built on three sides of a square, and there are stalls for fifteen horses. Like the house, they are now tightly closed, and big board shutters cover the windows. When any of the family are going to the estate, horses are sent there from some of the other Whitney establishments. It is the same with the carriages; none are kept there when October Mountain is officially unhabitated. Hunters, cobs and polo ponies fill the stables when any of the family are in Washington, and all of them are fond of horseback riding. "Mr. Harry Payne," as the men on the estate call the son of the owner, is very fond of riding his ponies through the woods and fields, so about twenty miles of bridle path has been cut over the mountains for his pleasure, and it is no small task to keep the brush and weeds from these, and some of them will probably never be seen by either the owner or his son. Just across the road from the stables is a tiny cottage, and in this Mr. and Mrs. Payne Whitney—Mrs. Whitney was a Vanderbilt—passed a part

of their honeymoon. It is not exactly the sort of a place that one would pick out for the honeymoon of two such rich young people, but they won the loyalty of every man, woman and child on October Mountain by choosing to go there and stay during their first days of married life. Back of the stables is a great water tower lording it over a grove of lofty pine trees. From all parts of the estate the gray top of the tower can be seen, looking from the distance like a frail shadow similar to the ones playing all over the sides of the mountains. On the northern side of the grove is the servants' house, a low, rambling building, which can hold many people. These servants have an easy time of it, as there are so many of them that there is not much for any one to do. When the family take it into their heads to go to the Berkshire hills, there is much excitement there. A telegram usually announces the proposed advent, and three days later an army of servants and a small troop of cavalry arrive. Before they come the houses and stables have been opened, cleaned and made ready, and then the servants sit around and wait for the coming of the Whitneys for their short stay of a few weeks.

The Coming of the Animals.

After Mr. Whitney had bought his domain and fairly started to redeem some of it from nature, he remembered that he was to have a shooting box. Then came the herds of animals, elk and bison from the West, moose from the North and deer from the Canadian wilds. English pheasants and Belgian hares were added to furnish the smaller game, and everything possible done to protect the native stock of partridge and quail. The big game is, of course, the most interesting and the most difficult to raise and care for. Mr. Whitney followed the example of the late Austin Corbin and other big game owners, and inclosed a large tract of land in a high wire fence. Slowly the limits of the inclosure have grown, and now 1,000 acres are closely guarded by a wire barricade nine feet high. The cost of this fence must have been enormous and the work of building it great. The wire netting is very heavy and the openings in it are about 8 by 4 inches in size. Every 20 feet or so is a chestnut post, to which the wire is fastened, and as there are no chestnut trees on the estate, all the stakes had to be bought and shipped in, so some slight idea of the expense of this vast game inclosure may be gained. Over hills and through woods and swamps the fence runs, and it is much work to take care of it. Once every week each foot of the fence is inspected, and also after every high wind, which would be apt to blow down trees which might break a section of it. This is necessary, for a break would mean the escape of many valuable animals, and a few bull elk loose in the Berkshire hills would not be any fun for the farmers. Only once has the outer fence broken, but then the break was found by the game keepers before any animals discovered it. The big game park lies in front of Mr. Whitney's house, which faces to the west, and the fence is very near the road, so that the animals can often be seen from the lawn. A great part of the inclosure is woodland, and the animals spend most of the day under the trees, so that early morning and early evening are the two best times to see them.

The buffalo herd is the most interesting animal exhibit in the inclosure, and the big brown animals are nearly always to be seen on a hillside or loafing along the fence. The herd now numbers thirty-two, and some of the older ones are giants and about as ugly as anyone can imagine. Five years ago the buffalo came to October Mountain on the cars from distant Wyoming. In the party were eight cows and five bulls, and they took kindly to the gentle climate of the Berkshire hills and thrived on the grass and blackberry bushes. The king of the herd was Apache, the big bull, and he has held his proud position ever since. No one can go near him, as he has a nasty temper and his eye is about as wicked as the red men for whom he is named. He is one of the largest buffalo alive to-day, and lords it over all the animals in the inclosure. During the five years that the buffalo have lived in Washington, only three have died, two of these being members of the original herd and one a little calf. One big bull was sent away a year ago to the Bronx Park in New York, and Mr. Whitney gave him to the city, as it had no good specimen of buffalo bull. These are the only missing members at the roll call, and thirty-two buffalo now come to the sheds in winter time. All summer the big animals roam about the great inclosure at will, eating what they want and wallowing in the rank grass in perfect contentment.

In winter time it is all different. Then the herd is brought into a small inclosure, and have to be carefully fed. The snow is so deep that the animals cannot find feed for themselves, and they live on hay, which is cut for them on the various farms, and they, with the elk, take care of the whole crop. They seem to prefer their hay a bit rank, and if there are a few brambles in it they appreciate the favor. The first year that the buffalo were in their new home only one calf was born, and he is now a fine specimen and ready to take Apache's place when he goes to join the Indians and the buffalo in the happy hunting ground. Six calves were born this spring, and they are now funny looking little light-brown affairs, and tag their mothers around, grunting like pigs. Six calves were born last year, and they now are fairly big, but small in comparison with the veterans of the herd. The year before only two calves appeared, and these are hard to pick out from their elders. The increasing herd grows more valuable each year, for each year finds the buffalo a rarer animal, and the herd in the Yellowstone Park is the only one now at large. The value of the animals is enormous, when it is taken into consideration that they are absolutely no good except as curiosities. Each one is worth over $500, and some of the big bulls are worth far more than this. F. M. Chapel has entire charge of them, as well as of the rest of the animals, and his house is close to the winter quarters. He has a wholesome respect for them all, and it is hard to tell whether he would prefer to meet a full-grown bull buffalo or bull elk alone. He does not care for either, and none of the men under him like to go into the big inclosure. When they do go, they stick close to the fence, and they claim that they can climb over it in record time, if they are called upon to do so.

The elk are the most attractive animals to watch, for their lordly grace and bearing is fascinating. All day long they stay in the woods, especially at this time of the year when the days are apt to be hot and the horns of the bulls are in the velvet. They now like to rub them on the branches of the trees and slowly wear off the moss-like coating, so that next month they can be ready for the fighting season. The cows, big, horse-like animals, without antlers, sometimes wander near the fence during the day, but only occasionally is one fortunate enough to see them. The first elk came from the West, with the buffalo, and there were thirty-seven of them. Now there are about ninety, but no one knows the exact number. The cows keep the calves in the woods most of the time, and the little brown fellows are so much alike that it is impossible to count them. It is thought that there must be nearly forty calves in the inclosure now. Two weeks ago Mr. Whitney had twenty of the yearling elk captured and sent to his estate in the Adirondacks, where they were set free in the woods, in hope that in time they will increase to such an extent that there will be elk shooting in the North Woods again. Ten bulls and ten cows were sent, and the men on the estate had a deal of hard work in getting the big, ugly animals into the shipping crates.

Mr. Whitney cares more for his black-tail deer than for any of his other animals, and these beautiful creatures are but seldom seen, for they are very wild and stay in the woods the greater part of the time. Ten were brought to October Mountain last season, three bucks and seven does. The men have seen two fawns this summer, but think that there are more, which will be seen when the deer come into the yards with the elk in the winter. Ten mule deer came from the West last year, five bucks and five does, and three fawns have been seen. They are larger than the black-tails and not as graceful, but seem to get along as well in the rigorous climate. Only two of the common, or Virginian, deer are on the estate. They are both bucks, and no one cares much about them. They are too ordinary, and any one who is not a millionaire can raise common deer. The latest addition to the menagerie are the moose. This spring two pairs of two-year-old moose were brought to the estate from Canada and turned loose in an inclosure all of their own. It is in a deep valley, where there is plenty of water for them and dense woods. No one has seen them since they were liberated, and some of the men fear that they will not thrive on October Mountain. Only one hard luck story has been enacted in the animal colony there, and the antelope claimed it as their own. A small herd was brought on from the West, but their first New England winter was their last, and antelope culture has been given up. It is hard to estimate the value of this big collection of big game, for there is no market value to it except as food. The keen assessors of Washington think there is value to it, nevertheless, and tax it accordingly, and give it a valuation of $5,838.

The Game Birds and Their Homes.

The feathered population on October Mountain keeps quite a few men employed, for game keepers are walking in the woods at all times, and more are working in the pheasantry. This is a big colony of tiny little houses, each inhabited by a cackling hen with a lot of young pheasants playing in the front yard. Charles Briggs is the head game-keeper, and has charge of the two pheasantries. At one, near the Lenox line of the estate, all the old birds are kept, which are there for breeding purposes. The coops are similar to those in Forest Park, and the birds of the common English variety, and only about 200 old birds are retained in captivity. The big pheasantry near the center of the estate is the most interesting, and in it everything is done according to the most successful English method. The eggs are brought to it from the other pheasantry, where they are laid by the old birds, and then set under a hen. Each hen cares for twenty eggs, and while she is setting on them she lives in a little box in a comfortable house, where many other hens are employed at a similar occupation. When the chicks were hatched this spring they and their foster mothers were put into the little coops in the rank grass of the pheasantry at once, and the chicks were allowed to run around in the big wire inclosure, and have all the fun they wanted. The wire fence is only about three feet high, and the young pheasants can now fly over it and roam about as much as they choose.

About 1,500 young birds were raised this year, and they can go to the woods as soon as they want to, for nothing is done to keep them in captivity. They fly and run all about the outside of the fence now, but three times a day they come in so as to be on hand for their meals. There are 128 coops in the pheasantry, and if it had not been a poor year for raising the young birds there would have been many more. This is the first season that such a large number of pheasants has been raised, but an even greater number will be brought up next year. None have been shot on the estate as yet, and it is not probable that Mr. Whitney will allow any to be killed this year. It seems to be his idea to thoroughly stock the woods before any shooting is indulged in, and, beside, it is an awful lot of work to chase a bird through the woods. It is much easier to sit on one's front doorsteps and break clay pigeons and have a man in top boots load your gun for you. This is the popular shooting at October Mountain now. Many partridges and quail are to be seen about the place, and all over the estate tiny fields of buckwheat have been planted and the grain will be allowed to drop its black seeds on the ground for the birds, so that they can have plenty to eat in the fall, and they will be fed by the gamekeepers through the long winter.

Two years ago, in the height of the Belgian hare craze, Mr. Whitney laid in a stock of these long-eared innocents, and they have increased and multplied as only rabbits can. At first they were kept in a warren on the southern slope of October Mountain, but soon they became so plentiful that most of them were given their freedom, and the woods and fields are now full of them. In a year or so they will be as thick as the hares are in an English park, and hare hunting will be one of the popular sports. Large numbers of quail were also liberated, and they increased last year, but the deep snows of the hills is against the Bob White, and it is doubtful if the quail ever become plentiful. The pheasants will overrun the country, however, and soon good pheasant shooting can be enjoyed about the edges of the estate where no Whitney signs can bid the gunner nay. The partridge will take care of themselves and increase rapidly as long as they are carefully preserved.

Fishing will, in a short time, be one of the features of October Mountain, and great care is now being taken of the various bodies of water. Basin Pond, in the southern part of the estate, is the largest sheet of water, a beautiful little lake, about twenty-five acres in extent, situated in the heart of the southern hills and imprisoned in big woods. Last fall Mr. Whitney decided to stock it with black bass, so sent to a fish hatchery and bought twenty big 2-pounders to put in Basin Pond. For some reason they were not shipped until early in the winter, and the snow was heavy on the ground when the big tank containing the fish came over the road to October Mountain. Hurriedly the fish were loaded on to another team, and the four-mile drive to the pond begun over unbroken roads deep with snow. When the fish were taken out to be put in their new home eight were dead, but more will probably be put in later this season. Two smaller ponds are full of bullheads and pickerel, but these are too prosaic to trouble the Whitneys. A large number of brooks ramble through the woods, and some of them are full of trout. The largest brook, which flows through the center of the estate, is not posted, as it has been stocked by the State Fish Commission, and each year many trout are taken from it. All the water will probably be closed as soon as the owner can find time to attend to it and take care of that part of his sport.

The Farms on October Mountain.

Instead of having one head farm where everything is centered, Mr. Whitney has left the little farms just as he bought them, and in most cases the original owners are living in them now as his tenants and employes. The farms are connected with a private telephone system and fifty-five men are employed on them. Each year about 100 tons of hay has been cut, but all of this has been fed to the animals and nearly fifty additional tons have been bought to feed the horses and cows. The domestic animals form but a small feature of the estate, and this number is limited, but time will probably increase them as the estate grows and is made perfect. The hay is now the only crop which amounts to anything, and the enormous barn for it at the home farm is another example of the millionaire's way of doing things. Last year the hay crop was larger than had been expected, and it was seen that a new barn must be built to store it. Again the twenty-day order was issued, and this time it was executed and the hay stored in safety. Charles H. Parsons is in charge of the farms, and, in fact, of the whole estate, as he is the superintendent. His work is enormous, as he has to visit all the different places each day and be responsible to Mr. Whitney for everything. All bills are sent to him, and none are paid unless approved by him. He has the pay rolls, amounting to $2,500 a month, and has absolute power over the men. Under his care are the twenty-four houses and thirty barns on the estate, beside the October Mountain house and stables.

Away down in the southern part of the estate is the Grossett farm, where the flocks of goats and sheep are kept. The goats are all Angoras, and beautiful with their long, silk-like hair. No one but Mr. Whitney knows why they are there or what good they are, for they are seldom seen. There are sixty-five goats in the flock now, and they simply run around and butt each other for lack of something better to do. On this same farm is the big flock of 226 sheep, another bunch of animals with no particular excuse for being there. They are just sheep with not even an ancestral tree, and beyond the few which have furnished mutton for the millionaire, they have done nothing. October Mountain is yet crude, but the promise is there and enough has been done to give a slight forecast of what will follow. And on some future day, when the stranger comes to October Mountain over the tops of the blue Berkshire hills, he will see a country place perfect in every detail, representing an enormous expense and changing wild October Mountain into a bit of artificial England.

Wisconsin Game Protective Association.

MILWAUKEE, Oct. 11.—*Editor Forest and Stream:* Please publish inclosed resolution, adopted in our last regular meeting:

Whereas, Our Mayor, David Rose, who is running for Governor, makes a dangerous war on our good game laws. This political demagogue has promised the farmers, game hogs and market-hunters that he will revoke the game laws and abolish the game wardens when elected, to make votes among the farmers. But the farmers of Wisconsin are no outlaws, and are in favor of protecting the game and fish. He tells the people every day that it costs the State a large sum for game protection (the wardens get only $2.50 per day if they work), and that that money can be saved, which is untrue and a campaign lie, as no money from the State treasury can be used outside of the license money, which is only one dollar for a resident, for paying the wardens, etc.

We hope you will roast this demagogue in your paper.

AUG. PLAMBECK, Sec. W. G. P. A.

A permit must be secured from the local authorities when a weapon of any kind is to be purchased in Russia. The name of the man who makes the purchase, with the number of the weapon, is recorded. If the purchaser ever wants to dispose of the weapon, he must notify the authorities and cause the transfer to be recorded on the books of the firm which sold it.

Reading FOREST AND STREAM and rifle shooting are about all the recreation I get, or indeed care for. Would as soon think of giving up my four rifles, as I would of stopping your paper as long as I have the wherewith.

S. S. N.

Maine Deer.

Boston, Oct. 13.—It takes only a few days of Maine open season to put deer into the Boston markets. They come right along, spite of all the restrictions on shipping them out of that State. Two handsome does were hung up in a Boston market Saturday. Asked where they came from, the marketman answered: "I dunno; som'ers in Maine, I guess. The express brought them here." The record for the week of deer transported through Bangor was 211. The second week of last year showed a record of 254; second week of the season of 1900, 145. The total shipments for the season thus far have been 298; same time last year, 348. It will be seen that the number is considerably short of last year. Writers and all others anxious to boom the game supply will not admit that the falling off is due to a lack of game, but claim that the weather is entirely to blame, though admitting that the number of hunters in the Maine woods is greater than ever. It ought to be whispered low, but there is no record yet of a serious shooting accident, though two hunters have been wounded in the hand and one in the leg by carelessness. There is a claim that an outlet for game from the Moosehead region is by the late morning train from Greenville, which does not go by way of Bangor, where there are careful wardens stationed, but by way of Dover and Foxcroft to Newport Junction, where there is no warden supervision. Another outlet that should be watched is at Jackman, by way of the Canadian Pacific. At both these outlets almost anything in the way of game passes. From the Rangeley region a rather unsatisfactory hunting season is reported, though some deer have been killed. The weather is blamed entirely, rather than any lack of game. It is true that it has rained about all the time, with the air full of falling leaves. Twenty-five or thirty Boston sportsmen have returned from the Maine woods the past week with deer, while it is a curious fact that few return without one or two. Is this a credit to the Maine game supply, to the skill of the hunters, or to the guides? It is very certain that many of them know little or nothing about hunting, "couldn't hit a barn door," as the saying goes, but they bring back deer, shot by (?).

Considerable disappointment is felt concerning the actual scarcity of partridges and woodcock in Maine, and the same complaint comes from New Hampshire towns. The old theory is advanced, "Cold weather and rain in the early season killed the chicks." Gunning on the Cape was not up to expectations last week. Still, the flights of shore birds have continued small. Old gunners at Chatham and other points say that the season so far has been the poorest in years. Black duck shooting has opened at the Pleasant Lake blinds. Herbert Poole shot nine black duck there Friday. Mark A. Harding succeeded the other day in getting several quail out of some flocks at Morris Island. These, added to a number of shore birds he had secured at Chatham Beach, made one of the best bags of the season.

At Stratton, Me., several deer have been shot since the open season begun. Mrs. Bert Soper shot a nice buck Oct. 2. In the vicinity of Phillips, Me., several deer have been taken. Mr. Henry C. Taylor, of Manchester, N. H., shot the first deer of the season at Black Brook camps, Dead River, Me. Will Holman shot the first deer of the season at Carthage, Me. Deer are reported plenty in that section, but partridges scarce. Capt. Billy Soule shot the first deer of the season at Pleasant Island Camps, Cupsuptic Lake, bringing it in at 5 o'clock on the opening day. Senator W. P. Frye closed his camp, Mooselucmaguntic Lake, Oct. 1. He is a great lover of angling, but never shoots. At Carry Pond Camps, Mr. Will Swan, of Boston, was the first lucky hunter, bringing in his deer Oct. 1. The next was taken by W. E. Souther, of Boston, Oct. 2.

The Maine moose season opens Oct. 15, Wednesday, of this week, and it is claimed that prospects are good in several sections. At this writing the Boston hunters who have been in New Brunswick and Nova Scotia after moose for several weeks, have not returned. It is certain that they have had a good deal of cold and rainy weather, conditions not favorable to moose calling.

Boston, Oct. 11.—The hunters are getting some deer in Cumberland county, Me. It will be remembered that this county was under continued close time till a year ago. Dr. Wallace Snow, of Portland, shot a fine buck last week at L. C. Spaulding's camp, near Sebago Lake. L. M. Johnson, of Sebago, shot one near the head of the lake the first days of the open season. A gentleman, just returned from the Rangeley region, says that the woods are full of falling leaves, while it had rained nearly all the time for a couple of weeks. Hunting is extremely difficult.

Great indignation is expressed at the shooting of the State's buck deer at Marshfield. Last spring a doe was caught off Brant Rock swimming in the salt water and nearly exhausted. The animal was picked up by Albert W. Phillips. The Fish and Game authorities were at once notified, and they liberated the deer in the woods in that vicinity. Soon after a buck was obtained—one of the Sportsmen's Show animlas, I am informed. The animals were expected to breed, under the protection of the law. Rabbit hunters found the buck's carcass Monday hung up to a tree. The animal had been dressed in Maine woods style, with all the best of the venison carved off the bones. The animal had not been killed more than two or three days. The doe has been seen wandering about after nightfall since the slaughter. The inhabitants of the town are very indignant, and the State Fish and Game Commission has offered a reward of $100 for evidence that shall lead to the arrest and conviction of the guilty person or persons. That part of the State is under perpetual close time on deer, but considerable lawlessness has occurred at times along the South Shore and the Cape.

The Lake Auburn, Me., Fish Association has repeatedly complained to the State Fish and Game Commissioners that the salmon and trout hatched in the hatcheries there and turned into the lake have been escaping down the outlet and into the Androscoggin, never to return. The Association has been granted permission to erect and maintain a screen at the outlet, and the members are contributing funds toward the screen, as well as asking the friends of fishing in that lake to do the same. The screen experiment will be anxiously watched. Hitherto it has been found very difficult maintaining screens at the outlets of Maine lakes and ponds, by reason of ice and freshets. A winter freshet that raises the ice is pretty sure to take a very strong screen with it.

Special.

CHICAGO AND THE WEST.

Proposed Big Club Combination.

Chicago, Ill., Oct. 11.—Mention has been made in these columns of the organization of the Undercliff Sportsmen's Association, which for some time has been quietly leasing ground on the famous Senachwine Lake marsh of the Illinois River country. This part of the Illinois River Valley has long been famous for abundance of waterfowl. That is to say, it was famous in the past, and it is to-day perhaps the best of the duck country left in this State. Swan Lake Club preserve is an old one. Adjoining these grounds lie the leases of the Undercliff Association. The latter club has a part of the marsh at the lower end of the famous "Goose Pond." At the other end of the Goose Pond lie the grounds of the Blue Wing Club. Not far from this are the big Hennepin preserves. Thus it will be seen that practically all the marsh of desirable nature is now under preserve, and the open shooter has little or no chance to have a day's sport on these once popular marshes.

The last talk is that there may possibly be a big combination of perhaps three or four of the above-mentioned clubs. I should think that Swan Lake would be opposed to this, yet some of the Swan Lake members have already taken out memberships in the Undercliff Club. If this whole stretch of country were under one club organization, the members of that club would be free to shoot at any place upon the whole marsh. Hennepin and Swan Lake would not seem to have much to gain by an arrangement of this kind, yet were parts of the Undercliff marsh strictly preserved, it would in time come to be good shooting country, perhaps under certain conditions, better on some days than the marshes of these older and more wealthy clubs. These are days of mergers and combinations, and although I should personally doubt the likelihood of this combine being made, there is at least rumor of it with something better than guesswork under the rumor.

Season Slow.

The season still continues slow. Very few jacksnipe hunters are going out to-day, as there is no flight reported. It is thought that the middle of next week will see some jacksnipe on the marshes. Duck shooting has not yet begun, as the weather is now mild and fair. Some good bags have been made on Tolleston marsh near Chicago, but nothing interesting comes from the open country. The birds are now reported to be in Wisconsin in the neighborhood of Lake Poygan, and others of the better Wisconsin marshes. It is not thought that there will be any very good shooting in Illinois this fall. The feed, such as wild rice, etc., is all missing in the Senachwine and Swan Lake country, the high water probably having cut it down. Where there were big beds of wild rice last fall there is open water or mud to-day. Some think the Chicago Drainage Canal has been the cause of this, but the more likely explanation is that of the high waters which were so general this summer.

As to quail, it is not yet time to concern ourselves over much. Of ruffed grouse, we never have very many in Illinois. A friend tells me that he is invited to a Michigan point, where a resident sportsman tells him he can put up from thirty to seventy grouse any day he likes. This would seem to be well worth watching.

The Northwest.

Mr. James K. Boyd, of Hempstead, N. Y., who wrote earlier in regard to shooting country in the Northwest, is good enough to write as below regarding his trip. I wish all the sportsmen who avail themselves of the Forest and Stream Information Bureau would be kind enough to tell what luck they have. Mr. Boyd says:

"I have just arrived home from our Western trip in North Dakota, after one of, if not the most enjoyable, chicken shoots we ever had. Although birds were all strong and active, requiring a real 'get there' motion, our two guns bagged twenty-odd daily, showing how many the early shooters left. We witnessed some of the finest work by the dogs possible, and although the northern ducks and geese had not 'come in' up to the time of our leaving, we were well repaid for our long trip, for we had good chicken shooting every day, and picked up a few native ducks.

"There seem to be various interpretations of Minnesota license for shooting, as regards those coming from a State not requiring a non-license tax."

In regard to the prospect for ducks in South Dakota, I have the following to offer from Dr. J. C. French, of Webster, S. D.:

"As a duty I may owe my fellow shooters, I want to have it known how dry it is here. When I see parties from way south and east coming long miles and spending good money for an unsatisfactory and disappointing trip, I feel it's time you got out your big pen, bare your arm and write it big and bold, 'This part of South Dakota is all dry.' Not water enough for a duck to drink, let alone swim. I know this country for 100 miles as a man knows his own front yard, and I speak within bounds when I say there is less water and less ducks than any white man ever saw at this time of the year. Fire is burning today, where I have seen enough water to float a big steamboat in other years. It's dry as a Vermont Sunday school picnic, that's what."

Reports from North Dakota are less distressing than the above. Friends who recently met shooters from the Devil's Lake country of North Dakota say that the duck shooting there was very heavy indeed. Of course the Devil's Lake waters are more permanent than the shallow sloughs of South Dakota, which have always been more or less capricious in their nature.

The Game Law as Enforced.

I was interested in the comment of Mr. Boyd, as stated above, upon Minnesota licenses. About all I can say in regard to the Minnesota game law is that you can see how it works if you want to try it on. I get more fun watching the working of the game law in Minnesota than from almost any other of my employments at this writing. Here is another instance of it. Mr. Frank Stone, of Chicago, is just back from a shooting trip in North Dakota, where he had good success. It is against the law to bring birds out of the State of North Dakota, but Mr. Stone didn't mind that. He had a brand new trunk which he took along with him for this very purpose. It was perhaps not a very expensive trunk, but was very bright and shiny, and strong enough in his opinion to carry an abundance of birds for the loved ones at home. Into this new trunk he threw, beside an extra pair of socks or so, his illegal game. Mr. Stone duly arrived in Chicago with his dress suit case and one of his trunks. The new, shiny trunk failed to appear, and keeps on continuing to fail to appear, in spite of Mr. Stone's agitation over the matter. Sending out a tracer for the trunk, he discovered that it was detained at the fatal Union Depot in St. Paul, Minn., where, in spite of the allegations of the protective authority, the Chicago sporting newspaper which criticises Mr. Fullerton and his men, the Minnesota game laws seem to have worked once more. That is to say, it was in this instance the Lacey law which worked, the seizure being made, as I understand it, by a deputy U. S. marshal, who had authority to seize game shipped out of North Dakota contrary to the law of the latter named State. Were I in Mr. Stone's place I should not worry about the new trunk or the pair of socks, or the loss of the game birds. There is a time for disappearing.

How to Do It.

This is the way to do if you want to go shooting in Minnesota. Sam F. Fullerton, the State warden of Minnesota, in handing me this correspondence, says: "The inclosed letter is such an unusual one, that I send it to you for your perusal. It is the kind of letter one would expect to get from a sportsman." The letter follows.

"Zanesville, O., Sept. 29.—S. F. Fullerton, Esq., Executive Agent Fish and Game Commission, Capital Building, St. Paul, Minn. My dear sir: A party of three (one an invalid) expect to take an outing in Minnesota within the next three weeks, and two of them will do some shooting if the occasion presents. As the two who will do shooting live in Ohio, and Ohio has a non-resident license law, I ask of you, where shall we obtain our licenses, from your office or from the county in which we expect to do our hunting? What hunting we do will be on small game, as we will not have a rifle in the camp. Apropos of your license law, will state, it is the proper thing, and I sincerely hope that every one that carries a gun into or out of your State may be compelled to pay same, and the money so obtained be used exclusively in the interest of game protection. While Vice-President of the Ohio Fish and Game Protective Association, I worked hard and spent my money in the interests of a license law; even went so far as to advocate the organization of county game protective associations, the election of officers for county organizations, and the employment of a competent attorney to prosecute, as we find here that prosecuting attorneys will not prosecute (they fear they will lose a vote or two for so doing). You will readily see that there is no desire on my part to evade your license, but I want to prepare everything before going, hence write you now. One thing more: By paying a license are we permitted to take from your State any game? We would be pleased to have the privilege to take home with us some for our families, and as the writer is a member of the local lodge of Elks, he would like to give the boys a duck supper, if permitted to take from your State enough ducks to do so.

"Respectfully yours,

"L. A. Moore."

The writer of a letter like the above, who does not start in to tell what he is going to do to the game wardens at the place where he is going to shoot, is much more apt to get along nicely than one who goes in there and gets too chesty about it. I don't think any man who goes to Minnesota will be disappointed if he obeys the law and respects the wardens.

How Not to Do It.

Mr. H. L. Chandler, of Owasso, Mich., who is a candidate for representative in his district, on Oct. 1 took down his little shotgun and started out to bid defiance to the game law. He shot a quail in the presence of several witnesses, and sent the game warden full account of the transaction, and invited arrest. Mr. Chandler is an attorney and not in the patent medicine business, as might be supposed from his evident hankering after advertising. There has existed some doubt in the minds of the lawyers as to the actual opening this fall of the quail season. I don't hear of any of the better class of sportsmen of the State who are eager to take advantage of the technicality and go out and shoot before the 20th of the month. The sentiment is against this sort of thing. It is strange that there should still obtain the amazing folly of a certain class of people who seem to think that the game laws are intended as an affliction and outrage upon the people rather than as a wise and beneficent means of giving to the people what a few of the people would otherwise take for themselves. Injustice and unfairness usually defeat their own ends. Mr. Chandler's attitude is not an enviable one.

The Minnesota Lawyer.

I called attention some weeks ago to the Minnesota lawyer, Mr. Stanislaus Donnelly, who was charged with shooting ruffed grouse out of season. This case came on for trial, as was earlier announced. Private information contains the following comment on the matter:

"We had a very amusing case here yesterday settled in the Municipal Court. Two lawyers shooting chickens bagged a couple of pheasants (ruffed grouse), the latter out of season. On the incoming train was the game warden, who saw the pheasants on the string, took them and notified the parties to appear in court. Instead of putting up the minimum fine of $10 and settling the thing then and there, the culprits started in on bluff tactics; threats to show up game warden, etc. Well, we had testimony that pheasants and prairie chickens interbred. Did you ever see a hybrid prairie chicken-partridge? Also we had testimony that a prairie chicken and pheasant got up and flew alike, almost similar in habits, etc.; that the birds were shot unintentionally and innocently—if they were shot, etc. The warden testified—although the evidence was ruled out—that the pheasants were shot while upon the ground. And so it went. I got into court at the tail end and enjoyed the fun. Defendants were found guilty—and they intend to appeal! I contend they should be fined the limit for having the pheasants in their possession, and $100 for shooting them on the ground."

License Law in Wisconsin.

Whether we like the license law or not it seems to be doing business, at least in a resident license form, in some of our Western States. Dodge county, Wis., has this year issued 1,037 licenses. There were about 300 more licenses issued in this county last year by this date than during the present season, but even so, the number is large enough to give some idea of the numbers of shooters who go out each fall.

The Tennessee Meat Dog.

I must thank Mr. Samuel B. Dow, of Tennessee, for an invitation to go down and get acquainted with him and his meat dog. That is my kind of a bird dog, and I don't care who knows it. As to quail shooting, it is going to be pretty nearly the only kind of field shooting available for folks in this part of the world, and I cordially agree with Mr. Dow that there is no prettier form of field sport in the world than that of shooting good quail over good dogs and in a good country, such as he describes.

Chicago Man Gets His Moose.

Mr. T. W. Robinson, of the Illinois Steel Co., Chicago, whom I earlier mentioned as having gone to New Brunswick after a moose, has returned, and returned successful. He got a large moose with a good pair of antlers, and says that bye and bye he is going to tell all about it. He went in with Jack Moore in the new moose country which Adam and Jack and I discovered last winter.

From all accounts there continues to be abundance of big game in New Brunswick, thanks to the law and the enforcement thereof. The following letter is from Mr. W. H. Allen, one of the New Brunswick guides, who writes under date of Oct. 6:

"My party that has just returned was composed of Mr. Wm. H. Moses and wife, of Tilton, N. H., and Dr. Fuller, of Boston, and Dr. Tuttle, of Waverly, Mass. They were only 18 days, including going in and coming out of the woods. Dr. Tuttle shot a moose and deer, as did also Mrs. Moses, while Mr. Moses shot his moose. Dr. Fuller did not shoot his moose, as he was not wanting one, unless of very large spread of antlers. He saw several good shots, but heads did not suit him. Moose are very abundant in New Brunswick this year. Our game is on the increase, and this I think is due to our very strict laws well enforced. I am very glad to notice such an increase in our moose, caribou and deer."

I have not heard from Adam Moore, and do not know what success Mr. Weed and he had in the Nictor country. It is not likely that we will hear of Uncle Henry Braithwaite until some time in December, but it is not difficult to guess that Uncle Henry will be doing business up near the headwaters of the Miramichi.

Sea and River Fishing.

Proprietors of fishing resorts will find it profitable to advertise them in Forest and Stream.

Lake Champlain's Big Fish.

Ticonderoga, N. Y., Eagle Lake, Oct. 8.—*Editor Forest and Stream:* The past season at Eagle Lake has been one full of glorious victories for the wielders of the pliant rod seeking the gigantic northern pike or the big small-mouthed bass that abound in the crystal waters of this gem in the land of Natty Bumpo, Israel Putnam and the famous ranger, Rogers. One of the earliest arrivals at Hotailing's Hotel was Mr. E. Runge, a member of a great New York art firm, who passes his winters in China going about in a house-boat looking after his purchases of vases and pottery from the staid, conventional Chinese merchants. He can tell and does tell many a well-founded story about the splendid hunting and fishing of that strange country, where deer and pheasants can be flushed or jumped from the palm thickets near any coolie's hut as easily as we in the States stir up squirrels about farmhouses. But let Mr. R. tell your readers about that and many other things, including brook trout fishing in the mountains of Japan! Well, this gentleman and his two sons were diligent for several days after arrival in July without marked success. Finally Mr. R. took two large cane poles sent to him by Mr. Alexander Weed, president of the Eagle Lake Improvement Co., and betook himself to the placid precincts of Moore's Bay, at the head of our four-mile lake. A crawfish did the trick so effectually that our worthy friend from Hong-Kong was soon fast to something very like a whale, as he expressed it, which towed his light skiff all over the bay for a while and finally almost pulled the stout cane from his hands. The end had to come, as it generally does in such cases, when there is no reel, and a sad but plucky angler went home for sympathy and dinner. He was out again that afternoon; and up by my lodge by Fox Island, his wife finally succeeded in landing a 9-pound pike in fine condition. He kept on after the fish during the season until late in August he captured alone, without a net, a 17-pound pike, the record fish there, with a live bait on a rod, last season.

William Garfield guided Miss Carpenter to a pike well conditioned and 37 inches long, and later on aided Mrs. Carlos C. Alden to land one 2 inches longer. Mr. Weed, in front of his camp on Prospect Point, "spooned" out a 15-pounder right before my eyes one morning, and it was served, cut in steaks, to his friends for several days. The record bass was caught from a boat by a ten-year-old boy, Master Kuhn, from Cincinnati, on the Sunken Island, guided by Mr. Hotailing, late in August, and weighed 4 pounds 10 ounces. A farmer named Cheeney put a little bass on a set line, or rather hand-line, near the bridge, and finally landed a pike that weighed, after being out of the water for six hours, 15 pounds, on Mrs. Moore's scales.

All these captures fall far behind your correspondent's experience Sept. 17, when he went forth from Arden Lodge with a small copper spoon and a heavy double gun at about 10 A. M. on that eventful day. His little blue batteau 9 feet long stood like an azure bonnet on the still water as he carefully embarked for fish or fowl, as fortune should kindly direct. The line was scarcely payed out to 50 feet when something seized the lure. He gave the usual motion sufficient to set the hook, for he was fishing with a fine hand-line and the game showed his weight and seemed inclined to move off independently. Just then a catastrophe occurred. The line had become decayed in spite of the fisherman's care, and broke off near his hand, and away went the fish without having once showed himself above the surface. Nothing daunted, your correspondent then climbed the cliff to his lodge and secured an old-fashioned kidney spoon, to which he had lately attached a triplet of huge hooks and feathered all with the plumage of one of his Plymouth Rock chickens, who disputed their morning corn with a covey of nice ruffed grouse, being tamed and fed for future sport. With this new lure the batteau moved out again, over the same place, when, lo! another strike and a harder one! This time the striker stayed with him and swam slowly toward the boat, running very deep as he aproached. There was not a breath of wind, and after a few rushes and careful recoilings of the slender trout line the little craft had been towed pretty well out toward Fox Island, and the angler called loudly for some one to row out and get a motion on his boat to help drown the monster pike which was rushing around and under him or floating gently near the surface just under his hand, the spoon and hooks all being outside his huge mouth. An attempt to take in the fish by seizing it around the throat, resulted in an awful plunge, covering the boatman with water to the waist. Then, as the big pirate swam off toward the island and its grass, a sudden resolution came to shoot him with the 12 bore gun. This was dismissed, as likely to cut the line and lose all. Both fish and man were now becoming exhausted from their half-hour tussle, when a new element of interest came upon the stage. It was the first fish hooked, who followed its mate to the boat, and began throwing somersaults in its efforts to dislodge the copper spoon and a bit of attached line about 50 feet long. The spoon could not be seen, and this showed that he was hooked deep. After several trials of this kind, old No. 1 stopped his efforts, and the water was covered with pickerel grass cut off by the struggles of the pair. A little speed is given to the frail craft with a paddle held in one hand, while a vigilant eye is kept on the line, always kept as taut as possible and never once allowed to get slack for the world. The old man of the lake is dragged and coaxed up from the bottom once more, and as he comes under the little low stern a quick reach and a firm grip in the eye sockets brings the beautiful, gleaming fighter into the canoe, where he remains as quiet as a mouse. Fearful of a sudden struggle, which experience told him must soon come, your writer carefully paddled to the shore with one hand, where, gathering up line and card, he rushed up the bank, never letting go of his prey, and said: "Well, my dear, here I am." It gives me pleasure to say that I carefully outlined that noble fish on a paper and have the drawing at my office in New York. It was in splendid condition, but had had no breakfast or any food at all for some time, although the lake was alive with shiners at that place. Its head was remarkably small for a fish that was actually 35 inches from nose to tail tip, and measured just 14½ inches around its waist, or rather, shoulders. I regret that I had no scales, but, perhaps, you can apply the very correct rule for ascertaining weights of this kind of game lately published in Forest and Stream, which I have mislaid, and give me the approximate weight. Reel work is all right, but for sport give me the old-fashioned way of taking big pike that I learned in Champlain when a boy. I was out for a dinner that morning and had no time for frills.

Peter Flint.

CHICAGO AND THE WEST.

On the Albany River.

The Forest and Stream news bureau seems to be working fairly well this fall. All my "customers" who have gone to Minnesota and Dakota have come back pleased, and I have just stated that Mr. Robinson liked his moose tip. Recently I had an inquiry from Mr. Sam J. Ryan, of Appleton, Wis., who wanted to find out about the Albany River, north of Lake Superior, with a view to a canoe trip next year. If you don't see what you want in the Forest and Stream, ask for it and we will get it for you. Here is the answer to Mr. Ryan's inquiry, written by Mr. W. O. Watson, who lives all the way out in Charlottesville, Va., and writes as follows:

"Ten or fifteen Albany River Indians come down to Nepigon every summer to do the tourist work there, and Mr. McKirdy, or the Hudson Bay factor there, can get Mr. Ryan all the information he wants from them. They told me great tales about the trout fishing in the Albany. Said no white men ever fished it. They said it took them twenty days to come from the Albany section to Nepigon by canoe, and they estimated that they traveled fifteen miles per day. Their account of the fishing and the country interested me greatly."

I thank Mr. Watson very sincerely for his volunteered advice. The Forest and Stream family might be a very much worse one.

Muscallunge at Last.

The muscallunge have been very backward this season and not very many good catches have been reported. I have just seen a photograph, however, which is calculated to make one's hair stand up straight—twenty-six muscallunge, many of them beautiful, clean, handsomely marked fish, and none less than ten pounds. These fish were caught by Train Master Hart, of Wausau, Wis.; H. H. Ober, agent of the C., M. & St. P. Ry., and Dr. H. Pink, of Indianapolis, on Saturday and Sunday, Sept. 20 and 21, in Tomahawk Lake, Wis., on the C., M. & St. P. R. R. Wm. Williams and Bert Hill were the guides who had out the above gentlemen. The take is said to be the finest one ever seen on that famous water, which has this year turned out better fish than any other lake in Wisconsin. This is the water where the State Fish Commission catches its breeders for the muscallunge hatchery in the springtime. The weights of these fishes were as below, respectively: 12, 18, 24, 15, 26, 20, 20, 18, 22, 15, 12, 12, 10, 10, 10, 18, 22, 12, 30, 24, 18, 15, 13, 12, 15 and 17 pounds.

Now, who says we have no muscallunge in the West? The above was certainly a grand score for two rods in two days. The catch has stirred up a great deal of excitement along the St. Paul road, and a great many anglers have gone into that country during the past week. The fishing is reported to be better now than it has been since spring, and indeed it is probably much better than it has been at any time during the year.

Bait-Casting.

Mr. H. W. Tucker, of Philadelphia, Pa., writes as below, regarding the art of casting as is done in the West:

"Through reading your articles in the Forest and Stream, I have become familiar with the scores made and general excellence displayed in bait-casting by the members of the Chicago Fly-Casting Club, and as I take an interest in bait-casting, my desire to gain information on the subject encourages me to request information upon some points. I should like to know the most popular length of rods used by the experts, make and caliber, or number, of line, and whether an overhead cast, as in fly-casting, is permissible, or whether contestants are confined to the movement in casting diagonally across the body from right to left, as represented in Henshall's book on the black bass?"

In the Chicago style of bait-casting the rod used is light, stiff and short. Our bait-rods have grown shorter and shorter here for six or eight years. The experts rarely use rods longer than seven feet, some going as low as six feet. The reel is of the quadruple multiplier sort, of the best makes and the line is the finest of the braided silk lines manufactured. That is to say, this line is used in the bait-casting competitions, though it is too delicate to use in actual fishing. As seen in the tournament competitions, the bait-casting is all done overhead, not with the full arm sweep, as taught by Dr. Henshall in his book. This full-arm style of bait-casting is obsolete, in this part of the country to-day among the experts. The latter claim that they can keep a bait better on the line with the overhead cast. In actual fishing the overhead cast, although sometimes practical, is often awkward and unnecessary. Some of the club casters do not restrict themselves to overhead casting in actual fishing, but this is the style used in contests.

About Fly-Rods.

The little controversy on weight and characteristics of fly-rods goes merrily on in the Fishing Gazette of London. Several English firms offer their opinions upon fly-rods in general, and the American fly-rods in particular. A good deal of the matter advanced is tommyrot, but there are some good things among the others. I notice that Mr. A. MacDonald has something pretty sensible to say, that it to say, it seems sensible to me, because it is a good deal to my own way of thinking in regard to chokebore fly-rods:

"It is really marvelous," he says, "on going the round of a tackle-maker's shop, to find so many ill-proportioned rods. Nearly all have the whippy point and stiff butt. A few have weak center pieces, but, alas! how very few have the graceful, steady, and, for their size, strong swing, which impresses the manipulator with their power, and imparts confidence in their use. Some are rods (large even to sixteen feet) with practically no power, and more adapted for flicking flies off a horse's ear than for angling. I do not include in this category, I need hardly say, rods of the Hardy, Castleconnell, etc., make. But some such rods are made by tackle-makers well up in the trade, and priced as high as 40s. or more. Personally, I make all my own rods, and prefer them to most makes, not because I have made them, but simply because with careful testing as I go along I am able to retain the proper power in conjunction with the necessary resiliency which is so difficult to obtain in ordinary priced rods. One is apt, if not careful when making a rod, to go beyond the point where the proper power or backbone is to be found. Once this is done nothing satisfactory can be made with the lengths. The only remedy is to shorten the lengths and start a smaller rod. When constructing a rod the butt should be fully utilized. Some makes I have handled, it is no exaggeration to say, would fish better with the center and point only. The butt appeared as if meant for something to hold on to and not as a vibrating part of the rod. These rods are very easily broken. Their defects are more felt in the 'Land o' Cakes' than in sunny England where fine water and dry fly-fishing is the rule, and where 'point work' is more used.

"Here, in loved 'Auld Scotia,' in the brawling mountain stream now running noisily through a narrow gorge, now opening out a wide pool with sullen circling waters, wet fly-fishing is more suited. The banks are often precipitous, or heavily wooded, and overhead casting is impossible. 'Switching' is necessary, and when a wide pool has to be covered then comes in the rod with the strong swing to the hand, which imparts an impetus to the line sufficient to carry the flies well over the stream."

So much may be said without committing oneself to the absurd weights which Englishmen seem to think necessary in their fly-rods. I should not myself care to use one of these heavy English rods, but I should like to see some American rod maker disabuse himself of this too-much-backbone idea and get back to making rods which do work of casting a line by themselves and not by the muscles of the angler.

If one will conceive his fly-rod to be made of elastic bands front and back, he can get a notion of its action in handling the line. When he begins to pitch his rod forward he may suppose all these rubber bands on the front of his rod to stretch, and then to begin to contract again, as the rod goes forward with the motion from the wrist up. This contraction from butt to tip of the rod brings the tip forward and carries the line

forward. Obviously, one does not want a distance of four or five feet between his hand and the place where this contraction and pitching force begins. Once in a while you get hold of a rod, sometimes a heavy rod, which, none the less, seems to have that easy, continuous, forcible sweep, which means both power and ease. That is a good fishing rod. Such a rod is that which I mentioned the other week as belonging to a friend of mine here in Chicago. It was made by an unknown maker, yet his theory was the correct one. There is a vast difference between a tournament rod and a fishing rod, and any practical fisherman can tell you this. Of course, this must not be construed as a word in favor of the light, whippy rod with back kick in it, and no power for lifting or driving the line. I am getting together a battery of fly-rods of my own, and I begin to remodel some of my earlier ideas about desirable quality in fly-rods. There can be such a thing as a light rod, which is wearisome to fish with all day, and upon the other hand, there can be a moderately heavy rod which will be pleasant and sweet to handle all day long. The difference lies in the action of the rods and the pleasure of use depends upon whether you have a chokebore rod or a cylinder bore.

Hartford Building, Chicago, Ill.

The Waddell Formula for Weights of Fish.

New York.—*Editor Forest and Stream:* On a recent fishing trip I measured and weighed several fish just out of water, to see how closely the Waddell formula would apply to different species. According to this formula, I believe, the square of the girth in inches multiplied by the length in inches is supposed to give the weight in pounds. An elaboration of the formula for different species may give pretty close results, but the one arbitrary formula cannot be applied. My results were as follows:

No. 1, Lake Trout—Girth, 10.75 inches; length, 22.50 inches; weight, 3 pounds. By formula, 3 pounds 4 ounces.

No. 2, Lake Trout—Girth, 12.25 inches; length, 24.75 inches; weight, 4 pounds 12 ounces. By formula, 4 pounds 10¼ ounces.

No. 3, Lake Trout—Girth, 13 inches; length, 25.75 inches; weight, 5 pounds 2 ounces. By formula, 5 pounds ½ ounce.

No. 4, Lake Trout—Girth, 14.25 inches; length, 28.50 inches; weight, 6 pounds. By formula, 7 pounds 3¾ ounces.

No. 5, Northern Pike (*E. lucius*)—Girth, 9.25 inches; length, 26.75 inches; weight, 3 pounds 8 ounces. By formula, 2 pounds 13¾ ounces.

No. 6, Northern Pike—Girth, 15 inches; length, 38.25 inches; weight, 11 pounds. By formula, 8 pounds 8⅛ ounces.

No. 7, Northern Pike—Girth, 11.50 inches; length, 30.25 inches; weight, 6 pounds. By formula, 5 pounds 1-10 ounce.

No. 8, Wall-eyed Pike—Girth, 9 inches; length, 18 inches; weight, 2 pounds. By formula, 1 pound 13 1-6 ounces.

No. 9, Small-mouth Black Bass—Girth, 11.75 inches; length 16.75 inches. Weight, 2 pounds. By formula, 2 pounds 13 9-10 ounces.

I will not guarantee my mathematics in the above cases, as there is a good deal of figuring to be done, and I passed up on mathematics in my junior year at college, twenty-four years ago. Robert T. Morris.

The Delights of Salmon Fishing.

Mr. Charles Hallock kindly permits us to print this extract from a letter, received by him from Mr. Ivers W. Adams, of Boston:

"I propose leaving Quebec the 31st of May (next month), with two of my sons and a gentleman friend from New York; an old associate of mine. We shall, this year, have fished togeher I think twenty-one years. He was my guest last year, and I had the pleasure, the delight, of receiving from him a solid silver loving cup of enormous size, upon one side of which was a reproduction of the chateau, the Moisie, of which I sent you a photograph. Another side was my own name, from Henry Sampson, 1901. The other side, "Walter Brackett's Leap." The whole, together, one of the finest pieces of work, executed by one of the best artists in New York. I wish you could see it.

"To salmon fishing, this royal sport, I have given a vast deal of thought, time and money, during my life, and probably to-day I have more money invested in salmon fishing, which I own in fee simple, as a riparian, than any other man in this country, and so far as I know, in any country. Of course I am not conversant, fully, with the streams the other side, but my investments in that line exceed $50,000. I value them at several times that. I pay no rentals; I own my properties. On the Wacheeshoo I own the fly-fishing and the net fishing to the ocean. No nets are set, or will be, as long as I own this beautiful little property.

"The salmon there are very plentiful, but not so large as the Moisie. I regard the Moisie, in some respects, as the finest salmon river in the world. The fish are large and very gamy; not logy, like Ristigouche fish, and the interests of the Moisie are not divided. The only river approaching it is the Grand Cascapedia, but that, you know, is divided in a dozen or more interests. If I could own absolutely all of the Grand Cascapedia, I am quite willing to say I would prefer that to the Moisie.

"The Moisie fishing is practically all within sight of our chateau, and in the season it is a marvelous sight, as we sit there after our dinner, and note the salmon constantly leaping, sometimes a dozen of them, in the seven marvelous pools within the stretch of our vision. We get a great many 30 to 40 pound fish, and being caught in pools so near the sea, they are fresh, strong, white, fat, and great fighters."

"A trout up to my place swallowed a watch," related the proprietor of the Brook House, "and the watch is running yet." "That is nothing," boasted the Beach House man; "a shark swallowed an alarm clock down to my place, and now he comes around and awakens the guests every morning."—Chicago News.

A Device for Landing Big Fish.

A correspondent of the Asian describes a fish-landing contrivance which might be used in American waters. He writes:

I want to bring to the notice of Indian anglers a new dodge for landing big fish which will prove of inestimable value to them. It can best be described as a clever and effective adaptation of the ordinary wire snare, and has been invented by Mr. A. G. Crawshay. The subjoined illustrations show its form and the means by which it is worked.

A strong strand of steel pianoforte wire in a running slip knot is fixed by means of clips to a semicircular steel hoop; and this, when the lower part touches a fish, after being slipped over the tail, is instantly released and drawn tight round the fish.

The inventor has scored a distinct success, and some of the special advantages he claims are the following: (1)

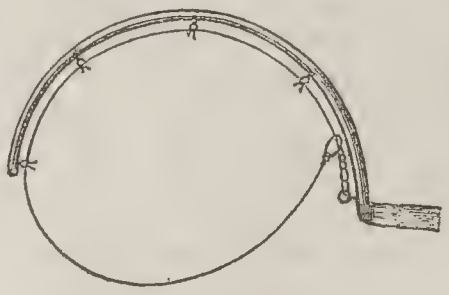

Fig. 1

Fig. 2.

The fish is not damaged as with a gaff. (2) It is much easier to use than a gaff, which latter instrument inevitably requires a certain amount of practice. (3) The fish once snared can be carried anywhere by the tail over sand or high rocks, and has no power to kick. (4) this lander is far superior to any net, for the man who is fishing can use it himself as easily as a gaff, and there is nothing for the tackle to get entangled in as with a net. (5) It can be carried like a gaff, and is also made to screw into any landing net handle. These are a few of the advantages of Crawshay's patent improved mahseer lander.

To use it slip the noose over the fish's tail behind the dorsal fin, not in front of it, and a sharp jerk upward to the full length of the wire secures the fish.

The artist has not quite hit off the idea in Fig. 2, for the noose should be much nearer the dorsal fin, and then so long as an even strain is maintained it is impossible for the fish to escape.

I have not yet tried the "Lander" with salmon, but hope to do so within a few weeks; but I know several men who have tried it and who are loud in its praise, and what succeeds with salmon ought to do for mahseer. I send you a lander by this mail. J. Moray Brown.

A Fish in the Organ Pipes.

This is a story of a fish, a water motor, an organ, and a wedding. The fish in some fashion found its way into the water motor of the organ at Emmanuel Church, and was unable to find its way out again. Apparently, in trying to do so, however, it succeeded in getting into the wind pipe, or rather wind pipes, of the organ, so that the instrument wheezed and choked at times as if it had an extremely bad attack of asthma. The discovery of the presence of some obstruction was made on Tuesday, when the church was used several times by societies who were holding meetings on that day. The organ was being played by Rev. Mr. Searings, the pastor of the Boston deaf mutes, who had volunteered his services, when suddenly one of the two water motors of the organ stopped working. It was not known whether the obstruction was a fish or an eel, and the only way to find out and remove it was by opening the motor and examining it. But there was a wedding—the Williams-Snelling wedding—to be held at the church on Wednesday, and the regular organist was in a state of mind. There was not time to have the organ repaired and yet he did not care to endanger his reputation by playing on an organ with a fish in its water motor.

Such uncertainty was felt about the course that the fish might take and its consequent effect upon the organ that finally an orchestra was hired to be on call and fill up any gap that might occur in the organ music. The orchestra was placed in an anteroom, but its services were, fortunately, not required. The fish had evidently become wearied by its efforts to escape and kept quiet, and the organist went triumphantly through the musical programme. This morning workmen from an organ factory took out the plug of the water motor and removed the fish.—Boston Transcript.

The affections of a horse are not inferior to his intellectual qualities; and, especially if made a pet, he becomes very fond of his master. In case of separation, he remembers him for years. But his affection is different from that of a dog, which continues to love his master even though the latter abuses him greatly. Rough, unkind treatment will quickly estrange the affection of a horse. Good horse sense discovers no particular reason why a horse should be devoted to a master who habitually maltreats him.

The intellect and affections of a horse point out two things so important to a trainer that he must bear them in mind until they become fixed habits of thought: 1. Never, under any circumstances, allow a horse to successfully oppose his will to yours. If you do, he will remember it and (reasoning by experience), try it again. 2. Always keep his affection. If he dislikes you, he has no wish to please you; and, if his obedience is always perfunctory, you will make but little headway in training him. These two points assured, he will almost invariably try to do whatever you require of him—if he only knows what it is.—Success.

Nov. 18.—Ruthven, Ont.—Fourth annual trials of the North American Field Trial Club. Alfred Wigle, Sec'y, Windsor, Ont.

Nov. 24.—Glasgow, Ky.—American Championship Field Trial Association's second annual trials. C. B. Cooke, Sec'y.

Nov. 29.—Thomasville, N. C.—Continental Field Trial Club's eighth annual trials.

Dec. 1.—Washington C. H., Ohio.—American Championship Field Trial Club's second annual trials. Chas. B. Cooke, Sec'y, Richmond, Va.

Dec. 15.—Huntsville, Ala.—Alabama Field Trial Club's (member of the American Championship Club) third annual trials. John F. Fletcher, Sec'y, Birmingham, Ala.

"Bum."

Away down in Arizona where the Spanish bayonet blooms amid alkali and sage brush and the ochreous earth glows like a baker's oven, lies the little city of Jerome, and near it on the mountain slope, for four years past, the Black Hills Copper Company has been engaged in mining operations.

Almost since the first pick was driven into the crumbling rock, the first spadeful of earth upturned, the company's monthly pay roll has borne an entry, last in the long string of names, "Bum—$4.00." During the whole of this period Bum has never been docked, fined, suspended, laid off or discharged, and never for a single fraction of a day has he absented himself from his post of duty.

BUM.

Bum is a dog—part English shepherd, part conundrum. Bum is not the sort of dog that would win cups or blue ribbons at a kennel show, but just the same it would be a mighty strenuous day in the lifetime of any tenderfoot who wandered out to the company's works and offered $1,000 for Bum. Bum was a member of the first work crew to go upon the ground. He was there when the first blast was fired and he barked. Night shift and day shift, ever since, Bum has sounded a vociferous warning whenever a fuse was lighted. As the superintendent phrases it, "First he barked because he was afraid; then he barked for fun and now he barks as a matter of duty." Before a blast is fired, it is the miner's invariable custom to ignite a small piece of fuse as a test. Just before the first blast was fired in the mine, Bum, who had been an attentive observer of the preparation of the test fuse, seized the hissing, spluttering thing in his mouth

and shook it vigorously. Of course it burnt him. From that time on it has been his habit to extinguish every test fuse kindled in the mine. Then seizing a piece of rock between his jaws, he streaks it for the mouth of the tunnel, deposits the stone upon a constantly growing pile, and rends the air with his barking until every living soul is safe outside the mine. Bum knows every miner on the pay roll, and counts them as they leave the mine, and if one of them is missing, he plunges back into the shaft to seek him. On one occasion, when engaged in this work of mercy, the blast exploded, and Bum reached the shaft mouth badly bruised and minus an eye. Notwithstanding his wounds, he was at his post of duty for the succeeding blast. Once Bum saved the life of a belated drill man, dazed with drink. The good old dog seized him by his overalls and bundled him, protesting, to the mouth of the shaft just in the nick of time.

As soon as the blast goes off and the column of thick black smoke wells forth, Bum ceases his barking, wags his tail, cuts a few capers and then lies down in the shadow of the power house to await the next one. There we shall leave him, but if any of FOREST AND STREAM'S readers wander out to Jerome and care to see a dog worthy to take his place alongside one of Hough's meat dogs, he should take a jaunt out to the copper mine, ask for Mr. Paul Eyesenhardt and be formally presented to Bum, the company's chief barker. MARIN.

SAN RAFAEL, Cal., Sept. 25.

National Beagle Club.

CAMDEN, N. J.—I append item of news relative to the coming trials of the National Beagle Club, which you are perfectly welcome to use in your columns if you so desire. It may interest your readers who are interested in beagles and beagle trials.

CHAS. R. STEVENSON.

From present indications it would seem that the thirteenth annual field trials of the National Beagle Club of America, which will commence Nov. 3, at Mineola, Long Island, will be the largest and greatest trials ever held in the history of the club. Great interest has been already manifested all through the eastern part of the United States, and particularly in the New England States, probably owing to the fact that the New England Beagle Club will omit their trials this year.

Then again, the experience of the club has been so satisfactory during the past three years. The field trial grounds are ideal and there have been plenty of rabbits, and the grounds are so located and constituted that those who attend have had little difficulty in seeing the work done by the beagles. The headquarters of the club at Mineola has also proved to be more than satisfactory. The house is a modern construction with steam heat and is nicely furnished, and the table is all that could be expected, thus making a most delightful place for the club to pass its evenings after the toils of a day in the field, and many pleasant evenings have been spent in this house, because with such entertainers as George F. Reed, the veteran field trial champion, of Barton, Vt.; C. Staley Doub, the great beagle breeder, of Frederick, Md.; Dr. Bruns, of New Orleans, Ia.; John Caswell, of Pride's Crossing, Mass.; Dan Summers, of Downingtown, Pa.; Jim McAleer, of Pittsburg, Pa.; Albert C. Heulings, of Camden, N. J., and a host of others, there cannot be a dull moment, and there has been lots of fun and merriment, to say nothing of the wonderful beagle stories that are told.

The following States will be represented at these trials: Vermont, Massachusetts, Rhode Island, Connecticut, New York, New Jersey, Pennsylvania, Ohio, Illinois, Maryland, Virginia, Louisiana, possibly Iowa and some other States, as the result of which the best beagles of the eastern part of the United States will meet in competition, thereby making the greatest meeting of beagles ever held in this country.

Brunswick Fur Club.

THE Brunswick Fur Club has sent out an invitation to its friends as follows:

BARRE, Mass., Oct. 21.—The Brunswick Fur Club cordially invites you to attend its fourteenth annual field trial of foxhounds, to be held at Barre, Mass., Oct. 21-24. The club will make its headquarters at Hotel Barre, where the rates will be $2 and $2.50 per day—the latter price being for single rooms. The hounds will be cared for at the expense of the club, and fed upon Austin's dog biscuit.

The Derby, open to all foxhounds whelped on or after Jan. 1, 1901, will be run on Tuesday, Oct. 21. Entries close at 10 P. M., Oct. 20. Entry fee, $2. The winner will hold the R. D. Perry cup for one year, and will receive a silver cup.

The All-Age Stake, open to all foxhounds, will be run on Wednesday, Thursday and Friday, Oct. 22-24. Entries close at 10 P. M., Oct. 21. Entry fee, $3. The first prize winners in the Speed and Driving, Trailing, Hunting and Endurance classes, will receive silver cups. The Pope Memorial cup will be held for one year by the hound doing the best work in the Trailing, and Speed and Driving classes. The hound making the highest general average in all classes, will receive a silver cup, and will hold for one year the American Field cup and the Woodstock kennel cup. The latter is competed for this year for the first time, and will become the property of the club member who wins it twice. The club diplomas will be given to the winners in all classes.

The judges will be Dr. L. Pope, Jr., and Messrs. Geo. B. Appleby, C. J. Prouty, F. B. Whidden and Bradford S. Turpin.

The trials are open to all, and fox hunters everywhere, whether members of the club or not, are invited to enter their hounds, and aid in making the week a memorable one in the history of foxhound competitions.

BRADFORD S. TURPIN, Secretary.

The Philadelphia Dog Show.

PHILADELPHIA, Pa.—I take pleasure in announcing that the Bench Show Committee have decided upon the same class prizes as last year—viz., $15, $10, $5, and medal in all regular puppy, novice, limit and open classes, and appropriate prizes in the local and winners' divisions.

The entries close upon Monday, Nov. 10. The superintendent is James Mortimer, and the veterinarian, C. J. Marshall. The dogs will be benched upon the new benches made for the Association last season. The prize list will be in the mail within a few days.

The list of judges has not been completed as yet, but will include C. W. Rodman, Jr., for Irish terriers; H. K. Bloodgood for poodles, and F. Freeman-Lloyd for a number of breeds. Mr. Lloyd is coming from Sidney, Australia, particularly to judge at this show.

MARCEL A. VITI, Hon. Sec.

Pointer Club of America.

NEW YORK.—The owners of the winner of first money of the four valuable stakes offered by the Pointer Club of America to be run at their field trials, commencing Nov. 6, at Eastport, L. I., will also receive rich silver trophies, notably the cups donated by Walton Ferguson, Jr., Dr. Allen Fitch and Randolph Crompton. Members of the club and those who are considering a nomination for the Championship Stake, which is open to the world, are reminded that entries will close on Oct. 15 with C. F. Lewis, Secretary-Treasurer, 48 Wall street, New York.

C. F. LEWIS, Sec.-Treas.

Yachting.

For Cruising Yachtsmen.

WITH the purpose of stimulating the interest in cruising, and the keeping of a detailed log by cruising yachtsmen during the season of 1902, the publishers of FOREST AND STREAM offer prizes for the best stories of cruises submitted to be published in FOREST AND STREAM. It is believed that these will form not only entertaining records of pleasant summer days spent afloat along our coasts and waterways, but will furnish information of practical value to other yachtsmen making subsequent cruises on the same waters.

Prizes will be awarded to the three best stories as follows:

First prize, $50.00.
Second prize, $30.00.
Third prize, $20.00.

Contributions are invited under the following conditions:

1. The cruise must be made in waters of the United States or Canada in the season of 1902.

2. The cruise must be made in a sailing yacht, power to be used only as an auxiliary, if at all.

3. The story must be prefaced by a description of the boat. Cruises should be treated in as interesting and readable a way as possible, but should be practical and contain all possible information and data that would be of value to men going over the same route. A description of the handling of the ship in all weathers will be regarded very favorably in making awards, and it is suggested to writers that an accurate account be kept of all incidents happening while under way.

4. An outline chart suitable for reproduction, showing the course taken, must accompany each article. When possible, articles should be accompanied by amateur photographs taken on the cruise, including one of the boat. Good photographs will be considered in making the awards.

5. The story should contain about seven thousand words, written on one side of the paper only, and must be received at the office of the Forest and Stream Publishing Company, 346 Broadway, New York city, on or before Nov. 15, 1902.

Mr. T. C. Zerega has very kindly consented to act as judge and to make the awards.

Boston Letter.

BOSTON, Oct. 12.—There is much ado concerning the restricted classes of the Yacht Racing Association of Massachusetts. The whole difficulty lies in the fact that it has been found possible to build a yacht under the present restrictions that is entirely objectionable to all the other yacht owners, with the exception of those who possess the alleged extreme boats. Plenty of warning has been given that there would be kicks coming, for when it was found at the commencement of the past season that yachts were being turned out which had extreme overhangs, there was considerable comment upon the advisability of limiting the restrictions further. To carry out the overhangs to the extreme point, it was necessary to build more or less of a scow model, generally more, and the result was a boat which was not considered an interpretation of what the Association meant by a safe, seaworthy boat.

The Executive Committee of the Association realized, as well as many of the yachtsmen, that it would be necessary to do some remodeling on the rules if the sport is to be kept in a healthy condition in Massachusetts Bay, and with that end in view has been working out all kinds of rules since spring, with the hope of getting something that would fill the bill. It became a question of modifying the present classes or else creating new ones. Mr. W. P. Stephens, who drew up the restrictions and scantlings for the present classes, was consulted early in the season, and, in answer to the inquiries of the committee, he sent a very able letter upon the subject. It is the opinion of Mr. Stephens that the form of the midship section would have much to do with the general form of the boat, and many of the yachtsmen who have seen his views agree that such a restriction would be of benefit. But the hardest part of changing existing rules is to preserve, if there is any possibility, the present classes and not to make rules that might bar existing boats.

It has developed that the wide, flat-floored centerboard boat, or even a wide keel boat, with immense overhangs, has a distinct advantage over narrower boats with more displacement and less sail area. This is the main thing that the Executive Committee of the Association is trying to remedy. The object is to put on such limits as to give all types an equal chance in the racing. To do this and not bar out existing boats is a task that cannot be lightly undertaken, and the committee has taken plenty of time to consider all possible ways. After having consulted the framers of rules and restrictions of different sections along the coast, the committee invited interested yachtsmen to attend an informal meeting that they might give their views upon what changes, if any, were necessary in the rules. This meeting was held at Young's Hotel last Friday evening, and owing to peculiar circumstances not much was gained from the majority of yachtsmen who addressed the committee.

Be it known that the first and strongest kick was made on account of the great length over all and the resulting unwholesome form of the boats. It was on this account that the yacht owners in the 21ft. restricted class got together, and, taking the matter in their own hands, formed the new 22ft. class. Mr. Louis M. Clark, who has done most of the work in looking up remedies for the present conditions, attended the preliminary meetings of these yachtsmen and opposed the class strongly. His views upon the subject led a few of these yachtsmen to think that he was opposed to any wide boats, and these thoughts were transmitted to others; but why any such view should have been taken is entirely beyond my comprehension. Mr. Clark has realized the immense advantage the wide boat, with her light displacement and great sail area has over the narrow boats, and the object he was trying to attain was to make them equal.

But the feeling had taken root in their minds that the wide boat was to be legislated out, and consequently many of those attending the meeting of the committee were governed by peculiar biased convictions. The ball was opened by a plea for the wide boat, instead of producing some suggestion for equalizing the chances of both types in the racing, and the meeting resulted in a discussion between the respective qualities, wide and narrow or moderate. Another thing that did not tend to produce any good results was the attitude taken by the yacht owners, each of whom when called upon for suggestions, talked only of the merits of his own boat. The most consistent suggestion came from Hon. Charles Francis Adams. He said that in his opinion it would not be policy for the Association to do anything that would spoil the present classes, by barring out any existing boats. He said that the Association had made its success by sticking to its classes and would continue to be successful if it continued the same policy. Mr. Adams spoke for the narrow boat, and said that all he would like to see would be that the narrow boats would have an equal chance with the wide ones, which in his opinion they did not have under the present restrictions. He suggested that the said area of the wider boats could be reduced and more ballast put in, and in this manner the two types could be made more nearly even, without barring existing boats. What will be eventually done will greatly depend upon the report of the Executive Committee, which will be made at the regular fall meeting of the Association, Thursday evening. It has also been proposed to adopt the new 22ft. class at that meeting.

The designers in Boston are commencing to get busy. Crowninshield has taken larger quarters in the new Board of Trade Building, and has plenty of work on hand, as has been previously announced. Fred Lawley has an order for a 50ft. ketch for J. H. Cromwell, of New York; a 65ft. auxiliary yawl for Philadelphia parties, a 44ft. launch for J. H. Proctor, of Boston. He has also an order for one of the new 22-footers, which is supposed to be for H. H. Wiggin, although Mr. Lawley will not say so. About two-thirds of the frames for the 137ft. waterline steam yacht for C. H. Fletcher, of Providence, have been riveted together. The 50ft. auxiliary yawl for Mrs. C. D. Gibson, of New York, is completed, and will be run out of the shop next week. The cabin work is being finished in the 30ft. cruiser designed by Fred Lawley for Alfred Douglas, of New York, and another cruiser of the same length and design is being set up. The firm has orders to build a 50ft. waterline schooner and a 58ft. auxiliary yawl from Arthur Binney's designs.

Starling Burgess has an order for a Y. R. A. 25-footer for T. K. Lothrop, Jr., and a 25-footer of his design for F. G. Macomber, Jr., is already well along at Fenton's Manchester yard. This boat has caused considerable talk, as she is 48ft. over all. He has also an order for a one-design 15ft. class for Buzzard's Bay, to compete with the one-design class designed by Herreshoff, and an order for a one-design 15ft. class for the Sandusky Y. C. He also has an order for a 40ft. launch for Mr. Hopkins, of Malden, Mass.
